T. L. Peacock,
Examiner of India Correspondence.

EXTRACT POLITICAL LETTER from Bombay; dated 23 June (No. 60) 1849.

2. ON the 18th April last our Right honourable President recorded the minute, of which a copy forms Enclosure No. 1, to Collection No. 1, accompanying this despatch, in which his Lordship suggested the adoption of such measures as occurred to him for conducting, temporarily, the administration of this lapsed territory pending the receipt of information upon various points therein alluded to, which his Lordship deemed it requisite should be obtained previous to determining upon a more matured system of organization. The several suggestions contained in this minute having been concurred in by the Honourable Mr. Willoughby and the Honourable Mr. Blane, corresponding instructions were issued to Mr. Frere on the 1st ultimo.

3. Having communicated these proceedings to the Right honourable the Governor-general of India, we were in reply informed, in a letter from Mr. Secretary Elliot, dated the 18th ultimo, that in the opinion of his Lordship the measures proposed by this Government for the temporary administration of the lapsed Sattara territory, " are very judicious and satisfactory."

4. On a review of these proceedings your Honourable Court will observe, that as the best means in our opinion of temporarily managing this lapsed territory during the period of its transition from a separate government to a regulation province, we have placed it under the control of a Commissioner, in whom the whole civil authority has been vested, subject to Government. The very satisfactory and able manner in which Mr. (H. B. E.) Frere, has conducted his duties as Resident, the personal knowledge which he possesses of the family of his Highness the late Raja, and his thorough acquaintance with the affairs of Sattara, have induced us to appoint that gentleman to this office on the salary of a Collector, namely, Rs. 2,333. 5. 4. per mensem, with a deputation allowance of 10 rupees when out in the districts.

5. To enable the Commissioner to discharge with efficiency the onerous duties which will devolve upon him in conducting the management of this territory, we have granted him the aid of three assistants, to the senior of whom we have resolved, in addition to the other duties which will devolve on him, to entrust the conduct of the judicial branch of the administration, being the department which, in its details, will best admit of separate superintendence. We have fixed the salary of this situation at 1,200 rupees per mensem, with a deputation allowance of 10 rupees per diem, when actually out in the districts; Mr. M. A. Coxon, of the Bombay Civil Service, has been nominated to this appointment on a reduced salary of 1,000 rupees per mensem, until such period as his seniority in the service shall entitle him to receive the full amount.

6. We

6. We have appointed Lieutenant H. B. Sandford, of the Bombay Artillery, and Ensign J. J. Nicholson, of the 23d regiment Bombay Native Infantry respectively, to the offices of second and third assistants to the Commissioner; the former on a consolidated salary of 600 rupees per mensem, with a deputation allowance of five rupees, per diem when out in the districts, and the latter on a salary of 400 rupees per mensem.

Lieutenant Sandford has been officiating as an assistant to the Resident at Sattara, from the period of the death of the late Raja.

7. We have directed that the business of this lapsed state, in its several branches, be, as far as is practicable, carried on for the present with the existing establishments, no appointments that from time to time may become vacant in any department being filled up, until after a reference to Government, since many modifications, and probably abolitions of offices, will in numerous instances eventually become necessary.

8. The existing system of police appearing to work well, and to meet the wants of the people, we have not deemed it necessary at present to make any change in its machinery. We have deemed it proper not to include the charge of the police in the judicial branch of the administration, entrusted to the first assistant, but have directed that it be retained under the Commissioner's own immediate and active superintendence.

9. With reference to the general subject of the administration of the country, we have considered no great changes, even in the forms of proceedings, to be immediately requisite, beyond the substitution of the Honourable Company's seal and style for that of the late government.

EXTRACT POLITICAL LETTER to Bombay; dated 21 November (No. 33) 1849.

2. WE approve the arrangement which you have made for the administration of the Sattara territory by Mr. Frere, as Commissioner, with three assistants.

3. We approve your intention of continuing in every respect the previous forms and principles of administration, until such information is obtained as will enable you to judge in what points alteration may be desirable.

EXTRACT BOMBAY POLITICAL CONSULTATION, 2 May 1849.

EXTRACT MINUTE by the Right Honourable the Governor; dated 18 April 1849.

21. SUCH being, according to the information we are at present possessed of, the actual condition of the state which has lapsed to us, I propose, as the best means of managing it for the present, during what may be called its period of transition from a separate government to a regulation province, that Mr. Frere, the present Resident, whose intelligence, ability and acquirements, as well as his personal knowledge of the family of the late Raja, and thorough acquaintance with the affairs of the state, peculiarly qualifying him for the discharge of the duties which, on this position, will devolve to him, be appointed Commissioner, with a moderate establishment, to exercise, subject immediately to Government, the whole civil authority of the state. He should, I think have under him three assistants, the senior of whom should, in addition to any other duties he may have to perform, be specially charged with the conduct of the judicial department of the administration, it being that which, in its details, will best admit of separate superintendence. I do not in the judicial include the police, which I propose to manage, at any rate for the present, by the same machinery as hitherto, and which will require great care and attention, as it is a branch in which I consider the native system to work very well when properly administered; and I conceive it to be essential that it should be under the immediate and active superintendence of the chief local authority.

 22. I would

22. I would give the Commissioner the salary of a Collector, and deputation when out. His first assistant should, I think, receive the same as an assistant judge at a detached station, viz. 1,200 rupees a month.

23. I would keep Lieutenant Sandford as the second assistant, on a consolidated salary of 600 rupees per mensem, that sum being about equal to what he now receives, including both his civil and military pay. He should likewise draw a deputation allowance of five rupees a day when out, and I would give Mr. Frere a third assistant on 400 rupees a month, as he deems such additional aid to be absolutely necessary.

24. Mr. Frere should carry on the business until further orders with the establishment now existing (all of which should be informed that they are now the servants of the British Goverment), filling up no appointments that may become vacant in any department until after a reference to Government, for, as much will be essentially modified or abolished, great care must be taken not to give rise to claims which may embarrass our after-measures. No great change, even in the form of proceedings will be at present necessary, beyond the substitution of the Honourable Company's seal and style, for that of the late government, for we have to deal with a system greatly in advance of those which usually exist in native states, and which I doubt not in many respects is more suited to the tastes of the natives of the country than that of our regulation provinces, and it is not impossible that in the practical working of it, particularly in the police, we may find portions which may aid us in improving our own.

Extract Bombay Political Consultation, 16 May 1849.

Notification to be sent to all Mamlutdars and Heads of Departments.—To all Killedars and Officers in charge of Ghauts, or commanding detachments of Troops.

Notification.

1. The late Raja Shree Mun Maharaj Shahjee Maharaj Chutturputtee, died on the 5th April 1848; on the same day a proclamation signed by the British Resident, was issued to all officers of the Sattara State, informing them of the death of the Maharajah, and desiring them to continue in the discharge of their several duties, under the control of the Resident, till the orders of the British Government should be known.

2. With advertence to the aforesaid proclamation, it is now further notified that a letter has been received from the Secretary to Government, dated the 1st May 1849, intimating that the Right honourable the Governor-general of India in Council, under the authority of the Honourable the Court of Directors, has been pleased to order, that in consequence of his late Highness Shreemun Maharaja Shahjee Maharaj Chutturputtee, having died without heirs entitled to succeed to the sovereignty of Sattara, the territory comprised therein is to be considered as having lapsed to the power by which it was granted, and is to be henceforth annexed to the British empire in India.

3. It is the desire and intention of the British Government that the rights and interests of all parties affected by this measure be treated with all due consideration and liberality, according to the merits of each case to be determined upon hereafter.

4. The administration of the lapsed territory is to be conducted by the present Resident, Mr. Frere, with the title of Commissioner, to whose orders all are required to pay obedience.

5. This therefore is addressed to you in order that you may make known the above-recited decision of the British Government to all public officers subordinate to you, together with the hereditary districts and village officers and the people generally, and require their loyal and ready conformity therewith.

Extract

EXTRACT BOMBAY POLITICAL CONSULTATION, 13 June 1849.

(No. 753.)

From *H. M. Elliot*, Esq., Secretary to the Government of India with the Governor-General, to *W. Courtney*, Esq., Acting Secretary to Government, Political Department, Bombay. No. 4777. Foreign department.

Sir,

IN reply to your letter under date the 1st instant (No. 97), with its enclosures, relative to the mode in which it will be advisable at present to conduct the administration of the lapsed state of Sattara, I am directed to state that in the opinion of the Governor-general the proposals of the Government of Bombay are very judicious and satisfactory.

I have, &c.

Simla, 18 May 1849. (signed) *H. M. Elliot*,
Secretary to the Government of India
with the Governor-General.

T. L. Peacock,
Examiner of India Correspondence.

RETURN of the SUBJECTS of His Highness the *Guicowar* now enjoying the BRITISH GUARANTEE, with the Terms thereof, and any CORRESPONDENCE showing the Grounds on which, in each case, the Guarantee was given.

EXTRACT Political Letter to *Bombay*, dated 2 July (No. 13) 1840.

' Para. 8. IT indeed appears fruitless to hope for the permanent maintenance of a good understanding between our Government and its ancient ally, while this anomalous state of things continues to exist. Although the system was created for purposes beneficial to the Guicowar state, and not directly to us, there are circumstances in the case which make it equitable that we should take our share in whatever sacrifices may be necessary, in order to get rid of the mischievous consequences.

9. The guarantees were granted either for the attainment of some object, which at the time was considered of paramount importance to the Guicowar state, or in compliance with the request of the reigning Guicowar; and had they extended no further than the lives of the first grantees, they would have been perhaps in every instance justifiable, and productive of comparatively little inconvenience. But we undertook not only to protect in all time to come the lives, honour and property of the descendants of certain persons against their sovereign, but also to enforce for ever the payment to them of large and onerous allowances from the Guicowar state, as the salary of nominal offices, of which the duties were not performed by them. This cannot have been necessary for the objects of policy which were in view, and as the burthens were such as the reigning Guicowar could not justifiably impose upon the successors, and would not have had it in his power to do so through any other means than our guarantee; our having given that guarantee, at the request of the reigning prince, does not render it the less a subject of just complaint on the part of subsequent rulers.

10. With these sentiments, we have been much gratified by finding that you have called for a complete statement of all subsisting guarantees to Guicowar subjects, with a view, as you state, of endeavouring to effect some compromise with the Guicowar. We earnestly hope that this attempt will be successful; we shall be prepared to sanction an arrangement for taking upon ourselves a part of the burthen, provided the Guicowar will consent to assign to us from the tributes a fixed annual sum, equivalent to the remaining portion. The nemnooks and other allowances would then be paid from our own treasury, and the time of your Government would not hereafter be taken up with the reception and discussion of complaint of their being withheld.

EXTRACT Political Letter to *Bombay*, dated 3 March (No. 3) 1841.

8. THE papers now before us are full of fresh instances of the inconvenience arising from these guarantees, which compel us to exercise not only civil, but even criminal jurisdiction over the guaranteed persons. Not only have you been obliged to undertake the settlement of the embarrassed pecuniary affairs of Bulwunt Rao Guicowar, and the adjudication of the claims of the firm of Mysal Bhugtee, upon the sons of Gungadhur Shastree, on account of the Polidarry (in which last matter you seem to have been in danger of doing real injustice to the Shastree's sons, until your present Governor, from his personal knowledge of the case, corrected the error), but it has also devolved upon you to punish Bhaskur Row Wittul, the representative of one of the guaranteed families, for causing a person in his employment to be flogged to death in the

attempt to make him confess a robbery. The Guicowar's personal animosity against Bhaskur Row (the effect of the peculiar relation constituted by the bhandarry) rendered you unwilling to leave the criminal to be dealt with at Syajee's pleasure. A fine of a year's personal allowances (70,000 rupees) would not have appeared to us adequate to this person's offence, were it not for the lamentable fact, which Mr. Sutherland stated, and your President confirms, that such atrocious acts are common at Baroda, and generally pass unnoticed. We approve of your having provided for the family of the victim out of the fine levied, and made over the remainder to the Guicowar.

EXTRACT Political Letter to *Bombay*, dated 21 December (No. 21) 1842.

9. No mention has been made to the Guicowar of the plan for taking upon ourselves a portion of the payments made under our bhandarry, on receiving from the Guicowar an annual assignment upon the tributes sufficient to cover the remainder of the amount. The Government of India did not feel itself justified in taking such a step without further consideration, and a fresh reference to us; we have not, however, up to this time received any communication of their sentiments on the subject, except so far as these are expressed in their correspondence with you.

10. The Supreme Government appears disinclined to the proposition, as involving an additional burden on our finances, without obviating future embarrassment in our relations with the Guicowar, inasmuch as that embarrassment arises less from our guarantee of the nemnooks than from our obligation to protect the persons, property and honour of certain individuals or families; an obligation from which we cannot honourably relieve ourselves without the consent of the parties so guaranteed. We admit the force of these objections, and considering the long differences we have had with the Guicowar, all now happily for the present terminated by the late arrangements, and his Highness's repeated promises to respect our guarantees, we are disposed to think that it would be most prudent to refrain from opening a new subject of negotiation, and to leave his mind in repose. We enjoin you to use the greatest forbearance in all your future intercourse with his Highness, which should be uniformly conducted in a spirit of friendliness and confidence, and with entire forgetfulness of the past.

EXTRACT Political Letter from *Bombay*, dated 16 December (No. 176) 1848.

Letter, dated 15 March (No. 8) 1848, Pol. Cons., Dec. 1848, 10432 to 10439.

26. WE next beg to submit, in Collection No. 7, an extract from our proceedings on the subject of a claim advanced on Govind Rao Guicowar by the banking firm of Hurree Bhugtee, of Baroda, for the sum of *Rs.* 3,03,130. 9. 9. being the balance, inclusive of compound interest up to the 31st July 1848, at the rate of 12 per cent. per annum, claimed by them on two bonds, amounting in the aggregate to the sum of 32,002 rupees, entered into with their firm by Govind Rao, on the 22d and 30th October 1830. For our sentiments upon this claim, we beg to refer to the minutes recorded by our Right honourable President, and by the Honourable Messrs. Reid and Willoughby, under the dates noted in the margin,* and to the instructions issued thereon, dated the 15th instant.

* *See* below.

EXTRACT

---

* Minute by the Right honourable the Governor, dated the 20th November 1848.
„ by the Honourable Mr. Reid, dated 24th November 1848.
„ by the Honourable Mr. Willoughby, dated the 2d December 1848.
Further Minute by the Right Honourable the Governor, dated the 5th December 1848, concurred in by the Board.

EXTRACT Political Letter to *Bombay*, dated 14 March (No. 13) 1849.

Para. 8. YOU have been called on to decide respecting a claim preferred against Govind Row by the firm of Hurry Bhugtee, grounded on two bonds for an aggregate sum of 32,002 rupees, one bearing the attestation of Mr. Williams, as Resident, the other that of Mr. Malet, as his assistant; and the former containing stipulations as to compound interest, which is also claimed on the other, and swells the total claim to an inordinate amount. The attestation having been given without the permission of Government, and without previous inquiry into the fairness of the transactions, does not, in your opinion, amount to a guarantee, and you have determined to allow only the principal, and interest to an equal amount, which, deducting payments already made to the firm, leaves a balance of 30,915 rupees still due.

Political letter from, dated 16 Dec. (No. 176) 1848.

9. Lieutenant-colonel Outram was of opinion that the Sahoocars had been guilty of fraud in this transaction, and had forfeited the bhandarry which they hold from our Government, expressly "subject to their own merits." You, however, did not think that their conduct deserved this penalty, as you deemed it to consist merely in the demand of an exorbitant rate of interest; but you do not advert to the fact, which Lieutenant-colonel Outram considered to be established,* of their having substituted a false bond (bearing interest) for 9,001 rupees, in the room of a mere acknowledgment of a balance of debt. Such an act, if really proved, would amount to a forfeiture of our bhandarry.

* Para. 4 of his Report (31 August 1848).

10. Lieutenant-colonel Outram says,† of the guaranteed persons generally, that "in consequence of no example of this sort having ever yet been inflicted on any one of the many Guickwar subjects who are similarly supported by the British against their own government, the bhandries, as they are called, seem to the public, and appear to think so themselves, to enjoy an immunity from all law. When complained against to their own sovereign, he is powerless to enforce justice, because they are under British protection, while, at the same time, the British Government has apparently no power effectually to punish them, so far as has yet been proved, for the revocation of the guarantee; the only punishment that could be inflicted has never, heretofore, been resorted to."

† Para. 9.

11. If the guaranteed persons have been suffered to usurp this immunity from punishment, it must have been through a complete misinterpretation of the nature and meaning of our bhandarry, which was never intended to secure to them impunity for all offences short of such as would justify the annulment of that obligation. Its intention was merely to give them the benefit of an investigation by our own officers before they could be subjected to punishment. The Guicowar could not, without great injustice, be deprived of the right of punishing his own subjects in case of real misconduct on their part. If it has ever been held that he is not at liberty to do so, with the consent and approbation of your Government, given after a proper inquiry, we desire that so gross a misapprehension may be at once corrected.

EXTRACT Political Letter from *Bombay*, dated 17 October (No. 110) 1849.

1. WE beg to reply to the following paras. (8 to 11)‡ of your Honourable Court's despatch, dated the 14th March, No. 13, of 1849, and to report our further proceedings on the subject therein alluded to.

2. We

‡ Para. 8. The Court remark that Government have been called on to decide respecting a claim preferred against Govind Rao by the firm of Hurry Bhugtee, grounded on two bonds for an aggregate sum of 32,002 rupees, one bearing the attestation of Mr. Williams, as Resident, the other that of Mr. Malet, as his assistant, and the former containing stipulations as to compound interest, which is also claimed on the other, and swells the total claim to an inordinate amount. The attestation having been given without the permission of Government, and without previous inquiry into the fairness of the transactions, does not, the Court observe, in the opinion of Government amount to a guarantee, and that Government has determined to allow only the principal and interest to an equal amount, which, deducting payments already made to the firm, leaves a balance of 30,915 rupees still due.

2. We communicated these paras. on the 26th May last to Captain French, officiating Resident at Baroda, with instructions to report whether he was aware of any grounds, beyond those mentioned by Lieutenant-colonel Outram, for believing that a forged bond was substituted by the firm of Hurree Bhugtee, for the sum of 9,000 rupees, in the place of the original bond for 9,001 rupees, the wording and character of the original bond being changed in the alleged fabricated document.

3. We at the same time intimated to Captain French that Lieutenant-colonel Outram was in error in entertaining an opinion that persons holding the British guarantee possess in virtue thereof an immunity from punishment, such a doctrine never having been set forth by Government, nor, is it believed, has ever since been entertained by the holders of the guarantees. On the contrary, we intimated to Captain French that if Lieutenant-colonel Outram had carefully consulted the records of his office, he would have satisfied himself that Government has always considered parties holding the British guarantee amenable to punishment on proof of sufficient misconduct.

4. We beg to submit copies of two letters we have received in reply to the the above reference from Captain French, dated the 1st June and 30th July last, from which it appears that no proofs exist in support of Lieutenant-colonel Outram's suspicions of a false bond having been substituted by the firm of Hurree Bhugtee on the occasion alluded to by your Honourable Court.

5. With reference to some remarks made by Captain French in the former of the above letters, we have informed him, that in the event of any circumstance arising during his stay at Baroda affecting the character of any parties holding the British guarantee, it will be his duty to report the same to Government, accompanied by his opinion thereon.

EXTRACT Political Letter to *Bombay*, dated 28 November (No. 35) 1849.

7 to 10 and 4 of 30 Aug., No. 84, 1849. Further correspondence respecting the debts of Bulwunt Rao Guicowar.

43. CAPTAIN French, the officiating Resident at Baroda, is of opinion that Bulwunt Row has forfeited our guarantee (which was originally declared liable to forfeiture in case of "flagrant misconduct)." You have taken a different view of the point, being, we presume, of opinion that the reckless prodigality, not unaccompanied with dishonesty, of which this individual has been guilty, is not the kind of misconduct which has hitherto been regarded as a forfeiture of our bhandarry, but we wish that hereafter it be so considered, and we direct you to make that intention known.

EXTRACT

Para. 9. The Court remark that Lieutenant-colonel Outram was of opinion that the Sahoocars had been guilty of fraud in this transaction, and had forfeited the bhanderry which they hold from the British Government expressly "subject to their own merits;" that Government, however, did not think that their conduct deserved the penalty, as Government deemed it to consist merely in the demand of an exorbitant rate of interest. But the Court state that Government do not advert to the fact which Lieutenant-colonel Outram considered to be established, of their having substituted a false bond (bearing interest) for 9,001 rupees, in the room of a mere acknowledgment of a balance of debt. Such an act, if really proved, would, the Court state, amount to a forfeiture of the bhandarry of the British Government.

Para. 10. Lieutenant-colonel Outram, the Court remark, says of the guaranteed persons generally, that "in consequence of no example of this sort having ever yet been inflicted on any one of the many Gaekwar subjects who are similarly supported by the British against their own government, the bhandries, as they are called, seem to the public, and appear to think so themselves, to enjoy an immunity from all law. When complained against to their own sovereign, he is powerless to enforce justice, because they are under British protection, while at the same time the British Government has apparently no power effectually to punish them, so far as has yet been proved, for the revocation of the guarantee; the only punishment that could be inflicted has never, heretofore, been resorted to."

Para. 11. The Court state, that if the guaranteed persons have been suffered to usurp this immunity from punishment, it must have been through a complete misinterpretation of the nature and meaning of the bhandarry of the British Government, which was never intended to secure to them impunity for all offences short of such as would justify the annulment of that obligation; its intention, the Court remark, was merely to give them the benefit of an investigation by the Company's own officers before they could be subjected to punishment. The Gaekwar, the Court add, could not without great injustice be deprived of the right of punishing his own subjects in case of real misconduct on their part, and that if it has ever been held that he is not at liberty to do so, with the consent and approbation of the Government, given after a proper inquiry, the Court desire that so gross a misapprehension may be at once corrected.

EXTRACT Political Letter to *Bombay*, dated 13 February (No. 4) 1850.

Further proceedings respecting the claim of the firm of Hurry Bugtee on Govind Rao Guicowar.

14. WE had called your attention to the opinion of Lieutenant-colonel Outram, that the firm of Hurry Bugtee had substituted a false bond, bearing interest, for 9,001 rupees, in the room of a mere acknowledgment of a balance of debt; an act which, if committed, would amount to a forfeiture of our bhandarry. You now, after a reference to Captain French, report that "no proofs exist in support of Lieutenant-colonel Outram's suspicions." This is more than is borne out by the report of Captain French, who merely stated that he was "not aware of any grounds beyond those reported by Colonel Outram for supposing," &c., having previously stated that "no further steps have been taken to ascertain" the true state of the case.

15. The grounds adduced by Lieutenant-colonel Outram were strong, and, in his opinion, conclusive. He distinctly stated, in para. 4 of his report of 31st August 1848, that the Soukar had "substituted for the receipt passed in 1830," a "former bond for 9,001 rupees, dated 4th February 1820, not endorsed by the Resident, and produced it as having been confirmed by the Resident in this item." The case certainly was not brought very clearly before Government in Lieutenant-colonel Outram's letter; but we should have expected that, if his conclusion was not admitted, the insufficiency of his reasons would have been shown, or the subject referred to him for further explanations. We desire that the question be taken into the deliberate consideration of your Government, in order that, in the event of Colonel Outram's opinion being found to be correct, you may annul our bhandarry.

16. Captain French's statements, in his letter of 1st June 1849, respecting the impression entertained at Baroda, that the guaranteed persons enjoy an immunity from punishment, have been read by us with surprise and regret. We have in our letter of 14th March (No. 13) 1849 (para. 11), enjoined that your conduct be so shaped as to correct any such misapprehension; and our still more recent observations, in para. 43 of our letter of 28th November (No. 35) 1849, on the case of Bulwunt Row Guicowar, will have shown to you that we consider the condition of good conduct, on which many of the bhandarries depend, not to have been enforced with sufficient strictness.

EXTRACT Political Letter from *Bombay*, dated 30 August (No. 84) 1849.

7. WE next beg to forward copy of a letter from Captain French, dated the 5th January last, soliciting attention to the existing guarantees held from the British Government by subjects of the Baroda Durbar, with the view to a reduction being made in their number, in the event of the present being deemed a fitting period for effecting the same.

8. EXTRACT Political Letter to *Bombay*, dated 13 January (No. 4) 1850.

Proposal by Captain French to cancel four of the guarantees on the list formerly submitted by Mr. Boyd.

Para. 3. CAPTAIN French considered that these guarantees were not hereditary, and that they had lapsed by death. It appeared, however, on examination, that this opinion had been hastily formed, the sumnuds in two of the four cases containing words of inheritance; while in a third case, although the particular guarantee had expired, the family of one of the two persons to whom it was originally granted possess another guarantee, which is hereditary. The family of the other guarantee, and the holders of the fourth bhanderry mentioned by Captain French have been ordered to be struck out of the list of guaranteed persons.

4. Captain French is perfectly right in thinking that we are most desirous to get rid, when it can be done with good faith, of as many as possible of these embarrassing obligations.

No. 38, of 1851.—Political Department.

To the Honourable the Court of Directors for the Affairs of the Honourable East India Company, London.

Honourable Sirs,

1. IN the 7th para. of our despatch, dated the 3d August (No. 84) of 1849, we submitted to your Honourable Court an extract from our proceedings consequent on a communication from Captain French (then) officiating Resident at Baroda, soliciting attention to the existing guarantees held from the British Government by subjects of the Baroda Durbar, with a view to a reduction being made in their number.

2. One of the guarantees specially referred to by Captain French had been granted in the year 1803, in the conjoint names of Samul Bechur and Mungul Sukeedass, the nature of which is shewn in the extract given* in the margin.

* *See* below.

It appeared that no stipulation had been made at the period (1803) when this guarantee was granted, that it should extend beyond the lives of the parties to whom it had been given, and both of them being dead, Captain French was, under our instructions, informed, on the 30th June 1849,† that this guarantee should be considered to have lapsed.

3. On the 16th February 1850, Lieutenant Battye, assistant to the Resident at Baroda, then in temporary charge of the Residency, submitted to Government copies of two papers, themselves said to be copies, which he stated had been extracted from a chopra produced by the karkoon of the above firm, the original one of which was stated to have borne Colonel Walker's signature, and was declared to have been granted in perpetuity. The original of this document Lieutenant Battye stated he had been given to understand had been burnt, on the occasion of Samul Bechur's house having been destroyed by fire, some years since.

4. This

*

Names of the Persons Guaranteed.	Substance of Agreement.	Date of * Guarantee.	REMARKS.
Samul Bechur and Mongul Sukeedass.	- - Guaranteeing them to reside where they please, and conduct their banking transactions. Guarantees their just claim against their debtors, and secures them from injury. This is not an hereditary guarantee.	- - -	- - They were the bankers of the Arabs, on whose removal from Baroda the guarantee of the British Government was granted for their personal safety, as well as their agents and dependents. Mongul Sukeedass also is dead; his son, Lulloo Mungul, conducts his father's business at Baroda.

† *Vide* Enclosure, No. 9, to Collection No. 4, accompanying our despatch to your Honourable Court, dated 30th August (No. 84) 1849.

4. This document is identical with the one alluded to in the 28th para. of our Right honourable President's Minute,* dated the 24th May 1849, with the exception that the name of "Samul Bechur" is substituted for that of "Mungul Sukeedass;" and for reasons mentioned in our proceedings, our Right honourable President and the Honourable Mr. Blane considered that the claim now advanced by the representative of the late Samul Bechur to be recognised as holding the hereditary guarantee of Government, ought not to be admitted. The Honourable Mr. Willoughby, however, considered it advisable, before finally deciding on this claim, that a careful summary should be prepared of all the information on the records of Government connected with this guarantee, inclusive of extracts from all lists of bhandarrees which, from time to time, have been submitted to Government by the Resident at Baroda.

5. A precis, containing the above information, having been submitted to Government by our chief secretary, on the 24th February last, the same was referred, at the suggestion of our Right honourable President, to the Honourable Mr. Willoughby, and that gentleman, for reasons which he has recorded in two Minutes, dated the 28th February last, is of opinion that the above claim ought to be admitted. Our Right honourable President and the Honourable Mr. Blane dissent from this view.

6. We accordingly now beg to submit our proceedings on this subject, and to refer the case for the decision of your Honourable Court.

We have, &c.

EXTRACT Political Letter to *Bombay*, dated 10 September (No. 22) 1851.

Question respecting the guarantee to the late Samul Bechur, of Baroda.

49. GUARANTEES of protection were granted in 1802 and 1803 to two influential bankers of Baroda, Samul Bechur and Mungul Suckeedass. The guarantee to the latter has always been admitted to be hereditary. That to Samul Bechur has generally been stated not to be hereditary, but it appears that the sons of that individual were allowed, practically, to succeed to its benefits. Recently, however, on a report from Captain French, while officiating Resident, it has been declared to have ceased.

50. The family of Samul Bechur now produce a document of guarantee, with words of inheritance, purporting to be a copy of an original, signed by Colonel Walker, which original is declared to have been burnt when Samul Bechur's house caught fire some years ago. Lieutenant-colonel Outram reports, "I have carefully inspected the chopra of the firm of Samul Bechur, and the copy of the document alluded to is, to the best of my belief, genuine. The chopra is a very old one, and the writing has every appearance of having been formed many years ago. I see, therefore, no reason to doubt its validity."

51. On this ground, and on that of the improbability that different conditions of guarantee would have been given to Samul Bechur, and to the other banker, Mungul Suckeedass, although they are stated to have been "the agents of the two rival parties of the Arabs," Mr. Willoughby was of opinion that the claim to a hereditary guarantee should be admitted. The absence of evidence in its favour on the Baroda records, in his opinion, may be accounted for by the destruction by fire of the record-room at the Baroda Residency, in which such documents were kept.

52. Your President and Mr. Blane, however, are of opinion that the absence of any record of the alleged hereditary guarantee, "in Colonel Walker's list of 1805, made only two years after it is asserted he had given such guarantee, is presumptive proof that it was never given, and is fatal to the claim." To this argument, taken by itself, we cannot attach very much importance; for that list (as we understand it) did not profess to be a complete return of all bhandaries,

* A copy of which formed Enclosure No. 2 to Collection No. 4, accompanying the despatch from this Government, No. 84, of the 30th August 1849.

bhandarries, and did not include the bhandarry to Mungul Suckeedass, of which the validity and hereditary character are not disputed.

53. Colonel Walker, however, though several times mentioning Samul Bechur as holding a guarantee, never alluded to any hereditary right; and, on the whole, we are of opinion, that the evidence of a copy not authenticated, and contained only in the books of the claimant himself, cannot be taken as conclusive in his favour, unless strong corroborative evidence can be produced. Therefore, if no such evidence should be adduced, the guarantee must be considered to have ceased.

EXTRACT Political Letter from *Bombay*, dated 17 September (No. 70) 1851.

48. ON the 28th May 1850, we furnished Lieutenant-colonel Outram with a copy of this para.* with instructions to embrace every opportunity in his power for correcting any misapprehension which may exist at Baroda, that persons holding the British guarantee enjoy in consequence any immunity from punishment for nefarious or other disgraceful conduct, and also to impress upon all persons holding such guarantee, that its continuance is in each case entirely dependent upon their good conduct.

EXTRACT Political Letter to *Bombay*, dated 2 January (No. 6) 1852.

Letter from, dated 17th September (No. 70) 1851.

(48.) Lieutenant-colonel Outram has been instructed to impress on all persons holding the British guarantee, that they can claim no immunity from merited punishment, and that the continuance of the guarantee is entirely dependent on their good conduct.

34. APPROVED.

EXTRACT Political Letter to *Bombay*, dated 15 September (No. 30) 1852.

Letter, dated 3d May (No. 47) 1852.

Requests Court's instructions on the question, whether the guarantee to the firm of Hurree Bhugtee should be regarded as forfeited by the fraud committed by them in connexion with their claims on Govind Rao Guicowar.

11. WE might in strictness avail ourselves of the fraudulent acts committed during the lifetime of the late head of the firm of Hurree Bhugtee, and cancel the guarantee granted to that firm. But under all the circumstances of the case, we should consider it unjust to punish the present members of the firm for acts done without their knowledge, through the instrumentality of the unfaithful agent of the firm, Baba Nafra, by whose misconduct they have themselves suffered so severely. We therefore direct that the guarantee be still considered to be in force.

* Letter from, dated 13th February (No. 4) 1850.

Para. 16. The Court state that Captain French's statements in his letter of 1st June 1849, respecting the impression entertained at Baroda, that the guaranteed persons enjoy an immunity from punishment, have been read by them with surprise and regret. The Court state that they have, in their letter of the 14th March, No. 13, of 1849 (para. 11), enjoined that the conduct of Government be so shaped as to correct any such misapprehension, and that their still more recent observations, in para. 43 of their letter of 28th November, No. 35, of 1849, on the case of Bulwunt Rao Gaekwar, will have shown to Government that they consider the condition of good conduct, on which many of the bhandarees depend, not to have been enforced with sufficient strictness.

EXTRACT Political Letter from *Bombay*, dated 15 December (No. 127) 1852.

11. IN continuation of the 7th and 8th paras. of our political despatch, dated the 30th of August (No. 84) 1849, we beg to forward, in Collection No. 8, an extract from our proceedings on the subject of an application preferred by Doolachund Wumulchund, manager of the banking firm of Manikchund Roopchund, of Baroda, for the restoration of the British guarantee, which was withdrawn from that firm, under instructions communicated on 30th June 1849 to Captain French, officiating Resident at Baroda. For reasons mentioned in our proceedings, we have declined to comply with this application.

Political Department, 22 June (No. 35) 1853.

Our Governor, at Bombay, in Council.

Baroda guarantees.

Para. 1. IN para. 11 of your political letter, dated 15th December (No. 127) 1852, you report to us an application preferred by Doolachund Wumulchund, manager of the banking firm of Manickchund Roopchund, of Baroda, for the restoration of the British guarantee, which was withdrawn from that firm in 1849.

2. This guarantee was cancelled, on the ground that it was not hereditary, and that the person to whom it was granted had died. Mr. Davies, the Resident at Baroda, however, now states that this decision was founded on error, inasmuch as Manickchund Roopchund, whose name gave the appellation to the firm, was dead when the guarantee was given, and that therefore the guarantee could not have been to that individual, but to the firm.

3. In the list of guarantees prepared in 1840, by the then Resident, Mr. Boyd, it is stated that the perwannah granted in the name of Manickchund Roopchund by the Guicawar's government, "will remain in force while the firm exists at Baroda, under the guarantee of the British Government." The translation, however, of the perwannah, which Mr. Boyd transmitted to Government, together with his list, contains no such statement. You have, in consequence, maintained the order cancelling the guarantee.

4. The apparent discrepancy thus brought to our notice between the entry in Mr. Boyd's list and the terms of the original document, has induced us to institute a similar comparison in respect to each of the other guarantees to banking firms, which were reported on the same occasion by Mr. Boyd as being then in force. These were, No. 1 (Khoosalchund Ambydass, and Pervoodass Mooljei); No. 7 (Samul Bachur and Mungal Sukeedass), and No. 3, to Hucherut Bhaee, the widow of Samul Bukty, head of the firm of Hurrie Bhugtee.

5. In case No. 1, it appears, from the translation furnished by Mr. Boyd in 1840, that the document given to the party contained the words "the perpetual guarantee" of the Arab jemadars.

6. Major Walker, with the subsequent sanction of the Government, appears to have adopted this guarantee. But we entertain strong doubts whether, looking to the words of the perwannah itself, and to the circumstances of the case, it can be said that an obligation is thereby imposed on the Government of Bombay which is absolutely without limit in point of time. The perwannah is not to the party, his heirs, or descendants, but to his family and his gomastahs, without any words implying any period of time beyond his own life and residence at Baroda; and it is questionable whether the use of the word "perpetual" in the guarantee of the Arab jemadars can be construed to extend the period for which the original perwanna of the Guicawar was given.

7. It seems to us, also, that there is a wide difference between guarantees given by the officers of these Arab troops, whose employment depended on the will of the Guicawar, and was therefore in its very nature temporary, and such as have been given to various persons for insuring the possession of certain lands, offices, or pensions to themselves, and their descendants for ever.

8. It seems to be a misconception of the original engagement of the officers of these Arab troops, to construe such a guarantee as this into an obligation binding in perpetuity upon the Government.

9. These latter remarks apply to all guarantees taken over from the Arabs.

10. In case 7, the joint guarantee to Samul Bechur and Mungul Sukeedass, containing no words of inheritance, and being reported by Mr. Boyd not to be hereditary, has been cancelled; but Mungul Sukeedass held a separate guarantee from Mr. Duncan, containing distinct words of perpetuity.

11. In the remaining case, however, that of Hurree Bhugtee, there exists a variation between the original document and the entry in Mr. Boyd's list, similar to that which exists in the case of Manickchund Roopchund. Mr. Boyd's words are, "This guarantee will be in force while the firm exists." The terms, however, of the guarantee, which was given in 1809 by the Resident, Captain Carnac, were these: "In pursuance of the verbal assurance given by me, on the 5th August 1809, and the authority of the Government of the 22d of the same month, the family of the deceased shall be preserved in their rights and privileges, resident in the Guicawar territories, subject to their own merits."

12. The verbal assurance here referred to was reported by the Resident on the 10th August 1809, in the following words: "At the instigation of the administration, the family of Samul Bhugty received my verbal assurances of being preserved in the rights and privileges of the deceased during their residence in the possessions of the Guicawar, subject to their own merits." The resolution of Government is to the following effect: "The Governor in Council has no objection to the extent of Mr. Carnac's assurance as stated in the eighth paragraph of the above letter, which we consider as nothing more than a virtual continuation of the bhandarry, or general protection enjoyed by the deceased Samul Bhugty."

13. We cannot discover in these documents any pledge in perpetuity. The guarantee is to the "family of the deceased;" that is, to the widow Hucherut Bhaee, to any other widow or widows of Samul Bhugty, and to the son whom, by the guaranteed perwannah, Hucherut Baee was permitted to adopt. The adopted son, Bechur Samul, is dead, leaving two widows, one of whom, Joitabaee, is the same who has recently engaged so much of the attention of Government.

14. The inconvenience of these guarantees to our Government, and their objectionable character as affecting the Guicowar estate, have been too often noticed by us in our correspondence with your Government to require that we should here dwell on the importance of putting an end to them, in every case in which this can be done consistently with the obligations of good faith. If the express terms of the original documents are taken as a rule, the guarantee to Hurry Bhugtee, if not forfeited by misconduct, may, on a very liberal interpretation, be deemed to continue as long as the widows of the late Bechur Samul survive, but by no interpretation can it be extended further. In the case of Manickchund Roopchund, if the firm no longer contains among its partners any one who was a partner in it when the guarantee was given, our guarantee has ceased, except in regard to the realisation of the property of those to whom the guarantee was given, and in regard to any transactions undertaken before notice was given of the withdrawal of the guarantee.

15. Before, however, we pass a final decision on these cases, we are desirous that a further reference should be made to Mr. Davies, to ascertain on what ground he considers these guarantees as binding, so long as the firms may continue at Baroda.

16. Our investigation of these four cases has led us to think it probable that there are other instances in which a perpetual character is attributed to our guarantee, for reasons which a strict examination would not prove to be tenable. We, therefore, desire that you will forthwith institute a careful scrutiny into all the bhandarries now supposed to be perpetual, and that you will, with all practicable speed, report to us the result of your inquiry.

We are, &c.
(signed) *R. Ellice,*
J. Oliphant,
&c. &c.

London, 22 June 1853.

Number.	NAMES of the PERSONS GUARANTEED.	DATE AND SUBSTANCE OF AGREEMENT.		Date of Guarantee.	Date of Report to Government.	MR. BOYD'S REMARKS.
1	Kooshalchund Ambadass and Purboodass Mooljie.	- - 5 February 1801. 3d Zillad 1203 Fusta.	- - A guarantee for personal security for himself and family, and his gomastha Purmonund, had been granted by the Guicowar Government, which, on the removal of the Arabs, was exchanged for that of the British Government, and will exist while the firm remains at Baroda.	26 Feb. 1803	6 Feb. 1807	- - Koorshalchund is dead; but his widow continues the shop, and enjoys the guarantee, as specified. *See* Enclosure, No. 1.
2	Muncherjee Koorshedjee, Dessaee of Newsaree.	- 29 March 1801. 5th Rubulacool 1194.	- - A guarantee for the personal security of self, family, gomasthas and dependents, to enable them to reside at Nowsarcee, and for his office, unmolested. It is hereditary.	29 Mar. 1801	- - -	- - This guarantee is said to have been executed in Surat by Mr. Seton, where it will be traced, and is included in the Reports of 29th March 1805 and 26th November 1805. His family now reside at Nowsaree. No. 2.
3	Shunkerjee Soonderjee, Dessaee of Bullesur.	- - 27 April 1801. Wysuck Sood, 14th Sumbut 1857.	- - Guarantee for the enjoyment of certain dessangerree hucks in villages, and a village for the payment of palankeen expense. This is hereditary, and secures to himself and family the perpetual enjoyment of his rights as Dessaee of Bullesur.	26 Feb. 1803	29 Mar. 1805 and 26 Nov. 1808.	- - This person previously possessed the guarantee of the Arabs, and on their discharge it was exchanged for that of the British Government. This guarantee is hereditary, and secures the protection of person, family and property. *See* No. 3.
	Amrut Lall Tooljaram -	- - 10 Juma detakhur Sou Sun 1202, A. D. 1802.	- - Protection for himself and family, and certain gomasthas, specified by name, while trading as merchants, in any part of the Guicowar territories, either at Ahmedabad or Baroda, and the village Muckloompoor, in the Dushraee pergunnah of the zillah of Ahmedabad, formerly granted an enam from the Peishwa, to be continued in his possession.	11 Feb. 1803	29 Mar. 1805 and 26 Nov. 1805.	- - This person was Karbaree of Siloonhur, Soodedar of Ahmedabad when dispossessed of the place; was originally under Arab guarantee, but on their discharge this was exchanged for one of a similar nature by the British Government. Amrut Lall Tooljuram is deceased; but Sooreej Koonwar, his son's wife, is living at Ahmedabad, and enjoys the village of Muckhloompore in that zillah by virtue of the guarantee. But as Ahmedabad is now a British possession, there is little ground for considering any guarantee to be now in force, particularly as heirs are not mentioned in the original agreement. *Vide* Enclosure, No. 4.

Number.	NAMES of the PERSONS GUARANTEED.	DATE AND SUBSTANCE OF AGREEMENT.		Date of Guarantee.	Date of Report to Government.	MR. BOYD'S REMARKS.
5	Rowjee Appajee, Dewan -	8 June 1802 -	- - This man was dewan or minister at the Guicowar Durbar at the time of its first alliance with the British Government, and in consideration of the eminent services he performed for both Governments, the late Mr. Duncan gave him a paper confirming him in that situation, and, moreover, making it hereditary in his family, and containing a pledge on our part for the personal protection of himself, his brothers, nephews, sons-in-law, and dependents, against any injury from the Guicowar Government. This engagement is also specifically referred to in the different treaties entered into by the allied Government.	- - -	- - -	- - On Rowjee's decease he was succeeded by his adopted son, Seetaram. It is here only necessary to state, that for misconduct he was deprived of his situation of dewan, retaining the greater part of the allowances. He died on the 11th August 1823, and was succeeded in the power of the office by his son, Narrain Row Seetaram, who was nominally hereditary dewan of the Guicowar Government. For further particulars, refer to the records of Government for 1808 and 1809; and for the views of the present Government of Bombay, respecting the nature of the obligation of the British Government towards this family, *vide* Mr. Newnham's letter to the Resident, dated 2d July 1824, replying to Mr. Willoughby's letter reporting the death of Seetaram Nurrain, who having died, was succeeded by his son, Gunput Row Nurrain (about three years old), who enjoys the nemnook of his late father. *Vide* Enclosure, No. 5. Additional Remark. 1 August 1853. Rowjee Appajee is dead; but pensions have been guaranteed to his widow.
	Kandass Patell and Bhychund Dessaee.	- - 26 January 1803. Maysood, 4 Sumbar 1859.	-- Kundass Soon Ameen, patel of the Baroda pergunnah. The guarantee is for personal protection for himself, and family, agents and dependents, and security in the possession of Pusalia lands, houses, and all other just rights. This person and Bhychind Dessaee are both deceased, but the guarantee is still enjoyed by their families. The protection is not declared hereditary, and the nature of the property, being meeras or wuttun, seems not to have required it in respect to the inheritance.	15 Jan. 1803	11 Sept. 1827	- - These persons possessed the guarantee of the Arabs, which on their dismissal was confirmed by the British Government, and now extends to their families. *See* No. 6.
	Murgul Sukeedas - -	- - 5 February 1803. 12 Shabun.	- - - - - - - - - -	- - -	- - -	- - Mungul Sukeedas is dead. His son, Lallo Mongul, conducts his father's business in Baroda. The late Governor, Mr. Duncan, gave him a separate guarantee, 8th June 1802, securing to him in perpetuity the British protection for the defence of his house, trade and property, and for the safety of himself, wife, family and property, so that the heirs of Mongul Sukeedas are differently situated from those of Samul Bechur. *Vide* No. 7.

8	Soobkanjie Bin Tookoojie Pole.	-- 19 Mohur sum Soir Sun 1203. 12 July.	-- For the protection of self, family, property, dependents, and kurkoens, and security of nemnook, amounting to 11,800 rupees, assigned for his support. This person was Killeedar of Kaira when the town was ceded to the British Government. This guarantee is hereditary.	11 May 1803	15 Oct. 1805 and 26 Nov. 1808.	-- The guarantee was at first given in the name of Soobhanjie and his brother Soobajie. Five villages were assigned as their nemnook in lieu of 11,800 rupees. On the 22d April 1814, a new sumnud was granted exclusively in Soobhanjie's name, under the British guarantee, his brother Soohajie's name having been struck off from it, and a nemnook of 7,193 rupees was fixed for him, on condition that he should keep a force of 21 horse for the service of the Guicowar Government. In lieu of the above sum three villages were assigned to him on 7th February 1819. The villages were changed for others, and a new sunnad granted, the produce of the last-mentioned villages being unequal to the nemnook, assigned him a chittie on the Potdar, to the amount of 1,000 rupees, annually granted to him. The brothers are still alive. *See* No. 8.
9	Dowlut Rao Guicowar -	-- 21 Rubielawul Soir Sun 1208 Fustie.	-- Out of the nemnook of Kanogie Row Guicowar, amounting to 50,000 rupees, a sum of 4,000 rupees was assigned to his son, Dawlut Rao, the payment of which is guaranteed by the British Government. It is not hereditary.	24 Apr. 1802	- - - -	-- This is the son of Kanojee Rao Guicowar. He is now in confinement for having committed murder; but a nemnook of 6,150 rupees is enjoyed by him. An allowance of 50,000 rupees to Kanojie Rao was granted from the Guicowar Government for the support of himself and family, out of which Dewlut Rao has 4,000 rupees, the payment of which, as well as personal protection, was guaranteed by the British Government, inserted in the treaty entered into between the two Governments, dated 26th April 1806. His guarantee therefore is part of the one we gave to Kanojie Rao before his last rebellion, but which, as far as he was concerned, he cancelled by his own misconduct; but Dowlut Rao has always been protected by us. He has a daughter. *Vide* No. 9.
10	Mulhar Rao Guicowar -	- 2 Super Esunee Mualin non ilif Fussee, or A. D. 1801.	-- A pension of 50,000 rupees was assigned, after the capture of Mulhar Rao Guicowar on his second rebellion by Colonel Walker, for the maintenance of himself and family, and the same was guaranteed by the British Government.	7 June 1808	- - -	-- Mulhur Rao Guicowar died on the 23d May 1821; his son, Khundeh Rao, before him. An annuity is still enjoyed by the surviving members of his family, who are paid from Residency Treasury, as per chittees, from His Highness the Guicowar, as follows:—

Gunput Rao Guicowar - - -	1,200 Rupees.
Kunwunt Rao Guicowar - -	1,800 „
Mudhon Rao Guicowar - -	1,200 „
Sunbagee Rao Guicowar - -	1,200 „

These sums are paid to the heirs of the above individuals. In like manner, 2,400 rupees were paid annually by the Guicowar, through the Resident, to Hassun Bhacee Bhorn on account of Mulhar Rao; but it was discontinued by the Guicowar Government, and on the orders of the Bombay Government it was paid to the heirs of Hussan Bhaee, with arrears, on account of the British Government.

Besides the above, his second son, Jysingh Rao Guicowar, by a Rajhpootanee female, and other individuals receive a monthly pension of 800 rupees and 400 rupees annually from the Guicowar Government, a report on which was made by Mr. Norris, Acting Resident, dated the 17th August 1820. These sums are received direct from the Guicowar Government; but it is said they are not paid in full; in respect to which a representation was made to the Resident by Jysingh Rao Guicowar.

List of British Guarantees in force at *Baroda*, copied from the Statement submitted to Government by Mr. *Boyd*, in November 1840, &c.—*continued*.

Number.	NAMES of the PERSONS GUARANTEED.	DATE AND SUBSTANCE OF AGREEMENT.		Date of Guarantee.	Date of Report to Government.	MR. BOYD'S REMARKS.
11	Martund Rao Guicowar -	- - 28 December 1808, 3 Jilkad 1209.	- - Permission to come and reside at Baroda, without molestation, guaranteed by the British Government; not hereditary.	22 Dec. 1808 -	- - -	- - This person, with his brother, Morar Rao Guicowar, fled from Baroda, and returned under kool, or a verbal assurance, given by the British Government, of personal protection; subsequently a written deed was drawn out and executed, but the same does not appear to have been given to him, the original being now in the record office of the Residency. Morar Rao is dead, but Mookhund Rao is still alive, and enjoys an annual nennook of 5,000 rupees. *See* Enclosure, No. 11.
12	Manuckchund Roopchund	- - 23 March 1809. Chytur Sood Sumbut 1865.	- - The Guicowar Government granted to this person, an inhabitant of Surat, a perwannat or permit to establish a commercial house at Baroda, promising that he should not be molested. It will remain in force, while the firm exists at Baroda, under the guarantee of the British Government.	23 Mar. 1809	31 May 1827 -	- - This banking house still exists at Baroda. The heir of this person resides at Surat. *See* Translation, No. 12.
13	Bechur Samul, sole proprietor of the firm of Hurrie Bhugtee.	--8 Ramyan Soir Sun 1210.	- - Guaranteeing to Nahrut Baee, the widow of Samul Bhugtee, and her adopted son, Beecher Samul, protection, as the representative of the firm of Hurrie Bhugtee at Baroda, with Photedaree management and emoluments, and the possession of enam villages, preservation of their rights and privileges, with residence in the Guicowar territory, during good behaviour. This guarantee will be in force while the firm exists.	- - -	5 Aug. 1809 -	- - Bechur Samul is alive. The British guarantee is as follows: "In pursuance of the verbal assurance given by me on the 8th August 1809, and the authority of the Government, of the 22d of the same month, the family of the deceased shall be preserved in their rights and privileges, residence in the Guicowar territories, subject to their own merits. (signed) "*R. Carnac*, "Acting Resident at Baroda." *See* Translation, No. 13.
14	Dureabaoie Guicowar -	- - 10 February 1820. 24 Rubber Lakhur 1220, Soir Sun.	- - On the death of Annud Row Guicowar a pension of 13,000 rupees per annum, for herself and son, by name Luxamon Row, was settled by the Guicowar Government upon them.	10 Feb. 1820 -	25 Feb. 1820 -	- - Both Dureeabace Guicowar, and her son, Luxamon, are living, and enjoy the nemnook allowed them by the Guicowar Government. This guarantee confirms the Guicowar's sunnud, which only grants this allowance during the life of Dureeabace. The guarantee ensures the payment of this nemnook, and nothing more. *See* Translation, No. 14.

15	Oomed Koonwurbace -	- - 10 February 1820. 24 Rublia Lukhar 1220, Soir Sun.	- - A pension of 9,000 rupees was granted by the Guicowar's Government during her lifetime, but the guarantee is for two lives, viz., for herself and her son, Goopal Rao Guicowar. It is not hereditary.	- - -	25 Feb. 1820 -	- - Is a concubine of the late Annund Rao Guicowar, on whose death the pension of 9,000 rupees was granted, and is now enjoyed by her and her son. *Vide* Translation, No. 15.
16	Gunput Rao Guicowar -	- - 10 February 1821, 24 Rubir Luchur, Soir Sun 1220.	- - A pension of 4,000 rupees per annum was assigned to him, the payment of which is guaranteed, by the British Government, for life.	16 Feb. 1820 -	25 Feb. 1820 -	- - Gunput Row is an illegitimate son of the late Annund Row Guicowar, is now living, and enjoys the nemnook. The guarantee simply confirms the sunnud, which says nothing of how long it is to be enjoyed. It was, however, no doubt, intended for life. *See* Translation, No. 16.
17	Family of Futteh Sing Row Guicowar.	28 April 1826 -	- - Granting for life to Radabase, widow of Futteh Singh, a stipend of 10,400 rupees, and also to her adopted son, Govind Row, the payment of 12,400 rupees, terminable at his death.			- - This arrangement was originally made by Mr. Resident Williams, on the 28th April 1826, and subsequently confirmed and secured in the same terms, on the 27th March 1832, by Lord Clare, in person, with restrictions as to the future residence of the parties, who were required to keep to the Company's territories exclusively. No guarantee is affixed to the sunnud. A memorandum to the above effect was sent by Lord Clare to his Highness. *See* Translation, No. 17 and 17 A.
18	Nurrain Rao Mahadeo Muzmoondar.	- - 29 Zilkut, Soir Sun, 1220. 3 June 1828.	- - The office of mirzmoondar, and all its emoluments, was guaranteed by the British Government, as well as his enam villages, palankeen villages, and is hereditary.	25 Mar. 1830 -	- 15 June 1828. Sanctioned by Government, 27 June 1827.	- - Mahhoo Rao Gopul possessed the guarantee of the Arabs, dated the 3d November 1801. On the dismissal of the Arabs, the guarantee of the British Government was given for his personal protection, 14 April, and is inserted in the treaty between the two Governments, dated 29 July 1802. On the death of Mahdoo Row, he was succeeded in his situation and emoluments by his son Succaram, who had a sunnud granted to him, dated the 29th September 1808, which was reported to Government on 26th November 1808. On his death he was succeeded in like manner by his son, Madhoo Rao Succaram, who died in September 1827. He was permitted to adopt, and Nurrain Row, the present incumbent, now enjoys the whole emoluments, &c., under a new sunnud, in his name, guaranteed by the British Government, hereditarily. *See* Translation, No. 18.

List of British Guarantees in force at *Baroda*, copied from the Statement submitted to Government by Mr. *Boyd*, in November 1840, &c.—*continued*.

Number.	NAMES of the PERSONS GUARANTEED.	DATE AND SUBSTANCE OF AGREEMENT.		Date of Guarantee.	Date of Report to Government.	MR. BOYD'S REMARKS.
19	Bhasker Rao Wittul	6 Super Soir Sun 1229, or A.D. 18 August 1828.	This guarantee is for personal protection to himself, family and dependants, as well as for the security of his office of khasgee wulla duriehb, and nemnook connected therewith, according to the original sunnud granted to Babajee Appajie. The guarantee is hereditary.	2 Mar. 1830	7 Aug. 1828	A sumnad, dated 19 November 1806, duly guaranteed, was granted to Babajee Appajee, for the payment of his duriekh of khusgee wulla and nemnook, under a separate statement furnished to him, amounting in all to 1,22,901. The allowances for karkarees are exhibited under the same guarantee, as follows: 1. Khristna Rao Bhugwunt, or Kooshaba Warma (since deceased, leaving three sons), 6,000 rupees. 2. Ramchunder Myrul (since dead, without heirs), 4,000 rupees P. A. 3. Without Rao Dewojee, 9,900. This person, on being raised to the office of karbaree of Government, had a separate nemnook granted to him, and this allowance ceased. He died, leaving a son, whom he was allowed to adopt, by the British Government, but his Highness did not confirm the same, and an allowance of 24,000 rupees per annum has been settled on his adopted son, Khristna Row Withul. 4. Bushajee Dunoodhur, 3,000 rupees, and is in the enjoyment of his nimnook. 5. Babajee Appajee died in 1810, and was succeeded in his situation and its emoluments by his son, Withul Rao Babajie, and a new hereditary sunnud was granted, confirmatory of the former, and guaranteed by the British Government, dated 12 Zillah, Soir Sun, 1211, or A. D. 1811.

20 &	Neo Rao Dishmookh, father-in-law of Pillajee Rao.	4 February 1833	- - - - - - - - - - - - - - - - - -	- - - - - - - - - -	- - - - - - - - - -	- - Guaranteeing him a pension of 6,000 rupees annually for life. This nemnook is inserted in the sunnad which conferred the annuity on Pillajee, of which it forms a constituent part. *See* Translation.
21	Panachund Pillajee, Rao's Agent.	4 February 1833	- - - - - - - - - - - - - - - - - -	- - - - - - - - - -	- - - - - - - - - -	- - Guaranteeing him a pension of 2,000 rupees annually for life. This nemnook is mentioned in the sunnad granted to Pillajee Rao.
22	Poongajee Toorajee -	30 March 1840 -	- - Guaranteeing for life the payment of a monthly stipend, amounting to 75 rupees.	- - - - - - - - - -	- - - - - - - - - -	- - Personal protection is to be inferred, though not mentioned in the memorandums.
23	Gopal Rao Guicowar -	24 April 1840 -	- - Stipulation on the part of the Guicowar Government to pay Gopal Row, the son of Gopal Row Guicowar, of Suhkera, the monthly stipend of 300 rupees, communicated by his Highness, dated 24 April 1840.	- - - - - - - - - -	- - - - - - - - - -	- - This arrangement was effected by the Resident, and subsequently confirmed by Government, on the 10th July 1839. From the correspondence it does not appear how long it is to be enjoyed. Gopal Row is still alive. Our guarantee has not been formally affixed to any sunnud, and seems only to extend to securing the regular payment of the allowance.

Withul Rao Babajee died on 6th August 1828, but, having no son, the widow adopted Bhusker Rao, to whom also was passed a re-confirmatory sunnud, with guarantee as before; he is now in enjoyment of the whole of the income and emoluments held by his late father, Withul Rao, with the exception of 8,070 rupees per annum less than the grants set forth in the sunnud, which appears as follows:

	Rs.
Dristoree on all Pugahs - -	6,300
Decata on Waghorra Pergunnahs -	75
Mahuls, included in Company's territories - - - - -	1,695
Rs.	8,070

Political Commissioner's Office, Baroda, 18 November 1841.

(signed) *W. S. Boyd,*
Political Commissioner and Resident.

No. 1.

* His wife adopted the son of Peinoodass Kesordass, who is at Gwalior.

TRANSLATION of a Perwannah granted by Anund Rao Guicowar to Kooshallchund* Ambydass and Pawoodass Mooljee Sonewis, Inhabitants of Baroda.

Set forth,

YOU wish to reside in Baroda, to carry on the business of a banker and merchant peaceably, for which you wish a promise of protection from this Government, and have made a representation to that effect. This paper is therefore sent to you, desiring you to reside, together with your family, and your gomastah pennanund in Baroda, and trade in peace, and you shall experience no injury, either from the Government or anybody else. If you wish to leave Baroda to proceed to any other place, you shall be allowed to do so; whence you wish to go we will cause you to arrive there.

For the due performance of what is written above, the perpetual guarantee of Meer Kerman, Lodeen Husseen Khur Bhadeer, of Asha, Bin Naser, and Mahomed Bin Ahmood, jemandars, is given to you. Dated 19th Ramyan 1201 of Fuslee, or A. D. 1801.

Signed and sealed by the persons.

When the two Arab zemindars were dismissed from the service of this Government, their bhanderry was withdrawn, and that of Major Walker, on the part of the Honourable Company, substituted instead, which was consented to by Government. Dated 3d Zilead 1203 of Fuslee, or A. D. 1803.

(Seal of Major Walker.)

Baroda, 31 March 1820. (signed) *A. Walker*, Resident.

No. 2.

TRANSLATION of a Perwannah granted by Govind Row Guicowar to Muncherjie Kursitjee Dessay, dated 5th Rubee ool Owul 1194, A. D. 13th October 1793.

WHEREAS you, four years ago, left Nosury, and have since resided in Surat, and now you have sent your agent, Moohlyram Dyuldars, on your behalf, to wait upon us at Poona, and to state that you have thus absconded through fear of oppression, and that you have suffered great injury through the dishonesty of your partners and relations in your lands of inheritance or purchase, whereon he prays us to grant you protection, as was given you by the late Futteh Sing Rao Guicowar, under the guarantee of the British Government, and extend the same to your family and dependents, in which case you would return to Nosary, for the prosperity of our districts there, with unremitting zeal and fidelity. On this representation we have taken into consideration how long you have been in our service; therefore we have addressed a letter to Mr. Griffiths, the chief of Surat, begging him to give you our assurances, under the guarantee of his Government, for your safety from oppression, as was formerly given you in the name of the British Government.

We hold you in high estimation, as an able and zealous servant of our sirkar, nor shall you be oppressed, or your suggestions opposed without cause. Fear nothing, but relying on our solemn promises, and the guarantee of the British Government, return to your district, and labour for its improvement. You and your gomastahs and families, and dependents of every sort, may rest satisfied that no injustice shall be practised against you. Discharge, therefore, your duties honestly and zealously, and let your minds be relieved of every apprehension. You and your dependents, it is hereby solemnly promised, shall suffer no injustice.

(True translation.)

No. 3.

Malsa Kanth (Seal.)

TRANSLATION of a Guarantee given by Annund Row, Guicowar, Sina Khus Keyl, Shumshere Bahadar, to Sunkerjie Soonderjie, Dessaee of Ballisur; date Sunnad 1857, Wyshuk Sood 14, or A. D. 28th April 1801.

You have sent your father, Doolubjee Kallonnjee, to Baroda; he has informed me that the dessan of the pergunnah above mentioned, Soondeajee Soonjee, on the death of his son, by his first wife, at the age of 30, and having no other, at the age of 59 or 60 years married again, four or five years after this, having no family or expectation of one, nor hopes of much longer life. Arrived at the end of life, having no heir, the wuttun will depart. Then having collected in one place four friends, the Koomavisdar of Newsoree Tumbuck, Kundeeron, on the part of the Amuldar of the Moosulmans, Multharjee Shil, his gomastah, Mooljee

Mooljee Govindjee, the gomastah of Tuperdass Luldass, of Surat, Nunabhye Josee, the kharbaree of the above mentioned (Soondergie Soonjie), Koorshajie Mehta Pursee, the mother of his second wife, Goolub, and all the inhabitants of the town, informed them that the wuttun would leave his family, as he had no heir. On hearing this all decided that the whole of them should ask Dulubjee Kuluanjee, who had a large family, to give one of his three sons. They then sent Nunabhye Josee, who called him, and they then told him that he had arrived at the end of life, that his family would be extinct, that he was his friend, and had three sons, of whom he required the youngest. On this Doolubjee, before the dessan, the dessan's wife, the two karbarees, and all the assembly, consented that, his youngest son's wife and the dessan's wife being sisters, on account of the relationship he would give the youngest son. This being done, it was not known whether the wife was pregnant, and eight days after the adoption, Soonderjee Dessan died, on which you, the adopted son, performed the rites, the wife became a widow, and all the zemindars, the karbaree of the Madree Rajah, and the karbaree of the Amuldar of the Mussulmans, all come and gave the cloths of condolence. After this Kooshajie Mehta, head kurbar, and the widow of the dessan conferring in private, resolved that the adoption of the friend's son was not advantageous to them, and that having money they would raise objections. After which they contrived that they should say that she was in the third month of her pregnancy, and that six months remained, and that should she have a son he would possess the wutton, and that he would give the adopted heir four or five villages of his desangeeree, and a house and slaves; thus they began to talk about. At the time of the Soonwar (a day before the birth and forty days afterwards) the dessaeen said that the child had died in the womb; 13 months after this she produced a girl; 22 months had elapsed, a time which was never before heard of. After the birth of the girl, Kooshajie advised that the management of the wutton, and the wutton itself, should be carried on in the name of the person betrothed to the girl. Daolubjee Kallianjee complained to the Sirkar, and Koonshajie, by bribery, prevented his complaint from being attended to. After this, in the time of Baba Suhel, he twice or three times petitioned Koorshajie Mehta, appropriated to himself much money from the districts in Sunvut 1851. Dolubjee complained of this, at which time 41,000 rupees were taken by the Sirkar. Koorshajee, in his design of marrying the daughter of the dessaeen, betrothed her to the son of Hurry Bhycee Soorjee, of Meehtee. You, then, having come to the Sirkar, informed Baba Suhel of this, who, understanding it, sent Suwars and a karkoon to the district, and put the dessaeen and her child under restraint, and brought Koorshajie and his two sons to Baroda, and imprisoned them. Koorshajie died in confinement, and Baba Suhel afterwards died. After this, in the reign of Kanojie Row Guicowar, the son of Koorshajee, through the means of Duda Parsee, caused inquiry to be made, and by bribery caused a sunnad to be drawn out in the name of the husband of the daughter of the dessaeen, and exchanging the officers of the district, imprisoned Kurnavishdar and you; and Pustorjee Koorhajee, taking a new mamletbar, managed the mahul, and appropriated to himself as much as 20,000 rupees. After this the Parsee, on being acquainted with the change of things, taking all his property, with the dessaeen and her daughter, fled to Surat, and the marriage of the daughter, which had been forbidden, was there celebrated. After this, on being released, the Kurmevishdar and you were called to Baroda, and after your arrival, the statements being heard, orders were issued that Kanojee Row Guicowar, on the false representations of the Parsee, had given the sunnad, which was improper; that you should give some nuzzarana, and that in your name, as adopted by Loonderjie, a sunnud for you and your heirs, with a perpetual guarantee, should be given you, according to the order agreed to, the nuzzarana and the Sirkar befriending you; in your name, Sunkerjee Soonderjee, dessan of the aforesaid pergunnahs, according to the adoption by Soonderjia as his son, so all the customary rights on the villages of his dessangeree, according to custom, and the villages for pulkee allowance, do you take for you and your heirs, and perform service for the Government in that pergunnah to your best ability. Accordingly, this perpetual guarantee is given to you and Doolubjee Kullianjee, no injustice will ever be practised on you; the Sirkar acknowledging that you are the son of Soonderjee Soorjee, having taken a nuzzarana of 32,000 rupees, delivers the wuttun to you. From this there will be no change. In this matter the bhundars (guaranteers) are Meerkaumalooden-Koosain Khan, Buheedar, Ameen Zemindar, Hya Bin Nasser Sooltan Jusseen Jamadar, Mahemeinma Abood Zemindar, and Mahomed Nuzhoor Zemindar.

Sumout 1857, Wyshah Shood 14th.

Here are six signatures and four seals of the bhandurs.

The Arab zemindars have been discharged by the Sirkar on this account, their bhanderries being taken off. Major Walker, Suhed in the service of the Honourable English Company, has agreed to the bhandaree as above written.

Sumnut 1859, Fulgoon Shood 5th.

No. 4.

TRANSLATION of a Perwannah issued by Annund Row Guicowar, Sina Khuskeyl Shumshere Bhader, in favour of Umrut Lall Toolzerum, Inhabitants of Ahmedabad, in the year 1202, Fusta, corresponding with A.D. 1801.

Sets forth,

THIS Government now makes the following engagements with you, and gives you this kolumbundy for its performance.

Art. 1. You are permitted to reside peaceably either in Baroda, Ahmedabad, or in any other place in the Guicowar territories which you prefer, along with your family, and your gomastahs Purshootum, Tuila, Runchoir Coobore, Sevahram, Kaoulram and Gunnesh Mehta, in the capacity of a merchant, and no one shall injure you, which the Government will take care of as long as you conduct yourself properly. For the due performance of this Article, the perpetual bhandary of Government is given in the names of Ahina Bin Gujee, Sultan Jassire, Moobaruk Bin Syed, and Mahimea Abood, Arab zemindars.

Art. 2. The village of Mukdoompoor, in the Duscooria pergunnah, in the Paeshwar's share of the city of Ahmedabad, which was formerly given you in enam by the comavishdar of that district, shall, according to your request, still continue in your possession from Sumrut 1858.

Art. 3. The 1,400 rupees deposited in the house of a shroff at Dholka, and which was taken away by Jutabhye Guicowar, shall be deducted from the money you will present to Government as a niziranah, provided it is ascertained that the money was actually taken away by Jutabhye.

Art. 4. The bill of exchange drawn upon Sheer Mahomed, of Dholka, for 1,200 rupees, and which was given to this Government, shall likewise be brought to account if, upon inquiry, it is found out that that sum has been received from Sheer Mahomed; but if the money still continues unpaid, the bill shall be returned to you, and a letter given to you from this Government. If Jutabhye Guicowar has received any part of the money, it shall be deducted from the account.

Art. 5. It is your request that the four horses and one pony, a camel and garas with bullocks, on garee ornamented with gold, which are now in the possession of Beechah Zemindar, as well as six bundles of cloth in the possession of a person by name Oopadeya, possesses, together with any other articles, which the Government or any person formerly took away from you, shall be restored to you on proof of the fact. To this request the Government consents to restore you two horses and one garee with bullocks and all other articles in the possession of any body else; it will order them to be returned to you.

Art. 6. You have made a request that the bond which Canojee Row Guicowar formerly obtained from you should be given back to you, which shall be complied with, if the bond is found in the possession of Government; but should it not be discovered, a receipt shall be given you for it.

Art. 7. You have likewise requested that the bond obtained by Government from Bachur Parah, belonging to Boodrabhye, may be given back to him. The Government believes that it has already been returned, but if not it shall be so.

Art. 8. You request that five of your domestics may be taken into the service of Government, and that the silver stick of your chobdar may be returned. The Government consent to employ five persons belonging to you in the sebundy stationed at Ahmedabad.

Art. 9. You request that the Government will order everybody who owes you money to pay it to you; the Government consents to do so, with the exception of the money levied by Shalookeer, formerly comavishdar of Ahmedabad.

Art. 10. You request that the Government, out of its kindness, will restore you the jewels and ornaments formerly plundered from your house, and likewise that the jewels, &c. taken away by other persons, may be recovered from them, upon your identifying them as your property. In answer to this, the Government states that it did not obtain any articles of jewellery, but whatever articles are proved by you to have been taken away by other persons, it will cause them to be restored to you.

Art. 11. You request that, in case any person should hereafter come to Ahmedabad, in the capacity of a comavishdar, on the part of the Peishwar, that that person should give you a perwannah for your satisfaction.

The Government reply, should a comavishdar come in the space of five years, then this Government will cause him to give the perwannah requested.

Art. 12. The Government permits you to reside in its territories, and to carry on the business of a merchant therein, for which bhandhery is given; but if you wish to proceed anywhere else, you shall be allowed to do so, and shall not receive any injury from Government; you must not, however, behave ill on account of Shillenea, but carry on the business of a merchant in peace.

Art. 13.

Art. 13. You request that you may suffer no injury from the Peishwar at Poona. The Government agrees never to send you there, unless it is your own pleasure to go there.

These 13 articles have been written, and shall be strictly performed. The sum of money which you have engaged to pay to Government as a nurzirana must be paid, and you must behave yourself properly in future. The bundles of clothes belonging to you when at Ahmedabad, and which were taken from you by Government, shall be returned to you.

(signed) *Shunabin Guzee,* (his seal.)
Sultan Jussire, (his seal.)
Mooburah bin Syed, (his seal.)
Mahomed Abood, (his seal.)

Dated 10th of Jumadie-ul Ahher.

N.B.—The above four zemindars were formerly the guarantees for the performance of the above-written 13 articles; but when they were dismissed the employment of this Government, an extra clause was inserted affixing the bhandary of Major Walker, on the part of the Company, and Kumaloodeen Kussein Khan, and Ameen bin Hameed Zemindar, on the part of the Guicowar Government, dated the 10th of Shawul 1203, Sumrul 1859 Margsood the 12th, at which time the seals of the four zemindars were taken off, and their signatures erased from the deed, and those of Major Walker were affixed instead.

No. 5.

TRANSLATION of a Letter to Sularam Ronjie from the Honourable *Jonathan Duncan,* Governor in Council, in Bombay, dated the 8th June 1802.

A. C.

IT is the desire of the Bombay Government that the Deewangury of the Baroda Government, now held by Sularem Ronjie, may be continued to his posterity from generation to generation, and the Government will support his sons, his brothers, his nephews, and all his relations and friends, whenever it can be done with justice and propriety; and if the Guicowar Government, or any other, should behave unjustly, either to you or to your successors, &c., then the Honourable Company will come between, and settle the dispute.

I am concerned in this agreement, and have affixed to this letter my signature, and the seal of the Honourable Company.

No. 6.

TRANSLATION of a Perwannah granted by Govind Rao Guicowar to Bychund Khoosalchund, Dessaee, and Kandass Wagjie, Putel of the Village of Danapura, together with their Gomastahs and Attendants.

Sets forth,

IN former times the Government disputed your money account, and on that account you, being fearful, left the city of Baroda; some time after this the Government issued a perwona, recalling you, upon which you returned, and settled your account, and gave you a separate memorandum, containing 10 articles, which shall be strictly conformed to, for which bhandary is given you, in the names of Nurrain Row Rajah Pundreh, Almanee Zemindar, Hyder Zemindar, and Nasur Zemindar. After this no more notice shall be taken of the former dispute, for which perpetual bhandary is given.

(signed) *Nurrain Row Rajah Pindeeh,* (his seal.)
Almanee Jemandar, (his seal.)
Hydeer Jemandar, (his seal.)
Nasir Jemandar, (his seal.)

Dated Sumvut 1851, 8th of Cehyler Wad.

N.B.—When the three last jemandars were dismissed from the service of the Guicowar Government, their seals were taken away, and their signatures erased, at which time the bhandary of the Honourable Company was substituted, and the seal of Major Walker affixed instead, under date Sumvut 1859, Maysood, the 4th Sumvut 1876, 21st December 1819.

No. 7.

Baroda, 7 January 1803.

WHEREAS Mungul Sukeedass, late of Ahmedabad, now residing at Baroda, hath not only given a proof of his disposition to render himself worthy of the Honourable English East India Company's good-will and protection, but has fully answered the expectations entertained by the Honourable the Governor of Bombay, as expressed in his certificate, bearing date the 8th June last, hereunto annexed; and having readily and amply contributed towards accomplishing the Company's views in this country, I do hereby declare for myself, and on behalf of the Honourable Company, that he is deserving of their favour and protection, and that they do, by these presents, assure and bind themselves to protect and defend his house, trade and property, at this place at Ahmedabad, Dolherah, Surat and Bombay, against any unjust attack or claim from the English or Giucowar Government, and that this protection shall extend to him, his wife, children, and their posterity for ever. Given under my hand, and the Company's seal, in Baroda, the day, month, and year above written.

(signed) *A. Walker*, Resident.

Cambay, 8 June 1802.

THIS is to certify that Mongul Sukeedass, shroff, at Baroda, and who has also a house of business at Ahmedabad, and another at Surat, is entitled to the Honourable English East India Company's good-will and protection, from the disposition he has hitherto shown to render himself worthy of their favour, in which I have great confidence he will preserve.

No. 8.

TRANSLATION of the Sunnud granted by Anand Row Guicowar to Soobhajie and Soobanjie Pol, Pugedars, in his service.

THE following are the particulars of your deed of settlement granted to you, Soolbhajie Pool and Soobhanjie Pool, this (12th day of July 1808) by the Guicowar Sirkar.

Modeh Pergunah	Kokliej	2,000		
	Wusna	1,200		4,700
	Sutra	1,500		
Maler Pergunah	Sumeedra	1,000		
	Antroly	900		1,900
Pitland Pergunah	Sundaie			4,000
			TOTAL Rs.	10,600

1. The pugah you at present command is to remain in your charge, as heretofore; the pugahs shall continue yours, the following to be the villages whence the pugahs shall be paid:

Of these six villages, the total produce of which is estimated at 10,600 rupees, the proceeds of Antroly, or 900 rupees a year, are assigned for your personal expenses; and the remaining proceeds, or 9,700 rupees, for the expenses of the pugah, agreeable to the custom of such establishments.

2. You two above named, with your children, dependents and karkoons, and relations, are leaving the Fort of Kaira, are at liberty to fix your residence wherever you shall think proper, that fort alone excepted, and wherever you remove to, there you shall be free from every molestration; you shall on no account whatever suffer any injury so long as you choose to remain, and whenever the wish to remove to your own wutteen induces you to remove thence, we will see you safely thither.

3. Your personal property attached to the pugah, of every possible denomination, iron or wood, cloth or rope, is given up to you, and you are to remove the same at your convenience; but you are carefully to abstain from appropriating any sirkar accoutrements or stores attached to the pugah.

4. All the claims you advance against the people of the place shall be carefully investigated and equitably adjusted.

5. The accounts of your karbury, Mooljie Jutidee, shall be equitably examined and adjusted.

6. You have hitherto discharged the duties of killadar of the Fort of Kavia, and you may in the performance of your duties have made yourself enemies among the rhyuts or grassias

grassias or others. These people shall on no account offer you any molestation; should they do so, the Sirkar will take measures for your protection, such as stated in these six paragraphs are the terms of your settlement; and in perpetual guarantee thereto, Major Walker, the Resident, pledges the bhundary of the British Government, and Ameen Bin Humeed Zemindar on his own behalf.

Signed and sealed, &c., by

Major *Walker* and *Ameen Zemindar.*

TRANSLATION of Memorandum under the Sirkar Seal of the Guicowar Government, granted by his Highness Annund Row Guicowar in favour of Kanojie Row Guicowar, dated 21st Rubie ul Oowul, Fusly 1208, A. D. 1807.

IT is hereby registered, that we promise and pledge ourselves to provide a suitable establishment and income for you, our kinsman, Kanojie Row Guicowar, to be paid by our Sirkar at the following rates per annum (interculary months in the leap-year not being considered additional).

For yourself and family:	*Rs.*
Your mother's pension and establishment	4,000
Your personal expenses	32,000
Your son's establishment	4,000
TOTAL Rs.	40,000

For the following individuals on your establishment:

Suddashaw Row Mohray	5,000
Nuoujie Putill Goley	3,000
Shen Row Sudeeshan	2,000
TOTAL Rs.	10,000

A total of 50,000 rupees, and the same is pledged to you, payable yearly; and the same shall accordingly be paid to you year by year by this Government.

No. 10.

TRANSLATION of a Letter to Anund Row Guicowar, Sera Khuskeyl Shumshire Bhudar, from Mulhar Row Guicowar Nemut, Bhadur.

A. C.

I QUARRELLED with you and owed you money, for which I gave you security; the person who was my security came to me, but I would not have an interview, but raising an army took your part of Veisanugger, and rebelled against you, and began to contend and fight with Babajee Appajee. On this account you requested the assistance of the Honourable Company. After that, Governor Duncan Bhadur proposed to me to make peace, but I would not hear him, and behaved unfriendly towards him. In consequence of this you obtained the assistance of the Honourable Company, who having taken from me Kurrie and other places, gave them to your Government, and set aside the pergunnah of Neried, of about the annual value of 1,25,000 rupees, as a jagheer for my support. I will now reside in that pergunnah with my sons and family, and will conduct myself properly. The Governor has assured you of my future good behaviour, and according to his assurance I will conduct myself, and there shall be no difference. The jagheer which has been given me for the maintenance of my family I will enjoy, and remain in peace and quietness, and except this jagheer, I will not advance any other claims for my former possessions.

If in time I perform faithfully this agreement, then by the permission of the Governor Bhadur, you will increase my jagheer a little.

Dated the 2d of Super, in year of Fusli esunee Meeaton woh, Ulif, corresponding with A. D. 1801.

(Seal.) *Mooruttal Shud.*

For this agreement the bhandary of the Honourable Company is given by Major Walker.

(signed) *Alexander Walker,*
Resident at Baroda, (Seal).

Baroda Residence,
18 March 1820.

(signed) *Meer Keemaul-ood-deen,*
Hodssein Khan Bhadur, (Seal.)

To *Francis Warden*, Esq., Chief Secretary to Government, Bombay.

Sir,

I HAVE the honour to acknowledge the receipt of Mr. Secretary Henderson's letter, dated the 12th ultimo, enclosing copies of a letter from Mulhur Row Guicowar, and its accompaniments, and directing me to report upon the claim advanced therein by that person.

2. It appears that in Sumroot 1870, corresponding with A. D. 1814, a nimnook of 10,000 rupees per annum was given by Futteh Sing Guicowar to Soojoonabhye, on her arrival at Baroda from Cutch, for the maintenance of herself and the other illegitimate branches of the family of Mulhur Row Guicowar, 800 rupees of which was to be paid monthly, and the remaining 400 at the end of the year.

3. Captain Carnac was informed of this arrangement, but it does not appear that it was reported by him to the Bombay Government, nor is any copy of the nimnook to be found among the Baroda records. The nimnook did not specify how the 800 rupees were to be divided amongst the different members of the family, but at the time it was given, Futteh Sing appointed a man of the name of Mucajie Morah to take care of the family, and pay the money to them, which he did in the following proportions:

	Rs.
1. To Subnoobhye, a concubine of Mulhar Row	150
2. To Nubalabhye, a daughter of Sooynabhye	65
3. To Tyesing Row Guicowar, son of Mulhur Row	100
4. To Purbabhye, the widow of Tumbuck Row, who was an illegitimate brother of Mulhur Row	75
5. To Rupabhye, a concubine of ditto	60
6. To Manuckbhye, a concubine of ditto, and her daughter, by name Gurga	25
7. To Luckunubhye, a concubine of ditto, and her daughter, by name Mynubhye	25
8. To Munabhye, a concubine of ditto, and her daughter, by name Ambabhye	25
9. To Mulabhye, a concubine, and her daughter, Oomalhye	25
10. To Manuckbhye, a concubine of ditto	10
11. To Gopabhye, a concubine of ditto	10
12. To Dewabhye, a concubine of ditto	10
13. To Rubluedbhye, a concubine of ditto	10
14. To Koorhalla, a slave girl of Lugnoobhye	5
15. To the dependents of Moharoonerbhyea, concubine of Mulhar Row Guicowar	31
16. To the dependents of Sooboobhye, the widow of Pertab Row, an illegitimate brother of Mulhar Row	37
17. To Dewa, or expenses incurred on account of the God	15
18. To the Karbary	20
19. To a Carcoon	19
20. To the Shargird Peishwa, or attendants of Jey Sing Row Guicowar	50
21. Buta, or deduction on account of Potdaree	33
TOTAL Rs.	800

4. The 400 rupees before alluded to was paid to Suguoobhye, who divided it between herself and the other members of the family. Things continued to be conducted in this manner until Mucoojee Marah was turned out of his situation, on account of some improper behaviour; after which, according to the desire of Suguoobhye, the money was paid to Jyesing Mulhur, Row's son, who paid to each person the same sum as above specified.

5. Sugnoobhy died in the month of July 1819, and soon after a quarrel arose between Nubdabhye, the daughter of the deceased, and Jysing Row Guicowar, regarding the property belonging to Mulhar Row, in the possession of Sugnoobhye during her lifetime.

6. Gunput

6. Gunput Row Towreh, the husband of Nubdabhye, and the person of whom Jyesing Row complains, in his letter to his father, Mulher Row, visited Gyabhye, the mother of Seeajee, and having received countenance from that lady, began to quarrel with the other members of the family, a part of whom espoused his cause, and thus the family became divided into two opposing parties, with the husband of Nubdabhye at the head of one, and Jyesing Row Guicowar at the head of the other.

7. The persons who espoused the cause of Gunput Row Towreh, and the monthly stipends each received respectively, were as follows:

	Rupees per ann.
1. Gunput Row Towreh	75
2. Nabdabhye, his wife	65
3. Manuckbhye and his daughter	25
4. Lucksimubhye and daughter	25
5. Manuckbhye	10
6. Dewabhye	10
TOTAL Rupees	210

8. By the above statement, it will be perceived that the above persons formerly only received collectively 210 rupees monthly, out of the 800 allotted by Futteh Sing for the maintenance of the family of Mulhar Sing. Jyesing and his party now represent that his Highness Seeajee Row has directed the former allowances to be divided into two equal parts, one to be given to Jyesing and his party, and the other to Gunput Row and his party. This arrangement the former consider (and perhaps not without reason) as unfair, and pray that the individuals above enumerated may only receive the sums formerly allotted to each, and that the cloths formerly given to the family on the festivals of Nagpuchmee and Dussirah may be presented to them as usual.

9. Upon the question of the right of the British Government to interfere in the distribution of the allowance of 10,000 rupees, the Honourable the Governor in Council will decide. The circumstances of importance in this part of the case are as follows:—The sum of 50,000 rupees was settled through Colonel Walker, by the Guicowar Government, at the request of the Honourable the Governor of Bombay, upon Mulhar Row and his family, and 35,000 rupees on that of Kundeh Row, his son, as being the better life of the two. This settlement was concluded in Sumrut 1864, or A. D. 1808, on Khundeh Row's death. A deduction of about 18,000 rupees in the allowance took place in A. D. in 1814, as mentioned in the second para. of this letter: this was partly made up by an additional grant of 10,000 rupees a year. If from these circumstances the grant of 10,000 rupees shall be considered to be a part of the 50,000 rupees, the British Government would appear to have a right to demand that, as the settlement was made through its medium and at its request, the several payments should be made by his Highness, so as to satisfy the parties concerned, or, in failure of this, that the British Government should itself superintend the disbursement of the money. If the 10,000 rupees shall be regarded as separate from the original grant to Mulhar Row's family, an opposite decision will be formed.

10. Of the settlements of 1808, there is a memorandum in the records, duly signed and sealed by his Highness the Guicowar. In this memorandum it is specified that villages to the amount of 50,000 rupees were to be given to the family, which, however, never appears to have been actually assigned for the support of Mulhar Row and his family, who have always received a money payment instead. According to the last statement of the disbursement of this Government, the whole expenses charged on account of Mulhar Row (including the 10,000 rupees) amount to 40,920 rupees per annum, which decrease of the original sum arises from the large deduction made on the death of Kundah Row, the son of Mulhar Row.

11. Some objection may be made by His Highness Seeajie to the family receiving their allowances from the Residency monthly, as such was never stipulated nor agreed upon. This question seems to rest in a great measure upon the same grounds as that of our right of interference. If we have a right to interfere, we should be entitled to expect that the allowance should be fairly divided among the members of Malhar Row's family, and if this object could not be otherwise attained, to require that these several stipends should be paid under our superintendence.

I have, &c.

No. 13.

TRANSLATION of an Agreement entered into by the Guicowar Government with the Widow of Samul Bhugty, by name Hucherut Bhye, states,

THE husband of Hucherut Bhye, by name Samul, having died without issue, and the Government having transacted business for a very long time with the house of his father, Hurry Bhugty Parieh, the Government will continue to do the same in future.

The widow having made a representation to Government, it, in consequence thereof, granted her permission to adopt a son, and at the same time gave her the following regulations for all future transactions which the Government might have with her house:

1st. In former times there were two brothers, by name Hurree and Buhty, who both died without issue; this the widow of Buhty, by name Ruttenbhye, having obtained the permission of Government, adopted the nephew of her late husband, by name Samul Paraeh, and entrusted to him the management of the affairs of the house, on the former footing. Some time after this Ruttenbye died, and one year after her demise, Samul Paraeh likewise died, leaving no issue. After this event it was requisite that the business of the house at Baroda (of Samul Bechur, deceased), and other houses in other places connected with the same, should be transacted as usual, and his widow, Hucherutbhye, having made a representation to Government that a distant first paternal relation, Hurree and Buhty, by name Bookun Govindjie, had a child living, by name Beechur, she wished to make him her adopted son, in order that she might give him the management of all the affairs of her late husband's house, as well as the transactions with Government in the potdaree, on its present footing. The Government having considered the subject, granted her leave to adopt the boy, and promised to transact business with the house as formerly. This banking firm is extensive, and connected with Government, and it is proper to be entrusted with the Government potdaree, and wishing to befriend the house, is desirous to continue the business in its hands, and have therefore granted to the widow a sunnud of adoption, in conformity to which it will abide.

2d. The sunnad of the village of Goriad, in the Baroda pergunnah, given in enam to Samul Parieh, is now granted to the adopted son of Hucheratbhye, by name Beecher Samul.

3d. The widow Hucheratbhye represents that some of her houses are situated in the territory of this Government, and others out of its jurisdiction, and therefore requests that a letter

a letter may be given to her, granting her permission to transact business in the same manner as formerly, upon the necessary authorities. To this the Government reply, that every transaction of her house must be carried on in a fair and honest way, and upon which letters may now or hereafter be required; this shall be granted to her.

4th. Hucherutbye represents, that she wishes to recover different debts from sundry persons, and if any person refuses to give what is justly due, she requests that Government will make him do so; to which request the Government accedes, in all cases where equitable demands exist.

5th. The adopted son, Beechur Samul, is to transact business in consonance with the wishes of his mother, Hucherutbhye, and as long as she lives he is to acquaint her with everything that is done; and Hucherutbhye having adopted Beechur Samul of her own free will, is to treat him in every respect like her own son.

6th. In the province of Surat, Ataveesy, an Assamee, of the annual value of 2,250 rupees, was granted to Hurree Buhtee on account of transacting the business of the Government potidaree. In consequence, however, of this Government ceding some of the districts in that province to the Honourable Company, a loss was occasioned to them of 1,000 rupees from the above Assamee; the remainder, however, amounting to 1,250 rupees, shall continue to be paid to Beechur Samul.

These six articles having been agreed to by the Government, Huchurutbye, shall remain in force; for the due performance of which the guarantee of the Honourable Company has been given.

Dated the 8th of Ramzan, at Baroda, in the year of Fusler Asher Miatin-woulif, or 1210.

(Seal) of *Murootbul Shud.*

In pursuance of the verbal assurance given by me, on the 5th August 1809, and the authority of the Government of the 22d of the same month, the family of the deceased will be preserved in their rights and privileges, resident in the Guicowar territories, subject to their own merits.

Baroda,

No. 17.

TRANSLATION of a Document presented to his Highness the Guicowar, on the 27th March 1832, at Baroda, by Lord *Clare*, on the part of the British Government, being an Agreement between the two Governments for the Wissulla Payment of a certain Advance granted by his Highness to Govind Row Guicowar.

HIS Highness Syajie Row Guicowar entered into an agreement with the British Government, by the advice and with the consent of Mr. Williams, Resident of Baroda, on the 28th April 1826, a Chyle wud 7th Sumvut 1882, by which it was settled that a nimnook of 12,400 rupees a year should be paid to Govind Row Guicowar; wherefore his Highness, after deducting what he has paid of the sum up to the present time, is to pay up the remainder, and in future to pay the nimnook each year, by giving an order on his banker every six months, through the medium of the British Government, to be cashed without deducting commission or per-centage, to be continued for the whole period of his life, after which it will revert to the Guicowar Government.

The British Government admits that Govind Row Guicowar has acted in opposition to the Guicowar Government, and that therefore he ought not to be allowed to enter the Guicowar territory without permission from the Guicowar Government, but that he should in consequence be compelled to reside at Surat, or some other place within the British territory calculated for his safe-custody. When Futteh Sing Guicowar died, his wife, Rudhabaee Guicowar wished to perform suttee, and for the purpose of dissuading her, Govind Row Guicowar was brought, but that child has no claim whatever on her property. A nimnook of 11,400 rupees was settled on Ruddabacee on the 28th April 1826, or Cheetr Wud of 1822, which must be paid up to her by the Guicowar Government, after deducting all that it has paid of that amount; and further,* in future the allowance must be paid to her without† deduction each year, by giving an order every six months on the banker, to be continued for the whole period of her life; and after her death it is to revert to the Guicowar Government.

† Original defective.
† Ditto.

Should Govind Rao Guicowar, or Ruddabacee Guicowar, in future act in opposition to the Guicowar Government, the nimnooks be from ‡ forfeited thereby, with consent of both Governments.

‡ Ditto.

No. 17 A.

TRANSLATION of a Sunnud granted by the Guicowar Government to Govind Row Guicowar and Ruddabaee Guicowar, settling certain Allowances on them, dated the 19th Ramzan, Sumbul 1882, Chytr Vud, 7th Soorsoon sul Uslereen teen oulof. Done at Baroda, 28th April 1826.

HIS Highness has granted to Ruddabaee, widow of the late Futteh Row Sing Guicowar, and to his kinsman, Govind Row Guicowar, certain yearly nimnooks for their maintenance. The lady is to receive her allowance during life for her own individual expenditure, and after her death the sum will revert to the Guicowar Government.

Govind Row's nimnook is to be enjoyed by himself. On the death of Futteh Sing, Guicowar Ruddabaee wished to perform suttee, and the child Govind Rao was therefore produced with a view to dissuade her, but that child has no claim whatever on her property, as was settled at the time through Captain Carnac, Resident, on the part of the Company,

Company, in presence of the Dewan of the Guicowar Government, and of all the ministers and others assembled.

The amount of yearly nimnook of 10,400 rupees.

	Rs.	
Rudhabacee Guicowar, for expenditure in charity, festivals, her household, &c. - - - -	10,000	allowance.
	400	miscellaneous expenditure.
TOTAL Rupees - - -	10,400	

The above to be enjoyed for life.

Rs.	
12,400	for Govind Rao Guicowar, yearly.
5,000	as his regular allowance.
1,000	for palkee.
5,000	for his revenue.
1,000	for clothing.
400	for food.
12,400	

Grand Total 22,800 Rupees.

In all, allowances to the amount of 22,800 rupees have been granted, which will be paid by Government, by an order on the banker every four months.

This arrangement has been made after acquainting the Resident, Mr. Williams, and obtaining his assent.

TRANSLATION of Sunnud granted by his Highness Syajee Row Guicowar to Busherjee Row Withul, dated 6 Suffur 1228, corresponding with 18 August 1828.

WHEREAS the late Withul Row Bubajee Kuasgywully (confidential minister), when suffering under severe illness, and at the point of death, adopted you, by the permission and approbation of our Sirkur, as his son; therefore he being now deceased, this sunnud is executed in your favour, and you are hereby placed in possession of the honours and emoluments of the office of kaasgy wally, in like manner and in full enjoyment thereof as first granted to your grandfather, Babajee Appajee, in a memorandum of seven Articles, under date the 7th Zilhhad 1207 (A. D.), and are confirmed to your late father by sunnud and agreement under the bhandry of the British Government, dated in Fusly 1211 (A. D. 1810); therefore you being thus placed in this office of inheritance, see that you discharge the same honourably and faithfully, and all the emoluments and advantages of office, as already

enumerated in former sunnuds, are hereby confirmed to you as descending to you by right of inheritance, and to descend to your heirs after you for ever. Such being the case, fail in nothing of the important duties devolved to you, and only in our assurance that you and your family shall suffer no injustice from us; and the bhandry of the Honourable Company is pledged to you as security for our faithful discharge of our engagement.

TRANSLATION of a Sicca Yud from his Highness Syajee Row to Pillajie Row Guicowar, relative to his Nimnook, &c.; dated 14 Ramzan, corresponding with 5 February 1823.

(Guicowar Seal.)

ON the 24th day Rubbic-ul-ahur, in the year Sumrut, $\frac{1876}{1820}$, a yud was granted, containing the nimnooks for Thukkelbaee Bulwunt Rao and Pillajee Row Guicowar, and two other yuds were written in Tukkulbaee's name, under the bhandary of the Honourable Company. After the demise of Tukkulbasee, disagreements having sprung up between you and your mother, Bulwunt Row Guicowar, you gave in a ruzeenamah to the Sirkar for a division of your nimnooks; consequently, and as both of your nimnooks were assigned in the original yud, this yud is given you for your nimnook, and the former are taken by the Sirkar, through the Political Commissioner. The date from which your nimnook is to continue is from 1st Ramzan, 22d July 1833.

The hoozooral pugah under you, as before, is to do duty according to the orders of the Sirkar; its annual nimnook, including chundee raklub, grass, equipments, and will be paid according to rules of the military service, viz.:—

	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Nimnook for the pugah, as above, for rozurnirrah, grass and equipments, &c.	30,000	–	–

Balance hitherto received	–	–	–	28,565	1	–
Add the whole amount of chundee raklub, mussalee, &c., as was before fixed	–	–	–	58,723	–	62½
TOTAL	–	–	–	34,438	–	62½
Personal Nimnook, &c.:						
For your personal expenses	13,000	–	–			
Allowance for Julleb Shagreed Peishwa, at 400 rupees per mensem	4,800	–	–			
Pulky allowance for your wife	1,000	–	–			
The amount of Sullabad Babtee on account of Gunperttee and other festival days, and for articles from shops, Moodekana; and for cloths, for Dessurah and for Nuppuchorree (which were formerly given from the Sirkar's Zemindar Khana); and also on account of Yung Khana, and other articles under the head of Sullabad Babtee, is now fixed at 9,000 rupees per annum, out of which half is to be paid to Balwunt Rao, and the other half to you, which is rupees	4,500	–	–			
				23,300	–	–
Amount fixed for the bheer of the village of Kurralie, which has been taken for the use of the Sirkar's cattle, is 1,000 rupees, half of which is to go to Bulwunt Rao, and half to yourself, rupees	500	–	–			
Carried forward	500	–	–	57,738	–	62½

Annual

			Rs.	*a.*	*p.*
Brought forward - - -			500	–	–
Annual nimnook separately paid to the other individuals by the Sirkar, viz.:					
Nune Row Dishmook's nimnook, as hitherto received - - - - - - -			6,000	–	–
Panachund, ditto - - - - - -			2,000	–	–
The payment of this amount is as follows:—					
In account of the pay, &c., for the pugah, by Dumulta village, viz.:					
Produce of the villages Sursumanee - -			13,172	–	50
Ditto - - - Ulwah - - -			637	1	25
			13,809	1	75
By Notes:					
According to usage in the Military Service:					
	Rs.	*a.*	*p.*		
On account of Ruzemeerah -	14,755	3	25		
On account of grain, rhubul, &c. &c. - - - - -	5,872	3	62½		
				20,628	2 87½
Your personal nimnook will be paid as follows:					
By Doomalla villages, inclusive of the additional produce as before determined:					
	Rs.	*a.*	*p.*		
Produce of the village of Mongrall - - - -	6,401	2	62½		
Produce of the village Vamardee - - - - - -	5,300	–	–		
				11,701	2 62½
On account of the khultee bhuttee (liquor shops), situated near the Bhuddeer, a deduction of 3,000 rupees has hitherto been made from both of your nimnooks, and it is now arranged that the produce of the kullal bhuttee should be alternately for five years, so that during your five years' management an annual reduction of 3,000 rupees will be made from the chittas, which you are to receive for *Rs.* 12,098. 1 *a.* 37½ *p.*; during the period of Bulwunt Row Guicowar's management of the kullal bhuttee, you will receive the full amount of your chitties, and deduction of 3,000 rupees will then be made from his chitties; in this manner it has been settled. The amount of your chitties as rupees - - - - -				12,098	1 37½
					23,800 – –
					58,238 – 62½
Those persons who are separately paid shall continue to receive their nimnook chitties, viz.:					
	Rs.	*a.*	*p.*		
Nure Row Dishmook - -	6,000	–	–		
Punachund Rooshull - -	2,000	–	–		
				- - -	8,000 – –
TOTAL Rupees - - -				- - -	66,238 – 62½

Besides these you have,

1. The grass bheer of the villages of Ulwah and Russalabad.
2. The gardens of Ramtullen and Karlu.
3. Coovah and the elephants, the ruhtuls, for which you will continue to receive from the Sirkar as usual.

After fixing the annual nimnook of *Rs.* 69,238. 0 *a.* 62½ *p.* for the Hoozoorat Pugah Chundie, inclusive, according to usage in the military branch of the service, as well for the disbursement of your personal allowance and of others, the mode of payment is given in detail, and in like manner you will continue to receive the same; besides this, the other three articles will also be mentioned by the Sirkar; and for the due performance of which the bhandary of the Honourable Company is affixed.

(Guicowar Seal.)

The bhandary of the Honourable Company is affixed.

CORRESPONDENCE in *India* respecting the Expiration or Forfeiture of any of those Guarantees.

EXTRACT Bombay Political Consultations, dated 17th October (No. 41) 1827.

(No. 11.)

EXTRACT Letter from the Acting Resident at *Baroda* to Chief Secretary to Government, dated the 14th September.

2. ANNEXED is translation of the document on which the Dessoy's claim is founded, and which is stated to have been granted to his father, Muncherjee Kooshajee, of Nowsaree. The result of my inquiries leads me to believe, that as far as the Honourable Company were concerned, their part of the engagement was never ratified, and the omission probably arose from the circumstances which gave rise to the engagement being only temporary, and its ratification becoming in consequence unnecessary. Be this as it may, I think this point should now be placed beyond doubt, and since Jemsetjee has been one of the most active of those concerned in the machinations still in progress in this durbar, I beg to suggest the expediency of a declaration being now made on our part, that the guarantee is revoked, and rendered null and void, in consequence of the Dessoy's misconduct.

EXTRACT Bombay Political Consultation, 4th October 1837.

(No. 4381.)

FROM *W. H. Macnaghten*, Esq., Secretary to the Government of *India*, to *W. H. Wathen*, Esq., Chief Secretary to the Government of *Bombay*.

Sir,

I AM desired by the Right honourable the Governor-general of India in Council to acknowledge the receipt of your letter, dated the 24th October last, transmiting extracts from proceedings in Case No. 5 of the Dessoy of Nowsaree, relative to the violation by his Highness the Guicowar of a guarantee granted to him.

2. Some time will probably elapse before the Governor-general in Council shall have received and made up his mind with regard to the proceedings in all the eight cases which the Right honourable the Governor in Council proposes to refer, relative to the conduct of the Guicowar; but in the meanwhile, as the point is a very important and prominent one for consideration, in the case submitted with your letter, now acknowledged, I am directed to request information as to the sense in which a bhandaree or guarantee is understood under the Bombay Presidency; and further, that any evidence as to the accuracy of such construction or precedents in favour of it may be cited.

3. It would appear to be the opinion of the Right honourable the Governor in Council, that a bhandaree is in its nature hereditary, but I am desired to observe, that on this side of India it is never considered to endure beyond the life of the person guaranteed, unless its continuance to his descendants may have been expressly provided for.

I have, &c.

MINUTE by the Right honourable the Governor in Council, subscribed to by the Board.

I SHALL feel much obliged, and so I think will your Board, to the Political Secretary, to obtain and lay before the Board the information here required.

(signed) *R. Grant.*

6 January 1837.

(No. 4383.)

MEMORANDUM by the Political Secretary; dated 4 August 1837.

I HAVE now the honour to submit to the Honourable Board the information required in the Right honourable the Governor's Minute of the 6th January last, regarding the nature of our bhandaree or guarantee engagements at Baroda.

2. These embarrassing engagements originated in the very peculiar circumstances under which our connexion with the Guicowar state was formed, and it will not, therefore, be irrelevant to take a brief review of those circumstances.

3. Our intercourse with the Baroda state is of ancient date, and the engagements entered into with it were of a more intimate nature than those usually concluded with the native governments of India. Upwards of 60 years ago, by a treaty entered into with the Sirdars of the Mahratta empire, the Guicowar family were placed under the protection of the Honourable Company.

4. It was not, however, until the year 1801-2 that the active interference of the British Government was called for. In that year a formidable band of conspirators seized and placed under restraint Anund Rao, the reigning Guicowar, and usurped the whole power of his government.

5. Annund Row was the eldest son of Govind Rao Guicowar, and on the death of his father in 1800 succeeded to the musnud. He was a prince of weak intellect, and in no way qualified to conduct the government.

6. An illegitimate son of Govind Row's, by name Canojee Row, rebelled against Anund Row, and obtained temporary possession of the government. His administration, however, being marked with violence and oppression, he was soon deprived of power, and placed under restraint, chiefly through the instrumentality of Rowjee Appajee, Anund Row's minister.

7. No sooner, however, was the rebellion crushed, than another was fomented by Morar Row, who was also an illegitimate son of Govind Row. This was likewise suppressed by the minister, Morar Row being also seized and imprisoned.

8. Canojee Row and Morar Row, however, had many partisans, whose open opposition or secret intrigues proved a constant source of anxiety to the minister, who was in consequence induced to solicit the aid of the Bombay Government, as the surest if not the only means of maintaining himself in power. As the political events of the day rendered a more intimate alliance with the Baroda state highly desirable, his advances were met with great cordiality on our part.

9. About this time, events occurred at Baroda which appeared to threaten the very existence of the Guicowar state. Mulhar Row, a man of influence and enterprise, and a cousin of Govind Row Guicowar, possessing a considerable jagheer in the vicinity of Ahmedabad, assembled a large force, with the ostensible design of releasing Canojee, and ejecting Rowjee Appajee from the Baroda ministry.

10. The minister's anxiety to form an intimate alliance with the British Government was thus greatly strengthened. His own resources were inadequate to resist so formidable an opponent as Mulhar Row, and he therefore despatched envoys to Bombay, to call upon that Government to assist him with money and troops, and to conform to the treaty of Salbhye, whereby the Honourable Company bound themselves to protect the just rights of the lawful successors of Futtey Sing Guicowar.

11. It is unnecessary to relate with minuteness the events which followed. It is sufficient to state, that the aid solicited was granted; hostilities ensued between the British force equipped for the occasion and the troops of Mulhar Row, which terminated in his complete subjection, on the 5th May 1802, when he gave up possession of the town and fort of Kurree to Colonel Walker.

12. It is now necessary to refer to the treaties which were about this time entered into between the two Governments. The Governor of Bombay, the Honourable Jonathan Duncan, proceed to Cambay, for the purpose of conferring with Rowjee Appajee; and on the 15th March 1802, a convention was concluded between the parties, whereby the British Government agreed to employ its troops for the reduction of Mulhar Row, on condition that the Guicowar should defray the expenses of their equipment whilst so employed.

13. The minister, however, had another object in view, namely, to obtain the co-operation of the British Government in effecting a reduction of the Arab force maintained at Baroda, who had become far too powerful for him to reduce by the means at his own disposal. By the same convention, therefore, the Guicowar agreed to accept a British subsidiary force, of about 2,000 Sepoys, one company of European artillery, and two companies of Lascars, on condition that it should be employed in effecting the above object. It is important to bear this fact in mind, for, as will hereafter be seen, most of our bhandarry engagements originated in this agreement.

14. Immediately after the reduction of Mulhar Row, another convention, dated the 6th June 1802, was agreed upon by the same parties, which, after confirming that of March preceding, stipulated that the British Government should advance a loan to the Guicowar, to enable him to liquidate the arrears of pay due

due to the Arabs about to be disbanded. This loan amounted to 11,75,000 rupees, and the revenues of certain districts were assigned for its repayment.

15. Although not strictly relevant to the subject under discussion, I cannot forbear from quoting the 5th Article of this agreement, because it may hereafter become necessary to consider the extent to which Government can, in virtue of existing treaties, oblige his Highness the Guicowar to comply with its just demands, and conform to its advice.

"There shall be a true friendship and good understanding between the Honourable East India Company and the state of Anund Row Guicowar, in pursuance of which the Company will grant the said chief its countenance and protection in all his public concerns, according to justice, and as may appear to be for the good of the country, respecting which he is also to listen to advice."

16. On the 29th July 1802, Anund Row Guicowar concluded a treaty with Major Walker, Resident at Baroda, "ratifying and confirming such compacts and agreements as my faithful dewan, Rowjee Appajee, hath, in my name and on my behalf, concluded with the Honourable the Governor of Bombay." In the 10th Article of this Agreement it is stipulated, "In the event of evil-disposed persons attempting anything unfair or unreasonable against my person, my dewan, Rowjee Appajee, his son, his brother, nephews, or relations, and Mahdon Row, Tatia Moojmoondar, or even should I, myself, or my successor, commit anything improper or unjust, the English Government shall interfere, and see in either case that it is settled according to equity and reason."

17. These three conventions were consolidated and confirmed in a "Definitive Treaty of General Defensive Alliance" between the two Governments, dated the 21st April 1805, drawn up in terms consonant to those employed in the Treaty of Bassein, between the Honourable Company and his Highness the Paishwa. (*Vide* Printed Collection of Treaties and Engagements with Native Princes and States in India, page 23.)

18. In the course of the operations against Mulhar Row, it was discovered that that chief had entered into a correspondence with the principal Arab jemadars at Baroda, with the view of enticing them to depose their lawful prince, and to establish Canojee Row on the musnud. This class of mercenaries had exercised a great ascendancy over the Baroda Government for more than 40 years before the British Government established its influence in Gujerat; and at the time I am writing of, their influence and power were so great, that the entire administration of the state was in their hands, and both Anund Row Guicowar and his minister were in continued danger of their lives. They had taken possession of Baroda, Borsud, and other places. They had also occupied the fort of Sunkeira, under the direction of a relation of the Guicowar's, named Gunput Row. Their number did not, however, exceed 1,000 men, besides 900 Hindustani Sepoys attached to them, but they were very formidable, from the positions they occupied, the great influence they possessed in the capital, and from the circumstance of their having gained possession of the person of Anund Row Guicowar, whom they kept under restraint. To add to the difficulties of the British Government, Canojee Row, with the connivance of the Arabs who held him in custody, about this time effected his escape, and rehoisted the standard of rebellion.

19. The British Government having assembled a considerable force at Baroda, negotiation was immediately opened with the Arabs, to obviate the necessity of an appeal to arms. Liberal terms were offered. They were informed that all their just claims would be satisfied, and all arrears of pay due to them liquidated; but in consequence of the treacherous and insubordinate conduct they had been guilty of, it was resolved that they should be no longer permitted to remain in the service of the Guicowar Government.

20. After a protracted negotiation, it became evident that the jemadars had no intention of submitting to these terms; with the consent of the Guicowar, it was therefore determined that the Arabs should be expelled from Baroda by force, and that on this being effected the town should be occupied by British troops. On the 18th December 1802, the town of Baroda was invested by the allied troops. The siege was prosecuted with vigour, and after having sustained a considerable loss, both in officers and men, the breach was reported

practicable. At this crisis the Arabs themselves renewed the negotiation, which terminated in a capitulation, by which they bound themselves to evacuate the fort, to release Anund Row Guicowar, to abstain from all future intercourse with the enemies of his government, and to quit Gujerat, after their arrears of pay, amounting to about 14 lacs of rupees, had been paid, upon condition that the bhandary of the Honourable Company should be substituted for theirs, wherever it had been granted, either to persons or property.

21. In elucidation of the nature of the obligations which thus devolved upon the British Government, I beg to refer to the annexed explanatory statement by Colonel Walker, which I have extracted from the diary of the Bombay Government, of the 2d April 1806. From the three last paragraphs of this document, it will be seen that Colonel Walker regarded the transfer of these engagements to us to be very advantageous, from the great influence which they gave to Government in Guzerat, and more particularly at Baroda.

22. In further illustration of the subject, the following remarks by the late lamented Sir John Malcolm may prove useful:

"The difficulties attending this connexion were inherent in its original formation; we did not obtain our influence and power in Gujerat and over the Court of Baroda, as we had in other cases, by a war or treaty with a sovereign in the enjoyment of authority; we came in as mediators between parties in a country torn by factions, and in which all rule was disorganised. The prince was in a state of imbecility, and a prisoner in the hands of Arab mercenaries, whose strength and influence rested as much upon their giving guarantees of protection to his principal subjects and creditors, as upon their military power. When we expelled them, we not only adopted their guarantees, but also committed ourselves in new pledges to ministers and others, who actually exercised the civil authority of this state, and with whom all our first engagements and treaties were virtually, though not nominally, concluded. These persons stipulated, as they had a right to do, for their personal security, and for a provision suitable to their rank, before they could be induced to promote our objects. Guarantees, similar to those which we gave on these occasions, had for a long time prevailed in Gujerat, and formed a prominent feature of the system of the Government of that country. These guarantees were, on our first establishment, granted on various occasions; and while we continued, as we did until 1820, to exercise a controlling influence over the Guicowar state, no inconvenience was experienced from these engagements; but on the death of Anund Row, whose natural defects had made him a cipher in that state, of which he was the nominal head, when his brother Syajee succeeded, and assumed the direct rule, we began to experience serious embarrassments from our guarantees; and in a very short period, this ill-advised prince violated the conditions of an engagement he had voluntarily entered into, and refused to listen to the advice or remonstrances of the British Government, though bound to do so by express stipulations of the treaty under which he had been seated on the musnud." (Government of India, page 8.)

23. It must not, however, be supposed that the British Government maintained the bhandaree system in force to the same extent as prevailed during the dominion of the Arabs. Our guarantee was for the most part confined to loans raised for the purpose of relieving the Baroda Government from the embarrassments in which it had become involved, in suppressing the disturbances to which I have briefly alluded. The principal exceptions were granted to Rowjee Appajee and his adherents, in return for the aid which they had afforded us in accomplishing our views at Baroda. Some of these are hereditary, and not only extend to person and property, but guarantee the continuance of office to particular families. No one can dispute that, as a system, this is most vicious, for as talent is not hereditary, situations of trust and importance may devolve to persons wholly incompetent for the due performance of their duties. As justly remarked by Sir John Malcolm, no inconvenience was felt from these engagements so long as we continued to control the Baroda administration; but when, in 1819, the imbecile reign of Anund Row Guicowar closed, and he was succeeded by his brother, the present Guicowar, the evils of the system became apparent: I apprehend that in considering these, and in endeavouring to extricate ourselves from them, we have forgotten their origin, and the advantages

vantages which we derived from them, for they ought to be viewed as part of the price which we paid for the valuable and extensive cessions which we obtained, under the treaties negotiated with the Guicowar Government from 1802 to 1805.

24. During the time that I was attached to the Baroda Residency, or from 1819 to 1829, I can only recollect one instance in which the guarantee of the British Government was granted; viz., that given to Bulwunt Row Guicowar, and Pellajee Row Guicowar, two illegitimate sons of Anund Row Guicowar. This sufficiently proves that Government has evinced no desire to encroach upon the rights of the present Guicowar; but when Mr. Elphinston vested that prince with the independent charge of the Government, one of the few restrictions which were imposed upon him, was that "The guarantees of the British Government to ministers and other individuals must be scrupulously observed." —Engagement with Seeajee Row Guicowar, dated 2d April 1820.

25. With regard to the information required in Mr. Secretary Macnaghten's letter of the 5th of December last, I beg to state, that I have no doubt that in all cases where a bhandaree or guarantee has exclusively originated with the British Government, the construction of the Government of India is essentially correct, namely, that a bhanderry is not in its nature hereditary, and does not extend beyond the life of the person guaranteed, unless its continuance to his descendants is expressly provided for. The only doubt I have relates to cases like that of the Dessoy of Nowsaree, where the party is in possession, at the time of the guarantee, of rank and office which are held to be hereditary, in which cases it may be doubtful whether the guarantee ought not to be also presumed hereditary, unless otherwise specified.

26. With respect to the Arab guarantees, it is very difficult, at this distance of time, to ascertain positively what was the practice; but it is highly probable, more particularly as regarded hereditary offices and possessions, that their guarantee did not become null and void by the death of an incumbent; but that, as a matter of course, the same would extend to his successor, for whose protection it would be equally requisite.

27. I am unable to throw much additional light upon the real nature of the guarantee claimed by the Dessoy of Nowsaree. It is entered in two lists of British guarantees, compiled by Colonel Walker. Up to 1828 the Dessoy and his family were always considered as under the protection of the Company. When the present Guicowar commenced oppressing them, the guarantee was immediately recognised; first, by Sir John Malcolm's Government; second, by Lord Clare's Government; and lastly, by the Honourable Court of Directors. Under such circumstances, admitting a doubt to exist of the real nature of the guarantee when it was originally granted, the party entrusted may be considered to have gained a prescriptive title to our protection, and I feel confident it will not escape the attention of superior authority, what will be the consequences to the family if their claim to such protection is now negatived. Their hopes and expectations have been strongly excited by repeated decisions in their favour, and having incurred, beyond the chance of reconciliation, the anger and resentment of their prince for having claimed our protection, their entire ruin must inevitably follow the declaration of our intention not to afford it.

28. In conclusion, I beg to apologize for the delay which has occurred in replying to this reference, which has been occasioned partly from a constant pressure of business, and partly from delays in obtaining information from the Record-office.

(signed) *J. P. Willoughby*,
Political Secretary.

Poona, 4 August 1837.

Bhanderry is a word of Sanscrit derivation, from bahee, a hand, in Sanscrit, and dherda, to place, to seize. The term itself is applied to an engagement of an extrordinary nature that prevails in, and is apparently peculiar to, the provir ce of Guzerat.

2. It may be difficult to give an English term sufficiently expressive of the word bhanderry, but guarantee seems to approach very near it.

3. The use of this security is very extensive in Guzerat; it pervades every department and measure in the official duties of its Government, and continues in a chain downwards throughout their subjects, in all their transactions of any consequence.

4. No cooley will leave his village without the bhanderry of some person on whom he can rely; and it is sometimes exacted from the chief of a place by individuals before they venture to take up their residence.

5. A bhanderry is either personal or for property; as it relates to the former it partakes of the nature of a safe-conduct, and as it regards the latter is a species of security.

6. As it affects the acts of Government, it may be considered the result of weakness, originating in experience of repeated breach of faith, or an apprehension of inability to perform engagements.

7. It also exhibits a want of confidence in the party requiring the bhanderry.

8. The difficulty of reconciling this term with the meaning of the English word guarantee, arises from the bhanderry to the acts of Government being given by people in the situation of subjects; and it is not easy, in our European ideas, to conceive the power by which the person giving the bhanderry in a Government, apparently despotic, is enabled to control it, and enforce an observance of its engagements; it may be useful, therefore, to investigate the power which the guarantee possesses.

9. As far as the bhanderry relates to the due payment of money, the person giving it is thereby invested with the power of enforcing payment. It is his duty to prevent the funds intended for this purpose being otherwise appropriated; the creditor must suffer with patience those temporary misfortunes known by the name of sultaney asmaney, which his guarantee has not the power to control; but in the strict interpretation of this extraordinary engagement, he is responsible to the utmost exertion of his means to cause due redress to be afforded to the party in whose favour the bhanderry is given, in the event of the funds being destroyed.

10. Should the funds assigned be misapplied or infringed on by the party making the assignment, the person who guarantees the engagement proceeds from remonstrance to every means in his power to enforce its observance; he cannot, however, be required to use more than those means, nor is he answerable for any loss that may arise, should his means, fairly exerted, prove deficient.

11. The breach in the engagement by the Government absolves him from his duty as a subject, as far as relates to the performance of the duty of the bhanderry, and violence would be justifiable in obtaining the ends of justice. The Arabs presented many instances of this nature, when, to enforce their bhanderries, they filled the durbars of the Rajah and the minister, and held their persons in a vigorous confinement.

12. If the person giving the bhanderry should be removed to a situation where his influence cannot be exercised, he demands a release from his obligation; it then becomes the duty of the Government to provide for this circumstance, by giving another bhanderry, sufficiently satisfactory, to the party receiving it.

13. It is not usual, however, to demand a release from this engagement without some extreme cause, as the responsibility is little, from the care taken to ensure the appropriation of adequate funds, and as it gives a considerable degree of consequence to the party who gives his bhanderry, it is a desirable engagement. Were any leading man (and the observation will be more applicable to the Company) to withdraw his bhanderry without some extreme cause, some serious apprehensions would be excited, and public confidence endangered.

14. Generally speaking, and considering the extensive power conferred by giving a bhanderry, which necessarily implies a power of enforcing a due performance of the obligation, and the control acquired thereby in many important

portant affairs of the Government, it may rather be considered as a beneficial engagement, and the risk must be trifling, as, generally, adequate funds are provided for its liquidation.

15. This last circumstance is what distinguishes the personal from that bhanderry which relates to property.

16. Although the circumstances first stated may be the strict interpretation of the engagement, yet, in ordinary language, it is nothing more than a declaration of a person of credit of the degree of confidence which he himself places on the engagement entered into. As it relates to money, it is an assurance of solvency, united with a power to prevent abuse, and may be compared to the associations which are occasionally made among English merchants to receive the notes of the bank, and thereby quieting the apprehensions of those who are alarmed at a scarcity of specie; khater jumma and khater tusli being almost synonymous with bhanderry.

17. In fact, a bhanderry is very seldom or never broken. It is the support of a weak government, and a breach would threaten a dissolution of it.

18. From what has been said, the bhanderry will be found to have many advantages.

19. In the case of the substitution of the Company's for the Arab bhanderry, the Honourable Company became possessed of a very extensive influence, and at the same time deprived the Guicowar Sirdars of a powerful means by which they derived a right of controlling their Government.

20. It would not, however, be politic to reduce the value of this security by too easy or too general a use; neither would it be advisable to render it so difficult of attainment as to cause the Government to have recourse to their own officers. By a middle course the Honourable Company will preserve their influence in the country, with the credit of the Government unimpaired.

21. It also affords another mode of extending the Company's influence, for as the bhanderry on their side is perfectly disinterested and gratuitous, it must be considered as an act of condescension and favour, and establishes a connexion with the monied men, which the Company have reaped much benefit from in their pecuniary transactions in Baroda.

(signed) *A. Walker,* Resident.

(No. 4,384.)

MINUTE by the Right honourable the Governor.

THE pending discussions with the Guicowar being in several instances connected with the general question as to the nature and effect of bhandarees, I think this an useful and interesting paper, though it does not decisively determine the point referred to us by the Government of India.

2. It certainly never was my idea that a bhandaree was hereditary as a matter of course; and, though some want of explicitness on this point in my minute of 22d June 1836, and in our letter to the Government of India of 24th October, which was drafted from that minute, has unfortunately led to the conclusion that we ascribed to a bhandaree that character, yet it will be observed, that both the minute and letter in question particularly and prominently refer to Mr. Chief Secretary Norris's memorandum of the 18th September 1835, as an authentic exposition of the facts of the case; and that, in that memorandum, it is more than once implied to be a matter of discussion, from the want of words of inheritance in Govind Rao Guicowar's letter of 1793, referring to the Company's bhandaree given to the Dessoy of Nowsaree, whether that bhandaree was or was not hereditary.

3. The same thing may be said of Mr. Williams' letter of 4th January 1835, a copy of which was also, I conceive, sent to the Government of India. I allude especially to paragraph 6 of that letter, in which Mr. Williams, though he does not absolutely decide the point, intimates it to be his own opinion that the guarantee was meant to be hereditary. This is clearly also the impression of Mr. Norris, throughout his memorandum, and his authority is considerable.

 4. With

4. With regard to the evidence on the subject, it must be recollected that the original bhandrey, granted by Futty Sing Guicowar, who died in December 1789, is not forthcoming. The subsequent letter of guarantee or bhandary from Govind Rao Guicowar, which bears date in October 1793, recognises, and thus confirms, but does not quote the former bhandary; and, though it gives assurance of safety to the Dessoy and his "family," does not contain any decided words of inheritance.

5. Under these circumstances, it becomes material to ascertain the construction which has been put on the bhandaree or bhandarees given to this family; and on this head the utmost deference is due to the statement of Colonel Walker, who, in an official return to Government of the year 1808, referring to the second bhandary, states it to be "a continual bhandary." At the period when this statement bears date, many persons were alive at Baroda to whom all the circumstances of the original bhandrey must have been well known. That Colonel Walker had the best opportunity, therefore, of learning the true facts, cannot be doubted, and the known accuracy of that officer vouches for his having made the best use of the means within his reach.

Appendix II. & IV., Mr. Norris's Report.

6. The next evidence is that of Mr. Williams, who, speaking of this bhandary in a list of "all bhandaree engagements, from the commencement of 1801 to the end of 1826," which list he sent to Government in May 1827, states as follows: "The family still claim and enjoy protection in virtue of the engagement;" and again, "The guarantee, to the extent specified, is considered to be enjoyed by the son of Muncherjee (the original grantee), who generally resides at Baroda."

Appendix I. to Mr. Norris's Report.

7. This report from Mr. Williams is the more remarkable, from this circumstance, that, having mistakenly read (as Mr. Norris clearly shows) the statement of Colonel Walker, already mentioned, he had supposed that officer to assert that the bhandary referred to had already been "discharged and cancelled;" and it is in order to disprove such fancied statement of Colonel Walker's that Mr. Williams brings forward the conclusive fact, that at the period of his writing, 40 years at least after the grant of the original bhandary, and 33 years after the grant had been confirmed to the original grantee and his family, the son of the original grantee, who had survived his father, was living under the acknowledged protection of the grant at the Guicowar's capital.

8. There is no evidence that the validity of the grant was ever disputed till 1828, and even then it was not disputed on the ground of its not having been hereditary. It was disputed, however, on other grounds; but, on being apprised of this fact, the Bombay Government immediately acknowledged the guarantee, and gave a written certificate of such acknowledgment to the person actually claiming the benefit of the grant.

Mr. Norris's Report, para. 5.

9. In February 1830, Major Barnewall, the Acting Resident at Baroda, forwarding to Government a list of bhandaries, enters that of the Dessoy of Nowsaree as "hereditary," and in December in the same year, Mr. Erskine, the Assistant Political Commissioner in Guzerat, acting under the orders of Government, solemnly renewed to the actual Dessoy that written acknowledgment of his bhandary which he had before received.

Ditto, para. 10.

Ditto, para. 15.

10. The bhandary in question was, 1832, again recognised by Lord Clare, acting personally as the organ of the British Government, by being entered in a list of bhandaries delivered by his Lordship to the Guicowar on the 30th March; and the claims in that list the Guicowar promised to settle within a year.

Ditto, para. 19.

11. All this time, it will be observed, it was never denied by the Baroda Government that a bhandary existed, and that the son of the original grantee, the father being dead, was entitled to the benefit of it. The chief question that had been raised was, whether those possessions of the person on which the Guicowar had encroached, were included within the bhandary; a question which impliedly admitted the bhandary to be still in force, or, in other words, to be hereditary. It was not till May 1834, 40 years after the grant from Govind Row, and probably 50 after that of Futty Sing, that the bhandary was totally denied,

Ditto, para. 30.

denied, one of the arguments being, that the alleged confirmation by Govind Row wanted words of inheritance.

12. The continued enjoyment of the bhandary as a hereditary privilege, through so long a period, by the grantee and his family, and the uniform recognition of it during the whole of that period by both the Governments concerned, appears to me to constitute such an argument as it would be difficult to resist, even if the language and purport of Govind Rao's letter in respect to the question of hereditary or not hereditary were altogether equivocal and inconclusive. But I do not think that the letter in question can be so described; for it expressly extends the protection to the family of the grantee, and this with reference to property which was by its very tenure hereditary.

13. The consideration last noticed has, I think, much weight; and I should think so, even if the instrument in question had never mentioned the family of the grantee. Mr. Willoughby alludes to this argument in his 25th paragraph, but states it more doubtfully than I should be inclined to do. The claimant himself, perhaps, overstates it in his petition of the 29th December 1824, when he says that words of inheritance are in no way requisite in the bhandaree of a zamindar. It seems to me that the use of such words makes the intent clearer; but, even without them, it strikes me that the more natural construction is to read the grant as hereditary, more especially when the word "family" is inserted; and if the enjoyment has, as in the present case, been conformable to such construction, I do not see how any other interpretation can be sustained.

14. Should the Board be pleased to concur in these remarks, they might, together with a copy of Mr. Willoughby's memorandum, be transmitted to the Government of India, as a sketch of the grounds on which we have represented the bhandary under consideration as hereditary, while, at the same time, we are far from regarding all bhandarees as entitled to that character.

15. There is one observation which I cannot help adding, founded on the fact of the wutun itself in this case being clearly hereditary, whatever may be thought of the guarantee. It is this, that by holding the guarantee hereditary, no injustice can, on any supposition, be done. Where a property is bestowed on an individual by words which denote only a life grant, then the addition of a hereditary guarantee would extend the gift beyond the original purpose, and therefore in such a case the instrument of guarantee, if doubtful on the face of it, ought not lightly to be construed as hereditary; but where the property is clearly hereditary, the guarantee at the most does no more than ensure its devolution in the manner originally intended.

(signed) *R. Grant.*

8 September 1837.

(No. 4,385.)

From the Chief Secretary to Government of *Bombay* to the Secretary to the Government of *India*.

Sir,

In reply to your letter of the 5th December last, acknowledging the receipt of my communication, dated the 24th of October preceding, with its accompaniments, being extracts from Proceedings in Case No. 5 of the Dessoy of Nowsaree, relative to the violation by his Highness the Guicowar of a guarantee granted to him, and requesting information as to the sense in which a bhandaree is understood under the Bombay Presidency, I am directed by the Right honourable the Governor in Council to state as follows:—

2. It never was the idea of this Government that a bhandaree was hereditary as a matter of course, and, though some want of explicitness on this point in the Right honourable the Governor's minute of 22d June 1836, and in my letter to your address of the 24th October following, which was drafted from that minute, has unfortunately led to the conclusion that this Government ascribed to a bhandaree that character, yet it will be observed that both the minute and letter in question particularly and prominently refer to Mr. Chief Secretary Norris's memorandum of the 18th September 1835, as an authentic exposition

of the facts of the case, and that in that memorandum it is more than once implied to be a matter of discussion, from the want of words of inheritance in Govind Rao Guicowar's letter of 1793, referring to the Company's bhandaree given to the Dessoy of Nowsaree, whether that bhandaree was or was not hereditary.

3. The same thing may be said of Mr. Williams's letter of the 6th January 1835, a copy of which was also forwarded to the Government of India, with my letter of the 24th October last, and you are requested to draw the particular attention of the Right honourable the Governor-general of India in Council to the 6th paragraph of that letter, in which Mr. Williams, though he does not absolutely decide the point, intimates it to be his own opinion that the guarantee was meant to be hereditary. This is clearly also the impression of Mr. Norris throughout his memorandum, and his authority may be considered as valuable.

4. With regard to the evidence on the subject, it must be recollected that the original bhandaree, granted by Futty Sing Guicowar, who died in December 1789, is not forthcoming. The subsequent letter of guarantee or bhandaree from Govind Rao Guicowar, which bears date in October 1793, recognises, and thus confirms, but does not quote the former bhandaree, and though it gives assurance of safety to the Dessoy and his "family," does not contain any decided words of inheritance.

5. Under these circumstances, it becomes material to ascertain the construction which has been put on the bhandaree or bhandarees given to this family; and on this head the Governor in Council thinks the utmost deference is due to the statement of Colonel Walker, who, in an official return to Government of the year 1808, referring to the second bhandaree, states it to be "a continual bhandaree;" and I am desired to observe, that at the period when this statement bears date, many persons were alive at Baroda to whom all the circumstances of the original bhandaree must have been well known. That Colonel Walker had the best opportunity therefore of learning the true facts cannot in the opinion of this Government be doubted, and the known accuracy of that officer vouches for his having made the best use of the means within his reach.

Appendix II. & IV. Mr. Norris's Report.

6. The next evidence, I am instructed to state, is that of Mr. Williams, who, speaking of this bhandaree in a list of "all bhandaree engagements from the commencement of 1801 to the end of 1826," which list he submitted to Government in May 1827, states as follows: "The family still claim and enjoy protection in virtue of the engagement;" and again, "The guarantee, to the extent specified, is considered to be enjoyed by the son of Muncherjee, the original grantee, who generally resides at Baroda."

Appendix I. to Mr. Norris's Report.

7. This report from Mr. Williams is, in the opinion of the Governor in Council, the more remarkable, from this circumstance, that having mistakenly read (as Mr. Norris clearly shows) the statement of Colonel Walker, already mentioned, he had supposed that officer to assert that the bhandaree referred to had already been "discharged and cancelled;" and it is in order to disprove such fancied statement of Colonel Walker's that Mr. Williams brings forward the conclusive fact, that at the period of his writing, 40 years at least after the grant of the original bhandaree, and 33 years after the grant had been confirmed to the original grantee and his family, the son of the original grantee, who had survived his father, was living under the acknowledged protection of the grant at the Guicowar's capital.

8. There is, the Governor in Council desires me to remark, no evidence that the validity of the grant was ever disputed till 1828; and even then it was not disputed on the ground of its not having been hereditary. It was disputed, however, on other grounds; but on being apprised of this fact, the Bombay Government immediately acknowledged the guarantee, and gave a written certificate of such acknowledgment to the person actually claiming the benefit of the grant.

Mr. Norris's Report, para. 5.

Ditto, para. 10.

9. In February 1830, Major Barnewall, the Acting Resident at Baroda, forwarding to Government a list of bhandarees, enters that of the Dessoy of Nowsaree as "hereditary," and in December in the same year, Mr. Erskine, the

Ditto, para. 15.

the Assistant Political Commissioner in Guzerat, acting under the orders of Government, solemnly renewed to the actual Dessoy that written acknowledgment of his bhandaree which he had before received.

10. The bhandaree in question was in 1832 again recognised by Lord Clare, acting personally as the organ of the British Government, by being entered in a list of bhandarees delivered by his Lordship to the Guicowar on the 30th of March, and the claims in that list the Guicowar promised to settle within a year. Mr. Norris's Report, para. 19.

11. All this time, it will be observed, it was never denied by the Baroda Government that a bhandaree existed, and that the son of the original grantee, the father being dead, was entitled to the benefit of it. The chief question that had been raised, was whether those possessions of this person on which the Guicowar had encroached were included with in the bhandaree; a question which, in the opinion of the Governor in Council, impliedly admitted the bhandaree to be still in force, or in other words, to be hereditary. It was not till May 1834, 40 years after the grant from Govind Rao, and probably 50 after that of Futty Sing, that the bhandaree was totally denied, one of the arguments being, that the alleged confirmation by Govind Rao wanted words of inheritance. Ditto, para. 30.

12. The continued enjoyment of the bhandaree, as a hereditary privilege, through so long a period by the grantee and his family, and the uniform recognition of it during the whole of that period by both the Governments concerned, appear to the Governor in Council to constitute such an argument as it would be difficult to resist, even if the language and purport of Govind Rao's letter in respect to the question of hereditary or not hereditary were altogether equivocal and inconclusive; but the Governor in Council does not think that the letter in question can be so described, for it expressly extends the protection to the family of the grantee, and this with reference to property which was by its very tenure hereditary.

13. The consideration last noticed has, the Governor in Council thinks, much weight; and I am desired to add, that he would think so, even if the instrument in question had never mentioned the family of the grantee. In the 25th para. of the accompanying copy of a memorandum by Mr. Willoughby, the Political Secretary, dated the 4th August last, he alludes to this argument, but states it more doubtfully than the Governor in Council would be inclined to do. The claimant himself, perhaps, overstates it in his petition of the 29th December 1824, when he says that words of inheritance are in no way requisite in the bhandaree of a zemindar. It seems to the Governor in Council that the use of such words makes the intent clearer; but, even without them, it strikes him that the more natural construction is to read the grant as hereditary, more especially when the word "family" is inserted; and if the enjoyment has, as in the present case, been conformable to such construction, he does not see how any other interpretation can be sustained.

14. There is one more observation which the Governor in Council directs me to add, founded on the fact of the wutun itself in this case being clearly hereditary, whatever may be thought of the guarantee. It is this, that by holding the guarantee hereditary, no injustice can on any supposition be done. Where a property is bestowed on an individual by words which denote only a life grant, then the addition of a hereditary guarantee would extend the gift beyond the original purpose, and, therefore, in such a case, the instrument of guarantee, if doubtful on the face of it, ought not, in the opinion of this Government, lightly to be construed as hereditary; but, where the property is clearly hereditary, the guarantee, at the most, does no more than ensure its devolution in the manner originally intended.

EXTRACT Bombay Political Consultation, 29 November 1837.

From the Secretary to the Government of *India* to the Chief Secretary to Government, *Bombay*.

Sir,

I AM directed by the Right honourable the Governor-general of India in Council to acknowledge the receipt of your letter, dated the 3d instant, submitting, with reference to my letter of 5th December last, regarding the case No. 5 of the Dessoy of Nowsaree, information as to the sense in which a bhandaree is understood under the Bombay Presidency.

2. In reply, I am desired to acquaint you that, after a full consideration of the whole of the circumstances connected with this case, the Governor-general in Council concurs in the opinion expressed in the 12th paragraph of your letter, to the effect that the continued enjoyment of the bhandaree, as a hereditary privilege, through so long a period by the grantee and his family, and the uniform recognition of it during the whole of that period by both the Governments concerned, appears to constitute such an argument as it would be difficult to resist; and I am directed therefore to request that the necessary measures may be taken for securing to the Dessoy of Nowsaree the full benefits of the guarantee to which he is entitled.

I have, &c.
(signed) *W. H. Macnaghten*,
Secretary to the Government of India.

Fort William,
20 October 1837.

(No. 5,465.)

MINUTE by the Right honourable the Governor, concurred in by Mr. *Farish*, without date.

COPY of this letter should be sent to Mr. Malet, with a request that he will intimate the decision of the Government of India in this case to the Guicowar, and inform him distinctly that it is final.

A period of one month should be given to his Highness in which to restore the Dessoy's rights, after which we must adopt the measures necessary to ensure restitution.

The Dessoy should be informed of these orders.

(signed) *R. Grant.*

(No. 5,466.)

From the Secretary to Government of *Bombay* to the First Assistant Political Commissioner for *Guzerat*.

Sir,

I AM directed by the Right honourable the Governor in Council to transmit to you the accompanying copy of a letter from the Secretary to the Government of India, dated the 20th ultimo, conveying the instructions of his Lordship in Council in the case of the Dessoy of Nowsaree, and to request that you will intimate the decision of the Government of India to his Highness the Guicowar, and inform him distinctly that it is final.

2. In communicating to you the above orders, the Governor in Council instructs me to state, that a period of one month is to be allowed to his Highness, within which he must restore the Dessoy's rights; on the expiration of this period, should his Highness have failed to do so, Government will be reluctantly compelled to adopt measures to enforce restitution.

3. A communication to the above effect has been made to the Dessoy of Nowsaree.

I have, &c.
(signed) *J. P. Willoughby*,
Secretary to Government.

Bombay Castle,
25 November 1837.

(No. 5,467.)

From the Secretary to Government of *Bombay* to *Temooljee Jamsetjee.*

WITH reference to Mr. Chief Secretary Wathen's letter, dated the 16th September last, I am directed by the Right honourable the Governor in Council to acquaint you, that the Government of India, after a full consideration of the whole of the circumstances connected with your case, has directed that the necessary measures be adopted for securing to you the full benefits of the guarantee of the British Government, to which you are considered entitled.

2. I am further directed to refer you to the First Assistant Political Commissioner in charge at Baroda, to whom instructions to carry the above orders into effect have been issued.

By order, &c.
(signed) *J. P. Willoughby,*
Secretary to Government.

Bombay Castle,
25 November 1837.

(True extract.)
(signed) *J. P. Willoughby,*
Secretary to Government.

EXTRACT Letter from Lieutenant-colonel *J. Outram*, C.B., Resident at Baroda, to *Arthur Malet*, Esq., Chief Secretary to Government, Bombay, dated 31st August (No. 209) 1848.

Extract Bombay Political Cons., December 1848, No. 10,432.

7. A PERUSAL of the examination of Hurree Bughtee's goomashta, on the 26th instant, and of Baba Nafra, subsequently (marked C.), in addition to what is stated above, will, I think, leave no doubt on the mind of the Right honourable the Governor in Council of the dishonesty of that firm in this transaction, and I hope, therefore, that, although the amount which is justly due to it must be gradually discharged by the instalments annually deducted from Govindrow's income, his Lordship will deem it just and politic to visit the firm with the only mark of displeasure which it is in the power of Government to inflict for the gross attempt to defraud a chief living under the protection of the British Government, by withdrawing our guarantee, which it has enjoyed since 1809. To this measure I can see no reasonable objection, the pecuniary conditions, in consideration of which the guarantee was originally granted having long since been fulfilled, although the generous protection of the British Government, which the firm has enjoyed therefrom for 40 years, has been thus shamefully repaid.

8. The following is the condition of the guarantee:—"In pursuance of the verbal assurance given by me on the 5th August 1809, and the authority of Government on the 23d of the same month, the family of the deceased (Hurree Bhugtee) shall be preserved in their rights and privileges, residence in the Guickwar territories, subject to their own merits. Baroda, 17th March 1820. (signed) *J. R. Carnac*, Assistant Resident." Which guarantee, therefore, as "subject to the merits" of the party holding it, it is now in the power of Government justly to revoke, for the family (by which is understood not merely the widows and children of the late Sowkar, but also his banking firm, which they carry on in his name), by dishonesty in their pecuniary transactions through their managing partner and representative, Baba Nafra, has fairly forfeited the protection which, under that stipulation, they were only entitled to so long as their conduct continued to merit it. The family and its firm, therefore, should now be told to look solely to their own sovereign for the protection which they could not, as Guikwar subjects, otherwise claim from the British Government.

9. I am as strongly impressed with the policy as with the justice of such a manifestation of displeasure on the part of the British Government at the disgraceful conduct of this firm, because in consequence of no example of the sort having ever yet been inflicted on any one of the many Guikwar subjects who

who are similarly supported by the British against their own Government; the "bhandries," as they are called, seem to the public, and appear to think so themselves, to enjoy an immunity from all law. When complained against to their own sovereign, he is powerless to enforce justice, because they are under British protection, while, at the same time, the British Government has apparently no power effectually to punish them (so far as has yet been proved, for the revocation of the guarantee (bandree), the only punishment that could be inflicted, has never heretofore been resorted to). I beg leave respectfully to submit my opinion, moreover, that considering the origin of these bhandries, and that the pecuniary obligations out of which they arose have so long been discharged, every occasion, such as this, wherein the guarantee is justly forfeited by fraudulent and criminal acts, should be taken advantage of to annul the engagement, and thus gradually may be decreased the unnatural control over subjects of a so-called independent prince, and the obnoxious petty interference with this Durbar, which the British Government is so frequently called upon to exercise in consequence of these guarantees, from which arose all the vexatious opposition of the late Guikwar to every measure proposed by us for the good of the country, however beneficial to his own subjects, and which, so long as they exist, must ever be a bar to that good-will and thorough cordiality on the part of the Durbar which is so essential to the welfare of Guzerat generally. Thus the subjects of both Governments sometimes suffer, and general interests are sacrificed, from upholding these troublesome ties with a few individuals. I trust I may not be mistaken as advocating the slightest departure from good faith towards any person holding our guarantee, however inconvenient or disadvantageous its maintenance may be. I mean to express that where, as in this instance, the other party virtually frees us by his misconduct from an engagement resting on his merit alone, we should avail ourselves of the opportunity to annul the guarantee which he holds.

10. Of all the guaranteed Sowkar firms of Baroda, that of Hurree Bhugtee is least entitled to any consideration from Government, having been convicted on former occasions of great misconduct, which heretofore has passed with impunity, to some instances of which I beg to draw the attention of the Honourable Board. In A.D. 1837, the Assistant Resident in charge had occasion to expose a conspiracy between Hurry Bhugtee's firm, through its agent, Baba Nafra, and certain members of this establishment, to defraud and ruin Gorajee Pole, a guaranteed chief. In reply, the secretary to Government remarked, "Mr. Malet states that the settlement was obtained through a conspiracy of influential members of the establishment with the other party, Baba Nafra; and the facts detailed in his report go far to prove the allegation." After further investigation of this case, the Political Commissioner, the Honourable Mr. Sutherland, recorded his opinion, "That there was unfair play, and unjustifiable conduct on the part of Baba Nafra, and his abettor, the Guickwar, there can be no doubt." On the same occasion, the Assistant Resident in charge complained of the obstructions which Baba Nafra interposed to his investigation of the frauds against Gorajee Pole, by refusing to produce the books of the firm. Afterwards, on investigating other cases of bribery, having reason to know that the same books would prove that large bribes had been given, during some years previous, to members of the Residency establishment, the Acting Resident gave the choice to the firm of either producing their books (which he proved they had no scruple to do before the Durbar), or forfeiting their guarantee. This penalty they preferred risking to the worse consequences which they well knew would result from the certain exposure which must have followed, of enormous corruption effected through their agency. The penalty was not at that time enforced, however, on the following ground: "With regard to the production of chopras, or account books, it is not conceived that Government have power to enforce the course pursued by Mr. Malet, against the Guickwar's will, though by refusing to aid the inquiry, a suspicion is created that his Highness is anxious that the truth shall not be elicited." Your report here referred to leaves no moral doubt of this firm having been the medium through which the corruption of the Residency establishment had been effected, by bribery, for many years previous; and it appears to me that, according to the terms of the guarantee, being subject to the "merits" of the holder, Government might justly have enforced the penalty which was then held out as the consequence of

Letter to Government, dated 15 Dec. 1837, No. 893.

Letter, dated 27 March 1838, No. 568.

Report, dated 31 May 1838, No. 565.

of refusing to produce their books, which must at once have legally proved the fact, and brought the guilty servants of Government to justice. The firm escaped with impunity at that time, owing to the doubts which Government entertained as to the legality of the demand for the production of these books; and I have reason to believe that the evil practice has continued unchecked consequently, and that it will be continued, unless the same penalty be now inflicted which you deemed the firm deserving of ten years ago; for such an example is the only thing likely to put a stop to it.

EXTRACT Minute by Lord *Falkland*, dated 20 November 1848.

9. MIXED up with this question is the behavour of the firm of Hurree Bhugtee, who have advanced a claim on the bonds I have above considered, to a sum amounting to *Rs.* 3,03,130. 9. 9., the amount I consider now due, sufficiently marks the view I take of the transaction; and I am much disposed to adopt Colonel Outram's recommendation to cancel the guarantee formerly extended to the firm; but on the whole of the question I should wish to be favoured with the opinion of my colleagues.

(No. 10,434.)

EXTRACT Minute by the Honourable Mr. *Reid*, dated 24 November 1848.

13. I QUITE concur with the expediency of withdrawing our bhandarees, wherever their duration depends on the conduct of the parties holding them, and when that conduct shall be such as to justify our adopting this extreme measure; but I cannot think that the mere demand of a debt, however exorbitant, is a sufficient breach of good conduct. The firm is not without some grounds for all its demands. We may not admit them, but we have no right to punish it for having advanced them. There have been no forgeries, no denials of payments made to the firm, and no frauds, if we except the abstraction of the correspondence from the Residency records, for which, in the absence of all proof, we have no right to make the firm responsible. Commercial morality is, I fear, not at so high a standard among our countrymen in India that we could with any reason visit so severely the offence committed by a native banker, of trying to exact from his creditor every pie which he thinks might be screwed out of him by the wildest interpretation of his bonds.

14. In this case, I would entirely abandon the idea of interfering with the bhandaree.

(No. 10,437.)

EXTRACT Minute by the Honourable Mr. *Willoughby*, dated 2 December 1848.

7. THEIR conduct on the occasion is certainly not free from blame and reproach; but I entirely coincide in opinion with Mr. Reid, "that the mere demand of a debt, however exorbitant, is not a sufficient breach of good conduct" to justify the extreme measure of cancelling the bhandaree or guarantee of protection granted to the firm in 1809.

(No. 10,438.)

EXTRACT Minute by the Right honourable the Governor, concurred in by the Honourable Messrs. *Reid* and *Willoughby*, dated 5 December 1848.

As my colleagues concur in opinion that there is nothing in this case which ought to induce us to deprive Hurree Bhaugtee of the advantage of the Government guarantee, I defer to their opinion."

EXTRACT Minute by the Honourable Mr. *Willoughby*, dated 20 February 1849.

* Case of Bulwunt Row Guicowar.

6. I CANNOT abstain on this occasion * from expressing my regret at observing how lightly the Baroda guarantees are regarded by the local political authorities of the present day, for this is the fourth instance, within a very short space of time, in which their annulment has been recommended; at all events, in three out of the four, on the most inadequate and untenable grounds; Captain French, in one of his late reports, going so far as to state that they impede the advancement of civilisation at Baroda. The sooner he banishes from his mind a crotchet of this nature the better.

7. On a former occasion I recorded my opinion regarding these embarrassing engagements, and adverted to the peculiar circumstances under which they were contracted. They form part and parcel of our original alliance with the Baroda state, and I should as soon think of cancelling any articles of our treaties, because in operation they were found inconvenient, as I should think of annulling, without sufficient cause, these engagements, because in the present day they are productive of embarrassment. No one can be more sensible than myself of the evils and inconvenience which have resulted from them, for I experienced them personally in former years, when attached to the Baroda Residency, during the violent struggles made by the late Guicowar to emancipate himself from the control their existence required, and which he not unnaturally felt irksome. But I have always contended that, although some evil has resulted from these guarantees, we are bound to uphold them to the utmost of our power, unless we are prepared to relinquish the valuable consideration for which they were exacted; that is to say, our richest and most fertile possessions in Gujerat.

8. Our political officers at Baroda should be reminded that our connexion with the Guicowar state was formed during the reign of a prince, himself incompetent, through ministers, bankers, and Arab jemindars, who in return for the aid and support they afforded us, demanded and received these troublesome guarantees of person and property for themselves and families in perpetuity, and it must not be imagined that Amud Row's successors can with reason complain of this or any other condition of the alliance; for had we not opportunely interfered at the precise period we did, there is every reason to believe that their inheritance would have passed into other hands; probably into those of Mulhur Row Guicowar, whom we afterwards subdued. The administration of Baroda, in fact, at the beginning of the present century, was entirely under the control of a turbulent body of Arab mercenaries, ready to sell their services to the highest bidder, whom we likewise expelled from power, one of the conditions on which they capitulated being, that various guarantees, to which they were a party, should be transferred to, and upheld by, the Honourable Company.

For further information regarding the origin and nature of these guarantees, and the obligation we are under to uphold them, I would refer the Board to an elaborate and able minute recorded by the late Sir John Malcolm, when he presided over the administration of this Presidency.

9. In the present day we merely see and feel the inconveniences arising from these pledges, as rendering necessary occasional interference between a sovereign and his subjects. If, however, we desire to maintain our character for good faith, we must maintain these, and resist every attempt to violate them, though of course we should extinguish them whenever we can honestly do so; for instance, by the perfectly legitimate mode of declining to perpetuate them by adoption, and by which, in fact, the number of guarantees still remaining in force has within the last few years been considerably reduced.

MINUTE by the Honourable Mr. *Reid*, concurred in by the Members of the Board.

I CONCUR, and think it would be well to communicate to Captain French the purport of the 6th and 9th paras. of Mr. Willoughby's minute.

(signed) *L. R. Reid.*

22 February 1849. *J. P. Willoughby.*

EXTRACT Letter from Captain *P. T. French*, Acting Resident at Baroda, to *Arthur Malet*, Esq., Chief Secretary to Government, Bombay, dated 19 May (No. 128) 1849.

10. I WILL not, I trust, be considered as about again to offend, by questioning in this despatch the general subject of guarantees. I tried to act with "unflinching honesty" towards my Government, this Durbar, and myself, and quoted the words of the above given despatch regarding these "anomalies which have already caused so much evil to the Guicowar's state, and embarrassment to us," but my views met with the disapprobation of Government, and I submit to the penalty. Yet as the Resident is expected to make the "most unreserved communications," I would beseech a full consideration of the whole subject, on the basis laid down in the Court's despatch,* just quoted, or on any other. In my opinion, the interpretation put on the word "bhandaree" is not that of the soil, and did I give the words of the first Mahomedan at this court of the use for which guarantees may be held, Government would see how little our honourable intent of vindicating the pledge was appreciated; and of the vexation and annoyance these pledges have already caused, I need make no mention.

EXTRACT from a Resolution on Paragraphs 8 to 11, from a Letter from the Honourable the Court of Directors, dated 14 March (No. 13) of 1849.

THESE paragraphs (8 and 11) should be communicated to the Officiating Resident at Baroda, with instructions to report whether he has reasons, beyond those noticed by Colonel Outram, to believe that, as surmised by that officer, a forged bond was substituted by the firm of Hurree Bhugtee, for the sum of 9,000 rupees in the place of the original bond for 9,001 rupees, the wording and character of the original bond being changed in the alleged fabricated document, and if so, whether any circumstances beyond those mentioned by Lieutenant-colonel Outram can be adduced in substantiation of that opinion.

Lieutenant-colonel Outram was in error in the opinion entertained that persons holding the British guarantee, possessed in virtue thereof an immunity from punishment; such a doctrine has never been set forth by Government, nor entertained by holders of the guarantee. In fact, had Lieutenant-colonel Outram been acquainted with the records of his office, he would not have entertained such a sentiment, since the punishment inflicted some years since upon Bhasker Rao Wittal, who, with the concurrence of both Governments, was compelled to pay a fine of 70,000 rupees for cruelty to one of his dependents, was a proof to all holders of the British guarantee that they are amenable to punishment on offences being substantiated against them. Government has always considered that parties holding the guarantee are liable to punishment on proof of sufficient misconduct.

No. 2,262, of 1849.—Political Department.

(No. 4,340.)

From *A. Malet*, Esquire, Chief Secretary to Government, Bombay, to Captain *P. T. French*, Acting Resident at Baroda.

Sir,

WITH reference to Lieutenant-colonel Outram's letter, dated the 31st August last, No. 209, and the reply of Government, dated the 15th December following, No. 5,249, relative to the pecuniary claims of the firm of Hurree Bhugtee against Govind Rao Guckwar, I am directed by the Right honourable the Governor in Council to transmit to you an extract, paras. 8 and 11, from a despatch from the Honourable the Court of Directors, dated the 14th March, No. 13, of 1849, and to request that you will report whether you are aware of any grounds beyond those mentioned by Lieutenant-colonel Outram, for believing that a forged bond was substituted by the firm of Hurree Bugtee for the sum of 9,000 rupees, in the place of the original bond for 9,001 rupees, the wording and character of the original bond being changed in the alleged fabricated document.

9,000 rupees.
9,001 rupees.

2. The Honourable the Court of Directors will be informed that Lieutenant-colonel Outram was in error in entertaining an opinion that persons holding the British guarantee, possess in virtue thereof an immunity from punishment; such a doctrine has never been set forth by Government, nor, it is believed, has been entertained by the holders of the guarantees.

3. On the contrary, if Lieutenant-colonel Outram had carefully consulted the records of his office, he would have satisfied himself that Government has always considered parties holding the British guarantee amenable to punishment, on proof of sufficient misconduct.

I have, &c.

(signed) *A. Malet*,
Chief Secretary.

Bombay Castle, 26 May 1849.

(No. 6,229.)

EXTRACT Bombay Political Consultation, 8th August 1849.

No. 143, of 1849.—Political Department.

From Captain *P. T. French*, Acting Resident at Baroda, to *William Courtney*, Esquire, Acting Secretary to Government, Bombay.

Sir,

IN reply to your letter, No. 2,262, 26th ultimo, with enclosure from the Honourable the Court of Directors, paras. 8 and 11, of No. 13, dated 14th March 1849, I have the honour to state, no further steps have been taken to ascertain if the bond produced by Hurry Bhugtee was forged or not.

In reply to your 2d and 3d paras., and with reference to the Court's despatch, I beg to state that the condition in which the records of this office are has been often submitted for the consideration of Government. I cannot, of course, state the extent of Colonel Outram's reading in it, but I should be betraying my duty, did I not give it as my opinion, that the ideas he expressed in the despatch of the 31st August 1848, No. 209, para. 9., were identical with my own; and as far as I can see, all here entertain the same opinions.

3. In saying this, I beg to remind you of the state of our records, and to add that I have, as far as may be, carefully consulted them; but by this I do not mean to say it has ever been laid down that guarantees have an immunity from punishment, though practically they certainly would seem to have enjoyed it.

4. When addressing Mr. Chief Secretary Malet, on the 5th January last, No. 9, regarding the erasement from the roll of some actually expired guarantees, I had to make inquiries of the native assistants in the office, from whence

whence the purport of my letter was gathered, and I was at once told it was no use writing; that I should only incur the displeasure of Government; that guarantees, though expired, would never be expunged, and that none of my predecessors had ever ventured on such dangerous ground. From this, Government will gather the impression, even in our own office; and the 10th para. of my letter of the 19th ultimo, No. 128, on the currency of Soonder Nillajee pension, tells that abroad.

5. The advocacy of my views has brought down on me the displeasure of Government; they are those of Colonel Outram and all here; but I should have probably refrained from further urging them, were it not that it appears your letter and the Court's despatch now again present a favourable opportunity. In fact, they call for an opinion, as silence would be tantamount to assent.

6. The house of Hurree Bhugtee, noticed in Colonel Outram's despatch, holds a guarantee "during good conduct." In the records I have perused it holds a prominent place. As far back as the 20th February 1827, in para. 15, I find the Honourable J. P. Willoughby, Esq., then Assistant Resident here, informing Government, that through this firm the late prince was carrying on intrigues in Bombay to upset the financial reforms then in progress here.

7. In a khurreeta from the Honourable the Governor to the Guicowar, under date the 8th February 1841, his Highness is advised never again to employ certain "evil-disposed persons," one of whom is Baba Nafra (so often mentioned by Colonel Outram), the mooneem of Hurree Bhugtee's house, and another is Gunesh Punt; but to this day the former holds our guarantee, and the latter is in the service, and has ever since been, of the Durbar.

8. Again, in the 39th para. of the Honourable the Governor's khurreeta to the Guicwar, under date the 13th July 1843, on Dhackjee Dadajee's case, his Highness is told the Resident has been directed to exclude from the Residency the above-named persons, Hurree Bhugtee's mooneem, and Gunesh Punt; and in the 2d para. of the Chief Secretary's letter forwarding the khurreeta, same date, and No. 1,229 A., he is told to report if his Highness excludes them his councils. This letter is again referred to in Mr. Secretary Willoughby's despatch of the 10th January 1844, No. 17, and the Resident is directed to continue to exclude Hurree Bughtee's mooneem from all intercourse with the Baroda Residency.

9. On the 30th April 1846, the then Resident proposed removing the above prohibition, and was reprimanded for the suggestion.

10. Now, I would ask, if this be immunity or not? and what the Durbar, the guarantees, and people at large, naturally must think? When intrigue, bribery, and corruption were rife, the firm of Hurry Bhugtee was in the van, and, with other "evil-disposed persons," its mooneem was held up to his Highness as a man to be avoided by two Governors of Bombay; yet he and the firm, though acting thus since 1827, hold our guarantee during "good behaviour."

11. I need not remind you of the late voluminous correspondence regarding this said Hurree Bhugtee and Joitabaee.

12. In further elucidation of the feeling abroad regarding guarantees, and Government holding by them tenaciously, I would remind you that on the 14th September 1827, in letter No. 414, the Honourable J. P. Willoughby, Esq., then Assistant Resident here, reported Jemsetjee Dessaee (a guarantee) as "one of the most active of those concerned in the machinations still in progress in this durbar," and he suggested the pledge being revoked. Government, in reply, said, 11th October 1827, No. 1,278, "If guilty, he will be deprived of the guarantee of the British Government, and be left to the Raja to punish;" yet he retains to this day our guarantee.

13. What can it be supposed the people think of the case of Bulvuntrow Guicowar, a man of whose conduct Government over and over expressed disapprobation, and of whom his Highness complained as defrauding his subjects? The people say, "Here is a man of dissolute, depraved, and extravagant habits; he runs in debt some lacs of rupees that he can never

liquidate; but because he is a guarantee, his Highness can't confiscate his wealth, and the British Government allows him 12,000 rupees a year for his personal support, his 200 creditors not having the remotest chance of ever being paid one rupee; while, were he a British subject, and residing in the Company's country, he would not be above the law.

14. I speak the words and sentiments of the people; on them Colonel Outram, I presume, formed his opinion, as I do mine, that the guarantees do virtually enjoy immunity.

15. Bhaskur Row Withul was guilty of a most cold-blooded murder; yet he is still a guarantee, and the Resident's escort receives him with presented arms, the only punishment inflicted being a fine of 70,000 rupees (as yet unpaid), and the cessation of the ruffle when the guard presents arms. Were he a British subject, what would have been his punishment, or a Guicowar's not enjoying our guarantee? Surely the fine would have been greater, and he would have been deprived of all hereditary honours.

16. I could give you many instances in further elucidation of this point, but it were at present needless. Nothing struck me more forcibly in the records than the entire absence of all aid and support from the guarantees when any intrigues or machinations were going on in this Durbar; all seem to have played a fast and loose game, but ever ready to join the Durbar when called. Our pledge insured them protection, and the call of the prince was an additional gain, of course. Of us they were sure; and having seen no instance of the pledge being forfeited, although allied with the Durbar to upset our reforms, they joined the prince so long as he rewarded their services.

17. Having seen something of native Durbars in other parts of India, and making great allowances for the defective education of the late Guicowar, and certainly a very obstinate, perverse nature, it still seemed to me that much of the disaffection that had for so long existed here came out of our pledge to the guarantees, and it would be a denial of the most ordinary powers of perception to suppose that the people at large think our support of these persons arises out of the simple reasons we assign. The weaker power ever dreads the mightier, and sees in all things a tendency to absorption, and, in a Mahratta Durbar, led by Deccanie Brahmins, the influence is strong, and colours all. Between the two Governments there ever will be international matters of discussion enough to arouse the suspicions and dread of the weaker. This I see now even frequently evinced, to the serious injury of that advance in civilization, and hearty cheerful confidence in the good intentions of Government, which would avert the folly that might beget the event most dreaded.

18. My period of incumbency has already more than half expired, and I cannot conceal from myself that political wisdom would dictate my not so frequently and urgently, however imperfectly, pleading the removal of that which seems to me a bar to cheerful confiding reliance on the good intentions of Government; but there is some consolation in the belief that I am doing what I consider my duty, as well as in the reflection that Government will so view it, however the want of judgment displayed may bar my future prospects.

19. As stated in my letter of the 5th January, the four extinct guarantees may safely be at once struck off the roll, and most, if not all the bankers, without causing any excitement. Let me remind you of the case of Damodhur Jumnabaee, now pending. Lacs of rupees are in the settlement involved, and either party would gladly spend very large sums in corrupting those in any way concerned in its disposal. This is by no means the only instance in which our guarantee has been attended with evil to all concerned. His Highness is drawn into the discussion of its actual bearings; he cannot himself, of course, know anything, but the papers prepared by his karbarees he signs, and they are, as usual, adverse to those going from the Residency; when, as in this instance, the services of the karbarees may be purchased, we cannot cope with them, nor can we conceal from ourselves that instances are on record of our own people being as unmindful of probity as those of the Guicowar. The discussion regarding Jumnabaee *versus* Damodhur being, if ever, closed, the firm of Khooshallchund might be at once erased from the roll of guarantee, and all other banking establishments at once, now, in my opinion.

20. The

20. The pledge to Govindrow and Bulvuntrow Guicowar is not hereditary, and thus gradually we will be released of pledges which hitherto have had a very baneful influence.

I have, &c.
(signed) *P. T. French,*
Acting Resident.

Baroda Residency, 1 June 1849.

(No. 8,379.)

EXTRACT Bombay Political Consultation, October 1849.
No. 208 of 1849.—Political Department.

Sir,

IN reply to your letter of the 23d ultimo, No. 3,122, I have the honour of reporting, for the information of Government, that I am not aware of any grounds, beyond those reported by Colonel Outram, for supposing that Hurree Bhugtee & Co. endeavoured to defraud Govind Rao Guicowar through forgery.

I have, &c.
(signed) *P. T. French,*
Acting Resident.

Baroda Residency, 30 July 1849.

(No. 8,380.)

MINUTE by the Right Honourable the Governor, concurred in by the Honourable Mr. *Willoughby* and the Honourable Mr. *Blane*.

PARAS. 8 to 11, of the Honourable Court's despatch, No. 13, of the 14th March 1849, may now be replied to, as it does not appear that there is any proof to corroborate Colonel Outram's suspicion of the substitution, as noticed in the 9th para. of the Honourable Court's letter, "of a false bond (bearing interest) for 9,001 rupees, in the room of a mere acknowledgment of a balance of debt."

2. Captain French has, in his letter of the 1st June last, stated that the orders for the exclusion of Baba Nafra from the Residency, conveyed in Mr. Chief Secretary Reid's letter, No. 1,229 A, of the 13th July 1843, have not been acted on. This was a great error on the part of the Resident, but I am not inclined now to interfere in the matter; what has passed so long may be continued, I presume, without much evil, and the interdict need not be renewed.

3. I do not think that any other portion of Captain French's letter merits particular notice. He was informed, on the 6th March last, of the views of Government concerning the guarantees, and by them he must be guided. Should anything arise during his incumbency affecting the character of any of the guaranteed parties, it will be his duty to report it to Government, with his opinion.

(signed) *Falkland.*
J. P. Willoughby.

1 October 1849.

No. 3,122, of 1849.—Political Department.

(No. 6,231.)

From *A. Malet*, Esq., Chief Secretary to Government, Bombay, to Captain *P. T. French*, Officiating Resident at Baroda.

Sir,

I AM directed by the Right honourable the Governor in Council to acknowledge the receipt of your letter of the 1st ultimo, No. 143, connected with the pecuniary claims of the firm of Hurree Bhugtee against Govind Rao Gackwar; and in drawing your attention to the 1st para. of Mr. Acting Secretary Courtney's communication of the 26th May last, No. 2,262, to request that you will reply particularly to the reference made in the latter part thereof.

I have, &c.
(signed) *A. Malet*, Chief Secretary.

Bombay Castle, 23 July 1849.

(No. 5,640.)

EXTRACT Bombay Political Consultation, 11 July 1849.

No. 9, of 1849.—Political Department.

From Captain *P. T. French*, Acting Resident at Baroda, to *Arthur Malet*, Esq., Chief Secretary to Government, Bombay.

Sir,

THERE being now on the throne of the Gaekwars a young sovereign, perhaps Government may think this a fitting opportunity for gradually considering a reduction in the number of His Highness's subjects who have our guarantee, and acting on the spirit of the orders of the Honourable the Court of Directors, under date the 2d July 1840, No. 13.

2. Of those guarantees the late Mr. Boyd, Resident at this place, forwarded to Government a return on the 18th November 1840; and here, I may mention, entry No. 24 requires correction, the pledge not being hereditary. *Vide* accompaniment to Government letter, No. 2,949, 18th June 1845, regarding the Gungadhur Shastree's family.

3. The entries in the return I would now wish Government to consider, with a view to the withdrawal of our guarantee, are Nos. 4, 6, 7, and 12. Regarding them there will not, I imagine, be any difficulty; and in most, the present occupants, if such they be, are two and more generations removed from the original holder, who had no hereditary guarantee, but yet are borne on the return, and from which I would beg authority for erasing their names.

4. No. 4, "Imrut Lall Tooljaram," lives and has lived for years out of the Gaekwar's state, at Ahmedabad. No. 6, "Khandass Patell," and "Bhychund Dessaee," are long since dead, and the present representatives are their grandchildren. The "guarantee is not hereditary." No. 7, "Samul Bechur" and "Mungul Sukeedass," long since dead, and now represented by their grandchildren. "This guarantee is not hereditary." No. 12, "Manuckchund Roopchund," has been long dead, and the firm is at Surat, though there is a small shop here also. The guarantee "will remain in force while the firm exists at Baroda."

5. It will, perhaps, be said I am needlessly troubling Government, these cases being all so plain; yet it was but yesterday that the goomasta of the last named claimed my assistance to recover money due him here.

6. Unless Government is disposed to take up the entire subject of the guarantees, I shall, if permitted, from time to time, as above, represent such cases as may appear devoid of difficulty; thus to a measure meeting the orders of the Honourable Court, without creating any sensation, reducing in each instance a cause of vexatious correspondence, it may be, with this Durbar.

7. I have

7. I have lately (letter No. 310, of 26th December last) reported on the case of Bulwunt Row Gaekwar, a guarantee, who is indebted to upwards of 200 persons, a sum, the mere principal of which he can never liquidate, and thought it my duty to suggest stringent measures, because of his shameful betrayal of the protection afforded him, and because it is well known he is possessed of wealth to a considerable amount. He defies and defrauds his creditors, and though a pensioner of his Highness, and residing in the city of Baroda, neither the constituted courts of the country, his sovereign, or the usual mode of enforcing payment by "dhurna," can compel him to pay back even the principal of the sums he has borrowed, for he is a guarantee, and knows that with his death the bonds he gave become waste paper, or nearly so. The Government has ordered that the property he may die dispossed of shall go to his creditors.

8. I may here earnestly beg to recommend to the serious consideration of Government, Colonel Outram's suggestion of a "proclamation," given in full in the 5 and 6 paras. of his letter to your address of the 29th July last No. 185.

I have, &c.
(signed) *P. T. French*,
Baroda Residency, 5 January 1849. Acting Resident.

(No. 5,641.)

MINUTE by the Right Honourable the Governor, dated 24 May 1849.

1. IN the accompanying letter, Captain French, Officiating Resident at Baroda, has drawn the attention of Government to the existing guarantees held from the British Government by subjects of the Baroda Durbar, with the view to a reduction being made in their number, in the event of the present being deemed a fitting period for effecting the same.

2. For the clear elucidation of this subject, I purpose, before noticing the points mentioned in Captain French's letter, to take a brief review of the past proceedings of Government connected with this subject; and in doing so, I am greatly aided by an elaborate memorandum prepared by my able colleague, the Honourable Mr. Willoughby, dated the 4th August 1837, framed by that gentleman when Political Secretary to Government, at the request of the late Right Honourable Sir Robert Grant, then Governor of this Presidency.

3. In the above memorandum, the Honourable Mr. Willoughby has given the following history of the origin and nature of our bhandaree or guarantee engagements at Baroda:—

"These embarrassing engagements," observes Mr. Willoughby, "originated in the very peculiar circumstances under which our connexion with the Guicowar state was formed. Our intercourse with the Baroda state is of ancient date, and the engagements entered into with it were of a more intimate nature than those usually concluded with the native Governments of India. Upwards of 60 years ago, by a treaty entered into with the Sirdars of the Mahratta empire, the Guicowar family were placed under the protection of the Honourable Company.

"It was not, however, until the year 1801–2 that the active interference of the British Government was called for. In that year a formidable band of conspirators seized and placed under restraint Anund Row, the reigning Guicowar, and usurped the whole powers of his Government. Anund Row was the eldest son of the Govind Row Guicowar, and on the death of his father, in 1800, succeeded to the musnud. He was a prince of weak intellect, and in no way qualified to conduct the Government. An illegitimate son of Govind Row's, by name 'Canojee Row,' rebelled against Anund Row, and obtained temporary possession of the Government. His administration, however, being marked with violence and oppression, he was soon deprived of power and placed under restraint, chiefly through the instrumentality of Rowjee Appajee, Anund Row's minister. No sooner, however, was this rebellion crushed, than another was fomented by Morar Row, who was also an illegitimate son of Govind Row. This was likewise suppressed by the minister, Morar Row being also seized and imprisoned.

"Canojee Row and Moorar Row, however, had many partisans, whose open opposition or secret intrigues proved a constant source of anxiety to the minister, who was in consequence induced to solicit the aid of the Bombay Government, as the surest if not the only means of maintaining himself in power. As the political events of the day rendered a more intimate alliance with the Baroda state highly desirable, his advances were met with great cordiality on our part.

"About this time, events occurred at Baroda which appeared to threaten the very existence of the Guicowar state. Mulhar Row, a man of influence and enterprise, and a cousin of Govind Row Guicowar's, possessing a considerable jagheer in the vicinity of Ahmedabad, assembled a large force, with the ostensible design of releasing Canojee, and ejecting Rowjee Appajee from the Baroda ministry.

"The minister's anxiety to form an intimate alliance with the British Government was thus greatly strengthened. His own resources were inadequate to resist so formidable an opponent as Mulhar Row, and he therefore despatched envoys to Bombay to call upon that Government to assist him with money and troops, and to conform to the treaty of Salbhye, whereby the Honourable Company bound themselves to protect the just rights of the lawful successors of Futteh Sing Guicowar.

"It is unnecessary to relate with minuteness the events which followed. It is sufficient to state that the aid solicited was granted; hostilities ensued between the British force equipped for the occasion and the troops of Mulhar Row, which terminated in his complete subjection on the 5th May 1802, when he gave up possession of the town and fort of Kurree to Colonel Walker.

"It is now unnecessary to refer to the treaties which were about this time entered into between the two Governments. The Governor of Bombay, the Honourable Jonathan Duncan, proceeded to Cambay, for the purpose of conferring with Rowjee Appajee, and on the 15th March 1802 a convention was concluded between the parties, whereby the British Government agreed to employ its troops for the reduction of Mulhar Row, on condition that the Guicowar should defray the expenses of their equipment whilst so employed.

"The Minister, however, had another object in view, namely, to obtain the co-operation of the British Government in effecting a reduction of the Arab force maintained at Baroda, who had become far too powerful for him to reduce by the means at his own disposal. By the same convention, therefore, the Guicowar agreed to accept a British subsidiary force of about 2,000 sepoys, one company of European artillery, and two companies of Lascars, on condition that it should be employed in effecting the above object. It is important to bear this fact in mind, for, as will hereafter be seen, most of our bhanderry engagements originated in this agreement.

"Immediately after the reduction of Mulhar Row, another convention, dated the 6th June 1802, was agreed upon by the same parties; which, after confirming that of March preceding, stipulated that the British Government should advance a loan to the Guicowar, to enable him to liquidate the arrears of pay due to the Arabs about to be disbanded. This loan amounted to 11,75,000 rupees, and the revenues of certain districts were assigned for its repayment.

"In the course of the operation against Mulhar Row, it was discovered that that chief had entered into a correspondence with the principal Arab jemadars at Baroda, with the view of enticing them to depose their lawful prince, and to establish Canojee Row on the musnud. This class of mercenaries had exercised a great ascendancy over the Baroda Government for more than 40 years before the British Government established its influence in Guzerat; and at the time I am writing of, their influence and power were so great that the entire administration of the state was in their hands, and both Annund Row Guicowar and his minister were in continual danger of their lives. They had taken possession of Baroda, Borsud, and other places. They had also occupied the fort of Sunkaria, under the direction of a relation of the Guicowar's, named Gunput Row. Their numbers did not, however, exceed 1,000 men, besides 900 Hindoostani sepoys attached to them; but they were very formidable, from the positions they occupied, the great influence they possessed in the capital, and from the circumstance of their having gained possession of the person of Annund Row Guicowar, whom they kept under restraint. To add to the difficulties

difficulties of the British Government, Canojee Row, with the connivance of the Arabs, who held him in custody, about this time effected his escape, and re-hoisted the standard of rebellion.

"The British Government having assembled a considerable force at Baroda, a negotiation was immediately opened with the Arabs, to obviate the necessity of an appeal to arms. Liberal terms were offered; they were informed that all their just claims would be satisfied, and all arrears of pay due to them liquidated; but in consequence of the treacherous and insubordinate conduct they had been guilty of, it was resolved that they should be no longer permitted to remain in the service of the Guicowar's Government.

"After a protracted negotiation, it became evident that the jemadars had no intention of submitting to these terms. With the consent of the Guicowar, it was therefore determined, that the Arabs should be expelled from Baroda by force, and that on this being effected, the town should be occupied by British troops. On the 18th December 1802, the town of Baroda was invested by the allied troops; the siege was prosecuted with vigour, and after having sustained a considerable loss, both in officers and men, the breach was reported practicable; at this crisis the Arabs themselves renewed the negotiation, which terminated in a capitulation, by which they bound themselves to evacuate the fort, to release Annund Row Guicowar, to abstain from all future intercourse with the enemies of his Government, and to quit Guzerat after their arrears of pay, amounting to about 14 lacks of rupees, had been paid, upon condition that the bhanderry of the Honourable Company should be substituted for theirs, wherever it had been granted either to persons or property.

"In elucidation of the nature of the obligations which thus devolved upon the British Government, I beg to refer to the annexed explanatory statement by Colonel Walker, which I have extracted from the Diary of the Bombay Government, of the 2nd April 1806. From the three last paragraphs of this document, it will be seen that Colonel Walker regarded the transfer of these engagements to us to be very advantageous, from the great influence which they gave to Government in Guzerat, and more particularly at Baroda.

"In further illustration of the subject, the following remarks by the late lamented Sir John Malcolm may prove useful:—

"The difficulties attending this connexion were inherent in its original formation. We did not obtain our influence and power in Guzerat, and over the court of Baroda, as we had in other cases, by a war or treaty with a sovereign in the enjoyment of authority; we came in as mediators between parties in a country torn by factions, and in which all rule was disorganised. The prince was in a state of imbecility, and a prisoner in the hands of Arab mercenaries, whose strength and influence rested as much upon their giving guarantees of protection to his principal subjects and creditors as upon their military power. When we expelled them, we not only adopted their guarantees, but also committed ourselves in new pledges to ministers and others, who actually exercised the civil authority of this state, and with whom all our first engagements and treaties were virtually, though not nominally, concluded. These persons stipulated, as they had a right to do, for their personal security, and for a provision suitable to their rank, before they could be induced to promote our objects. Guarantees, similar to those which we gave on these occasions, had for a long time prevailed in Guzerat, and formed a prominent feature of the system of the government of that country. These guarantees were, on our first establishment, granted on various occasions, and while we continued, as we did until 1820, to exercise a controlling influence over the Guicowar state, no inconvenience was experienced from these engagements; but on the death of Annund Row, whose natural defects had made him a cipher in that state, of which he was the nominal head, when his brother Syagee succeeded, and assumed the direct rule, we began to experience serious embarrassments from our guarantees; and in a very short period this ill-advised prince violated the conditions of an engagement he had voluntarily entered into, and refused to listen to the advice or remonstrances of the British Government, though bound to do so by express stipulations of the treaty under which he had been seated on the musnud.—'Government of India, page 8.'

"It must not, however," continues Mr. Willoughby, "be supposed that the British Government maintained the bhanderry system in force to the same extent as prevailed during the dominion of the Arabs. Our guarantee was, for

the most part, confined to loans raised for the purpose of relieving the Baroda Government from the embarrassments in which it had become involved in suppressing the disturbances to which I have briefly alluded. The principal exceptions were guarantees granted to Rowjee Appajee and his adherents, in return for the aid which they had afforded us in accomplishing our views at Baroda. Some of these are hereditary, and not only extend to person and property, but guarantee the continuance of office to particular families. No one can dispute that as a system this is most vicious, for as talent is not hereditary, situations of trust and importance may devolve to persons wholly incompetent for the due performance of their duties. As justly remarked by Sir John Malcolm, no inconvenience was felt from these engagements so long as we continued to control the Baroda administration; but when, in 1819, the imbecile reign of Anund Row Guicowar closed, and he was succeeded by his brother, the present Guicowar, the evils of the system became apparent, I apprehend that in considering these, and in endeavouring to extricate ourselves from them, we have forgotten their origin, and the advantages which we derived from them, for they ought to be viewed as part of the price which we paid for the valuable and extensive cessions which we obtained under the treaties negotiated with the Guicowar Government from 1802 to 1805.

"During the time that I was attached to the Baroda Residency, or from 1819 to 1829, I can only recollect one instance in which the guarantee of the British Government was granted, viz., that given to Bulwunt Row Guicowar, and Pillajee Row Guicowar, two illegitimate sons of Anund Row Guicowar. This sufficiently proves that Government has evinced no desire to encroach upon the rights and privileges of the present Guicowar; but when Mr. Elphinstone vested that prince with the independent charge of the Government, one of the few restrictions which were imposed upon him was, 'That the guarantees of the British Government to ministers and other individuals must be scrupulously observed.' 'Engagement with Seeajee Row Guicowar, dated 2d April 1820.'"

4. The above information was laid before the Board by Mr. Willoughby (at the request, as I have already remarked, of the late Right honourable Sir Robert Grant), in consequence of the following reference having been made to this Government by the Government of India, under date the 5th December 1836, in connexion with the numerous demands against the late Gaekwar, with which his Highness had refused to comply, and which had, in consequence, been referred by this Government for the final orders of the Right honourable the Governor-general in Council.

"I am directed to request information as to the sense in which a bhandaree or guarantee is understood under the Bombay Presidency, and further, that any evidence as to the accuracy of such construction or precedents in favour of it may be cited. It would appear to be the opinion of the Right honourable the Governor in Council, that a bhandaree is in its nature hereditary, but I am desired to observe, that on this side of India, it is never considered to endure beyond the life of the person guaranteed, unless its continuance to his descendants may have been expressly provided for."

5. A copy of Mr. Willoughby's memorandum was, on the 3d October 1837, forwarded to the Government of India, with an intimation that it had never been, as presumed by that authority, the opinion of this Government that a bhandaree was hereditary as a matter of course, and that the Government of India must have been led to this impression from a want of explicitness in the previous correspondence of this Government.

6. On the 25th March 1840 the Resident at Baroda was directed to submit to Government a complete statement of all subsisting guarantees held by Gaekwar subjects from the British Government, with the view of, if practicable, effecting some compromise with his Highness in regard to them. The Honourable the Court of Directors, in a despatch to the address of this Government, dated the 2d July 1840, in reference to this call, and to the subject of the Baroda guarantees generally, observed as follows:

"While we feel with you the impossibility of disregarding such claims on our good offices, we see with great uneasiness the prospect of further extensions of those obligations to protect individuals against their lawful sovereign which have already

already caused so much evil to the Guicowar state, and so much embarrassment to us.

" It indeed appears fruitless to hope for the permanent maintenance of a good understanding between our Government and its ancient ally while this anomalous state of things continues to exist; although the system was created for purposes beneficial to the Guicowar state, and not directly to us, there are circumstances in the case which make it equitable that we should take our share in whatever sacrifices may be necessary in order to get rid of the mischievous consequences.

" The guarantees were granted either for the attainment of some object which, at the time, was considered of paramount importance to the Guicowar state, or in compliance with the request of the reigning Guicowar, and had they extended no further than the lives of the first grantees, they would have been, perhaps, in every instance justifiable, and productive of comparatively little inconvenience. But we undertook not only to protect, in all times to come, the lives, honour and property of the descendants of certain persons against their sovereign, but also to enforce for ever the payment to them of large and onerous allowances from the Guicowar state, as the salary of nominal offices, of which the duties were not performed by them. This cannot have been necessary for the objects of policy which were in view, and as the burthens were such as the reigning Guicowar could not justifiably impose upon his successors, and would not have had it in his power to do so through any other means than our guarantee, on having given that guarantee at the request of the reigning princes, does not render it the less a subject of just complaint on the part of subsequent rulers.

" With these sentiments we have been much gratified by finding that you have called for a complete statement of all subsisting guarantees to Guicowar subjects, with a view, as you state, of endeavouring to effect some compromise with the Guicowar. We earnestly hope that this attempt will be successful; we shall be prepared to sanction an arrangement for taking upon ourselves a part of the burthen, provided the Guicowar will consent to assign to us, from the tributes, a fixed annual sum equivalent to the remaining portion. The nemnooks and other allowances would then be paid from our treasury, and the time of your Government would not hereafter be taken up with the reception and discussion of complaints of their being withheld. Moreover, the relief thus afforded to the Guicowar's finances may probably induce him to lend a more willing ear than could otherwise be expected to the proposition for the reform of his contingent; and if he should accede to that proposition, the formation of the new corps will afford you an opportunity of providing for many of the individuals who have suffered through their adherence to our interests, and will proportionally state the necessity of making additional demands on their account from the Guicowar.

7. With reference to the above remarks of the Honourable Court, the late Sir James Carnac, then Governor of this Presidency, in a minute dated the 13th November 1840, observed as follows: " I long since, indeed so far back as the 25th of March last, called for a detailed statement of all subsisting guarantees to Guicowar subjects, with a view to effect some compromise with the Guicowar in regard to their payment.

" The statement has never been furnished, but perceiving by the letter of the Honourable Court that its members fully approve of my intentions as developed to them, I mean to propose that, without waiting longer for the statement called for, we declare ourselves willing at once to enter on some arrangements with the Guicowar as to these bhandarries, in accordance with my opinions as expressed to the Honourable Court, and sanctioned and approved of in their letter of the 2d July.

" Considering, then, that when we shall have obtained security that the contingent of horse be placed on the precise footing defined by the treaty of 1817, the Guicowar will have conceded all the most material points demanded of him, I shall be prepared to propose that we take steps for the immediate renewal of our friendly relations with him."

8. With reference to these sentiments, the Honourable Mr. Farish, then a member of this Government, in a minute dated the 20th November 1840, observed as follows: " The further measure of effecting a compromise, whereby we should take the payment of all subsisting guarantees upon ourselves,

relieving his Highness of a portion of their burden, if adopted without requiring first the reforms of contingent, would, as far as I can judge, be too much of the nature of our advantage resulting to him as the fruits of the course he has of late years pursued. On the measure itself, before offering any opinion, it would be desirable to know the real state of all the subsisting guarantees, on which we are still waiting for information, and the details of the compromise to be proposed. There will moreover be, besides the question of pecuniary compromise, that connected with our responsibility to afford protection to person and property of those under such bandaree; and it is in points of this description, I apprehend, his Highness is most likely, directly or indirectly, to show his animosity, whenever it may be excited; and in dealing with them the greatest difficulty is experienced."

9. The Honourable Mr. (now Sir George) Anderson, then a member of this Government, in a minute, dated 21st November 1840, recorded the following sentiments on this subject: "I think it a subject of great regret that so excellent a measure as that of converting the contingent in a question from a very inefficient to an efficient military body, should be lost.

"The free and voluntary consent, however, of Syajee to this measure is not to be expected; the instructions of the Honourable Court's despatch of the 2d July forbid that it should be effected without that free consent; it seems to me, therefore, that the reform of this contingent in the manner we had contemplated must be given up.

"It is to be observed, however, that the Honourable Court, in the 10th para. of their despatch, suggested that the Guicowar might, under the relief afforded by our taking upon ourselves a portion of the burthen of the guarantees, be induced to lend a more willing ear to the proposition of the reform of this contingent. The measure may therefore be still held in this way to be a subject of negotiation in connexion with the guarantee question.

"It might, under such circumstances, be a just measure to our finances, to take upon ourselves the burthen in part of these guarantees; but without some such equivalent, I should be with difficulty brought ever to consider that measure just or right to the interests of the British Government.

"The difficulties arising in the guarantees have not been, nor are ever likely to be, serious as respects the money payments to be made to the persons guaranteed; it is in other rights or in other questions that the most perplexing difficulties are presented, as, for instance, the late case of Bhasker Row Wittul. From these difficulties we can never relieve ourselves, for it is not alone the Gaekwar, but the rights of others, for which we are bound and have always to consider.

"If, however, a perfect reform of the contingent can be brought about, and that it will then be not only effective as a military body, but that we shall have the right to use, when and wherever we please, it may very well be considered good policy, as well financially as upon other considerations, to burthen the state with part of the cost of these allowances and pensions of the Gaekwar state."

10. On the 1st December 1840, the above proceedings were submitted for the instructions of the Government of India; and in reply, this Government was, on the 4th January 1841, informed as follows by that authority: "He (the Right honourable the Governor-general in Council) would certainly wait for a complete statement of all subsisting guarantees to the Gaekwar subjects, and of the origin and circumstances of each, before he would consider the propriety of taking upon the British Government the payment of a portion of the pecuniary obligations devolving by them upon the Guicowar. There may be guarantees given upon insufficient and merely personal grounds, on which it may be equitable to afford some relief to his Highness, but it is apprehended that, for by far the greater part, the benefits, in return for which the guarantees were agreed to, or even solicited by the reigning prince, were of a permanent nature, and have materially tended to the preservation to this day of the existence and prosperity of the Baroda state. It is to be remembered, also, as is justly remarked by Mr. Farish and Mr. Anderson, that the embarrassments attending the guarantees would be little alleviated by a partial diminution of the direct pecuniary charge arising from them. It is by the assurance given, on general terms, to life, honour and property, that the independent authority of the Gaekwar is chiefly fettered, and the occasions of collision multiplied; but from this part of its obligations it is not possible for the British Government to

to free itself, except with the unforced consent of the individuals to whom our protection has been promised.

"At least his Lordship in Council would not, without the most deliberate examination, give effect to a scheme of the extent which has been proposed, involving, as it does, many grave considerations. He would suspend his opinion until the receipt of the information which has been called for, and be in further correspondence upon it with the Honourable Court; in the meantime, he would not delay the endeavour to effect an arrangement of the questions actually in discussion with the Gaekwar on the footing which has been above sanctioned, and he will hear with much satisfaction that the measures of the Bombay Government for that purpose have been successful."

11. "On receipt of the above letter, Sir James Carnac recorded a further minute, dated the 16th January 1841; the 6th para. (of the letter from the Secretary to the Government of India, above quoted) adverts to the question of the bhandarees:

"The letter of the Honourable Court had authorised me to endeavour to make some arrangement by which the Guicowar Government should be relieved from part of this burthen, and the payment itself cease to be a source of appeal to us, and of remonstrance with the Guicowar. The Governor-general in Council has, by his present communication, intimated that he would wait for a detailed analysis of the existing guarantees before he would authorise the adoption of any such scheme as is pointed out in the letter of the Court, and requires time for further correspondence with the Honourable Court before he can sanction any arrangement consequent on the reception of that plan. Under these restrictions, I cannot put in execution my own views on this head, which must consequently be postponed till his Lordship in Council shall have time to receive the statement regarding the bhanderries from us, and to communicate on that statement with the Honourable Court. This puts a stop to the hope which I had entertained of satisfactorily adjusting this question without more delay; yet I am anxious to record the course I had meant to pursue, had I acted at once on the receipt of the letter of the Honourable Court. I should, in accordance with the spirit of that letter, have endeavoured in the first place to obtain the Guicowar's assent to a modified reform of the contingent (probably the very measure now made imperative by the Governor-general in Council); and as an incentive to his Highness's favourable reception of this proposition, I should have held out as a boon not only the renewal of our ancient amicable relations, including the conditional restitution of the sequestrated districts, but also an arrangement for the future payment of the bhanderries favourable to his Highness in proportion to the disposition he should manifest with regard to the contingent. This arrangement would have consisted, first, in obtaining a correct valuation of the existing bhanderries, based on a strict analytical review of the circumstances attending each individual case. Having ascertained the value of the whole, I should have then proposed to his Highness to take upon ourselves the entire annual payment of every claimant, on receiving from his Highness's treasury, not their entire value, but such a portion of it as I should consider right, probably a half, or perhaps two-thirds, after throwing back to him, as a boon for his concessions, so much of the whole sum as I might deem those concessions were worth, on a rough estimate. I believe the sums paid by the Guicowar to the annuitants guaranteed by us amount to about four lacs annually; many of these are perpetual, others for life only, and on an average the whole together may not be worth more than eight or 10 years' purchase. On receiving (as authorised by the spirit of the letter of the Court, in case of ample concessions on the part of Syajee) one-half of the value of the capital (say 20 lacs), I should have engaged to take the entire annual payment on ourselves, by which arrangement the nemnookdars would have received their allowances without let or hindrance, and one constant source of disagreement would have been thus at once cut off.

"I think that this sort of arrangement would not have proved very burthensome to the Honourable Company; and though I fully admit that the Guicowar state has received great and important benefits from its alliance with the British Government, I am not insensible, from the results of my own experience, that benefits have been derived by ourselves from that connexion. I confine myself in this observation to financial considerations; and in support

of my opinion, Mr. Newnham furnishes us, in his minute of the 30th January 1832, with a statement of the gross collections, charges, and net receipts derived from the Guicowar state, compared with the military charges of the Baroda subsidiary force, taken from the accounts from 1826 to 1830 inclusive, the surplus being in these five years, *Rs.* 38,59,195. 2. 15. Independent of this, Mr. Newnham further observes, that for several years previous the revenue of the districts ceded to us by the Guicowar had exceeded the military charges of the Guicowar subsidiary force in the annual sum of between six and seven lacs of rupees, and that in future the annual excess might be calculated at 12 lacs, as was the case in 1830–31.

"This we may ascribe, in part, to our own improved system of management; and it is true, as Mr. Sutherland remarks, in his minute of the 6th February 1832, that it does not take into consideration local charges; but it, at all events, in my opinion, proves that we can afford to be a little liberal to the Guicowar, without being unjust to ourselves, where his conduct may deserve it. As to military charges, I may observe that, by the arrangements of Sir John Malcolm, when he visited Guzerat, in 1829, they were in some part provided for in these ceded districts, by his having merged the subsidiary force into the northern division of the army, employing a portion of it in our own possessions.

"With regard to the holders of personal guarantees, I am of opinion that the local authorities, if active and vigilant, ought always to be capable of arranging individual cases of complaint, without allowing them to become the source of important disputes between the two Governments. These are the arrangements into which I was prepared to enter, and I now circulate this minute, together with the letter of the Supreme Government, as explanatory of my views with regard to our relations with the Guicowar.

"We should now submit to the Government of India and to the Court of Directors, copies of the report, with which Mr. Boyd has lately furnished us, of our existing guarantees, with the grounds upon which they have respectively been granted."

12. The above minute was, on the 21st January 1841, submitted to the Government of India, and in reply this Government was, on the 8th of the following month, informed as follows:—"The Governor-general in Council continues to feel that the question of the guarantees is one to be separately disposed of on its own merits. In the form in which the proposition was originally submitted to the Supreme Government, namely, that of taking on ourselves a portion of the costs of the guaranteed payments, and of inducing, by negotiation, the Gaekwar to charge himself with the maintenance of the Guzerat Irregular Horse, it is obvious that the plan could only have been acceptable to him if he had gained more from the concession made to him than he would have lost by that which was to be obtained from him. It now appears that there are 17 guarantees, with hereditary obligation, and involving pledges for personal protection, after extending to agents and dependants, and that the expense which would fall on the British Government by the plan referred to would amount to nearly two lakhs of rupees per annum, or to that value, redeemed by a single payment. If upon general considerations of policy, and notwithstanding the circumstances favourable to the Gaekwar state, in which many of these guarantees originated, the Honourable Court would be desirous that this expense should be added to the charges upon the revenue of British India, the Governor-general in Council will, of course, upon the receipt of their final orders, be prepared to give effect to them. But this is a point on which he need not make any further remark at present. It will be sufficient to notice that the pecuniary part of the guarantees is that which, in his opinion, can be most easily enforced, as we have in our hands the collection of considerable revenues on the part of the Gaekwar, and that experience has shown that it is from the pledges of personal protection, from which we cannot free ourselves, that the greatest hazard of embarrassment and collision is to be apprehended."

13. Previous to the above letter reaching this Government, Sir James Carnac had, at the urgent request of the Gaekwar, proceeded to Baroda, with the view of adjusting, in personal communication with his Highness, the matters in dispute

dispute between the British Government and the Gaekwar state; and in a minute of his proceedings on this occasion, dated the 13th February 1841, Sir James Carnac stated as follows, relative to the communication he had made to his Highness during the negotiation on the subject of the guarantees:—"I then took occasion to advert to several subjects on which I desired to speak to his Highness. The first regarded his conduct to the holders of our guarantees, in respect to whom I gave him strictly to understand that the British Government would insist on the fulfilment of all our guarantees in the minutest particular. His Highness promised that he would faithfully observe all such engagements, but represented that the possessors of our guarantees should be enjoined to treat him with respect, and to forget that, although the British Government might be bound to protect them against injustice, he was still their sovereign. I replied that I had every desire to uphold his authority as the head of the state, and that I had warned all our guarantees against such behaviour as could be construed into even slight or disrespect towards him; that I fully recognised his right over these men, as over the rest of his subjects, and that the British Government would never object to its exercise in a just and upright manner, though it could not relinquish its privilege of interference in order to secure them from injustice and oppression.

"I assured his Highness that the British Government did not desire to interfere in behalf of any of the individuals holding our bhandaree, except when such a proceeding became imperiously necessary in vindication of our own good faith, and that they would be made to understand their entire subordination to him; while in all other respects the British Government would abstain from all interference in the internal concerns or management of his dominions, in which he was free and unrestrained to act as he might think proper, trusting that his general rule would secure the welfare of his people, and conduce to the maintenance of his own honour."

"In regard to my opinions of the state of our guarantees, I can add nothing to what I expressed in my minute of the 16th ultimo. I there explained why the question as to the final settlement of the claims dependent on these guarantees must remain undecided until we receive more specific instructions from the Supreme Government and the Home Authorities for their adjustment. In the meantime, I have impressed most solemnly on the Gaekwar that the British Government will insist on the strict and entire fulfilment of every article for which we stand pledged. I have received his assurances that he will, on his part, settle, in communication with the Resident, existing differences, and refrain from acts which may oblige us again to interfere between him and those of his subjects, by virtue of our guarantee, whom we are bound to protect from oppression.

"I fear that the possessors of our guarantee have, in many instances, presumed on their right to claim our interposition, and have been wanting in that respect and obedience which they are bound to pay to the Gaekwar as their sovereign. We have recognised him as the head of the state, and we ought to insist that every individual from among his subjects who can demand our protection should regard him in that light. Our guarantee does not remove such persons from within the pale of his Highness's authority, but merely obliges us to see that that authority is fairly and justly exercised towards them. It does not establish a tribunal by which alone these privileged persons are to be judged, and although it may be impracticable to avoid interposing, even in their private transactions, where the Gaekwar Government does not deal impartial justice in their disputes with their fellow subjects, yet it should be our principle to avoid interfering, as much as possible, wherever the Gaekwar state is not itself a party in the dispute.

"The Resident should be guided by these views; on the one hand, he must be careful that no imputation can be made against our good faith by our neglect to act up to our engagements, while, on the other, he must be equally cautious to maintain the dignity and honour of the Gaekwar state, and to refrain from interference in every case where we are not solemnly bound to adopt this course. In short, the Resident is to consider him, except in those particular cases, as the free and independent sovereign of his dominions.

"I have felt that the state of the question regarding our bhandarees, and the uncertainty of what may be the final decision respecting them, precluded my doing more in my various interviews with his Highness Syajee Rao; that insisting in general terms on our determination to uphold all our pledges, and requiring from him an acknowledgment that he also would respect them, I could not enter upon individual cases, nor indeed, had I desired to do so, would the shortness of my stay in Goozerat have enabled me to look into such questions of minute and intricate details. This must be left to the management of the Resident, Mr. Boyd, and under the altered disposition of Syajee, his satisfaction at having gained the important point of the restoration of Pitland, and the state of confidence and cordiality which, I am happy to observe, exists between him and Mr. Boyd, I trust that that gentleman will not find an insuperable difficulty in a satisfactory settlement of all pending disputes."

14. A copy of the above minute having been submitted to the Government of India, that authority, in replying, under date the 15th March 1841, expressed satisfaction at Sir James Carnac having succeeded in replacing the relations between the British Government and the Baroda state on an amicable footing; but with reference to the remarks contained in that minute regarding the guarantees and other matters, it was observed, that it would remain for the Honourable the Court of Directors, on a review of the proceedings, to convey, for the guidance of the Government of India, their final instructions on all the matters to which they related.

15. The above proceedings having been reported to the Honourable the Court of Directors, that authority, in reply, in a despatch to the address of this Government, dated the 21st December (No. 21) of 1842, observed as follows: "No mention has been made to the Gaekwar of the plan for taking upon ourselves a portion of the payments made under our bhandarry, on receiving from the Gaekwar an annual assignment upon the tributes sufficient to cover the remainder of the amount. The Government of India did not feel itself justified in taking such a step without further consideration, and a fresh reference to us. We have not, however, up to this time received any communication of their sentiments on the subject, except so far as these are expressed in their correspondence with you."

"The Supreme Government appears disinclined to the proposition, as involving an additional burden on our finances without obviating future embarrassment in our relations with the Gaekwar, inasmuch as that embarrassment arises less from our guarantee of the nemnooks than from our obligation to protect the persons, property, and honour of certain individuals or families; an obligation from which we cannot relieve ourselves without the consent of the parties so guaranteed. We admit the force of these objections, and, considering the long differences we have had with the Gaekwar, all now happily for the present terminated by the late arrangements, and his Highness's repeated promises to respect our guarantees, we are disposed to think that it would be most prudent to refrain from opening a new subject of negotiation, and to leave his mind in repose. We enjoin you to use the greatest forbearance in all your future intercourse with his Highness, which should be uniformly conducted in a spirit of friendliness and confidence, and with entire forgetfulness of the past."

16. The following resolution was, in July 1843, passed by Government on the subject of the above paras.: "Since the date of the despatch from this Government, which the Honourable Court now acknowledge, no further correspondence has taken place between this Government and the Government of India, or with the Political Commissioner for Guzerat, on the subject referred to in these paras., and no steps have, in consequence, been adopted in regard to this proposition. The Honourable Court express themselves averse to any new subject of negotiation being now opened with his Highness the Gaekwar, and no measures are therefore called for on these paras., which, in common with the rest of this despatch, will be forwarded to the Political Commissioner for Guzerat, for information." The above extract was accordingly forwarded to the Political Commissioner for Guzerat on the 15th July 1843, but Captain French

French appears, in his letter of the 5th January last, to have entirely lost sight of the Honourable Court's instructions therein contained, which, in a great measure, dispose of his present reference.

17. I am of opinion, therefore, that, with reference to the sentiments already communicated to this Government by the Government of India, and subsequently by the Honourable the Court of Directors, on the subject of these guarantees, we are precluded from entertaining the suggestion now made by the officiating Resident at Baroda, of re-considering the measure formerly contemplated by this Government, in the absence of those orders, of effecting "a reduction on the number of his Highness's subjects who have our guarantee, and acting on the spirit of the orders of the Honourable the Court of Directors, under date the 2d July 1840, No. 13," these orders having, we may consider, been rescinded by the subsequent order of the Court of the 21st December 1842, above quoted.

18. We are not, however, I consider, in any measure precluded by the above orders from correcting any errors which may be shown to exist in the lists of guarantees furnished to Government by the late Mr. Boyd, on the 18th November 1840.

19. In the 2d para. Captain French points out that the guarantee to the Shastree family is not of an hereditary nature, as stated in the above list. The Honourable the Court of Directors, in their despatch to this Government, dated the 15th January, No. 3 of 1845, have distinctly refused to acknowledge their obligations to this family as extending beyond the guarantee for their joint lives of their annual nemnook from the Gaekwar Government of 60,000 rupees. This bhandaree is terminable, therefore, with the lives of the holders of this nemnook, and the requisite correction should be made in the lists, in which it is entered as an hereditary guarantee.

20. In the 3d and 4th paras., Captain French, for the reasons which he assigns, recommends the withdrawal of the British guarantee from Nos. 4, 6, 7, and 12, of the late Mr. Boyd's list, above mentioned. I now proceed to notice each of these cases *seriatim*.

21. No. 4. Amrut Lall Tooljaram.—The ground on which Captain French suggests that this guarantee shall be cancelled is, that this individual "lives and has lived for years out of the Gaekwar state, at Ahmedabad." Captain French has evidently not consulted his records with any great care, or he would have discovered that this person was dead prior to the list furnished by Mr. Boyd in the year 1840, as will be seen from the following extract from this list:

Name of the Person Guaranteed.	Substance of Agreement.	Date of Guarantee.	REMARKS.
Amrut Lall Tooljarem.	- - Protection for himself and family, and certain goomashtas, specified by name, while trading as merchants in any part of the Gaekwar's territories, either at Ahmedabad or Baroda, and the village of Mukhtoompoor, in the Duskroee pergunnah of the zillah of Ahmedabad, formerly granted in enam from the Peshwa's share, to be continued in his possession.	11 Feb. 1803	- - This person was karbaree of Seloonkur, Soobadar of Ahmedabad, when dispossessed of the place. He was originally under Arab guarantee, but on their discharge this was exchanged for one of a similar nature by the British Government. Amrut Lall Tooljaram is deceased, but Sooruj Koonwur, his son's wife, is living at Ahmedabad, and enjoys the village of Mukhtoompoor, in that zillah, by virtue of the guarantee. But as Ahmedabad is now a British possession, there is little ground for considering any guarantee to be now in force, particularly as heirs are not mentioned in the original agreement.

The village of Muktoompoor, alluded to in the above extract, was confirmed to the late Amrut Lall Tooljeram by the following Article (II.) of the sunnud granted to him by the Gaekwar Government in 1801 :

"The village of Muckdoompoor, in the Duservoea purgunnah, in the Peishwa's share of the city of Ahmedabad, which was formerly given you in enam by the camavishdar of that district, shall, according to your request, still continue in your possession from Sunnut 1858."

22. This guarantee, it will be seen by Article I. of the Sunnud, is of an hereditary character, and as "Ahmedabad" is specially mentioned as one of the places in which the privileges it conferred should be continued, it appears extraordinary that Captain French should, because the present holder is residing at Ahmedabad, recommend its being cancelled.

"You are permitted to reside peaceably either in Baroda, Ahmedabad, or in any other place in the Gaekwar territories which you prefer, along with your family, and your gomashtehs, Purshotum Tatia, Runchore Coobere, Sevakram Karulram, and Gunnesh Mehta, in the capacity of a merchant, and no one shall injure you, which the Government will take care of as long as you conduct yourself properly. For the due performance of this article the perpetual bhanderry of Government is given."

23. The next guarantee of which Captain French recommends the withdrawal is No. 6, granted in 1803 to Kandass Patel and Bychund Dessaee. The following entry in regard to this guarantee is given in the list furnished by the late Mr. Boyd :

Name of the Persons Guaranteed.	Substance of Agreement.	Date of Guarantee.	REMARKS.
Kandass Patel and Bhychund Dessaee.	- - Kandass Soor Ameen, patel of the Baroda purgunnah. The guarantee is for personal protection for himself and family, agents, and dependants, and security in the possession of pusaeta lands, houses, and all other just rights. This person and Bhychund Dessaee are both deceased, but the guarantee is still enjoyed by their families. The protection guaranteed is not declared hereditary, and the nature of the property, being meeras or wuttun, seems not to have required it in respect to the inheritance.	20 Jan. 1803	- - These persons possessed the guarantee of the Arabs, which, on their dismissal, was confirmed by the British Government, and now extends to their families.

24. Captain French recommends that this guarantee be withdrawn, on the ground that, although now held by the grandchildren of the individuals to whom it was originally granted, "it is not hereditary." Captain French, I presume, has formed this conclusion from the extract above quoted, but if he had consulted the original grantee, he would perceive that it is of an hereditary nature. This bhandaree is to the following effect:

"In former times the Government disputed your money account, and on that account, you being fearful, left the city of Baroda; some time after this, the Government issued a perwanna recalling you, upon which you returned and settled your account, and gave you a separate memorandum, containing 10 articles, which shall be strictly conformed to, for which bhandary is given you in the names of Narrain Rao Rajah Pandreh, Almanee Jemadar, Hydur Jemadar, and Nasir Jemadar. After this no more notice shall be taken of the former dispute, for which perpetual bandary is given."

25. The nature of the next guarantee (No. 7) of which Captain French suggests

suggests the withdrawal, is stated in the following extract from the list submitted by the late Mr. Boyd:

Name of the Persons Guaranteed.	Substance of Agreement.	Date of Guarantee.	REMARKS.
Samul Bechur and Mungul Sukeedass.	- - Guaranteeing them to reside where they please, and conduct their banking transactions; guarantees their just claims against their debtors, and secures them from injury. This is not an hereditary guarantee.	- - -	- - They were the bankers of the Arabs, on whose removal from Baroda the guarantee of the British Government was granted for their personal safety, as well as their agents and dependants. Samul Bechur is dead. His heirs, Hurree Lall and Motee Lall are now living, and carry on their business. Mungul Sukeedas also is dead. His son, Lulloo Mungul, conducts his father's business in Baroda.

26. The following is a translation of the sunnud granted to the original holders of this guarantee:—

"This paper is given to Samul and Mulgul Paruck, on account of the Arab jemadars and sebundy.

"1. If any of the Arab jemadars, &c., now in the service of this Government should either be dismissed by the Government or leave its service of its own accord, they shall be paid all arrears of pay, as well as the value of all horses killed or wounded; and likewise money shall be given, according to the usual custom, to the killed and wounded sebundy.

"2. Samul and Mungul Paruck, and the vakeels of the dismissed jemadars, as well as their attendants, shall have their accounts settled in a just manner by Government, for the due performance of which bhandary may be given.

"3. Samul Bechur and Mungul Sukeedass, for whatever money they may lend to the Government or to any person in the city of Baroda, or in the Guicowar districts, shall have it repaid to them upon the terms of the original agreement, and whatever bhanderry is given to them by any of the Arabs, shall be settled accordingly; and if there still remains any doubt, the bhandary of the Honourable Company may be given likewise.

"4. Both the shroffs of the jemadars who are dismissed, as well as their vakeels and attendants, &c., may remain quietly wherever they please, and carry on the business of merchants in peace, and the Government will not in any way injure them, and let them remain under the authority of this Government. If there is any doubt of this, bhandary may be given.

"For the due performance of the four articles above written, the bhandary of Major Walker, on the part of the Honourable Company, is given, and therefore let the Arab jemadars, &c., as well as the two shroffs, faithfully serve the Government.

"Dated 12 Shauban, in the year of Fuslee Sullas Meeateen woh Ullif, corresponding with A.D. 1802.

(signed) "Major *Walker*,
"on the part of the Honourable Company." (Seal.)

(signed) "*Meer Kumaul-ood-deen Hoossain Khan Bahader*." (Seal.)

27. There is no stipulation in the above guarantee that it shall extend beyond the lives of the parties to whom it was granted; and as they are stated by Captain French to be both dead, the guarantee should, I am of opinion, be considered to have lapsed, and be erased from the list submitted by the late Mr. Boyd in 1840.

28. Captain French, however, in recommending the entire withdrawal of the British guarantee from the present representatives of both these parties (being their grandchildren), appears to have lost sight of the fact, that a separate

guarantee of an hereditary nature, was on the 7th January 1803, granted by Colonel Walker to the latter of them, Mungul Sukeedass. This guarantee is to the following effect :—

"Baroda, 7 January 1803.

"Whereas Mungul Sukeedass, late of Ahmedabad, now residing at Baroda, hath not only given a proof of his disposition to render himself worthy of the Honourable English East India Company's good-will and protection, but has fully answered the expectations entertained by the Honourable the Governor of Bombay, as expressed in his certificate, bearing date the 8th June last, hereunto annexed, and having readily and amply contributed towards accomplishing the Company's views in this country, I do hereby declare for myself, and on behalf of the Honourable Company, that he is deserving of their favour and protection, and that they do by these presents assure and bind themselves to protect and defend his house, trade and property at this place, at Ahmedabad, Dollerah, Surat and Bombay, against any unjust attack or claim from the English or Gaekwar Government, and that this protection shall extend to him, his wife, children, and their posterity for ever. Given under my hand, and the Company's seal, in Baroda, the day, month and year above written.

(signed) "*A. Walker*, Resident."

"Cambay, 8 June 1802.

"This is to certify that Mungul Sukreedass, shroff at Baroda, and who has also a house of business at Ahmedabad, and another at Surat, is entitled to the Honourable English East India Company's good-will and protection, from the disposition he has hitherto shown to render himself worthy of their favour, in which I have great confidence that he will persevere.

(signed) "*J. Duncan.*"

29. The other guarantee (No. 12), granted to Manukchund Roopchund, is described as follows, in the list submitted by the late Mr. Boyd :—

Name of the Person Guaranteed.	Substance of Guarantee.	Date of Guarantee.	REMARKS.
Manuckchund Roopchund.	- - The Gaekwar Government granted to this person, an inhabitant of Surat, a perwannah or permit to establish a commercial house at Baroda, promising that he should not be molested. It will remain in force while the firm exists at Baroda, under the guarantee of the British Government.	- - 23d March 1809.	- - This banking-house still exists at Baroda, under the guarantee of the British Government. The heir of this person resides at Surat.

30. With reference to this guarantee, Captain French in his present letter observes, "Manuckchund Roopchund has been long dead, and the firm is at Surat, though there is a small shop here also (Baroda). The guarantee will remain in force while the firm exists at Baroda. It will, perhaps, be said I am needlessly troubling Government, these cases being all so plain ; yet it was but yesterday that the goomasta of the last-named claimed my assistance to recover money due him here."

31. This guarantee is to the following effect :—"You wish to come to reside in Baroda, to carry on the business of a merchant in that place, and have requested a guarantee from the Government that you shall not be in any way molested or injured.

"This purwanah is given, therefore, to you for your satisfaction, and for its due performance the bandary of Captain Carnac, on the part of the Honourable Company, is affixed to it, as well as a promise to that effect from this Government.

"Dated Sunwunt 1865, the 7th of the month of Chyter Shud, corresponding with A.D. 1808-9.

(Seal) "Of *Mooroothut Shood*,

(signed) "*J. R. Carnac*, Resident."

(Honble. Company's Seal.)

32. As

32. As there is no mention made in this bhandaree that it shall be continued beyond the life of the party to whom it was granted, I doubt whether it has not by his death lapsed. Neither the late Mr. Boyd nor the present Acting Resident appear, however, to consider it to have done so. I, therefore, shall be glad to be favoured by the opinion of my colleague, the Honourable Mr. Willoughby, upon this point.

33. The 6th para. of Captain French's letter has been disposed of in a former part of this minute, and the 7th in our resolutions on Bulwunt Rao's case, now before the Board; and I purpose to dispose of the 8th paragraph with Lieutenant-colonel Outram's report of the 29th July last (alluded to in the latter para.) which is now engaging my attention.

(signed) *Falkland.*

24 May 1849.

(No. 5,642.)

MINUTE by the Honourable Mr. *Willoughby.*

I CONCUR, generally, in the Right honourable the Governor's minute, but I cannot avoid expressing my apprehension that the renewed discussion of the question of the guarantees, without a complaint from any party, may lead to evil, and encourage the present Guicowar to pursue the same course adopted by his father in resisting these obligations; and I think the Acting Resident should be explicitly informed, that beyond the correction of manifest errors in the existing lists, Government is of opinion that the further agitation of the question would at the present moment be unwise, as likely to disturb the harmony now happily existing between the two Governments.

The question raised in regard to the bhandary alluded to in paras. 29, 30, and 31, is not without difficulty. It might either be at once declared cancelled, the banker being allowed, if he thinks fit, to move his shop into British territory, or it might be continued for life to the present head of the firm, he being informed in writing that it will end at his death. Under all the circumstances, I am disposed to recommend the adoption of the latter course.

28 May 1849. (signed) *J. P. Willoughby.*

(No. 5,643.)

MINUTE by the Honourable Mr. *Blane.*

ANYTHING elicited affecting the accuracy of Mr. Boyd's return of guarantees ought, I think, to be duly reported and noted in that document; but it appears to me to be inexpedient to bring the merits of particular guarantees under discussion until some question be raised upon them.

(signed) *D. A. Blane.*

29 May 1849.

(No. 5,644.)

FURTHER MINUTE by the Right honourable the Governor.

I CONCUR in Mr. Willoughby's suggestion, that the Resident should receive intimation that Government consider it highly inexpedient to agitate questions of this nature until we are compelled by circumstances to enter on them; but I differ from my honourable colleague in respect to which he deems the best of the three courses to be pursued with regard to the guarantee formerly granted to the house of Manuckchund Roopchund, which, I think, should be at once declared cancelled; the banker being allowed, if he think fit, to remove his shop into British territory.

(signed) *Falkland.*

7 June 1849.

(No. 6.)

(No. 5,645.)

FURTHER MINUTE by the Honourable Mr. *Willoughby*.

I HAVE no further remark to offer.

(signed) *J. P. Willoughby.*

9 June 1849.

(No. 7.)

(No. 5,646.)

FURTHER MINUTE by the Honourable Mr. *Blane*.

I SEE no particular objection to its being intimated to the heir or representative of Manuckchund Roopchund, that the "bhandary" is not considered to be any longer in force, since the adoption of this course is considered by the Right honourable the President to be advisable.

(signed) *D. A. Blane.*

11 June 1849.

(No. 5,647.)

FURTHER MINUTE by the Right honourable the Governor, concurred in by the Honourable Messrs. *Willoughby* and *Blane*, without date.

THE course I have preferred should now, I think, be followed.

(signed) *Falkland.*
J. P. Willoughby.
D. A. Blane.

No. 2,851, of 1849.—Political Department.

(No. 5,648.)

From *A. Malet*, Esquire, Chief Secretary to the Government of Bombay, to Captain *P. T. French*, Officiating Resident at Baroda.

Sir,

1. I AM directed by the Right honourable the Governor in Council to acknowledge the receipt of your letter, No. 9, dated the 5th January last, soliciting attention to the existing guarantees held from the British Government by subjects of the Baroda Durbar, with the view to a reduction being made in their number, in the event of the present being deemed a fitting period for effecting the same.

2. In reply, I am desired to inform you, that the measures you suggest in the 1st para. of your letter are opposed to the sentiments of the Government of India, and of the Honourable Court, an extract from whose despatch of the 21st December, No. 21, of 1842, was transmitted to the Political Commissioner for Guzerat on the 15th July 1843. I am also directed to state, that the Right honourable the Governor in Council considers it highly inexpedient to agitate questions of this nature until circumstances compel Government to enter on them.

3. Any inaccuracies which may exist in the list of guarantee furnished to Government by the late Mr. Boyd, on the 18th November 1840, do not come under this prohibition.

4. I am

4. I am therefore desired, with reference to the 2d paragraph of your letter, to inform you that the Honourable the Court of Directors having distinctly refused to acknowledge their obligation to the Shastree family as extending beyond the guarantee for their joint lives, of the annual nemnook from the Gaekwar of 60,000 rupees, this guarantee is terminable with the lives of the holders of this nemnook. 60,000 rupees.

5. The Right honourable the Governor in Council accordingly authorises the requisite correction being made in the lists, in which it is entered as an hereditary guarantee.

6. Adverting to the 3d and 4th paragraphs, recommending, for the reasons therein given, the withdrawal of the guarantee from Nos. 4, 6, 7 and 12 of the late Mr. Boyd's list, above alluded to, I am instructed to communicate to you the following observations and instructions.

7. The ground on which you recommend the withdrawal of Amrut Lall Tooljaram's guarantee is, that this individual lives and has lived for years out of the Gackwar state at Alunedabad. A reference to Mr. Boyd's list, an extract from which is entered in the margin,* would have shown you that this person has been dead many years, but that a member of his family survives. No. 4. Amrut Lall Tooljaram.

* *See* below.

8. The village of Mukdoompoor, alluded to in the above extract, was confirmed to the late Amrut Lall Tooljeram, by the following Article II. of the sunnud granted to him by the Gaekwar Government in 1801.

"The village of Mukdoompoor, in the Duseroee pergunnah, in the Peshwa's share of the city of Ahmedabad, which was formerly given you in enam by the camavishdar of that district, shall, according to your request, still continue in your possession from Sumvut 1858."

9. This guarantee you will perceive, from Article I. of the sunnud, entered in the margin,† is perpetual, and as "Ahmedabad" is specially mentioned as one of the places in which its privileges were to be enjoyed, the residence there of the person entitled to succeed to the guarantee can be no reason for its being cancelled.

† *See* below.

10. The next guarantee of which you recommend the withdrawal, is that granted in 1803 to Kandass Patell and Bychund Dessaee. The entry given in the No. 6. Khandass Patell and Bychund Dessaee.

*

* Name of the Person Guaranteed.	Substance of Agreement.	Date of Guarantee.	REMARKS.
Amrut Lall Tooljaram.	- - Protection for himself and family, and certain goomashtas, specified by name, while trading as merchants in any part of the Gaekwar's territories, either at Ahmedabad or Baroda, and the village of Mukdoompoor, in the Duskroee pergunnah of the zillah of Ahmedabad, formerly granted in enam from the Peshwa's share, to be continued in his possession.	- - 11 February 1803.	- - This person was karbaree of Seloonkur, Soobadar of Ahmedabad, when dispossessed of the place. He was originally under Arab guarantee, but on their discharge this was exchanged for one of a similiar nature by the British Government. Amrut Lall Tooljaram is deceased, but Sooruj Koonrour, his son's wife, is living at Ahmedabad, and enjoys the village of Mukhtoompoor, in that zillah, by virtue of the guarantee. But as Ahmedabad is now British possession, there is little ground for considering any guarantee to be now in force, particularly as heirs are not mentioned in the original agreement.

† "You are permitted to reside peaceably either in Baroda, Ahmedabad, or any other place in the Gaekwar territories which you prefer, along with your family, and your gomashtehs, Purshotum Taita, Runchore Coobere, Sevakrum Kavulram and Gunnesh Mehta, in the capacity of a merchant, and no one shall injure you, which the Government will take care of as long as you conduct yourself properly. For the due performance of this article, the perpetual bhanderry of Government is given."

* *See* below.

the margin * is extracted from Mr. Boyd's list, above referred to, and relates to this guarantee. Its withdrawal is recommended by you on the ground that, although now held by the grandchildren of the individuals to whom it was originally granted, it is not hereditary.

11. I am directed to state, that if you have formed this conclusion from the extract above quoted, you will perceive, from the translation of the original guarantee, entered in the margin,† its exact nature, and that it is perpetual.

† *See* below. No. 7. Samul Bechur, and Mungul Sukeedass.

12. The nature of the next guarantee of which you recommend the withdrawal, is stated in the extract from Mr. Boyd's list, entered in the margin.‡

‡ *See* below.

13. There is no stipulation in the above guarantee that it shall extend beyond the lives of the parties to whom it was granted, and as they are stated by you to be both dead, the guarantee should be considered to have lapsed.

14. It appears, however, that the present representatives (grandchildren) of Mungul Sukedas possess a separate guarantee of an hereditary nature, which was, on the 7th January 1803, granted by Colonel Walker, and which, of course, extends to them.

15. With

*

Names of the Persons Guaranteed.	Substance of Agreement.	Date of Guarantee.	REMARKS.
Kandass Patel & Bhychund Dessaee.	- - Kandass Soor Ameen, Patel of the Baroda pergunnah. The guarantee is for personal protection for himself and family, agents and dependents, and security in the possession of pusaeta lands, houses, and all other just rights. This person and Bychund Dessaee are both deceased, but the guarantee is still enjoyed by their families. The protection guaranteed is not declared hereditary, and the nature of the property, being meeras or wuttuns, seems not to have required it in respect to the inheritance.	- - 26 January 1803.	- - These persons possessed the guarantee of the Arabs, which, on their dismissal, was confirmed by the British Government, and now extends to their families.

† "In former times the Government disputed your money account, and on that account you, being fearful, left the city of Baroda. Sometime after this the Government issued a perwana recalling you, upon which you returned and settled your account, and gave you a separate memorandum, containing 10 articles, which shall be strictly conformed to, for which bandary is given you in the names of Narrain Rao Rajah Bandreh, Almanee Jemedar, Hyder Jemedar, and Nassir Jemadar. After this no more notice shall be taken of the former dispute, for which perpetual bandary is given."

‡

Names of the Persons Guaranteed.	Substance of Agreement.	Date of Guarantee.	REMARKS.
Samul Bechur and Mungal Sukeedas.	- - Guaranteeing them to reside where they please, and conduct their banking transactions. Guarantees their just claims against their debtors, and secures them from injury. This is not an hereditary guarantee.	- - -	- - They were the bankers of the Arabs, on whose removal from Baroda the guarantee of the British Government was granted for their personal safety, as well as their agents and dependents. Samul Bechur is dead; his heirs, Hurree Lall and Motee Lall are now living, and carry on their business. Mungul Sukredass also is dead; his son, Lulloo Mungul, conducts his father's business in Baroda.

15. With reference to the guarantee (No. 12) granted to Manukchund Roopchund, which is described in the margin,* as extract from the list furnished by the late Mr. Boyd, I am desired to state, that as no mention is made in this bhandary that it shall be continued beyond the life of the party to whom it was granted, the Right honourable the Governor in Council directs that it be considered to have lapsed by his death; an intimation to that effect being made to the heir or representative, who appears by the 5th para. of your letter to have claimed the guarantee, and who can, if he think fit, remove his shop into British territory.

No. 12. Manukchund Roopchund.

* *See* below.

16. With reference to the 7th para. of your letter, I am directed to refer you to the orders of Government in the case of Bulwunt Rao Gaekwar, contained in my letters, dated the 6th March and the 7th and 31st ultimo.

17. Adverting to the 8th para. of your letter, I am desired to inform you that the recommendation therein contained will be disposed of with Lieutenant-colonel Outram's letter of the 29th July last, which is now engaging the attention of Government.

I have, &c.,

EXTRACT Bombay Political Consultation, 20 March 1850.

No. 38 of 1850.—Political Department.

(No. 2,119.)

From Lieutenant *M. Battye*, Assistant Resident in Charge at Baroda, to *Arthur Malet*, Esquire, Chief Secretary to Government, Bombay.

Sir,

1. ADVERTING to the 13th para. of your letter, under date 30th June last, No. 2,851, to the address of the Officiating Resident, stating, for reasons therein specified, that the British guarantee granted to Samul Bechur "should be considered to have lapsed," I do myself the honour to submit to Government copies of two papers, extracted from a chopra produced by the karcoon of the firm, one of which, bearing Colonel Walker's signature, distinctly pronounces the guarantee to be perpetual. The original document, I am given to understand, was burnt when Samul Bechur's house caught fire some years ago; and the papers now forwarded are exact copies of the manuscript in the chopra, which purport to be copies of the original on this subject; therefore I beg to solicit the orders of Government.

2. With reference to the 15th para. of the same letter, I have the honour to state, that the instructions therein contained relative to the guarantee to Manuckchund Roopchund, have been communicated to the present representative of the firm.

I have, &c.
(signed) *M. Battye*,
Assistant Resident in Charge.

Baroda Residency,
16 February 1850.

*

Name of the Person Guaranteed.	Substance of Guarantee.	Date of Guarantee.	REMARKS.
Manukchund Roopchund.	- - The Gaekwar Government guaranteed to this person, an inhabitant of Surat, a perwannah or permit to establish a commercial house at Baroda, promising that he should not be molested: it will remain in force while the firm exists at Baroda, under the guarantee of the British Government.	- - 23 March 1809.	- - This banking-house still exists at Baroda, under the guarantee of the British Government. The heir of this person resides at Surat.

Cambay, 8 June 1802.

THIS is to certify, that Samul Bechur, shroff at Baroda, and who has also a house at Ahmedabad, and another at Surat, is entitled to the Honourable East India Company's good-will and protection, from the disposition he has hitherto shown to render himself worthy of their favour, on which I have great confidence that he will.

(signed) *J. Duncan.*

(True copy.)

(signed) *M. Battye,* Assistant Resident.

(Copy.)

Baroda, 7 January 1803.

WHEREAS Samul Bechur, late of Ahmedabad, now residing at Baroda, had not only given a proof of his disposition to render himself worthy of the Honourable English East India Company's good-will and protection, but has fully answered the expectations entertained by the Honourable the Governor of Bombay, as expressed in his certificate, bearing date the 8th June last, hereunto annexed, and having readily and amply contributed towards accomplishing the Company's views in this country, I do hereby declare for myself, and on behalf of the Honourable Company, that he is deserving of their favour and protection, and that they do by these presents assure and bind themselves to protect and defend his house, trade, and property at this place, at Ahmedabad, Dollerah, Surat, and Bombay, against any unjust attack or claim from the English or Gaekwar Governments, and that this protection shall extend to him, his wife and children, and their posterity, for ever.

Given under my hand and the Company's seal, in Baroda, the day, month and year above written.

(signed) *A. Walker,* Resident.

(True copy.)

(signed) *M. Battye,* Assistant Resident.

(No. 2,120.)

MINUTE by the Right honourable the Governor, concurred in by the Honourable Board.

1. THE papers handed up by Mr. Battye are identical with those alluded to in the 28th para. of my minute of the 24th May last, with the exception of the substitution of the name of "Samul Bechur" for that of "Mungul Sukeedas."

2. It is, of course, possible that similar papers might have been given simultaneously to the two partners, but as it cannot be found from the records of the Secretariate that such a paper was given to Samul Bechur, and as Mr. Boyd, in his list, accompanying his report of the 18th November 1840, distinctly states that the guarantee given in the joint names of Samul Bechur and Mungul Sakeedas was not hereditary, I would not, without corroborative proof, admit the validity of this document.

3. In the list transmitted by the Resident at Baroda, on the 13th December 1831, it is stated that Samul Bechur's guarantee is hereditary; no paper of guarantee, however, was forwarded with this list, and an examination of Captain Carnac's letter of the 10th August 1809, tends to the inference that the hereditary guarantee now produced did not then exist, more especially as that given to Mungul Sakeedas is specially noticed in the same list, in which no notice is inserted of a similar paper given to Samul Bechur.

4. The Resident must, therefore, institute a strict search into the records of 1802 and 1803, for any notice of the grant of these guarantees; without which

or

or some other convincing proof, I shall not be inclined to alter the opinion already recorded by Government, that the nature of Samul Bechur's guarantee is not hereditary.

26 February 1850.

No. 1,172 of 1850.—Political Department.

(No. 2,121.)

From *A. Malet*, Esquire, Chief Secretary to Government, Bombay, to Lieutenant *M. Battye*, Assistant to the Resident at Baroda, in charge.

Sir,

1. I AM directed by the Right honourable the Governor in Council to acknowledge the receipt of your letter, No. 38, dated the 16th ultimo, submitting copies of two papers produced by the carkoon of the firm of Samul Bechur, in support of its claim to the hereditary guarantee therein alluded to.

2. In reply, I am desired to inform you that the paper now submitted by you is precisely the same as the hereditary guarantee granted to Mungul Sakeedas, excepting that in this the name of Samul Bechur is substituted for that of Mungul Sakeedas.

3. It is possible that similar papers might have been given simultaneously to the two partners; but as it cannot be discovered, from the records of the Secretariate, that such a paper was given to Samul Bechur, and as the late Mr. Boyd, in the list accompanying his report of the 18th November 1840, distinctly stated that the guarantee given in the joint names of Samul Bechur and Mungul Sakeedas was not hereditary, the Right honourable the Governor in Council cannot, without corroborative proof, admit the validity of this document.

4. His Lordship in Council, therefore, requests that a careful search may be instituted into the Residency records of the years 1802 and 1803, for any notice of the grant of this guarantee, reporting the result to Government.

I have, &c.

Bombay Castle,
11 March 1850.

EXTRACT Bombay Political Consultation, 4th April 1851.

(No. 1,899.)

No. 259 of 1850.—Political Department.

From Lieutenant-colonel *J. Outram*, C.B., Resident at Baroda, to *Arthur Malet*, Esq., Chief Secretary to Government, Bombay.

Sir,

AGREEABLY to the instructions contained in the 4th para. of your letter, No. 1,172, dated 11th March last, to the address of my assistant, I have the honour to report that the records of the years 1802 and 1803 have been carefully searched for the information regarding the hereditary guarantee said to have been conferred on the firm of Samul Bechur, and I herewith beg to forward extract of some notes of conference made by Major Walker, on the 1st of February 1802, from which it appears that Samul Bechurdass was "assured of the Company's protection, in proportion as his services should merit it." This is the only notice we can find of the guarantee to this individual in the records of our office which has not before been laid before Government; and I have now to solicit the orders of the Right honourable the Governor in Council, as to whether this guarantee is to be considered hereditary, or otherwise.

When Mr. Boyd reported on this subject, in November 1840, he doubtless was not aware of the document, copy of which Mr. Battye submitted to Government, with his letter, No. 38, dated 16th February 1850, being in the possession of the firm, no copy of it having been found in the office.

I have, &c.
(signed) *J. Outram*, Resident.

Baroda Residency,
29 October 1850.

EXTRACT from Notes of Conference by Major *Walker*, dated Baroda, February 1802.

No. 1. Monday, 1st February 1802.—THIS day, at half-past one o'clock, Samul Parikh Becherdass, a wealthy shroff, unto whom I had a letter from the Governor, accompanied by a number of other merchants, came to visit me; Aka Mahomed, Kehmaul-ud-deen and Hafesjee were present at this interview.

Becherdass acknowledged the receipt of the Honourable the Governor's letter, and promised to act in conformity with his injunctions. He professed himself ready to serve the Company with money to an unlimited extent, and even to assist them with an armed force if necessary. He proposed that one of his clerks should accompany the detachment, if I required it, to attend to the supply of its pecuniary wants; a proposal which was civilly declined.

Becherdass made the strongest professions of attachment to the Company, and said that it had been the first object of his desire to see the legal heir seated on the Guicowar gaudee. He expressed his hope that we would not be long in taking Kurree, after which event he would hearken to and obey whatever commands might be laid on him.

Becherdass proceeded to state the particulars of a loan of money entered into with him by the Resident at Cambay, on the Company's account. On this subject he was referred to the Honourable the Governor at Surat, who would do him justice if he had any just cause of complaint.

After repeated declarations of fidelity and attachment, he was assured of the Company's protection in proportion as his services should merit it.

Having again expressed his entire subserviency, Samul Parickh asked leave to make a present of certain articles, and was dismissed with the usual ceremonies. *Vide* A.

(True extract.)
(signed) *M. Battye*,
Assistant Resident.

(No. 1,900.)

MINUTE by the Right honourable the Governor, concurred in by the Honourable Mr. *Blane*.

As there appears to be no record whatever of the grant of a guarantee to Samul Bechur, similar to that granted on the 7th January 1803 to Mungul Sukeedass, I cannot think that one was ever given; for I am of opinion that the copy, which is stated to be that of an original destroyed by fire, is not sufficient evidence to warrant a different conclusion. Should my colleagues concur with me, the hereditary guarantee claimed by Samul Bechur's descendants on that document may be disavowed.

(signed) *Falkland.*
D. A. Blane.

11 November 1850.

(No. 1,901.)

MINUTE by the Honourable Mr. *Willoughby*.

BEFORE we finally decide on this case, I would suggest that a careful summary be prepared, of all the information our records contain respecting this guarantee, and how it is entered in the acts of bhandarrys, or guarantees. which have from time to time been submitted to Government.

14 November 1850. (signed) *J. P. Willoughby.*

(No. 1,902.)

MEMORANDUM by the Chief Secretary to Government.

1. WITH reference to the call made in the Honourable Mr. Willoughby's minute of the 14th November last, the Chief Secretary begs to submit the following information, being the whole that can be traced on the records of Government, relative to the guarantees formerly given to the late Samul Bechur Parukh and Mungul Sukhedass Parukh.

2. Under date the 15th March 1802, certain articles of convention were entered into at Cambay by the Honourable Mr. Duncan, Governor of Bombay, "for and on behalf of the Honourable East India Company, of the one part, and Raojee Appajee, for and on behalf of Anund Rao Gaekwar, Senakhaskel Sumsher Bahadoor, of the other part, for the security of the dominion and government of the Gaekwar in Guzerat.

3. The first and second articles of this convention were to the following effect:—

Art. I. "The said Raojee Appajee having solicited the assistance of the English troops against Mulhar Rao, with a view of bringing him to reason, either by peaceable or hostile means, so as to prevent his ruining the country of the state of the Gaekwar, of which Anund Rao is the proper and legitimate heir and head, and the English troops, under the command of Major Walker, having accordingly arrived in the territories of the Gaekwar, and the said Raojee Appajee having also come to Cambay to meet the Honourable the Governor, it is hereby agreed by and between them, that the expense already incurred, and such others as may hereafter be occasioned, for the pay, allowances and transportation of stores, ammunition, &c., shall be accounted for and paid, with interest, at the rate of three-quarters per cent. per month of 30 days, by the said Raojee Appajee, on account of Anund Rao Gaekwar, and the state aforesaid, in two instalments, the first to become due on or before the 5th of October next, and the second on or before the 5th of January 1803; for the security of which he assigns and mortgages the Gaekwar's share of the district of Uthavisee, near Surat, hereby agreeing, that on failure of the first instalment the English are to take possession of the said country, and to retain the same under their own collection and management, until the whole be fully cleared and made good to the Honourable Company, with interest."

Art. II. "It is further hereby stipulated between the Honourable East India Company and the Gaekwar state, that the latter shall permanently subsidise from the Honourable Company a force of about 2,000 sepoys, one company of European artillery, and its proportion, consisting of two companies, of Lascars; the estimated expense of which, including establishment of stores, being about 65,000 rupees per month. It is hereby agreed that landed jaédad, or funds, be assigned, so as fully to cover this expense, and whatever it may amount to, from such part of the Gaekwar territories as may be hereafter fixed on, in view to the greatest convenience of both parties; but this article is not to be carried into effect till the war against Kuree be closed, when it is also proposed, through the co-operation of the English, to effect a reduction in the number of the Arab force now kept up; and, meanwhile, this is to be considered as an eventual, and to remain at present an entirely secret article."

4. As connected with the last-mentioned of the above "Articles," the following further stipulation was entered into at Cambay, by Mr. Governor Duncan, with Raojee Appajee, the Dewan of Anund Rao Gaekwar:—

Art. IV. "The second Article of the Convention of the 15th March last, proposing to effect a reduction in the number of the Arab force under the Gaekwar Government, the principal obstacle to which consists in want of ready money funds for the liquidation of the arrears of such part of the said establishment as it is proposed to disband, and the Honourable Company meaning to extend to this effect some pecuniary assistance to the Gaekwar state, the repayment of this amount is to take place and be secured in the manner following; namely,

"The first payment of interest by Mrig of 1860, or June 1803, the second

year's interest, and one-third of the principal, by Mrig of 1861, or June 1804, and all the remaining principal and interest by Mrig of 1862, or June 1805.

"But in the event of failing in the above stipulated payments, the revenue of the pergunnas of Baroda, Koral, Senor, Petlad and Ahmedabad, to the full amount of the rusud, which will be about 11,75,000 rupees per annum, shall be collected by the Company, in proportion to the advance that may be made by them; and when this debt is fully paid, the collection of that part of the revenue from the above-named pergunnas, shall revert again to the administration of the Government of Baroda."

5. At the above period, as appears from the following extract from a letter from the late Colonel Walker, dated the 30th July 1802, Samul Bechur and Mungul Sukeedass, who in the correspondence of that time are generally conjointly alluded to as the "parukhs," possessed very considerable power and influence at Baroda. "It is not, however, in my opinion, owing either to motives of regard or of obligation that Rowba yields to the measures of the paruks. The assistance which he requires from them, and the absolute direction which they have of the Arabs, are the causes of his submission. The first is, indeed, a real and substantial cause. It is these parukhs who furnish the disbursements of the state, and much of the domestic expenses of the Raja and the minister. They have, by degrees, obtained possession of every source of supply, and may either forward or suspend any operation of government.

"Rowba is not insensible to the disgrace of this kind of dependence, but he feels it less than the ferocious sword of the Arab; this has rivetted the power of the parukhs, and the Dewan dreads its exercise through their intrigues. His fears however on this head must subside, as his natural good sense will discover to him that the period of their influence is expiring. The interposition of the English detachment they all know will render revolutions less easy, and many of the Arabs are dissatisfied with the parukhs. As the government recovers itself, these men will fall to their proper standard, and be reduced to the functions of their profession.

"A regard for their persons and property will prevent them attempting anything dangerous, but they will continue to obstruct, by their intrigues, and the influence which their money gives them, any attempt to reduce the expenses of government. Everything promises that they will not be long successful; some of the most respectable of the Arab chiefs have become sensible of their selfish and dishonest conduct in respect to them. They are sensible that the English power must predominate, and are willing to secure themselves under its shelter. Two of the principal chiefs have already, in fact, deserted the parukhs and embraced our side, by a secret convention which they have concluded with Rowba."

6. In two letters addressed about this by Babajee Appajee (brother of the Dewan) to Colonel Walker, he observes, "Raojee cannot control the two parukhs or the Arabs. Hitherto we had, to the utter ruin of the Sirkar, kept ourselves on the best of terms with the Arabs and their two parukhs."

7. On the 8th September 1802, Colonel Walker submitted to Government the statement given in the margin,* of the amount of the arrears of pay then due

* *See* Below.

* ESTIMATE of the Arrears due to the discharged Sebundy, including Babajee's Levies and Rowba's Promissory Note.

				19,75,000	–	–
Deficiency - - - *Rs.*				3,08,545	1	–

due by the Baroda state to the discharged Arab sebundee, observing, "I am sorry that the amount considerably exceeds the original calculation, and although Rowba says that he will find funds to answer the deficiency, I must own that I do not see any certain available means within his power. The excess has principally arisen from the artful management of the parukhs, by discharging those who have been longest in the service, and unto whom the largest arrears were of course due."

8. It had been resolved by Government, that the Arab Sebundee, in consequence of their treacherous and insubordinate conduct, should no longer be permitted to remain in the service of the Baroda state; they refused, however, to leave Baroda, and having secured the person of Anund Rao Gaekwar, they obtained possession of Baroda and other places. A considerable British force was in consequence assembled at Baroda, and a protracted negotiation having failed to bring them to terms which were prescribed by Government, it was finally resolved by Government, in concert with Anund Rao Gackwar, to expel them by force. Accordingly, on the 18th December 1802, the town of Baroda was invested by the allied troops; the siege was prosecuted with vigour, and the breach was reported practicable, when the Arabs renewed the negotiation, which terminated in a capitulation on the 26th December 1802, by which they bound themselves to evacuate the fort of Baroda, to release Anund Rao Gaekwar, to abstain from all future intercourse with the enemies of his Government, and to quit Gujerat after their arrears of pay, amounting to about 14 lacks of rupees, had been paid, it being at the same time stipulated that the bhanderry of the Honourable Company should be substituted for theirs, wherever it had been granted, either to persons or property.

9. On the 15th October 1805, Colonel Walker submitted to Government "a detailed statement of loans or other pecuniary advances made to the Gaekwar Government, under the bhanderry or guarantee of the Honourable Company, or which became guaranteed by the Company in consequence of the engagement with the Gaekwar, including some personal bhanderries."

ENTRY No. XI. of this List, is as follows:

No.	Description of the Bhanderry.	REMARKS, explanatory of the Nature of the Engagement, and the Authority under which it was contracted.
XI.	A security to Samul Bechur, that he should not be displaced from the mamlutdarry of Baroda for two years, 1860–1.	The deed has now become invalid, by the expiration of the period for which it was given. It was necessary, in order to quiet the apprehensions of Samul Bechur, lest he should be deprived of the mamlut, and in consequence exposed to loss, from having accepted the warrat for six lacs of rupees, given in favour of the Company, to discharge their first loan.

10. No mention is made in the above list of any separate bhandary of "favour and protection," having, as is asserted by the present representatives of Samul Bechur's firm, been granted to Samul Bechur on the 7th January 1803, on hereditary tenure.

11. In a report, dated the 1st January 1806, on the administration of the Gaekwar's minister, Sectæram, and containing information on various subjects connected with the financial affairs of the Baroda state, Colonel Walker observes, "At the period of the first arrival of the British mission at Baroda, the factions and parties in the capital had almost deprived the Dewan of the exercise of the functions of his office; the interior acts of government were transacted by Raoba, but the influence of the parukhs, Samul Bechur and Mungul Sakeedass, who were the agents of the two rival parties of the Arabs, directed every operation, and the ferocious superiority which the Arabs had obtained rendered it dangerous to pursue any cause at variance with their interests."

12. In a further statement, which accompanied a subsequent report from Colonel Walker, dated the 26th November 1808, enumerating the pecuniary

transactions of the Gaekwar Government, in which the Honourable Company's bhandary was involved, Samul Bechur is mentioned as follows:

Number.	Description of the Bhandaree.	Remarks.
XI.	- - A security to Samul Bechur that he should not be displaced from the mamlutdary of Baroda for two years, 1860-61.	Discharged and cancelled.

* *Note.*—This entry is identical with that quoted in para. 9 of this memorandum.

13. Under date the 31st May 1827, the late Mr. Williams, Resident at Baroda, submitted an alphabetical list of all bhanderry engagements entered into by the "British Government, from the commencement of the year 1801 to the end of 1826, incident to its connexion with the Gaekwar Government, specifying the date and purpose for which each was granted, the nature of each, and where redeemed, and the date of redemption, compiled from the English and Native Records of the Baroda Residency." In this list the seven following entries occur with respect to Samul Bechur:

Number.	Names of the Persons Guaranteed, and Date of Guarantee.		Nature of Guarantee, Purpose for which it was originally Granted, and Date of Redemption.
	Redeemed.	Unredeemed.	
93	- - - -	Samul Bechur, 5 February 1803.	- - This person, in conjunction with Mungul Parakh, was the banker of the Arabs, on whose removal from Baroda, the guarantee of the British Government was granted for their personal security in Baroda and Ahmedabad, including in the same all their agents and dependents. The two parukhs are deceased, but their families still enjoy the pledge originally granted.
94	Samul Bechur, 10 November 1803.	- - - -	- - This person obtained the mamlut, or charge of the district of Baroda, for Sumvuts 1860 and 61, which was secured to him for that period by our guarantee, on his agreeing to appropriate the revenues in liquidation of a certain loan. It is reported redeemed in Colonel Walker's Report, dated the 26th November 1808.
95	Samul Bechur, 11 November 1803, *Rs.* 9,23,601. 2. 50.	- - - -	- - A joint loan was obtained by the Gaekwar Government, from the British Government and the bankers of Baroda, on the entire discharge of the Arabs from Baroda. The latter advanced of this loan *Rs.* 9,23,601. 2. 50, the repayment of which was guaranteed by us, and confirmed by Government, the 2d January 1804. For further particulars, refer to Colonel Walker's Bhandary Reports, dated the 29th March 1805, and the 26th November 1808, in the last of which the guarantee is reported redeemed.
96	Samul Bechur, 21 February 1804, *Rs.* 3,00,000.	- - - -	- - A loan of 300,000 rupees, advanced to the Gaekwar Government, to liquidate certain arrears on account of its Moodee Kaneh, or commissariat establishment. Refer to the Reports above quoted, in the last of which our guarantee is reported redeemed.
97	Samul Bechur, 26 November 1808, *Rs.* 6,24,000.	- - - -	- - Refer to guarantees Nos. 60 and 79 of this list, of which loan this person advanced 6,24,000 rupees. Redeemed.
98	Samul Bechur, 26 June 1811, *Rs.* 2,08,348.	- - - -	- - Refer to guarantees 4, 12 and 80 of this list, of which loan this person advanced 2,08,348 rupees. Redeemed.
99	Samul Bechur, 9 July 1825, *Rs.* 4,12,001.	- - - -	- - A loan of 4,12,001 rupees was advanced, in April 1825, to the Gaekwar Government, to enable it to defray the expenses of the marriage of Eshodabhaee, the eldest daughter of his Highness Syajee Row, the reigning Gaekwar, and the same was guaranteed by the British Government. For further particulars refer to Mr. Willoughby's Report to Government, dated the 27th June 1825. On the 6th November, this contract having been annulled, a fresh one was entered into; consequently the security for the due performance of the former is to be of no effect, a report of which circumstance was made by the Resident to the Government, on the 31st May 1827.

14. The following entries occur in this list with respect to "Mungul Sukeedass," who in this and other subsequent lists is referred to in connexion with "Samul Beechur:"

Number.	Names of the Persons Guaranteed, and Date of Guarantee.		Nature of Guarantee, Purpose for which it was originally Granted, and Date of Redemption.
	Redeemed.	Unredeemed.	
58	- - - -	Mungul Sukeedass, 8 June 1802.	- - The late Mr. Duncan, when at Cambay, in 1802, gave a written paper to this person, granting to himself and family the guarantee of the Honourable Company, for protection and safety in Ahmedabad and Baroda. This pledge is hereditary, and is at present enjoyed by his son, Lulloobhoy Parikh, who is one of the principal bankers of Baroda.
59	- - - -	Mungul Sukeedass, 24 August 1808.	- - This person entered into a contract with the late Kurnal-ood-deen Hussein Khan, to become his potedar, or banker, on condition that the whole of his official salary should be paid into his bank. This engagement was guaranteed by the British Government, and remains unredeemed.
60	Mungul Sukeedass	- - - -	- - A loan of 6,24,000 rupees was advanced by him to the Gaekwar Government, to liquidate arrears due to its military establishments, the repayment of which was guaranteed by us. It is reported redeemed in Major Carnac's Report, dated the 6th February 1817.
61	Mungul Sukeedass, 22 June 1811, *Rs.* 2,08,000.	- - - -	- - Refer to guarantee No. 4 of this list, of which loan he advanced 2,08,000 rupees under our guarantee, which is reported redeemed in Major Carnac's Report, dated 6th February 1817.

15. Under date the 14th February 1828, the late Mr. Williams, with a report on various matters connected with the Baroda state, submitted, amongst other enclosures, an historical account of the circumstances which had led to the introduction of the system of bhandary engagements in Guzerat. Mr. Williams then enumerated the bhandarys then existing, observing, "The record-room in which these documents were kept was destroyed by fire, so that a regular series of these is not procurable; but by inquiry of the holders of these guarantees a list has been procured as follows."

16. The bhandary engagements enumerated by Mr. Williams in the above paper are 21 in number; amongst these, Samul Bechur's name is not enumerated, but mention is made of the perpetual bhandary given on the 7th January 1803 to Mungul Sunkerdass, alluded to in the Right honourable the Governor's minute of the 26th February 1850.

17. On the 24th February 1830, Major Barnewell, then in temporary charge of the office of Resident at Baroda, submitted a report on the existing Baroda guarantees, accompanied by a list of the same. In this list the two following entries occur:

Number.	NAMES.	Whether for Life or in Perpetuity.	Extent to which each Bhandary pledges Government.
21	Samul Bechur and Mungul Parukh.	Hereditary -	- - Guarantees protection to them and dependent.
23	Mungul Sukeedass Purukh -	Hereditary -	- - Guarantees his trade, person and property from all unjust acts.

18. The above was the first occasion on which the bhandary of Samul Bechur had, in any report or list forwarded to Government, been specifically alluded to as being held on hereditary tenure.

19. On the 13th December 1831, Mr. Williams forwarded to Government two lists of the Baroda bhandarys; one professing to contain a statement of the

redeemed, and the other of the unredeemed guarantees. In the latter of these lists the name of Samul Bechur is entered as follows:

Number.	Names of Persons.	Nature of the Guarantee.
25	Samul Bechur, 5 February 1803.	- - This person, *in conjunction with* Mungul Paruk, was the banker of the Arabs, on whose removal from Baroda the guarantee of the British Government was granted for their personal security in Baroda and Ahmedabad, including in the same all their agents and dependents. The two parukhs are deceased, but their families still enjoy the pledges originally granted.

20. In a list of the Baroda guarantees submitted to Government by the late Mr. Boyd, under date the 18th November 1840, the name of Samul Bechur is, in conjunction with Mungul Sukeedass, entered as follows:

*Number.	Names of the Persons Guaranteed.	Date.	Substance of Agreements.	REMARKS.
7	Samul Bechur and Mungul Sukeedass.	- 5 Feb. 1803. 12 Shaban.	- - Guaranteeing them to reside where they please, and conduct their banking transactions; guarantees their just claims against their debtors, and secures them from injury. This is not an hereditary guarantee.	- - They were the bankers of the Arabs, on whose removal from Baroda the guarantee of the British Government was granted for their personal safety, as well as their agents and dependents. Samul Bechur is dead; his heirs, Hurry Lall and Motee Lall, are now living, and carry on their business. Mungul Sukeedass also is dead; his son, Lulloo Mungul, conducts his father's business in Baroda. The late Mr. Duncan gave him a separate guarantee, dated the 8th June 1802, securing to him in perpetuity the British protection for the defence of his house and property, and for the safety of himself, wife, and family, and property, so that the heirs of Mungul Sukeedass are differently situated from those of Samul Bechur so far.

21. The above entry is identical with that alluded to in the 25th para. of the Right honourable the Governor's minute, dated the 24th May 1849.

(signed) *A. Malet*,
Chief Secretary.

24 February 1851.

(No. 1,903.)

MINUTE by the Right honourable the Governor, concurred in by his Excellency the Commander-in-Chief.

THIS memorandum has been prepared in consequence of the Honourable Mr. Willoughby's minute of the 14th November, and may be referred therefore to him.

(signed) *Falkland.*
J. Grey.

25 February 1851.

---

* This entry is evidently identical, as regards Samul Bechur, with entry No. 93, at para. 13 of this memorandum. In this entry this guarantee is stated not to be hereditary, but in the entry at para. 13 it is alluded to as being "unredeemed."

(No. 1,904.)

MINUTE by the Honourable Mr. *Willoughby*.

1. HAVING carefully considered these proceedings, I think that it would be premature to declare the bhandarry claimed by the firm of Samul Bechur null and void.

2. Although the entries in the lists of guarantees relating to the firm are contradictory, I think a strong presumption must exist that a guarantee, similar to that granted to Mungul Sukeedass, was granted to Samul Bechur; the hereditary nature of the former is not disputed.

3. I say that such a presumption exists, because in our earlier transactions with the Baroda state, both firms were similarly situated; they possessed the same influence, and the same reason existed for conciliating and obtaining the good-will and co-operation of both firms alike.

4. Although no original sunnud exists, and no positive testimony of the perpetual nature of the guarantee is now to be found in the records of the Baroda Residency, the copy produced from the chopras or records of the firm, if genuine, ought to decide the point in their favour. The absence of proof in Residency records may be accounted for, by the fact stated in para. 15 of this summary.

5. The question at issue, therefore, mainly depends on whether the copy in the chopras is genuine or not. On this point the Resident's further report should be required, after a careful inspection of the chopra in which it is recorded.

6. If that chopra is a trustworthy record, written some 40 years ago, and having no appearance of having been tampered with, the copy, coupled with the presumption above alluded to, would be sufficient evidence to satisfy my mind that the claim to the bhandarry is a valid one.

28 February 1851. (signed) *J. P. Willoughby.*

(No. 1,905.)

No. 10.—Further MINUTE by the Right honourable the Governor, concurred in by the Honourable Mr. *Blane*.

I CONCUR in the call for the report on the copy of the guarantee in the chopras of the banker.

EXTRACT Bombay Political Consultation, 4 April 1851.

No. 1,102 of 1851.—Political Department.

From *A. Malet*, Esq., Chief Secretary to Government, Bombay, to Lieutenant-Colonel *J. Outram*, C.B., Resident at Baroda.

Sir,

I AM directed by the Right honourable the Governor in Council to acknowledge the receipt of your letter dated the 20th October last, No. 259, relative to the bhandary claimed by the firm of Samul Bechur, of Baroda.

2. In reply, I am desired to state, that before coming to a final decision on this subject, his Lordship in Council is desirous of being satisfied whether the copy in the chopra is genuine or not, and therefore request that you will most carefully inspect the chopra, and report your opinion on the document alluded to.

I have, &c.
(signed) *A. Malet*, Chief Secretary.

Bombay Castle, 14 March 1851.

(No. 3,334.)

EXTRACT Bombay Political Consultation, 28 April 1851.

No. 45 of 1851.—Political Department.

From Lieutenant-colonel *J. Outram*, C.B., Resident at Baroda, to *Arthur Malet*, Esq., Chief Secretary to Government, Bombay.

Sir,

AGREEABLY to the instructions contained in your letter of the 14th instant, No. 1,102, I have the honour to report that I have carefully inspected the chopra of the firm of Samul Bechur, and that the copy of the document alluded to is, to the best of my belief, genuine. The chopra is a very old one, and the writing has every appearance of having been formed many years ago; I see therefore no reason to doubt its validity.

I have, &c.

(signed) *J. Outram*, Resident.

Baroda Residency, 25 March 1851.

(No. 3,335.)

No. 13.—MINUTE by the Right honourable the Governor.

NOTWITHSTANDING this favourable opinion as to genuineness of the copy of the guarantee in the books of Samul Bechur, I retain my opinion that the absence of any record of it in Colonel Walker's list of 1805, made only two years after it is asserted he had given such guarantee, is presumptive proof that it was never given, and is fatal to the claim; I would, however, refer the matter to the Honourable Court.

19 April 1851. (signed) *Falkland.*

(No. 3,336.)

No. 14.—MINUTE by the Honourable Mr. *Willoughby.*

I BEG to refer to my minute of the 28th February last, and to observe that the validity of the chopra being placed beyond doubt, the strong presumption which exists in favour of the guarantee becomes much stronger, and confirms me in my opinion that it ought not to be cancelled. I concur, however, in the proposed reference to the Honourable Court of Directors.

12 April 1851. (signed) *J. P. Willoughby.*

(No. 3,337.)

No. 15.—MINUTE by the Honourable Mr. *Blane.*

I ENTIRELY concur with the Right honourable President in the opinion, that the omission of the alleged guarantee by Colonel Walker, in the return furnished by that officer in 1805, is conclusive against such a guarantee having been given by him.

2. That Governor Duncan had no intention of conferring a similar guarantee to that granted to Mungul Sukeedass is evident, from the totally different tenor of the certificate of which the original has been produced. The form of the alleged guarantee from Colonel Walker would seem also, from the translation furnished, with the Assistant Resident's letter of 16th February, to be irregular, as it purports to secure the firm against any unjust attack or claim by the English as well as the Guikwar Government.

(signed) *D. A. Blane.*

12 April 1851.

EXTRACT Bombay Political Consultation, 19 January 1853.

EXTRACT Paras. 49, 50 and 53, from a Letter from the Honourable the Court of Directors, dated 10 September (No. 22) of 1851.

[Paras. 49, 50 and 53 should, in the first instance, be communicated to the Resident at Baroda, for any remark he may have to offer with reference to sentiments of the Honourable Court, contained in para. 53.]

Para. 49. GUARANTEES of protection were granted in 1802 and 1803 to two influential bankers of Baroda, Samul Bechur and Mungul Sukeedass. The guarantee to the latter has always been admitted to be hereditary; that to Samul Bechur has generally been stated not to be hereditary; but it appears that the sons of that individual were allowed practically to succeed to its benefits. Recently, however, on a report from Captain French, while Officiating Resident, it has been declared to have ceased.

Para. 50. The family of Samul Bechur now produce a document of guarantee, with words of inheritance, purporting to be a copy of an original, signed by Colonel Walker, which original is declared to have been burnt when Samul Bechur's house caught fire some years ago. Lieutenant-colonel Outram reports, I have carefully inspected "the chopra of the firm of Samul Bechur, and the copy of the document alluded to is, to the best of my belief, genuine. The chopra is a very old one, and the writing has every appearance of having been formed many years ago; I see, therefore, no reason to doubt its validity."

53. Colonel Walker, however, though several times mentioning Samul Bechur as holding a guarantee, never alluded to any hereditary right, and, on the whole, we are of opinion that the evidence of a copy not authenticated, and contained only in the books of the claimant himself, cannot be taken as conclusive in his favour, unless strong corroborative evidence can be produced; therefore, if no such evidence should be adduced, the guarantee must be considered to have ceased.

No. 206 of 1853.—Political Department.

From *A. Malet*, Esq., Chief Secretary to Government, Bombay, to the Resident at *Baroda*.

Sir,

WITH reference to Lieutenant-colonel Outram's letter, No. 259, dated 29th October 1850, relative to the bhandary claimed by the firm of Samul Bechur, of Baroda, and to subsequent correspondence, I am directed by the Right honourable the Governor in Council to transmit to you an extract, paras. 49, 50 and 53, from a despatch from the Honourable the Court of Directors, No. 22, dated the 10th September last, and to request that you will favour Government with any remarks you may have to offer with reference to the sentiments of the Honourable Court contained in the 53d para.

I have, &c.
(signed) *A. Malet*, Chief Secretary.

Bombay Castle, 14 January 1852.

(No. 335.)

No. 188 of 1853.—Political Department.

From *A. Malet*, Esq., Chief Secretary to Government, Bombay, to the Resident at *Baroda*.

Sir,

I AM directed by the Right honourable the Governor in Council to draw your attention to my letter, No. 206, dated the 14th January 1852, relative to the bhandary claimed by the firm of Samul Bechur, of Baroda.

I have, &c.
(signed) *A. Malet*, Chief Secretary.

Bombay Castle, 15 January 1853.

No. 59 of 1853.—Political Department.

From *John Marshall Davies*, Esq., Resident at Baroda, to *A. Malet*, Esq., Chief Secretary to Government, Bombay.

Sir,

2. In reply, I beg to state, for the information of his Lordship in Council, that notwithstanding a letter was addressed to the firm in January 1852, apprising it of the precise state of the case, and suggesting the production of whatever other correlative proofs there might be forthcoming in support of the alleged hereditary nature of the guarantee, nothing up to this date has been adduced by the firm, nor has the letter been ever replied to.

3. Under these circumstances, it would appear that the conclusion derived by the Honourable Court becomes inevitable.

I have, &c.
(signed) *J. M. Davies*, Resident.

Baroda Residency, 29 January 1853.

(No. 477.)

MINUTE by the Right honourable the Governor, concurred in by the Honourable Mr. *Blane* and the Honourable Mr. *Bell*.

H. E. Goldsmid,
Secretary to Government.

(No. 5,500.)

EXTRACT Bombay Political Consultation, 16 July 1851.

PETITION from *Bhunsallee Doolachund Wumulchund*, Heir and Manager of the Firm *Manulkchund Roopchund*, and Inhabitant of Surat, to the Right honourable *Lucius Bentinck* Viscount *Falkland*, Governor and President in Council, Bombay,

Respectfully showeth,

THAT a very large amount of unrecovered balances has been outstanding in favour of the firm, established in Baroda under the guarantee of the British Government, with a view to recover which, your Lordship's memorialist has had the honour to submit to Mr. Andrews, the then agent for the Right honourable the Governor at Surat, on application, a copy of which was forwarded by that officer along with a letter to Captain French, Acting Resident at Baroda, requesting him to afford to your Lordship's memorialist the necessary assistance towards the recovery of the balances in question. What representations Captain French has submitted to Government on the subject your memorialist does not know; but an answer, bearing date the 9 July 1849, No. 621, was soon after received from that officer, stating that your memorialist's application for the recovery of the money due to his firm at Baroda, forwarded to him by the agent at Surat, had been laid before Government for their consideration; in reply to which an order dated 30 June 1849 was received from Government, intimating that

that the warrant of permission to open the firm in question under the guarantee of the British Government was granted by his Highness the Guickwar to your memorialist's ancestor, Maneckchund Roopchund, who was (now) dead, and that as no provision was made therein for its (guarantee's) continuance to his descendants, it became null and void. The Acting Resident at the same time offered to your Lordship's memorialist the alternative of either continuing his firm and other shops situated within the jurisdiction of his Highness the Guickwar, or shutting them up at once.

That your Lordship's memorialist, dissatisfied with this decision, which is calculated to entail a great pecuniary loss on him, was about to appeal to your Honourable Board, when a protracted illness to which he was subj[illegible] vented him from taking any further steps in the matter until th[illegible] 1851, when he made another application to Colonel Outram, [illegible] in reply thereto, under date the 15th idem, No. 224, that t[illegible] conveyed in the letter No. 621, dated 9th July 1849, [illegible] final.

That having now no other resource left to him, yo[illegible] most respectfully begs to lay his case before your [illegible] requests that it may be again taken into consider[illegible] below.

The warrant of permission granted by his [illegible] guarantee of the British Government, was [illegible] chund Roopchund," at a time when that in[illegible] having died nearly 50 years before. It was co[illegible] in force till the firm which was established at Ba[illegible] retain that title; but as it does so to this day, your [illegible] prays that your Honourable Board will be graciously [illegible] by issuing an order to the Resident at Baroda to aff[illegible] necessary assistance in recovering the balance due [illegible] which act of kindness, your Lordship's memorialis[illegible] pray for your Lordship's long life and prosperity.

Dool

2. In coming to this conclusion, however, Captain French would appear to have acted hastily. No such person as Manuckchund Roopchund appears, from all my inquiries, to have been alive when the British guarantee was extended to the firm in A. D. 1809, that being simply the title under which the firm, a branch of a very old and respectable one at Surat, became established at Baroda, at a time when the resort to that capital of respectable bankers was considered to be an object of sufficient importance to be brought about by the guarantee of the British Government.

3. The petition speaks for itself, so that I shall only here add, that since the guarantee extended to this firm purports to "remain in force while the firm [illegible]oda," and as it can be most clearly and satisfactorily shown that [illegible]l as Manuckchund Roopchund was in existence when the [illegible] it follows, in my most respectful opinion, that the late [illegible]rantee would not have been sanctioned by Government, [illegible]f this fact before it at the time.

[illegible]val of the Government's guarantee from a banking-[illegible]ment such as that of Baroda, very much the effect [illegible] the realisation of its debts becomes from that [illegible]h are, to the best of my belief, the actual circum-[illegible]n at this present time.

I have, &c.
(signed) *J. M. Davies,* Resident.

[illegible]*und Vomulchund,* Managing Goomashta of [illegible]*opchund,* dated 24 September 1852.

[illegible] (A. D. 1809), the fir[illegible]
[illegible]nd, under[illegible]
[illegible]te Sir[illegible]

(No. 9,294.)

MINUTE by the Right honourable the Governor, concurred in by the Honourable Mr. *Blane*.

1. MR. DAVIES may be informed that we have already replied to a petition on this subject direct. Copy of the petition, with the reply, should be furnished to him.

2. I am quite indisposed to re-open this question; we determined that the guarantee was not hereditary, and nothing new is brought to show that the firm is composed of the individuals to whom the guarantee was originally granted.

3. In the event of any specific complaint of obstruction [illegible] outstanding debts of the firm, it can be considered, on its own

(signed)

31 October 1852.

(No. 9,295.)

MINUTE by the Honourable [illegible]

FEELING disinclined to re-open the question determined [illegible] French's recommendation, to which I defer, I cannot [illegible] recording my fullest concurrence in the Resident's observations [illegible] inconvenience likely to result to the firm by the withdrawal [illegible] which was to secure the partners from molestation [illegible] Baroda.

5 November 1852.

[illegible]urable

3. The Right honourable the Governor in Council is not disposed to re-open this question. It has been determined that the guarantee was not hereditary, and nothing new is now brought forward to show that the firm is composed of the individuals to whom the guarantee was originally granted.

4. In the event of any specific complaint of obstruction in realising the outstanding debts of the firm, it can be considered on its own merits.

REMARKS explanatory of a STATEMENT of the REVENUES of *Tanjore* as Collected from all Sources, from Fusly 1210 to Fusly 1262.

General.

As the figures in this statement differ in some respects from those entered in former accounts, it is necessary to explain the difference.

In the accounts formerly prepared, the revenues of the province were converted from pagodas to rupees, by calculating that there were 24 fanams in a pagoda, and 22 ½ fanams in 3 ½ rupees, the value of a pagoda having fallen from the former to the latter in fusly 1217. In the present accounts no notice has been taken of fanams, and pagodas have been converted into rupees, at 3 ½ of the latter to 1 of the former, whereas by the calculation before made, the pagoda was made to represent *Rs.* 3. 11. 8 ¾. A change in the value of the pagoda was thus, in the former accounts, made to represent a difference in the state of the province.

Cavil fees, which were to be collected from fusly 1223, were not included in the jummabundy of that year, but brought forward as a balance, in the demand and collection of fusly 1224. In the present accounts they are included in the revenues of fusly 1223, which was not the case in the accounts formerly sent.

In fusly 1233, the principal collector applied for leave to remit 10 per cent. of the land revenue, and prepared his accounts accordingly, but the request was not acceded to by the Board of Revenue; the amount, formerly entered as a balance in the accounts of fusly 1234, is now included in the revenues of fusly 1223.

The figures in the column of extra revenue will be found to differ from former accounts, in consequence of the erroneous calculation of the value of a pagoda, referred to above.

Column-war.

Column 2. The increase in the extent of land in fusly 1256, arose from the incorporation of the Tranquebar territory with the rest of the district.

Column 3. There are no accounts on record to show the gross produce of the province, from fusly 1210 to fusly 1215.

Columns 4, 5, 6, 8. These columns refer to the Woloongoo rent, which was introduced only in fusly 1232.

Column 9. The current prices of grain from fusly 1210 to 1231 have been entered according to old accounts; from fusly 1232 to 1254, the prices in the aumanie villages have been entered, and as their number has been much reduced since that date for subsequent years, the gross produce of the Woloongoo rented villages has been divided by their beriz, without deducting the 10 per cent. in high, or adding the 5 per cent. in low priced years, and the result entered as the current selling rates.

Column 10. There is no account to show the extent of land under aumanie in fusly 1214–1215 and 1216.

Column 16. Cavil fees were not collected up to fusly 1224, from that time to fusly 1261 they are entered, and for fusly 1262, they have been by order of the Board of Revenue incorporated with the Ayen revenue.

Colum 21. In order that a just comparison might be made between one period and another, the following deductions have been made from the accounts of those years to which they properly belong.

1st. The beriz of certain villages attached to the Poodoocottah state, which are entered in the district accounts for fusly 1210–1211 and 1212.

2nd. The beriz of some villages made over to the Muktumba Poorum Chuttrum in fusly 1235, has been deducted from previous years.

3rd. The beriz of the Karrical state has been deducted from account up to 1225.

4th. The beriz of some villages has been deducted up to fusly 1226, when they were exchanged with the Rajah for some saltpans belonging to his highness.

5th. The beriz of the Tranquebar territory has been deducted from the accounts of fusly 1211, but is added for fusly 1256, when it was permanently annexed; its amount is about 20,000 rupees.

Columns 23, 24. The statement of collection and remissions is up to April, fusly 1263.

Column 26. The annual amount for which land has been sold for arrears of revenue could be ascertained only after much delay; a general statement has therefore been given.

Column 27. The sayer duties were abolished in fusly 1253, from that time to the date of the incorporation of Tranquebar, the frontier duties between that state and Karrical, and the Tanjore province, have been entered, and subsequent to the annexation, the frontier duties for Karrical only.

Column 28. Salt was sold at 80 rupees the garce from fusly 1215 to 1219, at 105 rupees from fusly 1220 to fusly 1229, at 70 rupees from fusly 1230 to fusly 1238, at 105 rupees from fusly 1239 to 1253, and at 120 rupees subsequently.

Column 34. No house tax was collected up to fusly 1222; the tax was included in the cavil fees from fusly 1223 to fusly 1242, and since has been included in moturpha.

Column 36. The stamp revenue is entered from the year of its first collection.

Column 39. The sale value of land has been entered for such years as accounts were forthcoming for; the values are taken from the deeds of agreement filed by the seller and purchaser when application is made for a new registry of the meerass.

Fusly War.

Fusly 1210. The province came under the British Government in fusly 1210, and for that year the whole district being under amaunie, the produce of the wet lands was divided in the proportion of 40 to the meerassdars and 60 to the circar; in subsequent years the division of the produce varied from 50 to 57 per cent. to the circar, according to the means of irrigation afforded to the land, until fusly 1233, when, on the introduction of the Woloongoo rent by Mr. Cotton, the produce of all irrigated lands was equally divided between the meerassdar and the circar. The extraordinary high beriz of fusly 1210 is thus accounted for, and no fair comparison can be made between it and the beriz of subsequent years, unless one-fifth be first deducted from the former on account of the 20 per cent. extra warum; its accounts include, indeed, as the accounts of all years up to fusly 1233 include, a warum of more than 50 per cent. for many villages; comparisons can hardly be accurately made with any year prior to that fusly.

Fuslies 1214, 1215, 1216. The whole of the villages were given on one year's rent in fuslies 1214, 1215, and 1216.

Fuslies 1217 to 1219. In fusly 1217 the villages were all rented for three years.

Fuslies 1220 to 1224. From fusly 1220 to fusly 1224 inclusive, a five-years' rent of the villages was given, a deduction of 10 per cent. from the previous year's beriz being made in some villages.

Fusly 1230. The villages were given on rent for this year; deductions from the beriz of the previous year varying from 2 to 10 per cent. being allowed.

Fusly 1231. One year's rent, the standard grain amount, was fixed on all villages prior to the introduction of the Woloongoo settlement.

Fusly 1232. The Woloongoo beriz was fixed, and the Meerasswarum in all Neerarumbum villages settled at 50 per cent. of the gross produce.

Fusly 1233. Very high prices prevailed, but produce being exceedingly scanty, large remissions were granted.

Fusly 1234. Another year of high prices.

Fuslies 1235 to 1239. A five-years' rent was given in fusly 1235, 10 per cent. being deducted from those villages which did not receive the deduction in fusly 1220.

Fuslies 1235, 1236. Two years of low prices.

Fusly 1237. Another year of low price; produce was also scanty, in consequence of a violent storm, which occurred in April of fusly 1236; the land in Tanjore never produces freely unless thoroughly baked and cracked in the land wind season.

Fusly 1238. A rise in price caused an increase of revenue in the Woloongoo rented villages. The field assessment was commenced this year, and addition was made to the beriz of some villages in consequence of extra cultivation having been discovered in the survey, and of an increased assessment having been placed on some lands.

Fuslies 1239, 1240, 1241. The field assessment was continued; heavy losses sustained by the meerassdars and the Government in consequence of drought.

Fuslies 1242, 1243, 1244. A rise in price increased the collections in the Woloongoo rented villages.

Fusly 1245. Large remissions were given in consequence of losses by drought.

Fusly 1246. Although prices were high this year, remissions were required on account of losses by drought.

Fusly 1246. The annicut was built.

Fusly 1247. A year of comparatively low prices. The effect of the annicut was felt in an increase of cultivation.

Fuslies 1248-1249. Further increase of cultivation in consequence of the construction of the annicut.

Fusly 1250. The decrease in the revenue this year arose from a fall in price; cultivation was extensive, and produce good.

Fusly 1251. In consequence of very low prices, the Collector suspended the collection of the June kist until the following year.

Fusly 1252. Prices higher than in last year, but still below the standard.

Fuslies 1253–1254. The province suffered from drought.

Fusly 1255. Prices rose. In this year Tranquebar was annexed.

Fusly 1256. A year of high prices.

Fuslies 1257–1258–1259. Three years of low prices.

Fusly 1262. Pagoda and Bramin maniems, and nat and village curnum revenues, were included in the dyen account under orders from the Board of Revenue, and added 1,79,394 rupees to the jumma.

Fusly 1262. Remissions to the extent of 5–10 and 15 per cent. were allowed according to circumstances, in consequence of heavy losses sustained in a severe hurricane which visited the province in the month of March.

Maramut.

In fusly 1240, a sluice in the grand annicut was constructed, at a cost of 17,151 rupees.

In fusly 1241, the 20-vent sluice in the Cauvery bank was built, at a cost of 20,546 rupees.

In fusly 1242 was constructed a dam across the Paumanyaur, costing 13,342 rupees.

In fusly 1243 the six-vent sluice at Peromal covil, costing 12,055 rupees, was constructed, and a road from Combaconum to Odiarpollyum made, with a bridge across the Cauvery, at an expense of 14,129 rupees.

In fusly 1244 was built the 20-vent sluice near the head of Seringham, at a cost of 17,002 rupees; the 300 yard calingulas at a cost of 5,087 rupees; the head sluice between the Cauvery and Vennaur, costing 6,631 rupees; and a dam across the Vettaur, and two rajah voikals, costing 14,086 rupees.

In fusly 1246, the upper annicut cost 83,401 rupees.

In fusly 1247, the repairs of the annicut cost 23,718 rupees, and the excavation of the south rajah voikal to the lower annicut 10,777 rupees.

In fusly 1249, the bridge and calingulah at Coilady cost 11,682 rupees, and rough stone work at the annicut 14,770 rupees.

In fusly 1251, some bridges cost 23,243 rupees.

In fusly 1253, the prolongation of the dam at the upper annicut cost 18,735 rupees.

In fusly 1255, the dam across the Cauvery at the head of Seringham cost 54,584 rupees.

In fusly 1258, four bridges cost 16,393 rupees.

In fusly 1259, seven bridges cost 43,170 rupees.

In fusly 1260, two bridges cost 20,835 rupees.

In fusly 1261 was built the Cauvery and Vennaur regulating dam, at a cost of 49,049 rupees, and also seven bridges at a cost of 30,122 rupees.

In fusly 1262, four bridges cost 6,405 rupees.

(signed) *H. Forbes,*
Collector.

5 September 1854.

1264	1854	—				

(Revenue Department.)

(No. 84.)

From *J. Goldingham*, Esq., Commissioner, Northern Circars, to *J. D. Bourdillon*, Esq., Secretary to Government, Fort Saint George.

Sir,

From Rajahmundry, 29th July 1854, one enclosure. From ditto, 23d Sept. 14 enclosures. Memo. from Mr. Stokes, with one accompaniment on Guntoor and the Kistnah Annicut. Herewith returned.

Para. 1. I HAVE the honour to acknowledge the receipt of Extract Minutes of Consultation, dated 26th April 1855, together with the documents mentioned in the margin, calling for information connected with the Godavery Annicut. It is the wish of Government that the effects of this great work should be accurately ascertained. Both present and prospective benefits are to be stated, and information is required as to the practicability of substituting one uniform rate per acre or other extent as the charge for water, for a tax calculated on the crop, ordered to be introduced only as a temporary expedient till the assessment generally can be remodelled.

2. Among the documents received from Government, mentioned in the margin of the preceding para., is a paper showing the revenue, past and present, of the Guntoor district, and the bearing of the Kistna Annicut on its prosperity, and it is the desire of Government that similar information may be obtained from Masulipatam from the Collector of that district.

Preliminary remarks.

3. Before noticing actual results in illustration of the question, a few preliminary remarks will not be out of place. The works under discussion are the Godavery and Kistna Annicuts. Rajahmundry is affected by the Godavery Annicut alone, Guntoor by the Kistna work, and Masulipatam by both. In Masulipatam the revenue maintained by irrigation is considerable, but in the other two districts the bulk of the Government assessment is derived from unirrigated lands. The irrigation of the watered portion in all three districts is defective and uncertain. Inundations from the overflowing of the Godavery and Kistna occasionally occur, chiefly in Rajahmundry and Guntoor, rendering large remissions of revenue necessary, and causing serious injury to the country in the destruction of produce and agricultural stock, as well as general loss, replaced only after a lapse of years. With a rich soil, a comparatively better supply of water, and more certain harvests, Rajahmundry is in much better circumstances than either Guntoor or Masulipatam. It contains about a million inhabitants, the population of each of the other two districts being little more than half that number. It has also more large towns, but this prosperity is comparative only, and falls short of what may be looked for, when an assessment on sound principles, a matured state of the annicut irrigation and extension of water carriage, with improved communications generally, shall combine, under the Divine blessing, to develop its resources.

Report, para. 257.

4. The district, viewed in comparison with Tanjore, drew forth the following remark from the Madras Public Works Commissioners: "While Tanjore, under the beneficial effects of the lately constructed annicuts, was paying with ease a revenue of 45 lacs, and annually increasing in wealth, Rajahmundry, of similar extent, with a far more fertile soil, and inferior in no one natural advantage, was paying with extreme difficulty a revenue of 19 lacs, and its people were in the lowest state of poverty." Mismanagement under the zemindars, a severe famine followed by disease, occurring when the ryots were impoverished from exactions under zemindary rule, and an inefficient state of the irrigation, had operated in reducing the revenue in Guntoor and Masulipatam. In both these districts a revival has taken place, remarkably so in Guntoor, though the revenue is still much below its normal amount.

5. No. 1 of the Appendix will be found to give fuller information regarding the population of these three districts, with a classification of the villages in two of them, viz., Rajahmundry and Masulipatam, with reference to the number of inhabitants they contain.

6. The extent of unoccupied cultivable land is less in Rajahmundry than in Masulipatam and Guntoor, but a fair comparison cannot be instituted from the annual accounts, because when joint rents prevail, the village area for the most part is included in the lease, while in the ryotwar district of Guntoor it is only

land

land actually occupied and paid for that is entered in the settlement. Still it is apparent, that of the three districts, Rajahmundry is the most highly cultivated. According to the settlement account of fusly 1263 A.D. 1853-54, the following is the extent of the cultivable area which is unoccupied.

	UNOCCUPIED.	CENTAGE.	
	Acres.	*Ac.*	*C.*
Rajahmundry - - - -	53,407	7	20
Masulipatam - - - -	2,04,876	27	20
Guntoor - - - - -	5,27,957	48	0

7. Portions of the above land in Masulipatam and Guntoor may be brought under wet cultivation with the waters of the two rivers, but that in Rajahmundry, 4,700 acres excepted, is not within range of the new works. The lands of the Rajahmundry Delta talooks, though fully occupied, with the above exception, are not fully cultivated.

Delta Talooks:

	Acres.
Land occupied - - -	2,75,000
Of which, not cultivated, but paid for - -	50,000

8. The large extent of unoccupied land in Masulipatam and Guntoor is an indication of impoverishment. Latterly some lands have been relinquished in the last-mentioned district, partly owing to heavy losses occasioned by the inundations of the Kistna, and partly in consequence of burdensome rates of assessment on the best soils in certain talooks. This question is under consideration, and it is hoped that the necessary relief will be soon given where land is found to be waste in consequence of excessive assessment.

Extracts Minutes Consultation, 27th August 1853, reviewing the settlement of fusly 1261.
To Government, 18th January 1855.
From Government, 2d June.

9. It has been observed in a former para., that the revenue from wet lands in Masulipatam was considerable, but that the bulk of the revenue in the other two districts was drawn from lands not irrigated. Keeping revenue in view, the proportion of irrigated to unirrigated in Rajahmundry is 35 per cent., in Masulipatam 49 per cent., and in Guntoor it is only 16 per cent. The first effect of the works under construction will be to render the greater portion of this revenue permanent, by making the irrigation certain, an important result under any circumstance, but particularly so in a district like Masulipatam, where 49 per cent. of the land revenue is drawn from irrigated lands. All further direct increase will depend on the extension of products, requiring irrigation over the unirrigated area.

Per-centage of Irrigated Land:

	Land	Assessment.
Rajahmundry - -	31	35
Masulipatam - -	22	49
Guntoor - - -	5	16

10. In Rajahmundry, where the irrigation is more advanced than in the other two districts, the assessment of the irrigated lands is, as stated above, 35 per cent. of the entire revenue from the land. Of this, 15 per cent., which has hitherto had an imperfect and uncertain supply of water, has already come under the certain provision afforded by the Godavery Annicut, and of the remainder, about 10 per cent. is being brought gradually under the same influence. Ten per cent., or 1,35,000 rupees, is dependent on sources unconnected with he annicut.

11. The assessment in Rajahmundry, as shown in the accounts under the present system of joint rents, presents the anomaly of a want of distinction between unirrigated and irrigated. The rates for both kinds are nearly the same, while the proportion generally borne by the latter to the former in other districts is as two to one.

	Per Acre.
Unirrigated - - -	*Rs.* 3 1
Irrigated - - - -	
Annicut - - - -	3 11
Tanks - - - - -	3 9
Channels - - - -	4 –
Wells - - - - -	6 15
Falling rains - - -	2 15

12. It is further to be observed, that the unirrigated rates in this district are higher than those in Masulipatam and Guntoor. In accounting for this, something must be set down for inaccuracies in the area as recorded in the village accounts, and to the fact that more than one-fourth of the lands in Rajahmundry, from fineness of quality, bears a second crop. But making due allowance on these accounts, it

	Per Acre.
Rajahmundry - -	*Rs.* 3 1
Masulipatam - - -	1 –
Guntoor - - -	1 11

is supposed that the rates of assessment of unirrigated lands in Rajahmundry is disproportionately high. In a revision of the assessment, some adjustment will be made on account of the second dry crop, as is done in other districts where it is not included in the assessment, and then a greater approximation of rates in the three districts will follow.

See Statement, No. 8, in the Appendix.

13. It must not be overlooked that while the land assessment in Rajahmundry is higher than in the other two districts, the market prices of produce are lower there.

14. It is important to bear these facts in view, because while, on the one hand, an improved irrigation will lead to an augmentation of the revenue, such increase cannot be calculated implicitly on the basis of the present demand, as this, apart from the consideration of the effect likely to be produced by increased supplies of grain being brought into the market, must undergo great modification and some diminution when the assessment is remodelled.

15. Appendix No. 2 elucidates in a tabular form what has been stated above in regard to the proportion of irrigated and unirrigated lands in occupation and the ratios of assessment. The particulars apply to fusly 1263 (1853-54). It is not to be supposed that the whole of the unirrigated extent is actually under the plough: a portion is always retained for pasture, and some lands were left uncultivated in consequence of the poverty of the holders.

16. The following Table exhibits for lands not irrigated the proportions according to which the different grains are grown. The extent of land of this description which is not cultivated is added:

	Rajahmundry.	Masulipatum.	Guntoor.
	Acres.	*Acres.*	*Acres.*
Coarse paddy	1,63,954	37,457	71,457
Cholum	24,000	80,000	97,486
Sundry grain	30,552	80,629	3,67,620
	2,18,508	1,98,086	5,34,563
Land not cultivated	86,083	2,10,081	1,26,681
TOTAL of land not irrigated in occupation	3,04,591	4,08,167	6,63,244

17. The result of an improved irrigation will be the gradual substitution of fine descriptions of paddy for the coarse kind.

18. One important effect of a large outlay on public works in a district is an increased demand which is thereby created for its products; a stimulus is thus given to cultivation, and the ryot pays his rent more easily. Such outlays of money bear directly on the general prosperity. This has been extensively felt in Rajahmundry in connexion with the outlay on account of the annicut. The direct profit to Government from this expenditure will consist in the stability given to a fluctuating revenue, in the saving of remissions of assessment for losses in consequence of inundation, and in the water tax to be imposed when water is required for improving an imperfect irrigation, or when dry lands are brought under the irrigated class.

Actual results.

19. With these preliminary remarks, it is proper to proceed to a consideration of results, past and present, and the expectations held out for the future. The comparison will be instituted for the three districts, because as an increase is observable in all, it is important to distinguish the agencies that have been in operation. In Rajahmundry alone, as before observed, have the improvements in the irrigation been in any material degree advanced.

20. The

20. The highest land revenue collection in Rajahmundry, for upwards of 40 years before the construction of the Godavery works, may be stated in round numbers at 19,00,000 rupees. It was generally much below that amount, and four times only above it, and then in an immaterial degree. In the interval between 1832-33 and 1843-44 the revenue declined considerably; subsequently it revived, went on speedily improving from 1847-48 to 1853-54, and at present amounts to about 20,20,000 rupees, being an increase of 1,30,000 rupees above the normal standard, supposing the latter to be represented by 19,00,000 rupees.

			Rs.
Fusly	1257 (1847-58)	- -	18,73,449
,,	1258	- -	19,28,903
,,	1259	- -	18,91,254
,,	1260	- -	19,72,881
,,	1261	- -	20,25,310
,,	1262	- -	20,22,465
,,	1263	- -	20,18,510
,,	1853-54		

21. It seems, however, proper to glance at the actual collections of five years before the outlay for the annicut with those for the seven years subsequently. Taking, then, the average revenue for both periods, it is seen that the latter exceeds the former by 2,89,130 rupees, which, multiplied by seven for the seven years, gives an aggregate increase of 20,23,910 rupees for this period.

Note.—Five previous years are taken for convenience: the average of 7 years, or 16,19,088 rupees, would include years of great depression.

	Rs.
Average of 5 years, from fusly 1252 to fusly 1256 -	16,72,695
Ditto of 7 years, from fusly 1257 to fusly 1263 -	19,61,825
Ditto increase of the latter period - - -	2,89,130

22. Instituting a similar comparison for the revenue from extra sources, an increase of 3,05,305 rupees is obtained for the seven years under notice, which added to 20,23,910 rupees, the increase from the land, gives a total increase of 23,29,215 rupees. Appendix No. 3 will illustrate these results more in detail.

	Rs.
Average of 5 years - -	3,25,196
Ditto of 7 years - -	3,68,811
	43,615
Years - - -	7
	Rs. 3,05,305

23. The whole of this great increase is not to be ascribed to the operations of the annicut, and the outlay connected with it; for on reference to Appendix No. 3, mentioned in the preceding para., it will be seen that, following the same mode of calculation as above, there is an increase for the seven years in both Masulipatam and Guntoor, amounting respectively to 2,46,365 rupees and 27,22,325 rupees. The increase in Masulipatam is composed of an increase under land, and a decrease under extra sources of revenue; and in Guntoor the increase is swelled in consequence of large sales of salt; taking land revenue only, the gain to Government for the seven years in question will stand thus:

Rajahmundry - - -	20;23,910 rupees.
Masulipatam - - -	6,03,484 ,,
Guntoor - - - -	19,79,817 ,,

24. The increase in Rajahmundry and Guntoor is ascribable primarily to special inquiries instituted in those districts under the orders of Government, and to the reforms which followed. In Guntoor, where there has been no outlay on account of public works till lately, the money gain to Government is almost equal to that obtained in Rajahmundry; but this very favourable financial result is to be traced to previous deficiencies of revenue, which would be replaced on a better system of management being introduced, aided by the successful administration of a Collector of great revenue experience, whose first object on the zemindaries falling in, and thus coming fully under his control, was to obtain correct field registers, showing the extent and assessment of each field or parcel of land. On these his settlements with the ryots were based, each ryot being at liberty to occupy or relinquish land as he pleased. To this system, viz. a defined rent on each field, and freedom of action in a depressed state of the district, the consequence of zemindary misrule and famine, and where a long-continued waste of the resources had to be repaired, is to be attributed the marked progress above indicated; but the improvement, though great, has not brought up the revenue to its normal* standard; and in some localities, as already stated, considerable depression is still apparent. In Rajahmundry alone has the ordinary standard of the land revenue been exceeded, although in some parts of the district the revenue is still below the assets computed at the permanent settlement. The fact that the normal revenue has been surpassed in Rajahmundry alone is, *primâ facie*, indicative of

In Rajahmundry, by Sir H. C. Montgomery, in 1843-44.
In Guntoor, by Mr. Walter Elliot, in 1845.

Mr. H. Stokes.

Note.—I state this from personal observation, and a conviction that the same results would not have followed a system of village rents.

Average of 10 years from fusly 1232 to fusly 1241, the last-mentioned fusly being very unfavourable, 14,16,463

1261 - - -	13,90,050
1262 - - -	13,80,313
1263 - - -	13,55,821

* This has been noticed by Government in reviewing the settlement of fusly 1262.
Extracts Minutes Consultation 6th November 1854, para. 28.
Extracts Minutes Consultation to Government, reporting on the settlement of fusly 1263, 5th May 1855, para. 35.

of the existence of a new class of agencies bearing directly on the capabilities of the district.

To Government, 5th May 1855.

25. Appendix (A.) of the general report for fusly 1263 (1853-54) was intended to exhibit the effects of the new works on the revenue, and the general resources of the country. It has been drawn up with care, and may be referred to in the present place as containing the information called for by Government. It was there shown, that of the three main channels, viz. the Toolia Bhaga, the Ryaly, and the Vizaiswaram or Weyoor, the first had been more or less available for irrigation since fusly 1257 (1847-48); that the two latter had not materially contributed to the revenue up to fusly 1262 (1852-53); that, to inspire confidence in the works, it had been determined that the water cess should not be imposed till the benefit of the irrigation had been enjoyed for two successive seasons; that one-half only of the water-rate was to be imposed in the third year and the full amount in the fourth; that this indulgence would necessarily put off the returns to Government, and that the assessment under the present system of settlement could be fixed on approximate data only. Two statements were appended, one showing the revenue of villages under the Toolia Bhaga, and the other the profits derived by Government from the new works. Copies of these statements form Nos. 4 and 5 of the Appendix to this letter.

26. No. 4 exhibits the average for five years before the commencement of the annicut, and that for fuslies 1262 (1852-53), and 1263 (1853-54), with the number of villages enjoying the benefits of the irrigation and the period when water was first received in the several villages respectively. The following facts are established by this statement:

i. In 45 Government villages irrigated during periods ranging from one to six years, there was an increase of 52,099 rupees, or 62 per cent., in the revenue of fusly 1263 (1853-54), compared with the average of five years before the commencement of the work.

ii. In 23 villages which have had the water for five years, the increase on the same comparison is 35,077 rupees, or about 90 per cent.

iii. The ratio of increase in 97 Government villages of the same talooks, not brought under irrigation, is 37 per cent.

iv. In 25 villages of the zemindary of Pittapore under the Collector's management, similar results are observable, viz., an increase of 38 per cent. on the whole 25 villages, and of 87 per cent. where the irrigation has been in operation six years.

v. The advantages are in proportion to the period the water has been used, and in five villages of the Biccavole talook, the particulars of which are given in the statement, the present revenue is twice and three times the former amount.

27. In both the irrigated and unirrigated villages the revenue has gradually increased, the result of fusly 1263 (1853-54) being higher than that of fusly 1262 (1852-53). The unirrigated villages are benefited by the outlay and demand for their products. In both descriptions of villages the Government demand is regulated, in the absence of field registers, by an addition to the former year's settlement, on a general consideration of their increased resources, which is afterwards apportioned by the ryots among themselves.

28. It must be borne in mind that till fusly 1263 (1853-54), the irrigation was confined to the Toolia Bhaga, and that returns of revenue have been delayed in consequence of the channels not having been proceeded with simultaneously with the annicut, as originally projected. Two years may be said to have been lost by this deviation from Colonel Cotton's intention.

29. The other statement or No. 5 of the Appendix exhibits the profits to Government in respect of the land assessment of the area actually watered. The 45 irrigated villages under the Toolia Bhaga are therein arranged with reference to the period when the irrigation first commenced in them, and the revenue for each year of the six years, ending with fusly 1263 (1853-54), is shown in comparison with the previous five years' average. The result in these villages for the six years is an increase of 2,52,021 rupees, of which, allowing 65,820 rupees

rupees to have proceeded from other causes not connected with the annicut, 1,86,201 rupees, it is supposed may be safely taken as direct gain from the works. To this is to be added 1,30,038 rupees, being an estimate of the revenue which accrued to Government in fusly 1263 (1852-54) in other localities, as shown in the statement, making a total profit at the period mentioned of 3,16,239 rupees. The permanent addition at this moderate computation to the annual land revenue of the district was thus 40,789 rupees in one tract only, viz., 45 villages of the Biccavole talook; a fair proportion of the further sum of 1,30,038 rupees being added to this, it will be found that the annual land revenue has been augmented by a sum probably exceeding 1,30,000 rupees, the increase indicated in para. 20 above.

See Column 5 of the statement.

30. Besides the effects on the land revenue, the impulse given to trade and general consumption by greater facilities of transit and circulation of large sums in the district, combined with other causes, such as the establishment of a large sugar factory near Rajahmundry, the demand for oil seeds in the European market, has brought additional returns to Government under the other sources of revenue. The value of exports has risen from about 3,50,000 rupees in 1841-42 to upwards of 16,00,000 rupees in 1852-53, and that of imports of other goods, besides grain, from 60,000 rupees to nearly 2,00,000 rupees. Comparing the average of five years before the annicut with that of eight years subsequently, there is an average annual increase of 1,07,756 rupees, or a total increase since the annicut of 8,62,048 rupees. It would be difficult to state with nicety what portion of this increase belongs to the annicut outlay; but, deducting one-third as proceeding from other causes, there is a receipt of 5,75,701 rupees as probably attributable to that influence.

Average Annual Increase.	
Spirits - - -	*Rs.* 30,369
Home consumption of salt -	40,327
Moturfa - - - - -	11,449
Sea Customs, though greatly reduced by the operation of Act VI. of 1854 - -	25,611
	1,07,756
	8
	8,62,048
Deduct ⅓ - - -	2,86,347
	Rs. 5,75,701

31. The profits, then, to Government at the close of fusly 1263 (1853-54) from the expenditure for the Godavery Annicut and its subsidiary works may be thus stated:

	Co.'s Rs.
The increased collections from lands under the Toolia Bhaga from 1257 to 1263 fusly are taken at - -	1,86,201
Those in 1263 fusly in other localities - - - -	1,30,038
	3,16,239
Of the increase in the revenue from extra sources described above, two-thirds may be put down to the annicut -	5,75,701
Total -	8,91,940

This gives nine lacs for the actual receipts. But to this may fairly be added the increased receipts of the Pittapoor Zemindar noticed above; viz.:

From 1257 to 1263 fusly - - - - - -	29,627	
In fusly 1263 - - - - - - - -	10,000	
		39,627

Amount which might have been realised from enam lands under the Toolia Bhaga:

From 1257 to 1263 fusly - - - - - -	38,534	
Ditto - - - ditto for such lands watered in 1263 fusly - - - - - - - -	5,000	
		43,534
GRAND TOTAL -		9,75,101

32. There has been thus a direct receipt of 9,75,101 rupees since the commencement of the works against an expenditure of 20,37,917 rupees on that account, with a permanent addition to the annual revenue from the land at the close of the period reviewed of a sum not less than 1,30,000 rupees.

33. Satisfactory as these results will doubtless appear, other advantages both

to Government and to the people have been reaped, which enhance many fold the value of this important work. The season of fusly 1263 (1853–54) was one of severe drought. By extraordinary exertions the civil engineer succeeded in conveying water from the three main lines of irrigation to the wet cultivation and over the greater part of the dry lands in time to save the produce when it was on the point of perishing. Early in December 1853 the late Commissioner visited the district, and, from inquiries carefully made, it appeared that a revenue of 6,59,856 rupees was saved from imminent peril by the exertions mentioned, and that the value of the produce preserved to the country exceeded 40,00,000 rupees. But for this opportune supply of water about 2,00,000 rupees of the assessment must have been given up by Government as remissions, and the loss of stock and capital would have been great. As it was, the revenue was punctually discharged, the ryots enjoyed enormous profits in consequence of the enhanced prices of grain, food was augmented, and the calamities of famine were averted.

Note.—Without the head of water at the annicut this could not have been done.

Note.—Whatever may be thought of this valuation, the argument, viz. that a vast quantity of produce was saved to the country, is not affected.

34. One important benefit remains to be noticed, viz., the effect produced on the agricultural labourers. A new demand for their labour has been created; they are no longer dependent on their masters for a scanty provision of grain, with a cloth given annually, but seek employment for themselves, and earn from two to three rupees a month.

	Rs.
Assets as per accounts of subdivisions	24,79,829
Deduct ditto, of estates in the possession of zemindars	7,27,160
Assets of lands at present belonging to Government	17,52,669
Peshcush of the above	13,24,431
The sist (atkoobady) of fusly 1263, exclusive of 13,610 rupees, the sist of jaghires not included in the permanent assets, and reverted subsequently	15,19,130
Decrease of fusly 1263 below the assets	2,33,530
Increase of ditto, above the peshcush	1,94,708

35. It will be asked perhaps whether the present revenue will bear a comparison with the assets of the district on which the permanent settlement was based. The figures in the margin show that the revenue at the present time is 1,94,708 rupees above the peshcush, or demand of Government on the zemindaries, but 2,33,530 rupees below the assets on which that demand was framed. The Government are doubtless entitled to have the sum last mentioned made up to them irrespective of any extraordinary outlay of public money, the prices of grain and other circumstances being the same as when the assets were taken; but this is not the real question at issue at present, and it will be time enough to institute a comparison when the district shall have recovered more completely from the state of depression observable before the annicut project was put forward. As regards the annicut and its subsidiary works, there seems abundant grounds for the conclusion, after making due allowance for the progress to be expected under ordinary circumstances, that they have been followed by a large increase to the standard revenue of the district, which but for their influence would not have taken place, together with other results of vast importance, as set forth in the foregoing paras. Viewed with all those effects, apart from the question of navigation, it will be readily admitted, that not only have more than equivalent results been obtained for the outlay incurred, but that a foundation has been laid for benefits surpassing largely what the works have yet yielded. Considered in its navigation aspect, as realising all the advantages of improved communications, the conclusion as to a full equivalent for the expenditure will probably be found equally true.

Reports of the Sub-Collector in charge regarding the effects of the works.

Dated 4th May 1853.

36. Mr. Taylor, the Sub-Collector in charge of Rajahmundry, addressed the Board of Revenue, under date 23d September 1854, on the effects of the Godavery works, and it is the desire of Government that Mr. Taylor's reports, one on the Collector's Division, and the other on that immediately under his own management, submitted on that occasion, should be carefully tested. These papers discuss at some length the benefits which the Government and the country have derived from the works in question. The conclusions are drawn from a comparison of the revenue during six years, commencing with fusly 1257 (1847–48), the first year of annicut expenditure, with the six previous years, the last year of this series or fusly 1256 (1846–47), entering more immediately into the comparison, and it is assumed that the whole increase of land revenue during the second series of six years, amounting to 8,51,048 rupees, is to be ascribed to the annicut, and the expenditure connected with it.

37. Mr.

37. Mr. Taylor's inferences are fallacious, inasmuch as the first series of six years represents a period of extraordinary declension. The figures in the margin show the state of the revenue at that time. In fusly 1253 (1843-44), the Special Commissioner commenced his inquiries, and after that date a revival of the revenue is apparent. Adverting then to the low state into which the revenue had fallen during that period to its subsequent improvement before the annicut expenditure commenced, and to the fact that it had not attained its normal state in fusly 1256 (1846-47), the last year of the first series, the inference that the entire increase during the second series is solely ascribable to such expenditure is not sustainable. Some allowance should have been made to the reforms and administrative energy which followed the institution of the Commission, which, though aided by the annicut after fusly 1256 (1846-47), cannot be supposed to have suddenly yielded their influence on the restorative power of that work coming into operation.

	Rs.
Normal Revenue -	- 19,00,000
Fusly 1251 - -	- 15,34,286
„ 1252 - -	- 15,15,551
„ 1253 - -	- 15,54,385
„ 1254 - -	- 17,31,534
„ 1255 - -	- 17,49,519
„ 1256 - -	- 18,12,489

38. Following up the view that the whole increase is to be credited to the annicut, an attempt is made, in para. 19 of the report on the Collector's Division, to distribute it under specific heads as shown in the margin; but in the absence of data for thus distinguishing the effects of the expenditure, the apportionment cannot be received as real; even following the course of expenditure for the different improvements, as is carefully done in para. 16 of the report on the subdivision, little approach is made towards the acquisition of information sufficient for exhibiting results in a classified form.

Increase in the Collector's Division only:

	Rs.
Increase from 1257 to 1259 Fusly, being profit by general expenditure - -	194,505
Ditto, from embankments and drainage - - -	301,926
Ditto, from supply of water,	57,265
	553,696
Deduct decrease - -	110,071
Remaining. - - -	443,625

39. The remarks in the foregoing paras. apply equally to the few villages exhibited in para. 17 of the report on the subdivision, though the great advantages derived from embankments and the presence of water at critical periods are fully apparent in the several instances noticed. In para. 24 of the same report, Mr. Taylor admits that the classification of effects is arbitrary.

40. Mr. Taylor, however, shows in both papers that he is quite aware of the benefits derived from a better system of management, and of the difficulties presented in any attempt to state with nicety the actual effects of the annicut outlay, but he thinks that the highest administrative intelligence might have been at fault had it not been for the powerful aid afforded by that expenditure, and he justly observes that the collections have been greatly assisted by it. Report on the Collector's talooks, para. 18.

41. As a proof that other causes of increase have been in operation during the last five years, it is only necessary to compare the results in the upper portions of the district with those obtained in the Delta talooks. The comparison is as follows :—

		Collections of Fusly 1256.	Total Increase or Decrease of Six Years from Fusly 1257 to 1262.	Centage.
		Rs.	*Rs.*	*Rs.*
Under the Collector -	Delta Talooks -	86,317	+ 395·067	67,38
	Other „ -	197,757	+ 178·827	90,42
Under the Sub-Collector	Delta Talooks -	413,291	+ 200·309	48,46
	Other „ -	34,865	— 25·346	72

The result, so far as regards the Collector's Division, is thus very largely in favour of those parts of the district beyond the influence of the annicut, and is ascribed by Mr. Taylor, among other causes, to the better opportunity enjoyed by some villages for the development of their resources in consequence of their having reverted to Government from zemindary control. Mr. Taylor adds that it is also " mainly and justly due to improved management and better protec- Report on the Collector's talooks, paras. 7 to 13. Ditto, para. 13.

tion to life and property," aided by public and private outlay of money, the latter having reference to the expenditure by the owners of the sugar factory near Rajahmundry, with " a succession of propitious seasons and exposed to no calamitous visitations, impossible to control or to the miseries of drought and famine." The talook of Rajahmundry, in the Collector's Division, is in some degree an exception. This is a dry grain talook without irrigation, and therefore more susceptible of vicissitudes of season.

42. The upper lands of the subdivision consist of one talook only, viz., Taudemulla. Its deterioration, as above represented, is owing to fluctuations of season and a long prevalence of the sharing system of settlement.

43. In the Delta talooks the beneficial influence of the annicut has indeed been extensively felt, but it is hardly proper to attribute to this cause alone the improvement that has taken place, opposed as it is by the large increase in the upper talooks, and the decided testimony borne to better management. The blessing of this work to the country has been fully shown in former paras., and it is not in any way to its disparagement that a share of the general improvement should be ascribed to causes ordinarily in operation, such as a vigilant administration and good seasons. The annicut, moreover, has never been put forth as solely influential in the Jummabundy reports received from the district.

44. The average collections for the six talooks beyond the annicut for each of the two series of six years should be 181,318 rupees and 227,561 rupees respectively, and not 183,098 rupees, and 235,000 rupees, as stated in para. 13 of the report on the Collector's talooks.

Appendix, Nos. 12 and 13.

45. Interesting returns showing the relative value of a pootty of dry and wet cultivation on irrigated land for the first five years of the land being so occupied, and of a pootty of dry cultivation on unirrigated land and the same converted into wet, are given in paras. 33 to 35 of the report on the division of the Sub-Collector. The profit to the ryot, after deducting expenses, not including the assessment of Government for that period, from irrigated dry cultivation, is *Rs.* 564. 8. and that from wet, after a similar deduction, is *Rs.* 592. 8. During the first two years of the conversion in both cases the ryot loses, and the difference after that period in favour of wet cultivation is inconsiderable in the case of irrigated dry land, but great in that of unirrigated dry land converted into wet. The loss for the first two years and the knowledge that an additional impost will be imposed on the land being converted from dry into wet, have retarded the progress of wet cultivation. " Both in Mogultoor and Tanookoo," Mr. Taylor observes, " the ryots have been satisfied with using the water, to ensure good returns of their usual crops, rather than attempt the culture of rice, or other more valuable products," notwithstanding these impediments hitherto to a full and profitable use of the water, Mr. Taylor shows that there is a growing desire to obtain it; " every village," he says, " desires to own a water-course;" and, adverting to those villages which are impoverished in consequence of neglect or exposure to inundations, he observes, " I am happy to say that the inhabitants of these villages are no longer desponding; they have not been unmoved spectators of what has been doing around them, and they look forward with hope to a share of those benefits which others have already shared." This appreciation by the ryots of the advantages of the Godavery works was confirmed by my own personal observation while on circuit.

Note.—These calculations are made for a rich soil and favourable seasons. On its conversion into wet the produce is greater in the first statement than in the second, owing probably to the former including a second crop.

Report on the Subdivision, para. 28.

Ditto, ditto.

Ditto, ditto, para. 26.

Report of the Collector's Division, para. 26.

46. The peculiar character of the assessment generally, the fact that the dry assessment is in many cases higher than the wet, and the desire that has sprung up generally to obtain annicut water, show the importance of an early adjustment of the demand of Government on some fixed principle.

47. Statements Nos. 9 and 10 of the Appendix have been prepared from statement Z, which accompanied Mr. Taylor's reports under consideration, and convey the information intended by Mr. Taylor in a more simple form.

Report on the Subdivision, paras. 46 and 47.

48. Important testimony is borne in these paras. to the great value of the new channels as lines of communication. The carriage of goods, where the channels can be used, has been greatly facilitated, and the cost of transport has been reduced nearly two-thirds. On the completion of the channels it is expected

expected that the transit charges will not be one-eighth of their former amount. It is owing to the facility thus created that the price of 1,000 bamboos at Woondy has fallen from 25 to 15 rupees. The ryots also can obtain a fair market for the products they have raised, whereas when transport was difficult they were obliged to put up with what the soucars on the spot would give them.

49. The tabular view of the former and present charges for the transport of goods in para. 46 of Mr. Taylor's report on the subdivision, has been transcribed and will be found in No. 11 of the Appendix.

50. From whatever quarter viewed, whether as a work of irrigation in the benefits enjoyed from the presence of water, in increased production and saving of produce from destruction or for purposes of navigation as furnishing lines of communication for trade and general intercourse, the annicut is now indispensably necessary to the country, and the attention is forcibly drawn to the importance of its completion at an early period, and to its maintenance at all times in a state of thorough efficiency.

Future expectations.

51. The Government wish to be furnished with an estimate of the probable extent of land on which the water cess will be imposed, and the amount to be anticipated on the completion of the works. In framing such an estimate it is necessary to bear in mind that the annicut water will not flow to the entire area entered as irrigable without auxiliary appliances as pacotahs for raising it, and that a considerable portion of the land bears a high assessment either as usual wet land or as dry. There are no data for fixing with any degree of nicety the extent of land for the irrigation of which it will be necessary to raise the water by the ordinary means in use above the level secured by the annicut, but it is supposed to be considerable. Taking this circumstance into consideration with the fact that the present standard of assessment is on the whole high, it would hardly be safe to assume a higher rate than 1 ¼ rupee per acre as the probable increase to Government from the land on the irrigation being perfected.

52. It must also be remembered that there is scarcely any land in the Delta which never before paid anything. The Delta has been for the most part occupied, though its revenue has fluctuated from uncertainties of season. One main object of the annicut is to remove the effects of this uncertainty.

53. An increase of 1 ¼ rupee per acre in return for the great additional value imparted to land by a well organised system of irrigation, is certainly very little, but, however inapplicable so low a rate would be, under ordinary circumstances, a higher standard cannot be safely taken in the existing state of things in the Delta.

54. As, however, any estimate of ultimate financial effect must be at present in a great degree conjectural, it seems better to wait till further experience shall furnish data, on which reliance can be placed before any attempt is made to estimate, with an approach to nicety, future probable returns.

55. An addition of 1 ¼ rupee per acre though small compared with the estimate when the project was first entertained, represents only a portion of the entire increase of income to be expected. The whole benefit to Government will embrace, besides direct augmented returns, the increase under other sources of revenue, the natural consequence of a high degree of general prosperity, the stability afforded to a fluctuating revenue, the saving of remissions for losses, and the prevention of that great deterioration of capital and stock on occasions of inundation and drought. The vast and incalculable benefits to the people at large in an ample supply of food and sundry products must also be considered among the advantages to be derived, a large instalment of which they have had the good fortune to enjoy during the drought of fusly 1263 (1853-54.)

56. The total expenditure up to November 1854, was stated in Appendix A, of the General Report for fusly 1263 (1853-54), to be 20 lacs of rupees. For the increased income already derived together with the almost immeasurable advantages enumerated in the foregoing para., it will be admitted that the outlay for

the completion of this great work may be safely allowed to rise considerably above the expenditure already incurred.

57. The yearly outlay and cost of establishments have been computed at 1,70,000 rupees, which with 1,20,000 rupees being interest at 5 per cent. on a capital invested of 24 lacs, gives a total of 2,90,000, or a sum less than four annas per acre as the yearly cost of conveying water to the land. Adverting to the magnitude of the subsidiary channels, which can only be appreciated by being seen, to the double function they will be required to perform, viz., irrigation and navigation, and to the imperative necessity of improving them, and maintaining them at all times in a state of complete efficiency for those purposes, for the annicut is now indispensably necessary to the country, it seems that three lacs of rupees is the lowest sum that can be put down as the annual charge for repairs and cost of establishments, not including interest.

58. It was expected on the occasion of the former estimate, that 100,000 acres of land would be laid down with sugar cane. It seems improbable that such a result can be speedily realised. At present, the extent occupied with this product in the Rajahmundry Delta is only 3,048 acres, and as the large sugar factory near Rajahmundry, consumes largely palmyra jaggery, there is little prospect of an immediate extension of cane cultivation in any material degree. It seems, however, not improbable from what I learn that, on the land assessment being finally fixed, when all uncertainty as to its amount will be removed, and free scope given to the occupation of land, the cultivation of this product will be more generally followed, and that cane jaggery will be substituted at the sugar works for that obtained from the palmyra. At present, palmyra jaggery is sold at a rate 25 per cent. below cane jaggery, but this disparity of rate will cease on the backwardness to grow cane which is now manifest being overcome.

First Report of Public Works Commissioners, para. 273.

59. The great results obtained in the Woondy talook and under the Samulcottah Channel must not be viewed as furnishing a standard of increase for the Delta generally. The revenue of the former was greatly depressed below its normal condition, in consequence of the neglected state of the irrigation, and the losses entailed by the sharing system of settlement. The increase was the natural consequence of an irrigation put in order, and of an improved system of management. It was effected without the annicut. The increase in the case of the Samulcottah Channel is owing to there having been much land under it out of cultivation, which, on the resuscitation of the irrigation, was taken up. Both are striking instances of the value of maramut outlay, applied for the restoration of revenue; but their circumstances differ from those of the Delta generally. Viewed broadly, the Delta may be said to be nearly occupied, having an assessment which approaches a maximum standard, the main function of the annicut in this case will be to give permanence to a fluctuating revenue, and the effect will not be so striking as in the other cases cited. Lastly, in estimating future prospects, the probable effects of increased production on the prices of grain must not be lost sight of. The value of money may also change. But these contingencies will be more properly noticed when an adjustment of the assessment comes under consideration.

Note.—The annicut has since come into operation with increased benefits, by enabling the ryots to commence cultivation earlier, thereby obtaining richer crops, and to secure a more extended cultivation. The irrigation, in its ordinary state, could not insure this timely and certain supply of water. The Annicut was necessary for this end.

For the Three Delta Talooks the Sub-Collector's entries of waste are as follows:—

	Pootties.
Fallow - - - - -	3,163
Immemorial waste - -	224
	3,387
	8
Acres - - - -	27,096

Mr. Taylor's Report on the Subdivision above noticed, para. 30.

Question regarding the additional tax for water.

60. I proceed to submit the information called for in respect of the water rate. It is inquired whether a fixed rate per acre, or other extent for each of the kinds of crop, or an uniform rate per acre, a difference being made between those kinds of crop which require full irrigation, and those which consume a much smaller quantity of water, cannot be adopted for the arrangement submitted by the late Commissioner, which received the sanction of Government on the 5th January 1855. The proposal of the late Commissioner varied with the crop raised, the tax being supposed to be equivalent to a certain proportion of the profits to the ryot from such crop. It was not intended that the addi-

Proportion of the produce to be left to the ryots, $\frac{3}{8}$ths on land producing dry

tional

tional tax thus fixed should be imposed on the land so occupied, and from the demand of Government on it. This could not be done under joint rents, as it was the collective rent only which the Government officers had the power to increase, its apportionment being left to the ryots themselves. The ryots were informed by proclamation that two years' exemption from extra cess would be allowed from the time of the water being first brought to each particular village; that in the third year a fair amount would be fixed as the water rate, a moiety of which would be demanded in that year, and the full amount in the fourth; and that the apportionment would be left to themselves, the servants of Government interfering only on complaints of unequal distribution, and the exercise of undue influence by the headmen or pettanadars of the village. The ryots were further informed that the sum thus fixed at the early part of the season would not be augmented during that year.

crops; ½ on ditto, ditto, paddy; ⅔rds on garden produce; ¾ths on sugar cane.

61. It was a part of the instructions to Collectors that the actual produce of the different soils in each village should be examined by the Government officers, to serve as a guide for fixing the charge for water; but it was ascertained during my late circuit, that these orders had been only partially attended to, and that considerable difficulty was felt in carrying them out. In a letter on the subject, just received from the Collector of Rajahmundry (which will be submitted to Government hereafter), together with my Report on the practicability of immediately fixing a definite assessment on each field, the following passage occurs:—"The crop on fields irrigated last season may have this year been raised without the use of the water. Land, on which a second crop was raised by help of the water last year, may this year have been cultivated with but one. The first crop, again, may have been brought to maturity without using the water, which may have been taken for the second crop only. In a great part of the Ramachendrapoor talook in particular, a paddy crop was this year brought to maturity, on a large extent of land, from the ordinary monsoon rains. These lands have subsequently been irrigated by the annicut water, and a fine crop of gingely oil-seed raised. There are many other points, which it is not necessary to detail. I allude to those I have enumerated, with the view of showing that it is useless, even if the estimates and accounts of actual kyle were worthy of a greater degree of trust than I fear they are in general entitled to, to attempt to apportion with any great nicety the additional tax to be imposed, with reference to the different crops raised, and the extent of land which may happen to be irrigated in the present season. All that we can do and all that under the system of revenue administration which now obtains in this district seems to be necessary, is to fix a fair sum, after a careful consideration of the general results, and of all the circumstances affecting the profits of the ryots."

From Collector, 14th June 1855, with copy of a letter from the Sub-Collector, dated 17th May 1855.

62. Referring to the principle, according to which the water cess was to be imposed, viz., that of limiting the tax to a certain proportion of the estimated profits on each description of crop, Mr. Taylor, the Sub-Collector, observes: "It was simply a test by which to determine whether the assessment already levied was sufficiently high, or whether additions could fairly be made to the demand. The great object was to ascertain what the land actually yielded when supplied with annicut water; and if it were found that the amount of gross produce and the generally improved circumstances of a village justified the levy of teerwa jasty, to assess it accordingly; that is, to make an addition to the collective or joint rent of the villages, the distribution of which should be left to the ryots themselves."

63. The water tax being thus determined on general data, and its amount discretionary and blended with the assessment of the village, cannot be represented at a given sum. In five villages only of the Woondy talook, it is separately distinguished, though not formed on any definite principle. The following statement shows the amount in the five villages in question, with the assessment of these and other villages in the talook, and what the assessment ought to be if reliance could be placed on the examination of produce instituted for the occasion: —

ITEMS.		Land.	Demand for Fusly 1264.	Demand on the Government Share of the Estimated Produce.	Difference between Cols. 3 and 4.	Teerwa Jasty additional Cess for Water.

64. The irrigated products may be viewed under two classes, viz., such as require a large quantity of water to bring them to maturity, and those for which a moderate supply will suffice. The former includes paddy, sugar-cane, and cocoa-nut plantations; the latter, turmeric, onions, and all ordinary garden produce. The quantity of water necessary to bring these products to maturity varies with the class to which they belong, as above defined, all in the same class requiring about the same quantity of water. To tax a given extent, then, with reference to the product under this view, is the same thing as taxing it with reference to the quantity of water used. If this principle of assessment is to be observed, the collector must ascertain yearly the extent of land irrigated and with what crops, and then apply the higher or lower rate, as the case may be. Under the joint-renting system, data will thus be furnished for adding to the collective demand on the village which has to be broken up and distributed *de novo*; but the sum to be paid by the occupant for the water taken by him, will differ from the amount which appears in the Collector's calculations.

65. The true mode of taxing irrigated land is that which has the sanction of immemorial usage; viz., to fix the assessment on a joint consideration of the quality of the land and of the quality of the irrigation. Two scales of rates for the different soils of a district would thus be fixed, one for lands enjoying a full and certain supply of water, the other for lands, the irrigation of which is imperfect. This rule applies equally to tanks and river channels. If this principle of taxation were strictly attended to, some descriptions of what are generally known as dry products, as well as all garden produce might be raised with profit. The remark applies particularly to Indigo, which would be grown under sources of imperfect supply, if the assessment were not a bar. The system too often adopted is, to tax all irrigated land with the paddy assessment, without reference to the quality of the irrigation. The supply of water may be either partial or deficient to such an extent as not to admit of paddy being sown that year. In the former case, a proportionate remission is given; in the latter, the assessment is not charged at all, and the land may remain three and four years together unproductive. With a tax fixed with reference to the quality of the irrigation, both the Government and the holders of land would be gainers, as a return may be looked for with confidence every year.

66. The

66. The principle of a collective demand is, however, an obstacle to the introduction of rates of assessment founded on a combined consideration of both land and irrigation.

67. The irregular character of the assessment as at present found, will be apparent on consulting Statement No. 6 of the Appendix, Columns 17, 22, 27, 37, 42, 47, elucidate this point, although cultivated with the same description of crops the assessment in some instances is upwards of 100 per cent. below what it is in others. This great irregularity is more fully exhibited in Statement No. 7, which shows the wet lands of Balabhadrapuram, formerly watered by tanks but now under the annicut, arranged by fields under their respective classes, and the assessment on each field according to the village apportionment. It will be seen that no two fields of the same class bear the same rate, and that the rates of the same class differ very widely from each other. In breaking up the collective demand, considerations besides the class to which the land belongs, regulate the sum to be paid by each ryot.

68. The difficulties above noticed are increased by the rates borne by unirrigated land being equal, in the present condition of the assessment, to those of irrigated land. The addition of a specific sum to the former, as the water cess is impracticable, till the rates of both descriptions of land are reduced to their just proportions. The following table exhibits the average rates of assessment as borne in the present accounts for the different Delta talooks:—

	TALOOKS.	DRY.			WET.			GARDEN.		
	1.	Land. 2.	Sist. 3.	Average. 4.	Land. 5.	Sist. 6.	Average. 7.	Land. 8.	Sist. 9.	Average. 10.

	TOTAL	174,720	6,48,343	3 11 5	83,616	3,21,237	3 13 6	2,132	12,620	5 14 9

69. The difficulty of securing the rights of Government under the joint renting system was fully felt by the late Commissioner, but adverting to the discouragement experienced by the ryots from the uncertainty of the present demand, which was fixed on general considerations of what the village was capable of paying under its altered circumstances, and not on any definite principle intelligible to them, it was thought necessary, that some mode of regulating the demand of Government should be introduced, which would remove all doubt from the minds of the people. Hence the orders for adopting as a temporary expedient, a water cess on the crop in the manner stated.

70. The observations contained in the foregoing paras. will show, that under existing circumstances there would be great difficulty in introducing a water cess on the principle of a fixed rate per acre or other extent for each description of crop, or for the quantity of water required for the same. The principle of assessment which the late Commissioner ordered to be adopted as a temporary expedient, seems to present equal difficulties. The labour entailed by both

Note.—The pootty is the land measure of the district; it varies in different parts, but on an average eight acres is estimated as its equivalent. The contents of an acre are fully made known, and being uniform everywhere the village and taluk establishments are forced, under suitable check, to be tolerably accurate in entering the areas of fields.

plans cannot lead to definite results. The only plan, bearing in view the desirableness of non-interference on the part of the Government officials, short of an adjustment on sound principles is to avail ourselves of the experience gained in the villages under the Toolia Bhaga, such as it is, and to fix one uniform rate per acre for all descriptions of land in the villages to be assessed. The assessment of lands under the Toolia Bhaga has been gradually raised at the discretion of the Collector during the last five or six years, and it is supposed to be equal now to one half of the gross produce or perhaps above it. As the irrigation of these villages has been brought to a high degree of perfection, and as all the lands under its influence participate alike in its benefits, the average rate for acre for all the lands in a given number of villages may be taken to represent for the most part a fair average rate for all other villages under similar circumstances. Thus the number of acres of land in a village fully irrigated multiplied by this average rate, will give the collective amount to be settled as the demand of the year, its apportionment being left to the ryots as at present.—

71. To illustrate this principle, the average rates in eight principal villages under the Toolia Bhaga are shown in the following table:—

	VILLAGES.	Average of Assessment for Fusly 1263.	
		Per Pootty.	Per Acre.
		Rs. a. p.	*Rs. a. p.*
1	Padabramadavum	34 5 –	4 4 –
2	Bickavole	49 11 –	6 3 –
3	Maidapaud	49 12 –	6 3 –
4	Vetlapollem	43 – –	5 5 –
5	Balabhadrapuram	35 6 –	4 7 –
6	Anapurroo	64 12 –	8 1 –
7	Davarapoody	65 10 –	8 3 –
8	Kasaveram	42 10 –	5 5 –
	TOTAL - - - *Rs.*	45 6 –	5 10 –

The average for the whole is 45–6 rupees per pootty, but it will be sufficient, perhaps, to assume 40 rupees per pootty as a fair standard rate which corresponds with inquiries instituted by the late Commissioner last year in regard to the produce of land. The investigation in question seemed to show that a pootty of dry land would produce about six pootties of grain, and if irrigated * double that quantity. Following this view the calculation would be as follows:—

* *Note.*—In a final revision of the assessment, these calculations would of course be further tested.

Produce of a pootty of irrigated land - - -	12 pootties.
Value at 10 rupees per pootty - - - -	120 rupees.
Ryot's share of the above at two-thirds - -	80 ,,
Ditto of Government at one-third - - -	40 ,,
Average per acre, assuming eight acres to a pootty	5 ,,

72. Applying

72. Applying the foregoing standard rate to the land irrigated in fusly 1263 (1853-54), and comparing the result with the actual settlement of that year, it will be seen that the latter falls short of what would have been the demand according to the standard rate by about 25 per cent., thus:—

5,820 pooties cultivated, or - - -	*Acres*	46,560
Demand at rupees five per acre - - -	*Rs.*	232,800
Actual demand of fusly 1263 - - -	„	186,151
Difference to be added - - - - -	„	46,649
Centage - - - - - - - -	„	25

The above difference would be distributed in the several irrigated Talooks as follows:

To be Added—	*Rs.*	*Rs.*
Bickavole - - - - - - - - -	9,129	
Amlapoor - - - - - - - - -	1,401	
Cota Rama Chendrapurm - - - - -	1,574	
Mogultoor - - - - - - - - -	6,409	
Tanookoo - - - - - - - - -	92	
Woondy - - - - - - - - -	31,693	
		50,298
To be Reduced—		
Caupaveram - - - - - - - -	3,098	
Nagarum - - - - - - - - -	540	
Rally - - - - - - - - -	11	
		3,649
	Rs.	46,649

73. The bulk of the addition appertains to the Woondy talook, where the assessment is light, but the additional demand being heavy, could only be imposed gradually.

74. The average rate of five rupees per acre would probably be a sufficient approximation to a fair demand for the present in many cases, but looking at the rates of the eight villages respectively mentioned in para. 54 above, it will perhaps be found necessary to impose a higher or a lower rate in some villages, according to circumstances. These would be exceptional cases, and must be left to the discretion of the Collector.

75. Extending the principle of a fixed standard rate to the Zemindary and Enam lands, the following results are obtained:

	Pooties.		*Acres.*
Zemindary lands - - - - - - - -	1,177	or	9,420
Enam lands - - - - - - - - -	1,774	or	14,192
	2,951	or	23,612

	Rs.
Assessment of the above land at 5 rupees per acre - - -	118,060
Deduct usual ditto (estimated) at 30 rupees per pooty, or 3-12 rupees per acre - - - - - - - - - -	88,545
Remaining - - - - - - - -	29,515
Of which1-3d to be given up to the Zemindars and Enamdars, as proposed by the late Commissioner - - - - -	9,838
Remaining 2-3ds to Government - - -	19,677

Supposing this principle to have been followed in fusly 1263 (1853–54), Government would have received about 66,000 rupees, as the charge for water, viz.:

	Rs.
For Government lands - - - - - - - - -	46,649
For Zemindary and Enam lands - - - - - - -	19,677
	66,326

To Government, 21st December 1854. 4th January 1855.

76. The foregoing adjustment of the rights of Government could only be adopted as an expedient for the time. The true mode of regulating the rights of all parties is to place the assessment at once on right principles. This was my object in the communications noted in the margin, and the subject is again under consideration pursuant to the orders of Government, dated 1st June last. The postponement of this measure is inexpedient, as it will increase the difficulties of adjustment, and keep the authorities in ignorance as to the real bearing of the new works on the occupation and cultivation of the lands under their influence.

77. The Collector of Masulipatam has been required, agreeably to the orders of Government, to draw up a paper similar to that prepared by Mr. Stokes for Guntoor, to show the past and present condition of that district, and the benefits anticipated from the new works.

78. A brief remark on Mr. Stokes' paper will not be out of place. Mr. Stokes reviews in detail the revenue history of Guntoor, including the Palnaud, from the first period of the British connection with the country, and looking to the revenue system which has been pursued, and he adopts the important conclusion that the introduction of sound principle detachment, for to settlement for ordinary practical purposes are not necessarily dependent on a scientific survey. Both Guntoor proper and the Palnaud are illustrations of the truth of this remark. The former was settled by Mr. Stokes, the latter by Mr. Oakes, upwards of 30 years ago. In both, inaccuracies of area were corrected by the means at hand, and there was no postponement of the benefits of sound revenue arrangements for an indefinite period, under an impression that a professional survey was the only remedy for proved evils of system. Valuable as a professional survey may be, in ordinary circumstances the principle may be pushed too far. Good field registers are indeed essential, and the first duty of a Collector is to revise the registers of land where he finds them untrustworthy. This was performed with a large measure of success in Palnaud and in Guntoor with

with only ordinary means. The diffusion of a knowledge of surveying in Rajahmundry with the aid of a small grant sanctioned by Government for the purpose has increased the facilities of measurement in that district, and there seems no reason why the area of each village, including field maps, should not now be accurately laid down at a small additional charge to Government.

79. Mr. Stokes also draws the conclusion that Guntoor is lightly assessed, and he shows the average rate per acre for all the lands of the district to be only rupees 1-11. This rate is *primâ facie* moderate, but being the average of the entire cultivable area, it does not follow that the rich soils may not be too highly assessed. But this subject will be discussed separately in conformity with the call of Government in Extract Minutes of Consultation, dated 2d June 1855.

I have, &c.
(signed) *J. Goldingham,*
Commissioner.

To J. D. Bourdillon, Esq.,
Secretary to Government, Fort St. George.

Commissioner's Office, Vizagapatam,
9 July 1855.

* 1. The Land Revenue demand in Rajahmundry and Masulipatam includes the demand on the Government lands as well as the Zemindary Estates for each Fusly, while that of Guntoor includes the Beriz of Paulnad and the Peishcush on the Guntoor Circar, from 1212 to 1251 Fusly, and the Beriz of both from 1252 Fusly.

2. In the extra sources, the Sayer and Sea Custom are included.

3. A considerable portion of the arrears shown in this statement was authorised to be written off.

Commissioner's Office,
Vizagapatam, 9 July 1855.

J. Goldingham,
Commissioner.

No. 11.—COMPARATIVE STATEMENT of the Expense of LAND and WATER CARRIAGE, for Short and Long Distances, in the Sub-Division of *Rajahmundry*.

No.	TO AND FROM WHAT PLACE. VILLAGES. 1.	Distance in Miles. 2.	ARTICLES. 3.	LAND WATER. Hire paid for Bullocks, &c., per Pootty. 4.	Hire for Dhonies at present. 5.	Probable Price when Channels are full. 6.	RATE PER MILE WATER. Land. 7.	Cost at present. 8.	Probable Cost in future. 9.	REMARKS. 10.
				Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	
1.	From Woondy to Cocanada on Gosta Nuddy.	70	Paddy - - - -	8 - -	3 - -	- 14 -	- 1 10	- - 8	- - 2⅔	
2.	From Woondy to Ellore on Colair.	40	Ditto - - - -	4 - -	1 - -	- 6 -	- 1 5	- - 4	- - 1½	
3.	From Polaveram to Woondy on Gosta Nuddy.	60	- - 1,000 Bamboos, including the water carriage on the Godavery.	19 - -	9 - -	2 - -	- 5 1	- 2 5	- - 6½	- - The price of 1,000 Bamboos at Poleveram is 6 rupees, the former selling price at Woondy was 25 rupees, and is now 15 rupees. The difference between the cost and selling price is put down as the hire for carriage.
4.	From Samulcottah to Rajahmundry.	55	Per candy of 20 maunds -	2 - -	1 - -	- 8 -	- - 7	- - 3½	- - 1¾	- - The great market for this article is Vijeswaram, where the price fluctuates from 40 to 50 rupees the candy. None but the richest ryots can afford the land carriage from Rajahmundry. Local purchases are made from the poor class at from 15 to 20 rupees the candy, and the profit to the sowcar is at least 50 per cent. *Note.*—Mr. Taylor has not mentioned the article.
5.	From Tanookoo to Narsapoor on Palcole Channel.	25	- - Bengal and Horse Gram, Oil Seeds, &c.	2 8 -	-	- 8 -	- 1 7	- -	- - 4	Too high.
6.	From Woondy to Narsapoor	20	Paddy - - - -	2 - -	- -	- 4 -	- 1 7	- -	- - 2½	
7.	From Palcole to Narsapoor -	6	- - Bengal and Horse Gram Oil Seeds, &c.	- 12 -	- - 4 -	- 2 -	- - 8	- -	- - 4	This estimate is probably too high.
8.	From Narsapoor to Rajahmundry.	45	- - Bearers for two native Palankeens Canady men two.	12 - -	3 - -	- - -	- 4 3	- 1 1	- -	- - Small dingies capable of holding six or eight persons have been hired at this rate to Conney Court suitors, traders, and their attendants, from Nursapoor to Rajahmundry on the Palcole Channel.
9.	From Narsapoor to Chettypett.	36	Jaggery - - - -	- 12 -	- 3 -	- 3 -	- - 4	- -	- - 1	- - This communication being now closed, the Unkkala is used instead. The comparison includes two Palankeens only for the heads of two families, and the expense by water is one-fourth. Large quantities of jaggery are sent to the Rajahmundry sugar works, and the demand for this article will probably increase very considerably. The superintendent of Messrs. Arbuthnot & Co.'s factory is so sensible of the value of water carriage, that he has already constructed a number of boats for the conveyance of the supply of this article to Rajahmundry, and of sugar, &c. to the coast.

Commissioner's Office, Vizagapatam,

From Colonel *A. Cotton*, Commandant of Engineers, to *H. Forbes*, Esq., Secretary to Government.

Sir,

HAVING been so much concerned in the Godavery Delta Works, I trust I shall be held excused in offering to Government a paper of remarks on the report of J. Goldingham, Esq., on their effects, dated 9 July 1855.

In these remarks, I have thought it right to give my opinion distinctly. If it should be thought that they might have been written in less decided terms without compromising truth, I must apologise by saying that I consider the question of the results of this great experiment, of such paramount importance that it was absolutely necessary that I should put in as clear a light as I could, what I feel fully assured are the fallacies of the paper I have examined.

I must also beg to notice that the style of the report is that of papers generally, belonging to an old and deeply rooted system, so destructive, according to my views, that till it is fully exposed and rooted out, India cannot flourish.

Till reports are based upon *bonâ fide* returns, and till they contain *bonâ fide* European conclusions drawn from such real returns, I am persuaded that India must continue to be the impoverished and degraded country it is, and our power as baseless as late events have shown it.

I must also beg to plead, that after what we have seen now, at least, no public servant would be at all excusable who did not speak most distinctly on what he considered destructive fallacies in a question, about which he had greater means of forming a judgment than any other person so far as actual experience can go.

My position is this, that this is not a minor nor even a secondary question, this question whether water, water for irrigation, and water for navigation is, or is not the grand means for the material improvement of India, and whether railways or any other means are superior or comparable to it; but that it is really a vital and fundamental question in the future management of the country.

In my comparison of land and water carriage, I have omitted to mention that the results of the Bombay Railway are the same as those of Madras, that is, that it has not produced any good effect upon the traffic of the country. Captain Rivers, the consulting engineer, states, according to the newspapers, "as the results of the year's experience, that the railway only conveys an insignificant portion of the" (old) "traffic that goes on between the stations of Wasind, Campoolie and Bombay; that the railway is an expensive machine both in cost and keeping, doing no work while there is plenty for it to do," just as on the Madras line. It seems from the Bombay chief engineer's address at the Bombay Mechanics' Institution, to convey about 35,000 tons a year on an average of its whole length, a quantity, as Captain Rivers says, quite insignificant, and that at a price only just low enough to keep it on the railway, so that there is no benefit at all to the public worth mentioning, even on the trifle that is carried, whereas, had the water communication been completed from Bombay to Campoolie, at the foot of the ghauts, by a steam-boat canal of 24 miles, at a cost of about 5 lacs, instead of 60 or 70 lacs, the cost of the railway, the distance would have been 44 miles instead of 70, the time for first-class passengers, three hours instead of four, the cost of carriage, both of goods and passengers, about 1-10th of what it is by the rail; instead of only a small portion of the old traffic being carried along it, a new and enormous traffic would have been created, probably at least 10 lacs a year would have been saved in interest, and cost of transit to the community of Bombay, and a powerful stimulus given to the interior of the country; whereas now, as in Madras, this line is probably sealed up for ever from all the benefits of cheap transit. No management of the railway can make any material difference, the evil is radical, the bare cost of carriage over 70 miles of railway, must be 10 times that over 44 miles of water, and the extra capital of about 60 lacs is sunk, and can never be recovered. These actual effects of land carriage in two different localities, compared with water carriage, are of the utmost importance. Think of the number of first-class passengers, the only kind of traffic for which all this enormous expense has been incurred, being from 1½ to 2 per train, from 3 to 4 per day on both these railways, and that not the average of the whole intended

line, but only on that part of it immediately adjoining the city, which is in all respects the capital of the Presidency.

I cannot transmit this paper on the Godavery Delta Works, without expressing my exceeding satisfaction at the vigour and thorough efficiency with which the works have been carried on during the last three years. Had the Government allowed 3 lacs a year for this undertaking, I should have been highly pleased, but 6 or 7 lacs a year has been allowed, and according to my opinion, expended in so thoroughly satisfactory a manner, that there is now a completeness and efficiency in the works far beyond what I had contemplated.

Thus we have this great satisfaction that the foundation is sound, and the evil which exists can be remedied, that is, the non-collection of the water-tax. A very moderate tax on all the lands watered and otherwise improved, will make the increase of revenue 30 lacs or 150 per cent. upon the old revenue, and 100 per cent. upon the outlay, instead of as at present 40 per cent. and 25 per cent. respectively, and this increase of revenue would have spoken intelligibly to those who have not time or capacity to look more closely into the matter. Such a palpable proof of the effects of such a system of works is probably necessary to ensure their extension to all the other districts of India.

I have, &c.
(signed) *A. Cotton*, Colonel,
Commandant of Engineers.

Madras, 19 September 1857.

MEMORANDUM on Mr. *Goldingham's* Report on *Rajahmundry*.

9 July 1855.

1. AMONG various papers connected with this subject, I select this one, not only as being the one of highest authority, but also, as it seems to me to offer the best ground for giving my opinion on the leading points in this question.

2. I must premise that I look upon this as nothing less than the great question, whether an extensive system of irrigation and navigation is really calculated to produce the results which their advocates have expected from them, and therefore, whether it is expedient to extend them throughout India. That great efforts should be made to get rid of the results they may have produced, is of course to be expected, for all who have held adverse opinions, or who have been opposed to anything that has the nature of an innovation, must be under a strong bias to underrate results, which seem to show they were mistaken, and even many who have not opposed, may be led to take a false view either from the influence of others, or from other causes. And it is a fact, and one indeed which need not surprise us, that almost every individual of the native revenue servants, whether of this district or others, have been throughout entirely opposed to those works, and hence every opinion and every return offered by them, required careful examination. In this way, however, the grand point is gained of earnest discussion being brought to bear upon the subject, and thus the truth is put in a strong light, for nobody is fully satisfied of anything, or ought to be, till he has heard what an opponent has to say.

3. The Commissioner wrote this report under instructions, "to ascertain accurately what the effects of this great work are." In paras. 6 and 7, is given the extent of land occupied and unoccupied in the Rajahmundry Delta, the former 275,000 acres, the latter 53,000. This at once brings us to one of the great points of this paper. Are the returns contained in it correct in the main, or not? I am not now speaking of their precise accuracy, but of their correctness. That is, the question should be answered,—Are the statements which have been furnished to the Commissioner, such that they are in the strict sense of the word true, or such as are false returns? Is their incorrectness so entirely wide of the truth, as to falsify entirely all the deductions drawn from them? It will be seen as we proceed, that not only this, but almost all the other main statements, referred to in the report, are, without using any improperly strong language, false

false statements, that is, that they are so far from the truth as entirely to falsify all conclusions drawn from them. To call them therefore by any other term than false, would of course, convey a false impression.

It must not be imagined that I intend in the least to imply that the Commissioner intended to send up returns which were false. No doubt he received them as true, and according to that unhappy custom which has been adopted to such a ruinous extent in the public business of India, accepted them without the least investigation, or even a moment's consideration; taking it for granted, that because the return was put before him in the proper form and by the proper authority, that therefore its correctness was unquestionable, and there was no possibility of its having been prepared either by those who were incapable of doing it properly, or too careless to ascertain its correctness, or under a strong bias to falsify it. In the case of this first return of 325,000 acres of cultivable area in the Godavery Delta and Rajahmundry district, it is contradicted by a mere reference to the map. The portion of the Delta within the Rajahmundry district is not less than 2,000 square miles, which, allowing 500 acres per square mile, that is deducting about 1-4th for rivers, roads, &c., gives 1,000,000 acres for the arable area. There can be no room for mistake as to this calculation being in the main correct. What the above area of 325,000 acres, or 650 square miles is, I really have no idea. It would make out that the arable portion of the Delta is not much more than 1-4th of the whole, which any person knows is out of the question.

4. Again, in para. 15, he refers to Appendix 2, for a statement of land and revenue. In Rajahmundry, the former is stated to be 57,000 acres under the annicut irrigation. This, again, has nothing whatever to do with the fact.

5. The precise quantity that received water from the annicut in 1854-55, I have no means of ascertaining, but it could not have been less than 200,000 or 300,000 acres. The district engineer has abundant means of knowing what area the water reaches, within limits sufficient for our present purpose. This, therefore, also is a false return, it is not an approximation to the fact. Mr. Commissioner could have taken no measures to ascertain the real state of the case, but must have taken any statements put before him. I feel sure that he could not have tested a single talook or village, and it is certain he did not even call upon the engineer for the statements of the land watered. Everybody knows what sort of returns the people who are to be assessed will make of their own lands. But nobody but those who are thoroughly acquainted with these matters, could believe the impudence with which such false returns are sent in, where the people hope that there will be no real inquiry. I was told by the Collector of one village, every acre of which was ascertained by the engineers to be irrigated, which had been returned as totally unaffected by the annicut; and of others that had four times the extent of irrigation that was stated in the returns, and it is certain that hundreds of villages that were irrigated, were returned as receiving no water. One day I met a revenue officer at his tents just as he had finished his jummabundy, and he told me that there was no land whatever under summer crop in that talook; I was not three miles from his tents, when I passed through a large extent, perhaps 200 or 300 acres, at that moment under crop, belonging to that talook.

6. If it were only on this one point, I am sure the report is worthless, for it gives a completely false view of the case. Had the engineer been called upon to send in a map showing the lands that the annicut water had reached, and to test a few of the villages for comparison with these returns, and had the Commissioner or his assistant gone with the engineer, and the talook and village authorities, to see for himself the state of the case, he would have easily found out that these returns were totally false. To illustrate this point, I append two letters between the Commissioner and the district engineer, written about a year after this report was made. In consequence of the Government forwarding to the Commissioner extracts from the engineer's reports, which gave very different areas from some that the Commissioner's report contained, the latter called for the engineer's authority for his returns. It will be seen that the engineer there gives the example of two villages which he examined, and found entirely watered, while the returns gave only about 1-4th of the area as watered, and as the pooty,

which is commonly called eight acres, really contains about 10, the actual number of acres watered was fully five times that entered in the returns.

7. In para. 20, the expression "Normal standard" is used, and the revenue of land in the highest known year is taken for it. There is no such a thing as a normal standard in the district. When the district was in confusion, there was one state of things; when it had peace, and was a manufacturing district, there was another; when it lost its manufactures, there was another; after 1840, when the irrigation first began to be attended to, there was another; and now there is another. A normal state of revenue is an imagination.

8. In the 21st para., the Revenue after the annicut, is compared with the average of five years before it. There are three fallacies in this comparison:

1st. The improvements did not commence with the annicut. The clearing of channels, the embanking of the rivers, &c., were carried on in 1845, 1846, and 1847. Thus the improvement on the revenue which was the effect of the works, is brought to tell against them. But more than this, the revenue of one talook, Oondee, had been greatly affected by attention to irrigation commencing in 1840.*

2d. The average increase from the time the works are commenced, shows nothing. The question is, what the last year's revenue is, or the average of the last two years, because part of the outlay had not taken place in the first years that are brought into the average.

3d. This return is totally fallacious, because on 9-10ths of the lands no revenue had been levied for the annicut water.

9. In the paras. that follow, the effects of the new works are stated, in which he comes to the conclusion, that the annual increase of revenue is, 1,30,000 rupees (para. 29).

10. In the first place, who could imagine that there was one fact in this case not in the remotest way alluded to, which is no less than this, that the revenue authorities had not levied the tax for the water on the lands irrigated, except for an insignificant extent. It will be observed, that the Commissioner nowhere in this report states, that water-tax had been levied on all the lands which had received water. Thus, in his statement No. 2, he gives the average collections on his area of 57,000 acres irrigated from the annicut, at 3¼ rupees per acre. The least consideration of this fact would have convinced him that no water-tax, or something merely nominal, had been levied on that nominal area. He gives, in the same statement, No. 2, the average collections on unirrigated land 3¼ rupees per acre, leaving a difference of only ¼ rupee per acre for all the benefit of irrigation, navigation, river embankments, and drainage, being an increase of 1-6th upon the dry revenue.

Had he compared this with the progress of the village of Bickavole, as given in another para. in this report (the average revenue of ten years preceding the outlay of the Samalcottah Channel was 2,900 rupees, that of the last year the Commissioner gives was 9,657, or much more than threefold, he would have seen at once that the water-tax had not been levied on almost the whole of the lands he states to be watered.

11. At first, a few villages were made to pay additional assessment, but as soon as it was found that these were adduced as proofs of the good effects of the works, the levying of the water rates, except what was merely nominal, and that only on a very small portion of the lands, was stopped, and it is only now under the positive orders of Government that a water rate is being levied, and still only on the nominal extent of land that has had water three years. Taking the actual quantity of land watered, at only 250,000 acres at that time, the revenue, at the present very low water rate of 2 rupees per acre, would have been 5 lacs for only one crop, besides new cultivation.

12. The

* This was not the effect of these particular works, but it was an effect of improved irrigation.

12. The positive neglect of the Revenue authorities to levy the additional tax is the most important fact in the whole case, as respects the Revenue; and these returns are so given as to lead any one to suppose that the land had been taxed as fast as it was benefited.

13. But it was not only the land that was watered that was benefited. All the low lands of the Delta had been also improved. The evil they suffered under was excess of water, and the river embankments which were begun in 1845, besides other works, had almost put an end to destructive floods. Nothing had been levied from such lands. Again, a very large proportion of the Delta had some benefit from the water carriage, whether the lands were watered or not; and all had the benefit of the expenditure.

14. The work cannot produce revenue if the revenue authorities will not collect it. Some of the lands now in the eleventh year of irrigation, are paying this year the first water-tax.

15. In fact, the state of things here throws a light upon the strange anomaly in the north-west, of a body of engineers being employed to collect the revenue on the lands that they had themselves irrigated. From what has taken place here, I have no doubt that this arose from their finding that the revenue officers would not do it, and the engineers, consequently, as the only alternative, urged the Government to let them collect it themselves.

16. Of other mistakes, fallacies, &c., in these paras., I must notice the following:—

17. In para. 25, it is stated, that the Toolea Bagah had been more or less available for irrigation since 1847-48; the fact being that there had always been irrigation under it, that it was in a most neglected state, that its improvement was commenced in 1846, and materially affected the cultivation that year.

18. In para. 26, reference is made to an Appendix supposed to show the increase under the Toolea Bagah (I suppose including the branch called the Samulcottah Channel), from the time when water was first received. This return also is totally false. The average of five years is given as before the irrigation commenced, and this ends with 1847-48, whereas the irrigation commenced in 1846-47, and thus two years which had the water from the new Samulcottah Channel, and the improvement of the Toolea Bagah main channel are given as years before the works, and thus made to tell against them. The fallacy consists, as before, in the use of the word annicut, whereas these channels were cut and improved two years before the annicut was begun. Thus, in another statement, No. 4, the Revenue of the village of Bickavole is given as 5,829 rupees in fusly 1857, and this is made part of the average before the works. The actual average of Bickavole for ten years before the works was 2,900, and in 1847–48 nearly 3,000 rupees had been added, in consequence of the supply of water from the Godavery which it had never had before.

19. By the return given, the results in Bickavole were as follows:—

Collections in 1253	1843-44	3,622
„	1844-45	3,897
„	1845-46	2,922
„	1846-47	4,248
„	1847-48	5,824
Average before the Works		4,102
	1848-49	7,367
	1849-50	8,504
	1850-51	9,148
	1851-52	9,248
	1852-53	9,657
Average since the Works		8,785
Difference		4,683

The true statement would be :—

1843-44 - - - - - -	3,622	
1844-45 - - - - - -	3,897	Increase of each year above former Average.
1845-46 - - - - - -	2,922	
	3) 10,451	
Average before the Works - -	3,487	
1846-47 - - - - - -	4,248	761
1847-48 - - - - - -	5,824	2,337
1848-49 - - - - - -	7,367	3,880
1849-50 - - - - - -	8,504	5,017
1850-51 - - - - - -	9,148	5,661
1851-52 - - - - - -	9,248	5,761
1852-53 - - - - - -	9,657	6,170
1853-54 - - - - - -	9,693	6,206
1854-55 - - - - - -	9,819	6,322
1855-56 - - - - - -	10,803	6,596
1856-57 - - - - - -	10,900	7,423

20. Thus the actual increase in 1853 was 6,170, on 3,437, or 170 per cent.; not 4,683 upon 4,102, or 112 per cent.; and it is, now that the water rate has been laid upon the enam lands, 7,423 rupees, so that the village pays three times the average of the three years preceding the works. It is quite fallacious to give the average since the works began, because in the first year the whole expenditure had not been made. As this fallacy is not confined to the report under consideration, and it is a very important one, I give here the calculated results of a work by the two modes of showing them. Let us suppose 10,000 rupees laid out every year, and that the revenue improves in consequence at the rate of 5,000 rupees a year, the calculation from the average would be as follows:—

	Expenditure.	Increase.
1st year - - - - -	10,000	5,000
2nd year - - - - -	10,000	10,000
3rd year - - - - -	10,000	15,000
4th year - - - - -	10,000	20,000
5th year - - - - -	10,000	25,000
TOTAL Expenditure - -	50,000	5) 75,000
Average - -		15,000

21. The average revenue would then be stated at 15,000 rupees per annum, on an expenditure of 50,000 rupees, or 33 per cent., whereas it is evident that the increase on 50,000 has been 25,000, or 50 per cent. The fallacy consists in taking into the average, years that occurred before a great part of the expenditure was made. Even the 50 per cent. return is of course much under the mark, because no expenditure produces its full results under several years.

22. Under para. 26, he goes on to show the increase in 45 villages, that had the water from one to six years. The increase of revenue in 1263, was 62 per cent. above the average of five years before the works. How remarkable it is that he should not have observed the enormous discrepancy between the increase in Bickavole and in these villages, and have ascertained what the cause of it was.

23. The cause was what I have stated, viz., that in most of those villages the additional revenue had not been levied: either nothing at all had been taken, or a merely nominal sum.

24. Bickavole was before the best watered village in these talooks, the only one that had two large tanks, and the increase which it has borne very well shows what might have been obtained. I don't mean to say that I think so heavy an additional assessment ought to have been levied, but it shows indisputably

putably what the improved irrigation will bear in increased revenue, and it shows what enormous sums have been lost to Government by the neglect of the revenue authorities to impose some additional payment as soon as ever the water reached the upper lands, and as soon as the flooding of the lower lands was diminished.

25. In para. 28 it is stated that the irrigation was confined to the Toolea Bagah till 1853-54. This also is not the fact. The annicut was carried across the river in 1850, and that year water was thrown into the Weyairoo in the Western Delta. The delay of realisation of revenue was not caused by want of water, but because the rights of Government were neglected.

26. In para. 31 he gives a statement of the total returns from the annicut works. It will be seen from my previous paras. that I consider this return of no value whatever, independent of the essential fact, that the additional revenue had not been levied excepting on a very small portion of the lands. To give this statement as a correct return of results, without hinting at this astonishing fact, must totally falsify the whole case.

27. The real extent of land watered, having been at least 2½ lacs of acres, even if the low rate of two rupees for one crop which is now being levied from some of the lands, had been taken, the direct increase from old lands would have been five lacs a year, besides extended cultivation, extra revenue, &c.

28. In the 34th para. the improvement of the condition of the people is spoken of as "an important benefit."

29. I must beg to call this the grand object of the works. Of course the finances must be looked to, and it must be ascertained that works will pay in revenue the interest of their cost, but the benefit of the mass of the population is the real object. And on this point nothing can be more satisfactory than the results of all the inquiries that I have made. The receipts of the labouring classes are about 50 per cent. higher than they were, and there is employment for all, and the land owners are undoubtedly completely relieved from the wretched state of poverty and debt they were in.

30. In paras. 36 and 37 Mr. Commissioner endeavours to show that Mr. Taylor's information as to increase of revenue is fallacious.

First, he compares the revenue of the previous years with a certain sum which he is pleased to call the normal standard, and which he himself elsewhere states to be the highest known. First, there is no such a thing as a normal state of things, as I have before stated, and in the next place, that the revenue and the district were in such a miserable state for a series, as here given, of six years, was one great reason why the works were required and undertaken, but certainly nothing could be more fair than to compare the revenue since with the revenue immediately before. The question is not between the revenue now collected and that collected many years ago, when the district was enriched by a large export of manufactured goods, but between the present revenue and that of a series of years immediately preceding the new works. In para. 41 is a statement which, if it proves anything, proves that irrigation, drainage, &c., are a positive injury to a district. It represents that the increase of revenue in the upper talooks of the Collector's charge have yielded an increase of revenue of 90 per cent., while the lands under the new works have only yielded an increase of 67 per cent. The Commissioner does not himself attempt to give any explanation of this, but he states that the revenue in the dry talooks, quoting Mr. Taylor, is owing to—1st, a change from Zemindary to Government management; 2d, to protection of life and property; 3d, to the expenditure of the sugar manufactory; 4th, to a succession of propitious seasons. But then, he adds, that there is a falling off of 72 per cent. in the Sub-Collector's dry talooks, owing to the vicissitudes of seasons. This leaves us no other conclusion than that there were propitious seasons on one side of the river, and bad ones on the other. The fact is that this absurd return shows nothing. It is a comparison of one year, which in dry talooks might have been of course either half or double the average; with the average of the five following years. Such a return is altogether fallacious, and no wonder that it flatly contradicts itself, the increase in the one tract being 90 per cent., and the falling off in the other similar tract 72. But the return in another point of view is highly important, as showing in a strong light what the objects were of those who prepared these returns. All such returns as seem to prove too much of course confute themselves, because every body knows that when a return seems to show that a district had better not be watered, it contains a fallacy. And, lastly, it would be useless to compare the increase of the upper

talooks with that of the Delta, for the reason already assigned, viz., that the water tax had not been collected in the latter. The fact is that in a very short time, and in spite of the way in which the claims of Government were trifled with, in letting most of the lands have all the benefits of the works without paying any thing, the revenue of the district has been brought up to much above what it was 20 or 30 years before, when the district was comparatively wealthy in consequence of its great manufactures and consequent foreign trade.

31. In para. 44 he states that the average of the collections in the upper talooks, for two series of six years, is 1,81,000 and 2,27,000, showing an increase of 46,000 rupees, or 26 per cent., whereas we find in the village of Bickavole the increase had been 200 per cent., and something like this ought to have been the case with all the villages to which the water was conveyed.

10 acres. 32. In para. 45, the estimated returns from a pooty of irrigated land, compared with those from land in the former state, are adverted to. A single estimate of this sort, prepared by interested persons, is of course not to be relied on. And the most casual inspection of the estimates shows that they are simply ridiculous. The first two statements make out that the produce of irrigated land is little more than that of dry land, the latter being 140 rupees, and the former 169 rupees. What can be the use of putting forth statements of this sort, that everybody knows to be altogether contrary to fact. The second statement makes out that there is in the first two years an actual loss on the irrigated land compared with the unirrigated.

33. I cannot here help remarking on the extraordinary circumstance, that there is nothing in this report that implies that any attempt was made to ascertain this essential point. Surely when "the wish of the Government was that the effects of this great work should be accurately ascertained," the most important inquiry of all was, "what is the value of produce of the irrigated lands, compared with what it was before?" How could any conclusions, worth anything, be arrived at, unless this fundamental point was actually ascertained. All that is said on this point is, that an estimate given by Mr. Taylor is referred to.

34. It appears that not the slightest inquiry was made on this head, much less was any personal examination made, to assure the Commissioner that he was proceeding on correct information. This seems to me an extraordinary circumstance. Afterwards, in para. 51, the rate of 1¼ rupees per acre is proposed as the highest which it would be safe to impose for the new works, but not one word is said as to the grounds on which this is fixed upon. If there were any grounds for it, surely they ought to have been stated, especially when nobody ever heard of such a rate in any other district.

35. But let us compare this estimate with fact. In the estimate the value of produce in the first year is given at 72 rupees a pooty, or 7¼ rupees an acre; the actual value of produce of one crop on two pieces of land cultivated by a gentleman for trial were respectively 14 rupees and 30½ rupees in the first year. The produce of another piece of land by another person was 28 rupees, in the second or third year. In the estimate 18 rupees is given as the highest produce on first-class land after three years of cultivation for paddy.

Again, Mr. Newill took the produce by actual measurement of many fields in the Kistnah Delta, and found it, on an average, where there was good irrigation, 1½ Guntoor Pooties of 1,920 lbs., which, at the average price of the last five years, 28 rupees, give 42 rupees, besides straw, for which add 1-8th, making 47 rupees an acre, for a single crop. Again, if the value of the produce of an acre of irrigated land of the first class is 18 rupees, how is the land tax of 12 and even 20 rupees paid in some districts. I have a statement of the produce, &c., of an acre of land in Bellary, for instance, just received, on which the tax is 18 rupees an acre. But every body knows these things, and that a statement which shows that an acre of first-class Delta land under the most perfect irrigation with rich river water yields 18 rupees a year in gross produce, is on the very face of it false.

36. In the estimate it is then made out that there is a profit the first year on the irrigated land of the first class of 2⅘ rupees per acre, but on the two pieces of cultivation first mentioned here, the actual profit was 6 rupees an acre on the poorest land, and 18½ rupees on the best piece on a single crop, in the first year. Another farm of which I got the particulars, yielded 32 rupees per acre.

37. These are all actual ascertained returns, and if Mr. Commissioner had himself seen some grain cut and weighed, he would have ascertained at once the value of this estimate.

38. The

38. The fact is that the utmost care should have been taken to ascertain the real state of this case, for no conclusions of any kind worth anything could be reached without it. The second statement, No. 13, gives the value of produce on unirrigated land at about 9 rupees an acre, and I believe this is not far wrong. If we take the value under irrigation at only 25, the difference, 16 rupees, on 2½ lacs of acres, the lowest area watered at that time, the increase of produce will be 40 lacs, out of which the additional revenue collected was, according to this report, 1,30,000 rupees, and this does not allow for new cultivation, for the reduction of floods, and for the water carriage.

39. In para. 48 it is stated that the cost of transit has been diminished 2-3ds. This also conveys a very incorrect view of the effect of water-carriage.

1st. For a part of the year and over much of the Delta, things could not be carried at all, except at a ruinous price, so that rice might be in great demand at Cocanada, and a man could not sell what he had, from the impossibility of conveying it.

2d. The actual reduction is not 2-3ds, but 8-10ths or 9-10ths. The usual price paid for stone is 3 pie a ton a mile, about 1-10th of the former price.

3d. This is the charge, but it is a charge that allows an enormous profit to the boat owner, because the supply of boats does not equal the demand, and in judging of the results of the works, our question is, what is the total saving in carriage, whatever proportion of it goes to the employer, and what to the boat owner? The actual saving, I believe, is at least 19-20ths.

40. In the 51st para. he states, that the Delta land will not all be watered from the channels, but that the water must be raised by piccottahs. He says, "there are no data for ascertaining the extent of such land, but it is supposed to be considerable."

41. This is an extraordinary passage. Might we not ask who it was that supposed this to be considerable? Truly we do not want anonymous suppositions on important points in this investigation. I need hardly say that all this is pure imagination. There is no such land in the Delta. But what can be the meaning of giving suppositions when the engineer could have furnished him with real information on the point? Every acre of the Delta, with the exception of an insignificant strip near the annicut, will be watered direct from the channels. How strange it seems that an officer inquiring on the spot should offer to Government such a supposition as this, when the fact could have been ascertained without the least trouble.

42. In paras. 51, 52, 53, 54, he proposes a rate of 1¼ rupees for the water, but throughout the whole of them not a word is said as to the grounds on which he fixes this rate. He says, for instance, a "higher standard cannot be safely taken in the existing state of things in the Delta," and so on, but nothing tangible is said about it, and the Government is left to guess at the grounds on which this sum is fixed. I have abundance of data to prove, that the increase of produce on one crop land is from 20 to 30 rupees, and two crops 35 or more; that the carriage of the produce of an acre or a ton of paddy to the port, suppose 40 miles, is 4 rupees less than it would be by land; and that besides this there is the advantage of being able to send the produce to market at any moment.

43. Considering these things, and the rates on irrigated lands in all other districts, I can find no ground whatever for this water rate of 1¼ rupee for land placed under circumstances incomparably more advantageous than that of any other district at Present. It is quite certain that it could pay a higher rent than any other land in this Presidency.

To put this proposed water rate of 1¼ rupees in a clear light, I give here the actual assessment on irrigated land in various districts:—

	Rs.
Two-crop land under the Darojee Tank in Bellary, without water carriage, and 300 miles from a port - - -	18
Trichinopoly channels from the Upper Colloroon Annicut, as given in the Public Works' Report, without water carriage, and 100 miles from a port, no summer water -	8
Under the Calingaroyen Channel in Coimbatore, two crops, without carriage, and 200 miles from a port - - -	11½
Under the lower annicut in South Arcot, with partial water-carriage, and 30 miles from a minor port - - -	7½
Average of Tanjore, chiefly one-crop land, no summer water, the water supply always imperfect, no water carriage, 10 to 60 miles from a port, almost half the land of exceedingly poor quality - - - - - - - -	5

The Commissioner's proposed rate for the Rajahmundry Delta, with scarcely any poor land in it, with water carriage to every village, with a far more perfect system of river irrigation and drainage than any other district, with water throughout the year, and with the only safe port in the Presidency :—

	Rs.	
Average tax on unirrigated land as given in statement No. 2 - - - - - -	3¼	
Add water rate - - - - - -	1¼	
		4½
Rent volunteered and paid for ordinary land in Nunggarum Talook of Rajahmundry to a European renter, without any Government and permanent title, for one crop -		11¼

It is well known that the assessment in Tanjore is so low that the land is saleable at 50 or 60 rupees per acre on an average. Thus the rate proposed for a Delta composed of the richest land, with advantages much beyond that of any other tract of land in the Presidency, is below that of the lowest assessed land in any other district, and less than half the rate at which natives have come forward, and asked to sub-rent land in this very Delta of ordinary quality, and without any particular advantages whatever, for one crop only, and without any right in the land, whereas it is capable of paying a higher assessment than any other land in the Presidency. The rent now paid by the sub-renters alluded to in Nuggarum for one crop is 8 rupees above the old rate of 3¼ rupees, or more than six times the water tax that the Commissioner proposes.

44. In para. 58 he adverts to the failure of the expectation respecting the sugar culture. There has been no important extension yet, and from my inquiries the reason is plain enough, viz., that it was more profitable to employ the same amount of labour in cultivating rice. There are, however, now indications of an extension. One European gentleman has planted this year 80 acres, and he is planting 200 or 300 acres more this year, purposing to extend it to 600, and another gentleman is planting 20 or 30 acres, and the results of a few acres planted by the latter last year were abundantly profitable. Nothing can be finer than the canes planted this year by Europeans, and the statements they give me of the cost and return obtained and expected, are extraordinarily encouraging. There is thus every reason to believe that the attention of European capitalists will be drawn to the district for this cultivation.

45. It must, however, be observed, that the present population is not equal to the full cultivation of the Delta, even for paddy.

46. In para. 59 it is stated that in the Woondy Talook and under the Samulcottah Channel, the great results must not be viewed as furnishing a standard for the Delta generally. This is quite true, for Woondy had already extensive irrigation, and was far better watered than any other part of the Delta, and one of the villages under the Samalcottah Channel was better supplied with water than almost any one in the Delta. The effect of the irrigation in the Rallee Talook, for instance, which had not one acre watered before, must render it capable of bearing a far greater increase of revenue than Woondy, and so also, though in a less degree, with all the other talooks. I must further notice the extraordinary remarks in the latter part of this 59th para. The Commissioner says, "Viewed broadly, the Delta may be said to be nearly fully occupied, having an assessment which approaches a maximum standard; the main functions of the annicut in this case will be to give permanency to a fluctuating revenue, and the effect will not be so striking as in the other cases cited" (the cases of the Woondy Talook and the Samalcottah Channel lands). My exception to this is, that it is a statement diametrically opposed to the true state of the case. In the first place, the Godavery Delta is so far from being fully occupied, that it contains only about three-quarters of a million of people, while that of the Cauvery, of the same extent, but of much inferior land, contains nearly or quite 2,000,000. With its very superior advantages, both in land and water, the Godavery Delta will hold 3,000,000, or four times its present population. Again, what can be meant by saying that an average tax of 3¼ per acre for irrigated land of the highest order, one-half or one-sixth of that in other districts approaches a maximum standard. The revenue of the Delta of the Cauvery, with its very light assessment, is much more than 60 lacs; that of the Godavery is under 30, with its vast superiority, both natural and artificial. Thus the "main function"

tion" of the annicut is to give permanence to an assessment of 3¼ rupees per acre on the land previously in cultivation; watered throughout the year, secured from river floods, and those of the local rains, pervaded constantly by a system of water carriage, this Delta is only to pay just what it did before; the "main function of the annicut is to give permanence to a fluctuating revenue." I only ask, is this a true representation of the case, or is it not? What a remarkable comment upon this extraordinary statement the present statistical return of the district affords. We there find that, in spite of the ridiculously low rate of water tax that has been levied, in spite of 4-5ths of the land not having yet paid a rupee, the actual land revenue is no less than 40 per cent. above that of the former average, and that paid with such ease, that while the former outstanding balances used to be 2½ lacs, they are now 30,000. I must beg that this statement of the Commissioner may be thoroughly considered: it affords a clue to the whole report. What must have been the strength of that bias which could have induced an old experienced revenue officer to commit himself to an opinion that the utmost that could be done to improve Delta lands, in the way of irrigation, navigation, and drainage, could only enable the lands to pay 3¼ rupees an acre, and that only on a part of them, a large portion being left as not worth cultivation; this in face of facts, of which no man in Madras was more conversant than the Commissioner himself. We cannot possibly be misled in arguing thus, if the Delta of the Cauvery, with its inferior land, its extraordinary light assessment, its imperfect supply of water even in the monsoon, its total want of summer water, its land carriage at 2½ annas (3¾ *d.*) a ton a mile, and without a safe port, can pay much more than 60 lacs a year, and yet sell its lands at 50 or 60 rupees an acre, the Delta of the Godavery of the same extent, with its very superior land, its full supply of water for eight months, a large supply for the remaining four, its water carriage at 1 to 2 pies (⅛th to ¼ penny) per ton throughout the year, its safe harbour, and its complete drainage, could, when filled up in population, pay 100 lacs, or about five times what it has paid without artificial advantages.

At this present moment about 700,000 acres are watered, and the other 500,000 have the benefit of the drainage and water carriage. A water-rate of 5 rupees, making the assessment 8¼ rupees, which certainly would not be 25 per cent. upon the produce, would make an addition of 35 lacs on the lands before cultivated alone, without allowing for new cultivation, for the land not yet watered, though benefited in other respects, and for increase of extra Revenue.

The Commissioner gives, in this para. from Mr. Taylor, a return of waste land of 27,000 acres in the Sub-Collectorate. What this means I don't know; but it certainly bears no proportion to the extent of land that does not pay revenue.

47. With respect to the future price of grain, it must be remembered that the moment cheap access is given to a port, the price, except in scarcities, does not depend upon the extent of the crop, but on the state of the market of the world. While rice is at a certain price in London, it cannot possibly fall below a corresponding price in Rajahmundry. In seasons of scarcity in the neighbouring districts, it may rise extraordinarily high, but it cannot possibly fall excessively low.

48. On the 60th and following paras., about the modes of assessing the land, I have of course nothing to say, except that I do hope there will be no more guessing, and that nothing will be done, upon such returns and statements as this report contains, but that the actual extent of land and actual produce will be really ascertained, and the water taxed upon real grounds. And especially that the tax in other districts may be considered. It is unjust to make the cultivators of one district pay a rate very much higher than those of another. It must be remembered that a greatly lower assessment cannot be levied on the 2,000,000 acres of the Godavery and Kistnah Deltas, without injuriously affecting the cultivators of other districts, already much more highly assessed. And further, I must beg to offer my opinion, that a very low assessment is decidedly objectionable on general principles. Such intolerable injustice and mischief has been done, by an excessively high assessment in particular tracts in times past, that we are now in danger of thinking we cannot have too low a tax. But even in England it is found that too low rents inevitably lead to idleness and slovenliness in the tenants; and in this country I am sure there is a very wholesome stimulus in a moderate assessment, and that there is real danger of

the people sinking down into the state of the Pacific Islanders, and losing all activity and industry. I must also insist upon this as an important point, in which the welfare of all India is essentially concerned, viz., that the real power of irrigation and internal navigation, if shown in the most palpable manner, that is by a large increase of revenue, is a thing which will strike those who are too slow or indifferent to be aroused by any less obvious fact. I must also state that I entirely agree with the Civil Engineer of the Kistnah Division and with the late Collector of Nellore, that a water-rate should be levied from the very first. I consider this of the greatest importance. It is well known, that with the great mass of men, the shortest way of convincing them of the value of a thing is to make them pay for it. So stupid are the people generally in those districts, that in consequence of the Government, or rather the Collectors, letting them have the water for nothing, they actually think they are doing the Government a favour to use it; whereas if they were assured that they should not have a drop till they paid for it, they would at once feel that it was of value. Further, the Collector of Rajahmundry told me that his great difficulty in levying the insignificant water-tax taken this year, arose from the fact that they had been allowed to use the water for years (some of them for 10 years) for nothing. On all accounts, therefore, as a matter of great importance to the finances, of great importance to the people of those districts, of great importance to the neighbouring districts, and of the greatest importance to the people of all India, I would earnestly urge that every acre watered should be made to pay from the very first, and that the tax should not be excessively low.

49. In the 70th he speaks of the pooty as averaging eight acres. This is a mistake; by some surveys made by the engineers, the actual area of the pooty is on an average about 10 acres. How extraordinary it seems, that in all those points, Mr. Commissioner should have neglected to seek information from the department which alone could supply him with it correctly. In the same para. he says of the present tax in the villages, under the Toolea Bagah, "it is supposed that it is equal to one-half of the gross produce, or perhaps above it." I must beg earnestly to press upon the notice of the Government again this extraordinary passage. He says again, "it is supposed." Now I cannot but ask, are we to proceed upon suppositions, and those such that it is not considered right to make any individual responsible for them. Who could suppose such a thing? The thing is so notoriously contrary to fact, that I cannot myself think who it was who supposed it. We have two proofs that Mr. Commissioner himself did not suppose it; 1st, because he does not say he supposes it; and, 2dly, because he, in this report, gives Mr. Taylor's estimate of produce, without making any objection to it. In that estimate the produce of first-class land is given at 180 rupees a pooty, and in the statement the actual assessment paid on these Toolea Bagah villages is given at 45½ rupees, or about a quarter of his estimated produce on first-class land. We must make some allowance for average land; but if we allow the average produce to be 150 rupees, the proportion of tax would be less than one-third, instead of one-half, or more, even calculating from the estimate which Mr. Commissioner himself adopts.

50. But I have before shown, by stating actual results, that this estimate of produce is all nonsense.

51. The fact is this; almost the whole of this Toolea Bagah land is now regularly cultivated for two crops, and the actual value of produce must be by the various trials that have been made, at least 40 rupees per acre, not less, making the assessment of 45½ rupees a pooty or 4½ rupees an acre, 1-9th of the produce, and this I feel assured is about the real state of the case, at least the proportion is not greater than this. I have before stated that Mr. Newill's average of many actual trials in Guntoor was 2⅖ pooties of grain, which at 16 rupees gives 42 rupees and adding 1-8th for—

Value of straw for one crop - - - - -	*Rs.* 47	per acre.
By an experimental piece of ground, cultivated by a gentleman, the first year one crop - - -	„ 14	„
By another piece ditto - - - -	„ 30½	„
By another in the 2d and 3d year - - - -	„ 28*	„
Average of T. Bagah lands according to Mr. Commissioner's statement, somebody supposes, double the assessment of 45 rupees a pooty, or 4½ per acre -	„ 9	„

(Almost the whole of this land bearing at present two crops.)

52. This

52. This anonymous supposition is thus shown to be baseless even by the Commissioner's own paper, and it in reality is only about one-fourth of the true proportion of produce.

53. But in the following page he supposes again that the produce may be 120 rupees a pooty, which differs from the estimate of Mr. Taylor (which in another place he adopts), by 1-3d, or 60 rupees a pooty. He then applies this to the area of land which he states to have been irrigated, viz., 46,500 acres, and shows that the actual collections were 25 per cent., or 47,000 rupees under what they should have been. Now when we compare the result arrived at by this accumulation of false returns and suppositions with the realities of the case, we find that the amount of 47,000 rupees is about the sixteenth part of what ought to have been added to the revenue.

54. The actual extent of land watered was certainly not less than 250,000 acres, and the assessment at 6 rupees an acre, would have been 15 lacs. The present average assessment on this extent of land, at the rate Mr. Commissioner has given, 30 rupees a pooty, or 3 rupees per acre, really would be 7½ lacs, showing a difference of 7½ lacs.

55. I suppose 6 rupees on these grounds. The present average assessment is given at 30 rupees per pooty (3¾ rupees per acre, calling the pooty 8 acres), or 3 rupees the real acre. The water-tax now being levied is 2 rupees for one crop land and four for two; I therefore add an average of three for water-rate, which supposes only half the lands to be double cropped. At this rate the assessment would be about 1-7th of the gross produce. And it allows nothing for land cultivated with sugar, chillies, &c.

56. Surely it would have been but what was incumbent upon an officer of Government, to have ascertained by actual measurement both of produce and land what the assessment ought to be, before laying the matter before Government.

57. As the Commissioner in one part of this report refers to the increase of revenue in Guntoor before the works were begun there, as a proof that the increase of revenue in Rajahmundry would have been great without the works, I must just remark, first, that the increase of revenue in one district, which was not improved by public works, does not prove that the increase in another was not caused by its public works. The increase in Guntoor was clearly caused by two things: one was, it was gradually recovering from a dreadful state of depopulation, and there was nothing to prevent its rising to the state it was in before its loss of population; the other is, that it is, I believe, now allowed by all who have had to do with the district, that Mr. Stokes' revenue was really more than the district could bear. It is never sufficient merely to look at the collections of a district at the time. If an increase is supported by an increase of exports of revenue from extra sources, of internal traffic, &c., we may know that it is a sound increase; but if not, we may be sure that it is only the fruit of more severe exaction, and will probably be followed within a few years by a falling off.

58. I must again refer to the immense importance of this subject, and it must be my apology if this paper seems to be severe upon the report under consideration. In proportion to the authority of the paper, due to the experience and thoroughly approved uprightness of the writer, is the necessity of proving the essential fallacies it contains, and the total falsehood of the conclusions.

59. I think there could not be a better opportunity than this paper offers, respectfully to request the attention of Government to this very important point, viz., the nature of the statistical returns and the remarks made upon them, which in past times have been so commonly laid before Government. I look upon this paper as a lively specimen of the style of paper which has caused such incal-

culable

---

* Since this was written, an Appendix to the Commissioner's Report, marked (A.) which I had not seen before, has been put into my hands. On this I will remark more fully at the end of my present paper, but in it he gives his predecessor, Mr. Commissioner Elliott's estimate of the average of irrigated and garden land (the garden land an insignificant proportion), at 30 rupees per acre for grain, and 1½ for straw, total 31½ rupees per acre, or 3½ times what the supposition gives as the average of the T. Bagah lands. Which did the Commissioner think was the right estimate, 9 rupees or 31½ rupees? both are given in this same report; at least one in the Report and one in the Appendix (A.); they could not both be right, while the Commissioner gives them as if he agreed with both.

culable mischief. A statement is called for; it is prepared by a native subordinate in some office, perhaps a man quite incompetent, perhaps personally interested in the case. The return is put into the hands of a subordinate European officer, who signs it of course; his superior does the same; it passes on through various offices, and perhaps no individual has tried it by any test whatever before it reaches Government. I state a fact when I say that this is frequently the case. I don't know how often it has occurred to me that one minute's examination of such a document regularly furnished to me from the proper office has shown that it was either false or simply nonsense, proving that nobody who had signed or countersigned or forwarded it had even looked at it. Such are the returns in this paper; one gives the area of the Rajahmundry Delta 3,25,000 acres; another makes the produce of irrigated land 1-5th more than that of dry land; another makes out that the area of irrigated land was about 1-5th of what it actually was; another makes out that the increase of Revenue in the dry talooks of Rajahmundry was much greater than in those in the Delta, conveying the impression that the irrigation had been actually injurious. In these cases it was not necessary to make investigation into the matter; but every person who had anything to do with these statements had materials in his own head to enable him to know that they were false. When to such returns taken for granted in spite of the reader's own knowledge to the contrary, are added mere suppositions, and those so strange, that no name is attached to them, we have a complete specimen of a document of the past times. I do trust that this style of paper will now entirely disappear from the records of Government. The times of make-believes and anonymous suppositions have lasted long enough. Let us now deal with realities. What possible use there can be in taking a return which we have abundance of means of knowing to be totally false, and dealing with it gravely as if we knew it to be true, I cannot imagine, and I am equally at a loss to know what can be the use of supposing or allowing somebody without a name to suppose to us, when we can walk out of our tents a few hundred yards and see the case with our own eyes, or when we can send to a gentleman a few miles off, who has actually ascertained the state of the case. Why should not every officer who signs or forwards a return, be required to add something of this sort, "I declare that I have examined this return, and I feel confident that it is substantially correct." Or, on the other hand, "I declare that I have examined this return, and I have no reason to suppose it to be substantially false, but I have not sufficient means of satisfying myself about it." Or, "I forward this return as it comes to me in the regular course, but I cannot, for such and such reasons, think it is substantially a true return."

60. I cannot say less than that the whole of this paper is based upon returns so false, that they represent from 1-3d to 1-10th of the truth, and upon suppositions that are totally unfounded. And as to the effects of the works upon the revenue that no less a mistake is made than the not mentioning the fundamental fact, viz., that the extra revenue due to the water had not been collected, excepting on an insignificant proportion of the lands. Even in the village of Biccavole, one of the few villages upon which at first a real increase of tax was laid, it is only this year (the eleventh in which it has had the water), that 1,000 rupees has been levied on the Enam lands for the first time. So that on the Enam lands alone in a single village 10,000 rupees has been lost to Government. Taking the present area watered at 6 lacs of acres (and allowing nothing for the relief of flooded lands, nor for the water transit of which all the remaining lands have the benefit,) and allowing a water-rate of 3 rupees per acre, the increased revenue ought to be 18 lacs, (independent of extension of cultivation), and the actual increase has been about 6¼ lacs, comparing the present year, 22 lacs, with the average of 10 years before the works, 15¾ lacs. The difference is nearly 12 lacs, and if we take the average from the first at about 1-3d of this, or 4 lacs a year, it will give, for the 11 years, 44 lacs as the sum that has been lost to Government through the neglect of the Revenue Officers, and even if we suppose that the people were allowed two years, use of the water free, which I consider to be quite a mistake, there would still remain 27 lacs.

61. I consider the remedy applied to this evil in the north-west, of employing a band of engineers to collect the revenue from their own works, worse than the disease, for to employ men in the comparatively simple work of collecting revenue, who are capable of planning and executing the works which will produce it, is surely a great waste of power. But I cannot say less than this, that I think this case unmistakably calls for some most decided measures to make

make the Revenue officers understand, that the rights of Government are not to be thus trifled with with impunity; and I am convinced that the greatest obstacle to the real and effective improvement of the country committed to our care generally will not be removed, till a Revenue officer is made clearly to understand that if he will not do his duty, another will be found who can and will do it. The public removal of an officer from a district, who had proved himself incapable or unwilling to enforce the just claims of Government in this way, would do more to forward the improvement of India than a hundred reports.

62. I really must beg to be allowed to speak plainly on this point, for the welfare of India hangs upon it. Here is a thorough experiment as to what can be done on a large scale by irrigation and navigation; and if, after the engineers have by God's blessing carried out the works effectively, the revenue officers are permitted first to neglect their duty to collect the new revenue, and then to adduce the comparatively small increase of revenue as a proof how moderate the effect of the works has been, the result must be a totally false view of the value of such works, and a consequent backwardness to extend them throughout India. I feel quite sure that if a year before the Commissioner wrote his report, a letter had been sent to the Collector, assuring him that if something approaching to a fair water rate were not levied on every acre watered, and the engineer's certificate forwarded, declaring that he was satisfied that all the lands improved, without any material exception, were included in the area assessed, both the Collector and his sheristadar would be removed from their offices within six months, many lacs would have been added to the revenue, without any serious burthen to the people, by the time the Commissioner arrived. I have felt much inclined at times to urge upon the Government that the plan adopted in the north-west should be so far followed in Rajahmundry, as that an engineer should have been placed in charge of one talook, with collectoral and magisterial powers, to show what ought to be done; but great and indeed incalculable as the evil is of not showing by this palpable proof of collections what the benefit of such works is, that of introducing such a system, as the taking off a large portion of the engineers to do such work as collecting, would be still greater; at least it seems to me difficult to choose between the two.

But in reality I consider there is no necessity for resorting to such a ruinous measure, for if the proper Revenue officers and their sheristadars were convinced that their appointments depended upon their enforcing the plain rights of Government, the water-tax would be as regularly levied as the duties are performed in the Public Works Department.

63. The results of the works have indeed, even in revenue, been abundant as it is, but they certainly ought to have been at least three times as great. The village of Biccavole, which is a safe example, because it was before one of the best-watered villages in the district, has increased from 2,900 rupees, the average of 10 years before the works, to 10,900, or nearly four-fold, and this agrees well with the capability of the irrigated land to pay revenue. The old revenue was three rupees per acre, and four times this, or 12 rupees, would be at a moderate computation 33 per cent. on the gross produce. It is quite certain that this would be a very light assessment compared with watered lands in other districts, when it is considered that transit at three pice or four pice a ton a mile is provided almost to every man's door. The engineer reckons that at a low calculation (and I am sure it is so), the amount of water traffic is now 12,000,000 tons carried one mile per annum, upon which the total saving would be, at two annas a ton, 15 lacs; this alone being 5-6ths of what I have above supposed ought to have been added to the revenue, and more than double the actual increase.

64. If it should be a question how it has happened that Biccavole and a few other villages were made to pay so heavily from the first for the water, while by far the greater part of the lands have paid nothing, I answer, the reason is plain enough to any person acquainted with the real state of things in the districts. When the real increase of capability of these villages to pay revenue was perceived, it was at first fully acted upon; I think, indeed, that the increase of tax was rather severely enforced; but as soon as it was found that the engineers adduced this as a proof of the effects of the works, a change of proceeding on the part of the native Revenue authorities was of course adopted. The native cutcherry being all either landowners, or connected with landowners, their bias is of course against the interests of the Government, but this is counterbalanced

by their wish to approve themselves as able managers of the revenue affairs of the district, and the credit arising from an increase of revenue is earnestly desired as a proof of their capacity and faithfulness; but when the counteracting influence is withdrawn, and the credit of the increase is found to go to another department, and one, too, against which the Native Revenue Department have a very strong feeling as rivals and innovators, there is nothing to prevent their acting under their natural bias, and the consequence is, that every effort is made against an increase of revenue. This seems the only possible way of accounting for the monstrous returns both of area and produce with which the Commissioner was furnished. Every Revenue authority in the villages and in the talook knew, that the returns for the villages of Razole and Soanpillay, mentioned in Captain Rundall's letters, were quite false. They knew well enough that the whole of the village lands were watered, but they knew also that the European authorities would accept anything they chose to put before them, and would neither see for themselves, nor call upon the civil engineer to ascertain for them the actual state of the case.

65. After all this trifling with the claims of Government, the following statement will show the progress of the district now, in respect of revenue, under the new state of things.

IX.—Statement of Land Revenue, &c. in *Rajahmundry*.

Years.	Fusly.	Total Collection of Land Revenue.		Average of after Collection.	Total Collection of Land Revenue.	Average Collection before the Works.	Averages of Collections since the Works.		Increase since the Works.	Public Works Expenditure, including Repairs.	Exports and Imports.	T. Bagah Traffic, Number of Boats.	Population of Delta Talooks of Rajahmundry.	Vigeswaram Channel Traffic, Number of Boats.
		Within the Fusly.	Afterwards.

* It must be observed that this is the whole expenditure on the Delta, but the returns of revenue are only for that part of it in Rajahmundry. There is some increase in the Masulipatam part of the Delta which should be added, but I have no distinct statement of it; it is considerable, but nothing to what ought to have been collected.

† The traffic has increased much more than the number of boats, as the average tonnage of each boat has probably more than doubled.

‡ Eight months. § Nine months. ‖ Seven months.

66. It will be seen from this, that while the land revenue has increased nearly 6½ lacs, the arrears of collections at the end of the fusly have diminished from an average of 2½ lacs to 30,000. We have thus positive proof that the district is now paying without the least difficulty a land revenue higher by nearly 6½ lacs, or 40 per cent., than it paid with great difficulty before.

67. Taking the total expenditure in the Rajahmundry part of the Delta at 25 lacs,* we have a return of 25 per cent. at present in revenue, notwithstanding the neglect of the Revenue authorities. Were the whole of the watered lands assessed, the increase in old lands alone would be 18 lacs, at a very low assessment, or 72 per cent. upon the outlay.

68. Even as matters are, whether we look at the increase of revenue, the proofs of the ease with which it is paid, the astonishing increase of internal traffic, or the increase of exports and imports, it is impossible that we can be mistaken in concluding that the district has undergone a change such as no other district in India has undergone, excepting Tanjore, from the same causes, and there the change was very slow compared with this. And what reason can be imagined why the state of every district in India should not be thus radically changed, if the same means were applied?

69. There is one special remark which the above statistical statement seems to call for. It throws a great light on the subject of internal traffic. On the Toolea Bagah the average per month the first year, 1851, was 88 small boats; the average for 1856–7 was 1,120, or an increase of thirteen-fold in number, but as the average size of the boats was greatly increased, the increase of traffic was probably not less than thirty-fold in five years. On the Vigeswarum channel the average monthly number was 200 in 1853, and 876 in the first seven months of 1857, or more than a four-fold increase of number of boats in 3½ years; the increase of goods was probably six-fold. In last month, July 1857, 1,200 boats passed through, and this not one of the busy months of the year. But what I wish particularly to bring to notice is the proof that this gives of the enormous amount of traffic that there would be in the country if water transit were general. In the case of this Vigeswarum channel, this traffic is carried on in spite of the following circumstances:

1st. The channels are not completed to any one of the three neighbouring great towns, Narsapoor, Masulipatam, and Ellore, so that the traffic is only with a portion of the Delta villages.

2d. The supply of boats cannot keep pace with the demand, so that a monopoly price is charged for freight, 4 or 5 pice (or ½ *d.*) a ton a mile, while the expense of working the boats is from 1 to 2 pie for short trips.

3d. The towns with which communication is open from this channel are only Rajahmundry, Coringa, Cocanada, and Samulcotta, towns of 15,000 or 20,000 inhabitants each.

4th. There is no distant traffic connected with this line either to the interior or along the coasts. On long trips the traffic would certainly be carried on at 1 pie (⅛ *d.*) a ton a mile.

5th. This tract is as yet by no means in a wealthy state.

6th. The people cannot get at once fully into the way of using the water for traffic. It of course takes some time for the people to discover all the ways in which they may take advantage of carriage at 4 or 5 pice a mile, when they have been accustomed to pay 2½ annas, and that only available at times.

70. Now, if we consider that under these circumstances here is a traffic sprung up of about 1,50,000 tons a year (12,000 boats, averaging 10 tons of load besides rafts), it is really impossible to estimate what the traffic will be, when—

1st. These channels, besides being opened to all the adjoining towns, and instead of connecting a small patch of country of 1,000 square miles with them, form part of an immense system of internal communication, connecting many millions of people, and 150,000 square miles of country in the north and west, with as many millions and as great an extent to the south and south-west, including vast cities containing hundreds of thousands of inhabitants.

2d. When

* Deducting 5 lacs for repairs and 5 for the share of Masulipatam in the works.

2d. When the freight is reduced to 1 or 2 pie a ton.

3d. When the country is greatly increased in wealth, as it is rapidly becoming where, as in these districts, cheap transit and irrigation are provided; and,

4th. When the people begin to perceive more fully the extent of the opportunities which such cheap transit affords.

71. We may be certain that in such circumstances it would soon be ten times what it is now, or 1½ million of tons per annum; and this is besides a proportionate passenger traffic.

72. But what a palpable fact is thus brought before us, as to the question of water or land carriage. The Madras Railway traffic during the last quarter of last year was 60 tons a day per train, or 120 tons a day in all, equivalent to 37,000 tons a year (*See* para. 109 of Colonel Pears, Consulting Engineer to Government, 2d July 1857). In a note to para. 107 of the same letter he states that the quantity passing one point was only 55 tons a day in April, but the above 120 tons appear to be the average. On further examination, it appears that the 120 tons includes the railway material. In the same note Colonel Pears states the average daily numbers of tons carried by the common road in April at 800 tons. But on referring to the return to which he alludes, I am sorry to say that I am afraid it must be classed with the sort of returns of which I have spoken in this paper; at least, on examining it, there are so many apparent contradictions in it that I can make nothing of it. If Colonel Pears is correct in the conclusion he draws from it, that the road traffic was 800 tons a day, while the railway traffic was only 55 at the same point, the railway only carried 1-16th of the whole. The return is to me so unsatisfactory that I cannot feel assured that this is the real proportion; but there can be no doubt from all that Colonel Pears writes in his papers, that the railway does really carry only a small proportion of the total goods traffic.

This 37,000 tons is the traffic on a work which has cost, I believe, 60,000 or 70,000 rupees a mile, connecting the whole of the south-west, the west, and the north-west of the Presidency, with a city of 700,000 inhabitants, the seat of Government, and the principal seat of trade. This monstrous work thus carries one-fourth part of the goods traffic that exists on a canal that cost a few hundred rupees a mile, and which connects a little patch of country of about 1,000 square miles with a port and town of 17,000 inhabitants.

73. Is it possible that anything could put in a more striking light the total unfitness of such a railway for this country? Let us again compare the saving to the country by the one traffic and the other. The rates on the railway are such intentionally as shall be only a hair's breadth below the price paid on the common road with which it competes. See para. 122 of the same letter. Colonel Pears says, "Mr. Fletcher's fundamental principle seems to be to regulate his rates by those existing on the roads, to make them only so far below them as may be necessary to monopolise the existing traffic." Thus the sole object in view is to carry the goods at the highest possible rate, so that the saving to the merchant is a mere nothing, while on the canal there is a substantial saving of at least two annas a ton a mile, or nearly 20,000 rupees a year per mile on the present traffic, 20 times the cost of the canal, allowing a portion of its cost to be charged to irrigation. The gross receipts of the railway are at present about 100 rupees a week, or 5,200 rupees a year, taking half of which for profit, gives 2,600 rupees a year on an expenditure of, I believe, about 70,000 rupees, or 3¾ per cent. (without any allowance for depreciation or repairs, everything being at present new), leaving a dead loss to the country of 1¼ per cent. or about 70,000 rupees a year on the 80 miles now open; and this is by way of relieving the country. This, too, is the first 80 miles out of Madras; the receipts at 200 miles from Madras will be a mere fraction of what they are near the city. Had a canal been cut on the same line at a quarter the cost of the railway, I have no doubt there would have been a traffic of 500,000 tons, much more likely a million, and that carried at a tenth of the charge on the railway; so that at a saving of one anna a ton a mile there would really have been a relief to the country by the half million only, of 10,000 rupees a mile, or 8 lacs a year, by an outlay of 15 lacs, instead of a loss of 70,000 rupees, by an outlay of, I believe, 60 lacs. What is here said about goods is equally applicable to passengers; the number

of

of passengers would probably be increased tenfold at least, if carried at one-quarter or 1-10th the railway rates, for by canal they could certainly be carried at ½ pie, or $\frac{1}{16}$ *d.* per head per mile. By Colonel Pears' returns it appears that the average number of passengers for the three months was 300 a day, or 93,000 a year, which certainly cannot be 1-10th of the present travellers, and probably not 1-30th of what there would be were the charge ½ pie per head per mile on a canal, instead of 4 pice, as on the railway, for the lowest class of passengers. The transit boats, on the Cocanada Canal, carry at present on an average 80 passengers a day to and from a town of 17,000 inhabitants, or one a day for each 210 inhabitants; the Madras Railway carries 300 to and from a town of 700,000 inhabitants, or 1 to 2,300, less than 1-10th of the proportion in the canal. The canal transit is at 1 pie a head, with a rate of three miles an hour; the railway charge is 4 pice a head, and the speed 20 miles an hour. The profit on the canal transit is about 24 per cent., on the railway 3½.

On the canal, indeed, there is nothing charged for the use of the work, but this does not affect the question materially, because the cost of making the canal navigable is so small, perhaps 2,000 rupees a mile, and the traffic already so great, that the charge to meet an interest of 10 per cent. would not exceed 1-12th pie a head per mile. We have thus the most palpable proof of which the country requires even for its passengers' traffic, low speed and low prices, or high speed and high prices, whether we judge by the number of travellers or the rate of profit. If the canal were worked with steam, the charge might be reduced one-half, and the speed increased to eight miles. Colonel Pears says (para. 20), "The actual results are notorious. None, as a rule, but the wealthiest classes have travelled by this rail. On all occasions of feasts at Trivellore, which lies close to the rail, a common and very inferior road, running nearly parallel to the rail, has presented to the railway officials the unsatisfactory spectacle of thousands of people, some in bullock carriages, some on foot, passing to and fro between that town and Madras." How terrible it is to see such unaccountable mistakes made in planning works for the improvement of India. The only thing that is thus gained by the railways is to show in the strongest possible light the importance of water carriage, and the enormous advantage that a district like Rajahmundry, provided with it, must have over one still paralysed by land carriage.

74. The railway, instead of creating traffic, carries only a small portion of the old traffic, while in the Vigeswarum Channel the traffic has increased about six-fold in three years and a half, and therefore we may conclude that at least 5-6ths of this has been created by the water carriage. The increase in the last year has been at the rate of 5,000 boats, or 50,000 tons for the year; the increase in a single year among this insignificant population being much more than the whole traffic on a railway entering the capital of the Presidency. We thus see, as I wrote some years ago, that the effect of one of these great railways is to seal up its line of country from cheap transit for ever, for I suppose it will now be impossible ever to cut a canal on that line; and because 60 lacs have been wasted on the railway, the country must continue to waste 10 or 20 lacs a year in the cost of traffic; and thus, instead of the railway attracting or creating traffic, it will assuredly be the means of destroying it on that line, and driving it off to those parts which have water carriage. The question of the effect of the public works in Rajahmundry cannot possibly be rightly understood without this discussion of the comparison of land and water carriage, as now illustrated by the actual operation of the two kinds of works. The results on the northern canal from Madras correspond with this. Leading, as it does at present, to nothing, without even a common road to connect the end of it with the great northern road, the traffic last year was 120,000 tons, three times that of the railway. Were it connected with the Kistnah and Godavery Channels, it would soon be increased twenty-fold.

75. The consulting engineer urges the reduction of the charges on the railway, and no doubt he is right in supposing that it would be politic to do it, but the country would gain hardly anything if the whole 300,000 tons were transferred to the railway, because the charge would still be only the least possible below that of the common roads. The defect is in the apparatus, which cannot carry cheaply.

76. Just as I had concluded this paper, the Appendix A. of the Commissioner's

Report, which I have alluded to as a paper I had not seen, was shown to me. This paper greatly increases my astonishment at the report. It seems to me such an extraordinary refutation of the report itself, that I think it necessary to make considerable extracts from it. It begins as follows:—"In proceeding to notice here more particularly the several results of the Godavery irrigation as it has affected the Government revenue, or the resources of the country, it is to be premised that, in order to afford encouragement to the general introduction of the more laborious and expensive system of wet cultivation, and to inspire confidence in the advantages to be derived from these works, it has been determined that no additional tax should be imposed upon any of the Government lands, until they may have enjoyed the benefit of irrigation from the Godavery Channels for two successive seasons. After that period, the Teerva Jasty, or extra assessment, is to be levied upon the following principle. The ryot to take the undermentioned proportions of the gross produce as his share, viz.:—

On dry lands - - - - -	Three-fifths,
On wet - - - - -	One-half,
On garden - - - - -	Two-thirds,
On sugar cultivation - - -	Three-fourths,

and the remainder to be considered as the due of Government." Now one-half of the gross produce of the irrigated land would, according to the estimate given in this same Appendix, as "the results of numerous inquiries and many careful experiments made on the spot by the late Commissioner (the Honourable Mr. Elliott)," with the view of obtaining the average produce of the land, taking the most moderate of the data thus called, is, that the out-turns of the whole irrigated area calculated, and turned into money at the average market prices of the season, is 31½ rupees per acre, including straw. It must be allowed that this is at a high price, 20 rupees a candy, and the average may perhaps be taken at 14 rupees, which would make 22½ as the produce; but against this must be set—1st, that there was hardly any rain that year, so that the produce was low; 2nd, most of the land was in its first or second year of cultivation for rice; 3rd, there was hardly any second crop, if any at all. Allowing for those things, we may certainly reckon that this estimate would be under the mark for the value of produce in average years. Hence we conclude that the Government rent to be half of this would be about 16 rupees an acre; the rate the Commissioner in this report proposes is 1¼ rupee in addition to the former average Revenue of 3¼, or 4½ rupees per acre, not one-third of what he thus lays down as sanctioned in "the liberal regulations which received the sanction of Government on the 5th January 1855." He goes on to say, "The additional demand thus made, after the free enjoyment of the water for two seasons, to be imposed, one-half in the first year and the full amount in the second. Under joint rents, this water cess can be imposed only on approximate data, greater precision not being attainable till the assessment of the land shall be finally fixed. The additional cess is to be made on the same principles on the permanently assessed lands and enams, and in each case two-thirds of the demand thus calculated to be fixed as a water tax. These liberal regulations, which obtained the sanction of Government on the 5th January 1855, necessarily defer the period of the direct returns of revenue to the public treasury."

77. In para. 2, he proceeds to say, "The collections in some villages of the Capaveram and Biccavole Talooks, under the T. Bagah Channel, are described in statement 31, &c.* * * * In the 23 villages which have had the advantage of water for five years, the increase is about 90 per cent. The ratio of increase of the remaining villages of the same talook not brought under irrigation have been 27 per cent. or 37 per cent., if fusly 1263 is compared with the former average." Now here he shows that the revenue in the irrigated villages had nearly doubled, so that the same increase throughout the Delta would add about 3¼ rupees per acre, nearly three times the 1¼ rupee proposed by the Commissioner, and making, on 12 lacs of acres, 42 lacs of rupees per annum for the increase on the whole Delta when fully irrigated. In para. 6 he says, "As the irrigation commenced, with the exception noticed, from fusly 1262, and it was not till the following year that it became general, the period of immunity from additional tax will not expire for some time to come, and a considerable period must elapse before the land tax can be brought to a fair standard; any attempt, therefore,

therefore, at the present time to ascertain the direct returns derivable from the expenditure incurred in the irrigation works is altogether premature." Compare this extract with the 21st and following paras. of the report, where, after showing that there was an increase of revenue of 2,89,000, but that much of this was owing to other causes beside the water, not one word is said about this statement being in fact no measurement at all of the effects of the annicut, because the water tax had not been levied.

78. In the 11th para. he goes on to quote as follows from an official memo. of the preceding Commissioner, dated 11th July 1854: "The indirect benefits conferred on the country by the greater facilities for transit, the increased demand for labour, and the circulation of the large sums expended on the works, cannot be expressed by figures. But not the least remarkable proof of the operations of these influences is found in the spirit of independence which it has called forth among the agricultural labourers, who were previously little better than agrestial slaves. Their sole remuneration consisted in the grain allotted to them at the threshing floor, the value of which at 8 rupees the pooty did not exceed 12 rupees a year, together with the annual gift of a cloth worth a rupee more. These men can now earn from 2 to 3 rupees a month, and what is better, they are no longer afraid to leave their masters, but boldly sally forth to seek their own fortunes." "The increase in the trade of the province must likewise be ascribed in a great degree to the improvement of inland navigation, and the large expenditure on the public works has also had its effect." "These, combined with other causes, such as the establishment of sugar factories, the demand of oil seeds in the European market which has sprung up in the last few years, have raised the value of exports from about 3½ lacs of rupees in 1841-42, to upwards of 16 lacs in 1852–53, while the imports of other goods besides grain, have in the same period risen from somewhat above half a lac to 2 lacs of rupees."

79. In para. 12, he says, "Further indirect advantages may also be traced in the increased prosperity of the extra sources of revenue since the annicut operations were begun. In the following comparison the inland transit duties abolished in 1844 have been omitted. The Sea Customs, which show an increase, although considerably reduced under Act 6 of 1844, have been retained, and the salt transactions are confined to such as relate to the consumption in the district. The average receipts have thus risen from 2,47,848 rupees to 3,55,604 rupees, giving an average annual increase of 1,07,756 rupees."

80. In para. 14, he says again, "In viewing these results it must be borne in mind, as above stated, that no general measures have yet been carried out for the increase of the revenue, and that only a trifling addition to the land rent has as yet been imposed on one small portion of the area irrigable under the works."

81. Had these paras. been put into the body of the report, and a simple tabular statement such as I have given, showing the actual progress of the district, commencing exactly with the expenditure on public works, been given, no sensible person would have been misled by the report itself; as it is, the only effect it would produce is to give a totally false view of the whole matter, and thus deprive all India, for an indefinite time, of the incalculable benefits which water for irrigation and water for navigation, and it alone, can give to it.

82. If (para. 29, end) "the annual land revenue has been augmented by a sum probably exceeding 130,000 rupees" (and if this were the result of a fair water tax levied on all the lands then watered, 1855); if (para. 51, end) it would be hardly safe to fix a higher rate than 1¼ rupee per acre, the probable increase to Government from the land, on the irrigation being perfected (making a total of 4½ rupees per acre for Delta land of the richest quality irrigated with river water); if (para. 51) "it will be necessary to raise the water by the ordinary means in use above the level afforded by the annicut," and the extent of such land is supposed to be considerable; if (para. 59) "viewed broadly, the Delta may be said to be nearly fully occupied, having an assessment" (3¼ rupees per acre), which approaches to a maximum standard, the main function of the annicut will be to give permanence to a fluctuating revenue; "then most assuredly, if the works cannot be pronounced an utter failure, at least all the great things that were said of them in anticipation, and all that have been said about them as conclusions from the actual results are mere imaginations and delusions, and the utmost that can be recommended is, that now that they have been executed they may as well be kept in repair, but that to set about spending

half a million sterling in another district would, after such a result, be a dreadful mistake. But if, on the other hand (Appendix A, para. 1,)" the wet land will bear an assessment of half the gross produce (31½ rupees as estimated in para. 10), or 16 rupees an acre, 12 rupees per acre above the former assessment, or 144 lacs on the whole area; if (para. 3) on "23 villages first watered, the increase of revenue is 90 per cent." (though nothing approaching to a fair water tax had been generally levied even in those villages); if (para. 11) "a spirit of independence has been called forth among the agricultural labourers, who were before little better than agrestial slaves;" their former remuneration being 12 rupees of grain and a cloth worth 1 rupee, and they can now earn from 2 to 3 rupees a month, and what is better, are no longer afraid to leave their masters, but boldly sally forth to seek their own fortunes; "and the value of exports have increased from 3½ lacs in 1841–2, to 16 lacs in 1852–3, while the imports of other things besides grain have increased from ½ lac to 2 lacs;" if (para. 12) "the extra revenue had increased 40 per cent., 1,07,000 rupees;" if (by the statistical statement given in this memo.) the real increase of land revenue alone is 6½ lacs, 35 per cent. upon the previous average; if, by the same statement, the outstanding balances on the last day of the fusly have fallen from 2½ lacs, or 16 per cent. of the revenue, to 30,000 rupees, or 1½ per cent.; if the increase of traffic on the main canal has been about 30-fold in five years; if the increase of revenue of 6½ lacs is, in spite of the astonishing neglect of the Revenue officers, who have levied a little more than nominal water-tax on not one-fifth of the lands irrigated; if the saving on the present water traffic, as compared with land carriage, is on a low estimate, 15 lacs of rupees a year; if there will soon be completed at least 1,000 miles of water communication under the annicut at 1 pie per ton per mile, or 1-30th of the land rate; and if all this is effected at an outlay to the present time of about 30 lacs; then I think we may, without the smallest possible room for doubt, conclude that nothing comparable to this has yet been accomplished by any means proposed for the material improvement of India, that there is not the smallest hope of anything more effective being devised, and that consequently we have now sure and certain ground for extending these blessings to every other district in India at once, as the only, and with the continuance of the blessing of God which has attended us hitherto, the sure remedy both for the poverty and consequent ignorance of the people and for the financial difficulties of the Government. Such an increase as has been already actually realised in this one district, though certainly not 1-10th of the full revenue benefits have yet been received, viz., 40 per cent. in all the districts, would add 12,000,000 a year to the India Treasury, and this increase has been accompanied with everything that can possibly indicate complete present relief to the people, and a future full of hope.

83. Lastly, if 70,000 rupees a mile spent on a railway leaves the principal part of the traffic on the common road, and carries the remaining 37,000 tons at the least possible charge under the common road rates, thus affording only a nominal saving to the public, while a new road, without charges for repairs or depreciations on the 80 miles leading from the capital of the Presidency does not pay its interest, but leaves a dead burthen upon the poor natives, shutting up also for ever the line it occupies from cheap transit, and all its following advantages; and if at the same time a few hundred rupees a mile spent on making an irrigation canal navigable creates in a few years a trade of 150,000 tons a year in an out-of-the-way part of the country, hundreds of miles from any great city (a traffic four times that of the railway entering the capital), and that in spite of a demand so far exceeding the supply of boats as to keep the charge for freight to three or four times what it need be, the actual cost of carriage being about 1-10th of what a railway can profitably carry at; then we may as safely conclude, that the whole railway system is only an obstruction to India in its present state, and that water, and water only, for transit can possibly meet the wants of the country.

84. What is said about goods is equally applicable to passengers, as I have shown above.

85. How can I help, upon this review, once more pointing out the grievous mistake that has been hitherto made in giving so much attention to the expenditure and so little to the income of the country. Commission after commission has

has been appointed to investigate what saving can be made in the expenditure, and under the pressure of a balance against the country, the recommendations of economists have unhappily been so far attended to that the country has been denuded of the troops necessary for its defence, with the present awful results; and, after all, the utmost that can be obtained by such reduction of expenditure is comparatively trifling; whereas there seems, as it were, no limit to the augmentation that might be made to the income by such means as have been tried in Rajahmundry. The increase there of 40 per cent. upon the revenue, is but a small portion of what the district even already can pay, not only without oppressing the people, but with the greatest relief to them at the same time; and if during the last 20 years such works had been carried on in every district, the consequences would have been that there would have been more than ample funds for every purpose; the country would not have been denuded of European troops, and, humanly speaking, all the late terrible events would have been prevented.

86. The whole question of these works lies in a nut-shell:

1st. Such works can be executed at a charge of at most 6 annas per acre per annum in interest and management:

2d. The increased value of produce on lands so irrigated is, on the most moderate calculation, 20 rupees an acre (viz., 10 rupees as dry land and 30 as wet).

3d. Therefore, if only 20 per cent. of the increase is taken as tax, the finances will be relieved to the extent of 4 rupees per acre per annum, and the people will gain 16 rupees.

4th. Besides this, the people will have the whole benefit of the water carriage, which alone would probably be fully equal to the whole water tax that they would have to pay.

87. As it will be allowed by all that this is a great national question, I think I may without presumption earnestly request that what is thus said upon it on both sides may be printed, that all who are interested in it may have an opportunity of forming their own judgments upon it.

(signed) *A. Cotton*, Colonel of Engineers.

Madras, 12 September 1857.

P.S.—As a further proof of the groundless nature of the proposed rate of 1½ rupee per acre for water and water carriage, &c., I may refer to Captain Taylor's pamphlet, giving the actual cost of watering land by wells throughout the territory of Bombay and Berar. He there shows that the average cost per acre per annum to the land-owners is 27 rupees. If numbers of individuals over a great extent of country find it worth their while at this cost merely to raise water for their land (and they would not do it if there was not a considerable profit on it), we may judge what sort of a charge 1½ rupee is for water, water carriage, &c.; we see it is 1–22d part of what land-owners willingly pay for water alone without cheap transit, &c.

CORRESPONDENCE referred to in Para. 6 of the above Memo.

(No. 477.)

From *J. Goldingham*, Esq., Commissioner, Northern Circar, to Captain *Rundall*, Civil Engineer, Godavery Division.

Sir,

GOVERNMENT having forwarded to me extracts paras. 15, 16 and 17 of your report on the Nuggarum aqueduct, in connexion with the imposition of an additional cess for the water received, I have the honour to request that you will be good enough to furnish me with information on the following points:

From what accounts the area, viz., 60,000 acres, the whole of which you observe may be irrigated, has been taken. The entire gudicuttoo, or cultivable area, according to the village accounts, is 26,533 acres of land, liable to full assessment, and 18,529 acres enam; total, 45,162.

For what portion of the 60,000 acres has water been supplied by the Irrigation Executive Department? According to the revenue accounts received from the

Collector, the land irrigated in fusly 1264 is 2,607 acres Government lands, and 2,389 acres enam ; total, 4,996 acres.

Within what period water sufficient for the full extent of 60,000 acres will be furnished?

2. I shall also be obliged for information in regard to the value of property saved in 1853 in the Nuggarum talook, its amount, and how calculated.

3. As you are in possession of the necessary data for furnishing the above information, I shall be glad to receive it at your earliest convenience.

I have, &c.

(signed) *J. Goldingham,*
Commissioner.

A. Cotton, Colonel,
Commandant of Engineers.

(No. 404.)

From Captain *F. H. Rundall,* District Engineer, Godavery Division, to the Commissioner of the Northern Circars.

Sir,

I HAVE the honour to acknowledge the receipt of your letter of the 26th ultimo, and to express my regret at having allowed it to remain so long unanswered. There were, however, certain returns which, not having at hand, I wished first to obtain, that I might bring them to your notice.

First, as respects the area of land in the talook. The grounds on which I stated this to be 60,000 acres are measurement of the trigonometrical survey, and a comparison of it with the village returns. The former makes the Nuggarum talook contain 120 square miles, which, if we calculate at 500, instead of 640 acres to the square mile, will give 60,000 acres, leaving, 16,800 acres occupied by sites of villages, sandy tracts near the sea, &c. The village returns give 7,086 pooties nearly, from which 1,110 pooties are deducted for village sites, poontahs, &c., leaving 5,975½ pooties as cultivable land. At 8 acres to the pooty, the whole will amount to 47,800 acres; but in all the villages which have hitherto been surveyed and measured in detail by the Sub-Collector, the actual quantity of land has been found to vary from one-third to one-fifth more than that entered in the accounts. So that the pooty, though professedly only 8, in reality contains 10 acres, and thus the area of the cultivable land in the talook will be found to amount to nearly 60,000 acres.

Secondly, as respects the amount of land actually watered. This I do not pretend to give with exactness, but can certainly give a near approximation, arrived at by two methods: one by the quantity of water actually consumed in the talook, as measured by the depth flowing daily over the aqueduct, every drop of which is carefully treasured and prevented from running to waste: the other method is by computing the area commanded by each channel. Not only are the lands under the newly excavated irrigating channels supplied, but immediately the rains have ceased the old drainages are bunded across, and filled, and so supply water to a large extent of land. Moreover, the salt swamps, hitherto left waste, have been flooded with fresh water, and are now cultivated like the rest of the land. There were never less than 20,000 cubic yards an hour going over the aqueduct, and generally more. The area of land supplied by the channels and drains is near 30,000 acres, so that when I stated 20,000 acres as the quantity irrigated, I know I was well within the mark.

The return made by the native revenue authorities naturally falls a long way below this, amounting only to 659½ pooties, or 6,553 acres. This is not to be wondered at; but the degree of reliance to be placed on the return may be judged from those of the two villages of Razole and Somepilly. In the former, out of 89½ pooties, 6½ zeroyetty and 15½ mauneyem, or a total of 22 pooties only, were returned, leaving 67 pooties as unwatered. While in Somepilly, out of 25½, 2¼ of zeroyetty and 2¾ mauneyem were watered and 20½ unwatered. As these two villages lie right under the main channel, and I had myself seen almost every acre of them under water, I had them measured, when the whole was found to have been irrigated. The villagers seeing that the matter was thus thoroughly investigated, no longer pretended concealment, but acknowledged the fact. In both these

these cases you will perceive the return is just 1-4th of the truth. If therefore the whole return is multiplied by four, it will be found to coincide with my statement, and be near the truth.

As regards the value of property saved during the year 1853. The tahsildar estimates the value of the produce raised in the village of Somepilly on the land irrigated by the annicut water at 1,746 rupees, for 10 pooties of zeroyetty land, thus giving 174 rupees per pooty. On two parcels of land in the same village, measured by my own orders, one, a third-rate crop, yielded at the rate of 12 pooties of grain to the pooty of land. The other, a second-class crop, on second-class land, yielded at the rate of 15 pooties, which, with grain at the price of 14 rupees, made the value in the one case 168 rupees, in the other 210 rupees per pooty. We may safely, then, take the tahsildar's estimate; and if in 1853 we allow for an average over the whole talook, that property to only one-half that amount was saved, we should have for its value of 5,500 pooties the sum of 4,73,500 rupees. This is reckoning that the whole crop consisted of grain; but in the Nuggarum talook the more valuable products of sugar-cane, chillies, and other garden stuffs, are raised, which would add at least another lac to the above amount; and, lastly, the most important item of farming, "the live stock," must not be forgotten, for without the timely supply of water brought by the aqueduct, it is impossible to say how many of those poor creatures might have perished in such a year of drought.

In the above calculations no estimate is made for the value of the Dalwa crop; but perhaps it would be premature to reckon upon this, as it is yet but a novelty. I must, however, in conclusion, beg leave to point out that all the return as yet levied has been the small sum of 5,000 rupees this year from the zeroyetty lands. Another fusly has passed, and the enamdars are still left untaxed.

I have, &c.

District Engineer's Office, Godavery Division,
Camp at Dowlaiswarem, 25 July 1856.

(No. 79.)

From Colonel *A. Cotton,* Commandant of Engineers, to *H. Forbes,* Esq., Secretary to Government.

Sir,

I HAVE the honour respectfully to return my thanks for the papers which have been sent to me by the Board of Revenue, on the subject of the results of the works in Tanjore and Rajahmundry, and to forward my remarks upon them.

I need hardly repeat how essential it appears to me that both sides of this question should be printed, and that every one concerned should thus have some means of forming his own judgment on the subject of a question of such vital importance as that of the irrigation of India.

I have, &c.
(signed) *A. Cotton,* Colonel,
Commandant of Engineers.

Madras, 4 March 1858.

MEMORANDUM on the Papers of the Board of Revenue, dated 21 May 1855, on the Statements made in Colonel *A. Cotton*'s Book on Public Works in India, respecting the Effects of Hydraulic and other Works in *Tanjore.*

1. IN the 4th para. the Board say, "Colonel Cotton appears to omit expenditure on repairs." In the passage which they are alluding to it is expressly said, "besides current expenses for the repair of existing works."

2. In the same para. the Board state that the actual sum expended was 43 lacs on irrigation works, but by their own statement this was in 52 years, not 50 years, the period I mention: it was under 40 lacs in the 50 years. They

then state that besides this, there were nine lacs, including two lacs of surplus pagoda funds on other works, which would make 49 lacs in all. There is no doubt that the sums expended on roads and bridges ought to be considered. The reason why they were not, doubtless was, that they were not entered in the statements that I received. The Board then go on to state that the sum expended was really 52 lacs, instead of 20.

3. It is very necessary to call particular attention to this at starting, because it shows unmistakably the bias under which the paper is written. Nothing but a violent bias could induce gentlemen to offer it as their opinion, that, in calculating the results of works, all the cost of repairs for 50 years should be added to the first cost, and the total reckoned as the capital employed. I need not use arguments against so palpable a mistake. Of course I could not say positively what portion of the expenditure was properly capital, and what was for repairs, but when I allowed one-half for each, it was certainly quite sufficiently near to be substantially a true representation of the case, while to charge the repairs as capital, was palpably a false view of the matter. Reckoning the total capital at 20 lacs, and the mean during the whole period, consequently, at 10 lacs, 20 lacs for expenses in 50 years—40,000 rupees a year would be four per cent. per annum, supposing that the whole of this money was spent on works executed for this capital; but this sum in repairs includes the cost of repairs of all the former works also, and cannot therefore be much out of the way.

4. To the 20 lacs, however, might certainly be added half of the nine lacs expended on roads and bridges, so that the real capital was 24½ lacs for the 50 years, instead of 20, as I have given it.

5. In the 5th para. the Board again say, "It may be assumed that Colonel Cotton alluded not only to the Land Revenue, &c." What can be the use of these insinuations? I expressly say the revenue of Tanjore, not the land revenue, and the sums I mention are the whole revenue; and certainly it would be giving a false view of the case not to give the whole revenue; the power of the people to pay taxes, and the amount of exports, are of course very dependent upon the wealth of the people, and whether their produce exceeds their consumption, &c.

6. They then proceed to show that the average collections of the first five years was 30,00,000. The only difference between this and my amount arose from my taking the average of the first four years, instead of five, as the Board have done, which gives just 30 lacs, as the Board have. I omitted the first years of the first series of five in the returns, because it was evidently so extraordinary a year, as to vitiate the average, if taken into it.

7. The Board then proceed to show that the average of the last five years was 48 lacs, not 50, as I have stated. In the first place, I beg to observe, it was quite unworthy of the Board to argue the matter in this way, because I was evidently speaking in round numbers, and the getting rid of one lac at the beginning, and two lacs at the end, did not affect the substantial truth of what I was exactly right. First, the Board give the average, not of the last five years of the series of 50 years of which I spoke, but of the 52 years of which they had given the expenditure.

8. The revenue of the five years I spoke of were—

1846	51	lacs.
1847	51½	„
1848	43½	„
1849	46½	„
1850	48	„
	5) 245½	„
	49	„

9. The

* So in original.

9. The average would thus be 49 lacs, but this average was undoubtedly below the real average revenue of the district at the time, on account of the very low prices of the last three years: the average was at least 50 lacs. The revenue of the following years has been—

1851	49 lacs.
1852	49 ¼ „
1853	51 „
1854	52 ½ „
1855	54 ½ „
1856	58 „
1857	56 „

10. Thus it will be seen that the five years from which the Board compute their average of 48 lacs, have years of 51 and 51 ½ lacs immediately preceding them, and 51 and 52 ¼ lacs immediately following them.

11. The increase of revenue is therefore perfectly correctly stated at 20 lacs in the 50 years, though certainly the expenditure should have been stated at about 24 ½ lacs, instead of 20; the difference being owing to the omission of the sums expended on roads and bridges, from statements I had received.

12. I shall not attempt to answer the Board's arguments "that the greater part of the increase cannot be ascribed to the outlay on public works."

13. Nobody knows better than the members of the Board the effect of irrigation on the produce of the soil, that it is increased threefold, and consequently that increase of 20 lacs on 30 in a district well watered, represents a very small part of the increased wealth of the people; nobody knows better than they do, that the saleable value of lands in Tanjore is 10 times that of the adjoining unimproved districts, and that while its revenue has increased so greatly, there has been no increase at all in the others.

14. I subjoin a statement of the revenue of the two improved districts of Tanjore and Rajahmundry with the two adjoining ones. It will be seen there, that, while Vizagapatam had fallen off half a lac, and Masulipatam had remained stationary, Rajahmundry had increased 5 ¼, according to this statement; and that, while the unimproved part of South Arcot has fallen off one lac, and Madura has increased only 1 ¼ lac, the Delta of the Cauvery (Tanjore), with the two improved talooks of South Arcot, has increased 10 ½ lacs. All the laboured arguments in the world cannot get rid of the conclusions that these plain statements will convey to any unbiased person, neither will any arguments convince others, or at least bring them to acknowledge that they are convinced, that works which make the lands produce three times as much as before, will have more effect upon the revenue, as well as upon the wealth of the people, than the wisdom of all the sheristadars in the Presidency can possibly have in arranging the details of the mode of collecting that revenue.

15. It must not be forgotten also, that this increase of revenue of 20 lacs is, notwithstanding, a net reduction of the extra taxation of 1 ½ lac, by the abolition of the land transit duties.

16. In a note to para. 9 the Board state, that the increase of revenue in 30 years before the annicuts, was 15 lacs, and the expenditure on public works in that time was 30 lacs, while in the 17 following years the expenditure was 20 lacs, and the increase only 2 ¼.

17. On this I beg to remark, 1st. That the increase not being proportioned to the expenditure proves nothing, unless the Board had shown that additional taxes had been levied or proportioned to the increase of produce and diminution of the cost of transit. Everybody knows this has not been the case in Tanjore; by far the greater part of the lands that have been so benefited by the annicuts pay no additional tax whatever, while, on the other hand, 1 ½ lacs of extra taxes have been taken off. But the benefits of the latter expenditure appear plain enough in the enormous increase of the saleable value of land of late years. This is the same refuge that has been occupied in the discussion about the results of the works in Rajahmundry. The revenue officers determinately refuse to levy the water rate, and then, concealing this fact, argue that the results of

the works are not so great as was expected. But, 2d. To state that the increase of revenue has only been 2¼ lacs.

18. I have shown above how false the average of the later years given by the Board is, viz., 48 lacs.

The true average before the annicuts is—

1832	-	44 lacs.
1833	-	46¾ „
1834	-	48½ „
1835	-	46 „
1836	-	44½ „
	5)	229¾ „
		* 46 „

19. And that of the later period at least 50 lacs, making a difference of four lacs, while the average of the last five years to the present time is—

1853	-	51 lacs.
1854	-	52¼ „
1855	-	54½ „
1856	-	58 „
1857	-	56 „
	5)	271¾ „
		* 54¼ „

But this increase is, as I have stated (besides 1½ lac net taxation) abolished. 3d. The Board further state, that in their last year, 1852-53, a hurricane desolated the district on account of which 2½ lacs of revenue were remitted; but so great was the destruction of property (at least 20 lacs, as I was informed), that the revenue of the following years must have been materially affected by it.

20. Thus it is evident that this note will not have the least examination.

21. In the 14th para. the Board again say, "It is presumed that Colonel Cotton alludes to the general revenues." I can only repeat, that there is not the least room for the Board's "presumption," when I explicitly say the revenue, and not the land revenue.

22. I must acknowledge that I have made a mistake in what I said in my book about the increase in latter years. I have said the revenue had increased from 42 to 52 lacs since the construction of the annicuts. The first average of 42 lacs was not that of the years immediately preceding the annicuts, but of those preceding the commencement of the series of great works for properly regulating the supply and distribution of the water. It was in 1828 that I was first ordered to Tanjore, for the purpose of reporting upon the then alarming state of the rivers. Previous to that time every work had been executed as an isolated improvement, and it was then that, in consequence of the threatening state of things, the Government had come to the conclusion that it was absolutely necessary to take the whole subject in hand; a system of works calculated to regulate the whole water supply was therefore planned, and they were commenced in 1830.

23. The annicuts which were planned in 1833, and executed in 1836, were only a portion of that general system of works. It is quite evident from my mentioning the average of 42 lacs, which was not that of the years preceding 1836, but which was that of the years preceding 1830, that the mentioning 1836 as the beginning of the period I intended to speak of, was an oversight.

24. Allowing for this, the statement I have made of an increase of 10 lacs, is perfectly

* So in original.

perfectly correct. The increase in Tanjore alone was 8 lacs, not allowing for the abolition of the transit duties, and in the two Delta talooks of South Arcot about 1½ lac, making in all 9½ lacs.

25. In the Board's calculated increase of 4 lacs, they do not include that in South Arcot, which was caused by the operation of the new works. I have also made a mistake in stating the revenue of Tanjore at 52 lacs, though it had one year risen to 51⅓; the average, as I have shown above, was at least 50, exclusive of abolished taxes.

26. I must acknowledge that this passage was carelessly written, but the matter had been examined by me a hundred times, and I had fully assured myself of the truth of what I meant to have said, that the increase of revenue from the new system of works, of which the annicuts formed a part, was 10 lacs. The works executed in 1830, 1831, 1832, 1833, 1834 and 1835, were large undersluices for discharging the muds of the Cauvery Calingulahs, for diminishing the floods in Tanjore, extensive excavations of the channels in South Arcot, &c. These works were essential parts of the new order of things.

27. I do not go into all the details which the Board dilate upon in the following paras. Though generally intended to show the advantages of the annicuts, all such writing rather tends to obscure the truth. The broad facts, as I have stated them (I beg to urge), show the matter in its true light, and leave no possible room for mistake. Here is a district which has been improved by the application of capital and western knowledge on public works, chiefly hydraulic, and this district in 50 years increased in revenue 20 lacs (including the talooks of South Arcot, 22 lacs for the whole Delta), while the neighbouring districts have either retrograded or remained stationary. The average up to the present time in Tanjore is 52½ lacs, being an increase of 22½, and adding to this 1½ lac increase in the other part of the Delta, the increase is 24 lacs, or a quarter of a million per annum in a single district, notwithstanding the abolition of the transit duties.

28. The whole deficiency in the Indian revenue is stated at only one million, so that four additional districts so improved would have adjusted the finances of all India.

2d. It is well known that by far the greater part of the lands have paid no additional tax for those improvements, and the whole of the Mannium lands, perhaps 20 per cent. of the district, have never paid a rupee to this day. The large French territory of Carical also has had all the benefit of the new works for nothing.

3d. The saleable value of the lands has increased in an extraordinary degree.

4th. The expenditure on these works, deducting cost of repairs, has been perhaps 30 lacs, by a rough calculation, up to the present time.

5th. It is notorious that this district, after paying this comparatively vast revenue, has more wealth in it, in the saleable value of its land and other things, than perhaps all the other districts of the Carnatic put together.

In para. 28 the Board think proper to say, "Mr. Smollett's figures are found on examination to be correct." They a little further on say, "The years which he selected in his first pamphlet, &c., were open to objection, as not giving a fair comparison." How these two sentences can be reconciled I cannot guess. The Board then give in the margin the series of years taken from the pamphlet, and proceed to point out how three ordinary years had been omitted from the series, and two added which did not belong to it, and which were such years as never occurred before or since, and which consequently would have vitiated the average had they belonged to it. They were the two years of the dreadful famine of 1823–24, when Tanjore sold a good crop at enormous prices. Besides this flagrant act, upon which the Board, I am grieved to say, have nothing to say expressive of abhorrence of such a proceeding, there are the following fallacies in the comparison then made:—

1st. This is the "demand," not the collections. I said nothing about the "demand," nor had it anything to do with the matter.

2d. It is the demand on account of land revenue; I spoke of the whole

revenue of the district. The land revenue alone does not give a true measure of the effect of the improvements.

3d. He gives the average of the years after the annicut. I did not say anything about the average of the years. The effects of the works are of course not fully seen at once, nor is the whole of the money spent at once; the comparison can of course only justly be made between the average of years preceding the improvements, and the last year, or the average of the last two or three years.

4th. The enormous land revenue realised in 23 and 24, viz. 43 lacs and 51 lacs, when the ordinary revenue was only about 36 lacs, is one of the strongest possible proofs of the incalculable importance of the irrigation works. There was a district in the very midst of the country visited by a most awful famine, the inhabitants of which, instead of being themselves divided into the two classes—one buying at famine prices, and the other dying by tens of thousands from their inability to buy—are all selling at those enormous prices, and at the same time, instead of adding to the mass of consumers only, are supplying immense quantities of grain to all the surrounding districts, saving the lives of lacs of their inhabitants. This is the effect of the irrigation works exclusively. Mr. Smollett takes these two years, and puts them into a series of years to which they do not belong, in order to give a vicious average of that period, that he may compare it with a following period, in order to show that works of irrigation do not affect the welfare of the country, thus endeavouring to make these years prove exactly the opposite of what they truly show, and most wickedly thereby doing his utmost to prevent the prosecution of works which had thus palpably and notoriously saved millions of people from a calamity, the measure of which cannot be calculated; but of this much we are certain, that had Tanjore been without its irrigation works, another million of people would have been added to those who were consumers only, instead of being suppliers, and that several hundreds of thousands of people additional would have perished. What but overwhelming caste feelings can be supposed to have so blinded faithful and honourable men to pass over without one word of conscientious indignation such an attempt, by means of a garbled return, to propagate a view which, if it could in the present day be adopted, would do such immeasurable mischief?

See Appendix (A).

30. The Board endeavour to shelter Mr. Smollett by saying that in a second edition this omission is supplied. It is painful to be obliged to point out, that what he did say afterwards, was in consequence of this flagrant proceeding being reprobated in the public papers, and that not one word of defence or apology was given by Mr. Smollett. I must state here that I speak from memory only, for I have failed to obtain a copy of that particular pamphlet at the present time.

31. In the 28th para. the Board say, "Although Mr. Smollett has successfully shown that Colonel Cotton has over-estimated the profits of the general marahmut in Tanjore, &c." I have shown above that there is no ground for this assertion; that the revenue of Tanjore had increased 20 lacs in 50 years, as I have asserted; the average is at present 24 lacs for the whole Delta above what it was in 1800.

32. I give here the revenue of the district of Tanjore according to the Board's returns, with five years' averages, striking out from those averages the three wholly exceptional years, 1800, 1823, and 1824, as they would entirely vitiate averages even of 20 years:

1800	46½	lacs.	1810	36		1820	40¾	
1801	33		1811	35½		1821	39¼	40¼ lacs.
1802	27¾		1812	38	38 lacs.	1822	41¼	
1803	24½	30 lacs.	1813	41		1823	52	
1804	35		1814	40¾		1824	58¾	
1805	33½		1815	39½		1825	44½	
1806	29¾		1816	39¾		1826	38¾	
1807	37¾	36 „	1817	39	39 „	1827	37¼	42½ „
1808	39¾		1818	38		1828	47½	
1809	38¼		1819	38½		1829	43¾	

1830	-	43½	45¾ lacs.	1840	-	46¼	46 lacs.	1850 - 49
1831	-	44		1841	-	44		1851 - 49¼
1832	-	46¾		1842	-	46		1852 - 49¼
1833	-	48½		1843	-	47		1853 - 51
1834	-	46		1844	-	46		1854 - 52¼
1835	-	44½	46¾ „	1845	-	51	49 „	1855 - 54½
1836	-	46¼		1846	-	51½		1856 - 58
1837	-	46½		1847	-	48½		1857 - 56
1838	-	48		1848	-	46¼		
1839	-	48¼		1849	-	48		

52½ lacs.

I have given the last average on the whole of the remaining eight years, because the two last years were two of unusually high prices as the first were of unusually low ones.

The difference in Tanjore alone is 22½ lacs, besides 1½ lac in South Arcot, and notwithstanding the abolition of the transit duties, amounting to 1½ lac net.

33. Nobody knows better than the Board do that there is nothing like this in any other district in the Presidency excepting those of the western coast, which are so differently circumstanced that they cannot be compared with the eastern districts. Indeed their improvement is owing to the same cause, with only this difference, that they are generally well supplied with water naturally, while the eastern tracts require it artificially.

34. Nor does anybody know better than the Board, that while this one district alone pays 75 per cent. above its former revenue, it is much better able to pay it than the other districts, or to pay their old revenue; that the increase of revenue is very far from being the measure of the increased wealth and prosperity of the district.

35. In the 27th para. the Board speak of the increased saleable value of the lands. They say that the value of land before 1833, was, on an average, about 80 rupees a vaylie, and in 1854, 163 rupees. I have fully ascertained that the latter of these is quite incorrect, and I believe the first to be wrong also. When I got returns at the former period, they gave 160 rupees a vaylie; and, judging from two different returns which I have lately seen, one sent me by the present Collector, but which I have mislaid, and one shown to me by Mr. Forbes, which are fully supported by the information I have obtained on the spot, I conclude that the present price is about 340 rupees. I should observe that in both these returns a large quantity of land of small value sold in one talook gave a lower average than this, but if the average of the mean prices in all the talooks is taken, which is undoubtedly the true way of taking it, the present price is as I have stated. Taking the difference at 180 rupees a vaylie, or 27 rupees an acre, and allowing the area of irrigated lands of the whole Delta to be 900,000 acres, including maniem lands, it gives nearly 2½ millions sterling as the increased value of the lands in our possession (besides the French territory), showing distinctly how far the increase of revenue is from being a measure of the effects of the works. The money so invested, according to my information, yields six per cent., so that that capital shows an increase of 15 lacs a year to the income of the landowners on the taxed lands only, besides any benefits to the tenants since 1833, that is, during the period that the Board endeavour to show that the district has so little benefited by the irrigation works.

36. Taking the present average value at 340 rupees a vaylie for taxed land, or 50 rupees an acre, it gives 4½ millions sterling for the actual value of those lands, and if we add to that about 25 per cent. in area for the rent-free lands, or 2,25,000 acres, and 85 rupees for price, the capital represented by the average tax of 5 rupees per annum at 6 per cent., the total capital invested in them is two millions, and it makes a total of 6½ millions sterling as the value of irrigated land in Tanjore. Compare this with the state of any unimproved district.

37. How can I conclude this paper without expressing, not my surprise, for I have had too long experience of the strength of caste feelings in the Revenue officers to expect a paper from most of them which is free from conclusions arrived at manifestly under the influence of that bias, but my sorrow to see a body of faithful men, when called upon solemnly by the Government to give a judicial decision upon a vital point in the question of the management of the country, endeavouring as far as possible to shelter this most wicked attempt

to deprive the country of the works upon which not only wealth depends, but life and death. I call it most wicked, for were men of Mr. Smollett's stamp as influential as they wish, they would succeed in depriving India of the only possible means of providing food in what would otherwise be times of famine. The Board know well, that had Tanjore not been irrigated in 1823 and 1824, probably at least a million more of people would have perished in the south, and that had Guntoor been irrigated in 1833, it would have saved at least half a million of lives in the north.

38. They know well that unirrigated land paying one or two rupees an acre, and near an inland market and a port, is unsaleable, while irrigated land cut off entirely from both by want of cheap transit, pays from 5 to 20 rupees an acre and is highly valuable property. They know also that on a large scale land can be provided with these things at an annual expense to Government of a quarter or half rupee. And yet they cannot stand forward conscientiously and heartily to denounce the attempts that are made to deprive the people of those benefits, and as openly support every effort that is made to urge forward these essential measures.

39. It is not the writings of men like Mr. Smollett that do the mischief; he himself is too well known as a man of strong prejudices, and his writings to all but men anxious to be misled answer themselves, but it is such papers as the one now under examination which really supports him that are so mischievous.

40. Here was an opportunity given to the Board to show that they were above all minor feelings, and when called upon, could and would give a manly, conscientious, and unmistakable verdict in a cause so vitally affecting the welfare of millions.

41. There is certainly such a thing as courtesy, but a courtesy which in such critical cases says that nothing is black, nothing white, but everything a little greyish; which makes out that nothing is true, and nothing false, but everything neither, or both, or something between the two, is not courtesy but something else.

42. Mr. Smollett says, "ten years ago * * I applied to the undertaking (the Godavery Delta irrigation) the soubriquet of the 'gigantic swindle;' ten years later, after scrutinising the result in detail, I deliberately assert that the epithet was well deserved." This is the ground taken up by the gentlemen whom the Board endeavour to shelter. Was it too much to expect that a body of conscientious men would in an honest, manly, and conscientious manner express what is most assuredly their real opinion on this point? I know well that every member of the Board knows that this is directly contrary to the true view of the case.

43. They know well that the revenue in Rajahmundry has increased seven lacs, the exports and internal traffic 15 or 20 fold, the produce of the land three or four fold; that not a fifth part of the lands watered yet pay one rupee of tax; that the internal traffic is now carried by the canals at one-tenth of the former cost; that passengers travel at 1 pie a head per mile, &c.; they know also well that if these works are supposed to have failed in immensely improving the country, it will greatly tend to deprive other districts of similar incalculable benefits, yet they can write courteously on the subject, and thus identify themselves with the writer of these pamphlets.

44. What I asserted was, "India is like the field after an Indian battle; there is but one cry, water, water: all that is wanted is water, and this want supplied, everything else will almost follow of course. Water for irrigation and water for transit will provide for everything else." Now either this proposition is true or it is not, and Mr. Smollett's proposition, that hydraulic works are a gigantic swindle, is either true or false. Either water for irrigation and transit is the grand means of preserving life and the most effectual way of increasing the wealth of India or it is not; hydraulic works are a "swindle" or they are not. The Board, the body to whom is entrusted the material welfare of the Presidency, the lives of 20 millions of people, are called upon by the Government to judge in this case. They know the truth of the case, and they write a long report calculated as far as possible to shelter the party which holds the view they know to be the false one. Can we be surprised if, shortly, gentlemen who brought to a decisive test of this sort utterly fail are set aside and other agents are sought for to carry out God's purposes of mercy

mercy to India, which I, for one, feel fully assured he will find agents to do, however present agency may fail. That India will be irrigated, I have no doubt, notwithstanding outward friends and open enemies.

45. There is one passage in Mr. Smollett's pamphlet which I am surprised that the Board do not notice. It seems to me that they might have heartily supported him in that without any suspicion of their motives, that is, where Mr. Smollett recommends that I should receive a grant of manium land of 2,000 acres in the delta of the Godavery. A gentleman who rents a village there was this year offered by natives 11¼ rupees an acre for the use of some land of his for one crop, and without any permanent right, and they are now his tenants. From this circumstance and the ascertained value of produce, about 40 rupees for two crops, it is quite certain that were I in a position to offer land on a permanent tenure, I should find abundance of tenants at 15 rupees an acre, so that 2,000 acres would yield me an income, without investing any capital, of 30,000 rupees or 3,000 *l.* a year. Such a proposal seems to me unexceptionable, and it seems to offer a good opening for the Board to express their further approval of Mr. Smollett's views; my only objection to it is, that so far as I am myself concerned, I have been already so much more than amply remunerated for the performance of my pleasant duties.

46. If I might be allowed respectfully to make a suggestion to Government, it would be that they should now call upon the Board of Revenue for their estimate of the cost of cultivating and value of produce of an acre of average dry land, 100 miles from the coast and without water carriage to either an inland market or a port, and the same of an acre of land irrigated from one of the great rivers, and with water carriage to both home and foreign markets; and also the average expense of providing irrigation and water carriage on a large scale. No doubt the Board could easily furnish these, as after writing so many papers on the revenue of the irrigated lands, they must have already satisfied themselves on these fundamental points.

A. Cotton, Colonel,
Commandant of Engineers.

For the increase in Rajahmundry I deduct the average of the first period not from the average of the last period, but from the last year's actual collections, because it is obvious that when the revenue is regularly and steadily increasing, the latter is the true way of showing the progress.

From *J. Goldingham*, Esq., First Member of the Board of Revenue, to *W. H. Bayley*, Esq., Acting Secretary to Government, R. D.

Sir,

GOVERNMENT having been pleased to afford me the perusal of Colonel Cotton's Memo. on my Report, dated 9 July 1855, on the probable results of the Godavery Annicut, I would beg to make the following few remarks:

2. Colonel Cotton naturally expresses much solicitude both as regards the estimation in which the annicut shall be held as a means of developing the resources of the country, as well as the actual results of the work itself. He is under the impression that the value of the work has been underrated by me, and that my report is calculated to discourage the extension of similar projects throughout India. A calm perusal of the report will, I trust, show that there are no grounds for such a conclusion. In para 50, after reviewing what has been realised, I observed that the work had become essentially necessary to the country, and that true policy required that it should be completed and maintained at all times in a state of thorough efficiency. With this feeling of the great importance of the work, I should be glad to find that means had been adopted for enlarging the supply of water, whether by raising the annicut itself, or by another work higher up, or by both.

3. Colonel Cotton occupies a position rarely attained from the many useful works he has projected during a long course of years with a total denial of self, and the really substantial benefits he has conferred by these means both on the Government and the people. It is not going too far to say that lacs of rupees would have been lost to both, but for his talents and devotedness to the cause. It is not likely that the Godavery Annicut will in any way diminish such a reputation, though the money results of that work to Government in the mere form of additions to the land tax, as originally estimated, may not be realised. Colonel Cotton was of opinion that the Godavery Annicut would ultimately bring a clear addition to the revenue of 30 lacs of rupees; the tenor of my report was to show that such magnificent expectations could hardly be realised.

4. Colonel Cotton complains of the inadequacy of present returns, and the inadequacy of the prospective estimate as to ultimate effects.

5. The present returns, it is true, do not represent every acre of land that has benefited by the annicut. It seems certain that here and there villages will be found where concealment to a considerable extent has been successfully practised; but such cases do not furnish a standard for estimating the amount of revenue that is withheld in the Delta generally. It is impossible that the Collector could have been imposed upon to the extent alleged. Colonel Cotton makes no allowance for the rule that was considered absolutely necessary of allowing two years of free enjoyment of the water before an additional impost would be imposed. The system of rents also renders it difficult to get at the true state of things. My report throughout, para. 76 particularly, points out that the authorities must be kept in ignorance of the real bearing of the new works as to the occupation of the lands under their influence till the system of settlement shall be reformed. The desired reformation is now commencing, and as it proceeds will clear up all doubts as to what the present returns should be. The survey of a few villages will show but little. Considerable progress must be made in a talook before general conclusions can be safely drawn.

6. Colonel Cotton is equally dissatisfied with the prospective estimate showing the probable ultimate returns, and complains in strong terms of the insufficiency of the rate of increase per acre, viz., 1¼ rupee, which I have assumed. It seems unnecessary to recapitulate the grounds on which this rate of increase was taken. They will be found in paras. 51 to 55 of the report. In para. 55 I pointed out that this increase did not represent the entire increase to be expected, which must embrace, besides direct augmented returns, the increase arising from the stability afforded to fluctuating revenue, from a discontinuance of remissions and the cessation of those heavy losses in capital and stock occasioned by inundations which it required years sometimes to replace before the ryot could recover his former position. The increase in sundry sources of revenue, as following an improved state of the country, was also mentioned. As regards the

the people at large, the ample supply of food held at their command must not be omitted, I observed, among the advantages derived, a benefit which the district had the good fortune to enjoy so largely during the drought of fusly 1263, A. D. 1853–54.

7. The increase of 1 ¼ rupee per acre is not the water cess, as Colonel Cotton seems to suppose (Memo. paras. 42 and 45), but, as explained in the report, it represents the probable increase per acre on the final re-adjustment of an assessment at present in a very confused state, and in many cases so high as to render an additional impost impracticable.

8. The simple fact that the present land revenue of the district was still considerably below the assets at the time of the zemindary or permanent settlement, notwithstanding the annicut and the outlay of money connected with it, was pointed out in para. 35 of the report, but not as an argument unfavourable to the work, though Government were entitled to expect the full amount of assets irrespective of any extraordinary expenditure.

9. The deterioration experienced in consequence of the decay of the manufactures of the district, did not fall under consideration in my report. It will probably be found that the increased and increasing foreign demand for its agricultural products has more than compensated for any loss under that head.

10. Viewed in its main and most important aspect, viz., that of a blessing to all concerned, I see no difference of opinion between the Memo. and the Report. In the matter of direct money returns there is a wide disagreement.

11. But the entire question of returns, present and future, is surrendered by Colonel Cotton in p. 47, where he says, " It must, however, be observed that the present population is not equal to the full cultivation of the Delta, even for paddy." Colonel Cotton's views as to the capability of the Godavery Delta are drawn from the circumstances of the Cauvery Delta. The population in the former he fixes at three-fourths of a million, while that of the latter is stated to be " nearly or quite two millions." The Godavery Delta, it is added, " will hold three millions, or four times its present population," and considering its advantages over the Cauvery Delta, " could, when filled up in population, pay 100 lacs, or about five times what it has paid without artificial advantages." It appears then that the population of the Godavery Delta must be quadrupled before Colonel Cotton's expectations can be realised. Can Colonel Cotton, from the experience of the past, assign a probable period for this consummation? His calculations of increase must remain in abeyance till the conditions on which they are founded are fulfilled.

Memo. p. 48.

Note.—These statements of the population do not correspond with the returns in the office of the Board of Revenue, but the argument is in no way affected by this circumstance.

12. In regard to the " artificial advantages " to be acquired by the Delta by means of the annicut, Colonel Cotton should not lose sight of the fact that the waters of the river have flowed through that tract, though uncontrolled, at all times, and that the presence of this water has had its effect in raising permanently the ordinary standard of assessment. And in connexion with this fact, I would call attention to p. 61 of the Report, where it is pointed out, as noticed by the Collector of Rajahmundry, that the ryot does not always require annicut water, and that he uses it or not according to circumstances, showing that a command of water is possessed in some seasons irrespective of the annicut. Lands so situated, it is obvious, are not likely to bear much additional cess, notwithstanding that the waters of the river have been brought under complete control.

13. Indications of cane culture are mentioned in para. 44 of the Memo. This commencement of investing capital in this way came incidentally under my notice lately, and I was given to understand that the speculation was likely to turn out well. More capital will doubtless be attracted to the locality if the returns of profit have not been exaggerated. The entire sugar-cane cultivation of the whole Presidency, however, in fusly 1266, A.D. 1856–57, was 32,637 acres, and that of Rajahmundry only 3,275 acres. If, as Colonel Cotton so stoutly maintains, the revenue authorities would not charge for annicut water, how comes it that the sugar-cane cultivation is so small, so much below his expectation of 100,000 acres? I believe and trust it will increase, but if it has not

done so with little or no charge for water, what may be expected from an enhancement of that charge?

14. But a check would be at once imposed on undertakings of this nature if the view enunciated by Colonel Cotton in para. 49 of his Memo. were generally entertained. "A very low assessment," Colonel Cotton thinks, "is decidedly objectionable on general principles." The expression "a very low assessment" is indefinite. There are limits beyond which the assessment cannot be carried consistently with the interests of the ryot, and the exigencies of the State will always prevent its being very low. After paying for outgoings, including the Government assessment and subsistence, the ryot must have a surplus for improvements. Without this both he and his farm, as well as the revenue of Government, must remain in a depressed state. If, in consideration of a heavy tax, Government is called upon to furnish means for improvements, the ryot is reduced to the condition of a tenant at will or a mere workman, and experience shows that work done in this way is the dearest of any. It seems quite necessary that the ryot should have capital of his own, and that he should feel that whatever he may lay out in improvements will be his own.

15. In advocating an assessment not "very low," Colonel Cotton places the ryot of India in the same category with the Pacific islanders and tenants in England. The analogy does not hold good in either case. The state of civilisation and motives to industry widely differ as regards the former, and in the latter the ryot of India is not a mere tenant, but to all intents and purposes owner of the soil, as nothing can prevent his exercising a proprietary power over it, so long as he pays the Government assessment. His tenure is more perfect than the right which it was hoped to create when the permanent settlements of 1802 were made, as it has been subsequently discovered that all that Government could make over to the zemindars under that settlement was their own right, which extended to a certain portion only of the produce of the land. As pointed out at the time by Colonel (Sir Thomas) Munro, if Government were disposed to give up their own revenue, as was done so largely at the settlement in question, the relinquishment should have been in favour of ryots, from among whom a class of substantial men would ere long have sprung up.

16. As regards the effects of a low assessment in leading to idleness and slovenly culture, the case of the enam tenures in India may, I think, be cited as a refutation of that view, and I find it stated that the tithe in England is even found to be a great hindrance to improvement. If Colonel Cotton is right, surely Government have been in error in reducing the assessment of every district, and the simplest plan would be to revert to the heavy assessments of last century.

Adam Smith.

17. As regards conclusions to be drawn from examination of small patches of produce, much caution is necessary, as not only is there a want of uniformity in the different fields of a village, but the capability of different parts of the same field is found frequently to vary. Such examinations, however interesting in themselves, must not be taken for more than they are worth, when the question of assessment is concerned. The adjustment of the assessment is a delicate operation, and much practical experience is necessary in the persons on whom the duty of fixing it may devolve. Colonel Cotton's remarks give the impression that the undertaking is easy, and that having estimates of the capability of the different classes of land, the whole work is, in fact, done. It is far otherwise. There are many disturbing circumstances arising from season, and the want of uniformity in the productive power of fields and tracts throughout, that point out that an estimate of the kind cannot be blindly applied to each field or tract, according to the class under which the assessor may place it. The average produce of each field must be correctly ascertained, and even then experience shows that the assessment cannot be finally fixed, as some correction must be first made to meet disturbing circumstances. "It is the nature of assessments proceeding from single fields to whole districts, and taking each field at its supposed average produce, to make the aggregate sum greater than what can be easily realised." The Collector has to make a further adjustment before a rate per acre can be finally applied to any field. A margin, in fact, to meet

Colonel Munro's Report on the Survey and Assessment of the Ceded Districts, 26th July 1807, p. 6.

meet all circumstances is necessary, and it is here that experience and sound practical views are so much needed.

18. Colonel Cotton glances at the desirableness of requiring the officers of the Department of Public Works to fix the assessment themselves. If, as shown above, matured experience in the particular line is required for this duty, it will hardly be supposed that the Maramut Department, whose habits of mind are chiefly familiar with strictly arithmetical processes, without any revenue knowledge, possess the necessary qualification. The whole tenor of Colonel Cotton's arguments show that he would speedily rack-rent every province, and that he could not refrain from making his works pay in this simple manner. But Government have already had ample warning of the consequences of erroneous views in fixing the assessment of the country, in the history of the survey and assessment operations of Tanjore, where the Meerassidars of the first talook surveyed and assessed, pointed to the fields which were ready for the sickle, and left the Collector to realise the survey assessment himself without their agency. Sheally talook.

19. The question of the assessment of Government has undergone mature consideration recently, and final orders as to the principles which should guide the settlement officer have been laid down by authority. The Honourable Court, in Despatch No. 17, of 1856, dated 17th December 1856, observe, with reference to the course pursued in the North Western Provinces of Bengal, that the operation of determining the assessment there has been declared to be "not one of arithmetical calculation, but of judgment and sound discretion;" and the Court state that they "are well satisfied that absolute accuracy cannot be attained." They go on to observe, that "the main point to be regarded is, that the assessment should be fixed at a rate sufficiently moderate to allow for errors of judgment on the part of the settling officer." From Government, 22d April 1857, No. 372, P. 20.

20. It seems important that these enlightened views should be borne in mind at all times, and that every tendency to a feeling of increasing the burdens of the people, for fear of their being idle, should be checked.

21. I would point out an inconsistency into which Colonel Cotton has been led in p. 57. So long as he is discussing the results of the Godavery Annicut, he expresses himself in strong language as to the false character of the accounts that are put before the revenue authorities, and the readiness with which the authorities in general lend themselves to the statements of their subordinate native officers; but when it is pointed out to Colonel Cotton that in Guntoor higher results have been attained than in Rajahmundry without an annicut or any extra expenditure, his answer is that the revenue of that district had been carried too high. The same administrative machinery, and the same means of check exist in both districts; and while their working has been so successful in Guntoor as to go beyond what was required, it will not be supposed that there has been such a complete break down in Rajahmundry as is alleged in the Memo. Report, p. 23.

22. As regards Guntoor, it is quite true that the assessment of some lands was burdensome, and that the poollery tax, which amounted to about 1,00,000 rupees, was a heavy drag upon the ryots. The former has been corrected, and the latter has been entirely relinquished. The consequence is, a higher revenue than before, as has been already reported to Government.

23. The foregoing remarks are intended to embrace the principal features of the question, and are sufficient, perhaps, to lead to a tolerably correct general view of it. To take up the minor points, as discussed in the Memo., would tend to no profit, particularly as the scientific survey now commencing will furnish correctly ascertained facts for data, which are necessarily, as already explained, to some extent conjectural. One point, however, it would be improper to pass over in silence. The increase of revenue already obtained occurs, for the most part, under the Toolia Bagah and Samulcotah Channels; but Colonel Cotton deprives the annicut of any share in producing this increase. "These channels," it is observed in para. 18 of the Memo., "were cut and improved two years before the annicut was begun." This fact, and the admission in para. 13, that much low land in the Delta had been relieved from excess of water by the new works, show that irrigation, to a very considerable extent, Commissioner's Report, para. 25 to 29. Colonel Cotton's Memo., paras. 17, 18, 24.

was enjoyed before the annicut was constructed, and confirm the view put forth in the Report, that a large increase per acre, such as would be obtained under ordinary circumstances when water is newly applied to unirrigated land, was not to be expected in the Delta of the Godavery.

I have, &c.
(signed) *J. Goldingham,*
First Member and late Commissioner,
Northern Circars.

Revenue Board Office, Fort Saint George,
22 May 1858.

From Messrs. *E. Maltby* and *W. H. Bayley* to *T. Pycroft*, Esq., Chief Secretary to Government.

Sir,

HAVING been allowed to peruse Colonel Arthur Cotton's strictures on our Report to Government, of May 1855, on the results of the Coleroon Annicuts, we have the honour to request that the enclosed reply may be submitted to Government.

2. You are probably aware that we were the only members of the Board of Revenue called upon by Government to report on this subject. The report on the Godavery and Kistna Hydraulic Works was reported on separately, by the Commissioner of the Northern Circars.

We have, &c.
Madras, 5 June 1858. (signed) *E. Maltby,*
W. H. Bayley.

REPLY to the "Memorandum" of Colonel *A. Colton*, dated 4th March 1858, impugning the Correctness of the Statements made in the Proceedings of the Board of Revenue, dated 21st May 1855, regarding the Hydraulic and other Public Works in Tanjore.

1. COLONEL A. COTTON, in his book, entitled "Public Works in India," revised edition, March 1854, having made certain statements regarding the results of the Coleroon Annicuts in the Tanjore district, and of the Godavery and Kistnah Annicuts in Rajahmundry and Masulipatam, their accuracy was denied in a pamphlet, dated 1854, written by Mr. Smollett, of the civil service.

2. On the 7th December 1854, the Government called upon the Board of Revenue to test the accuracy of these conflicting statements.

3. At this time the only members of the Board were Messrs. Maltby and Bayley, the senior member being employed on special duty as Commissioner in the Northern Circars. It was therefore by direction of Government that the two former gentlemen undertook to investigate the results of the annicuts in Tanjore; and as the districts of Rajahmundry and Masulipatam had not been under the Board's jurisdiction for five years, the papers connected with the Godavery and Kistna Annicuts were referred to the Commissioner.

4. The two members of the Board submitted their Report to Government on the 15th May 1855, and it is this Report (connected with the Coleroon Annicuts) alone that Colonel A. Cotton deals with in the "Memorandum" now under reply.

Part I. (on General Public Works in Tanjore for 50 years).

5. It was stated in page 19 of Colonel Cotton's book, and repeated elsewhere,* that Tanjore exhibited "the example of a system of moderate but actual improvement, steadily pursued for 50 years with unvarying success, raising the revenue from 30 to 50 lacs (500,000 *l.*) a year, while the saleable value of the land has equally advanced till it is now (allowing for the difference in

* Pages 20 and 62.

in the value of money) equal to the value of land in England; all this being accomplished, not by a sudden extensive outlay of capital, producing even temporary difficulty to Government, but by an average annual expenditure of only about 40,000 rupees (4,000 *l.*) a year, besides current expenses, for the repair of existing works." This Mr. Smollett characterised as a delusion (p. 11), and supported his views by tables of revenue for the last 20 and 23 years.

6. The Board reported, that on reference to the records it appeared that from A.D. 1800 (when Tanjore was ceded to us) to 1851 inclusive, the sum expended on works of irrigation and communication in Tanjore amounted to 52¼ lacs;* and that in the same period (excluding the first year of all †) the total revenue collections has risen from 31 to 48¼ lacs per annum, or an increase of 17¼ lacs.

7. They then proceeded to consider how much of this was due to the outlay on public works.

8. Colonel Cotton in his "Memorandum" endeavours to show that the Board were grossly in error throughout, and actuated by party feeling. He commences with his observations on the question just referred to, and points out first that the Board's estimate of expenditure is for 52 years, whilst he said 50 years.

9. It is to be explained that, though Colonel Cotton did mention a period of 50 years in his book, he gave no table of annual expenditure, or used any dates whatever to show when it commenced or ended; the book was probably written in 1852, and the Board's intention was to compare the outlay from the time of the acquisition of the district, up to 1851, which they supposed ‡ would be the latest date of Colonel Cotton's returns, and then compare the revenue receipts at the beginning and end of the same period. They did not suppose that Colonel Cotton meant strictly 50 years, neither more nor less. This would have made 1849 the last year, which did not seem in accordance with views written in 1852 as to the progress of Tanjore, up to that time. Even had they taken the years up to 1849 inclusive, they would not have been on the same ground as Colonel Cotton, for he states in his present "Memorandum," para. 6, that he omitted the year 1800; but no reference to this omission is made by him in his book. The Board were, therefore, left to their own judgment, and believed they were making a comparison which was in accordance with Colonel Cotton's period, and one which would honestly show the actual outlay and the increase of revenue from the time Tanjore came into our possession, up to the date of Colonel Cotton's writing.

10. If, therefore, the years 1800 and 1851 are to be struck out, 3 ¾ lacs must be deducted from the 52 ¼, leaving 48 ½ lacs expended in 50 years.

11. Colonel Cotton then adverts to the 9 ¼ lacs stated by the Board to have been expended on "Roads and Bridges," and included in their outlay estimate of 52 ¼ lacs. He admits that this formed no part of the 20 lacs he mentioned in his book as being the expenditure in Tanjore; and his explanation is as follows:—"There is no doubt that the sums expended on roads and bridges ought to be considered. The reason why they are not doubtless was, that they were not entered in the statement that I received."

12. That Colonel Cotton should not have noticed the omission of all works of communication in a statement prepared for the express purpose of showing the results of public works of India, and which contains strong denunciations against the roads of the country, is most extraordinary; and it is still more so when we turn to page 62 of that book, and find him distinctly stating that roads and bridges did form part of his estimate. His words are "Tanjore has been irrigated and drained, and provided with common roads and bridges, at an outlay of 20 lacs (200,000 *l.*) in all (besides repairs), and both the revenue and net income of the people have increased by at least that amount annually."

13. No

* Irrigation, 43 lacs; roads and bridges, 9¼ lacs.
† For reasons of which Colonel Cotton does not question the propriety (para. 6).
‡ Colonel Cotton was not in India, and could not be referred to.

13. No one has been more severe than Colonel Cotton on others for receiving statements and arguing on them without careful scrutiny, and this confession of carelessness on his part may perhaps be a useful warning to him hereafter.

14. The next objection made in the "Memorandum" to the Board's estimate of outlay is the one no doubt on which Colonel Cotton depends as being fatal to their conclusions; as it is not very clear in the latter part, it will be better to use his own words.

15. "Nothing but a violent bias could induce gentlemen to offer it as their opinion that in calculating the results of works all the cost of repairs for 50 years should be added to the first cost, and the total reckoned as the capital employed. I need not use arguments against so palpable a mistake. Of course I could not say positively what portion of the expenditure was properly capital, and what was for repairs, but when I allowed one-half for each, it was certainly quite sufficiently near to be substantially a true representation of the case, while to charge the repairs as capital was palpably a false view of the matter. Reckoning the total capital at 20 lacs, and the mean during the whole period consequently at 10 lacs, 20 lacs for expenses in 50 years, 40,000 rupees a year, would be 4 per cent. per annum supposing that the whole of this money was spent on the works executed for this capital; but this sum in repairs includes the cost of repairs of all the former works also, and cannot, therefore, be much out of the way."

16. The charge made by Colonel Cotton, though specious in appearance, is not fair. The question before the Board was not as to the total gain in a period of years from a certain amount of capital laid out, but it was as to the increase of revenue on a comparison of one set of years with another half a century subsequently, whereas the expenditure on hydraulic works referred to the whole continuous period.

17. Had it been a question as to the total gain, the Board would of course have sought to make out a more formal account of capital and revenue, as they did in the same report when they came to consider the result of the annicuts constructed in 1836. But the Public Works Accounts of the last half century are far too imperfect to admit of such a process. The difference between the Board's way of putting the case and Colonel Cotton's is simply this. He says the increase of revenue was caused by the expenditure of 20 lacs, besides repairs, and they say (even supposing these works were the sole cause of the increase, which they were not) the expenditure was 48 ½ lacs, including repairs. He speaks parenthetically of repairs without naming the cost; they think it necessary to point out what was the expenditure with their cost, as being better adapted for the information of the public. They had not the means of showing how much was spent on original irrigation works and improvements, and how much on repairs. Colonel Cotton estimates that out of a total, 40 lacs, 20 were spent simply on repairs. He admits this is a mere guess, and the Board have every reason to believe that it is an erroneous one, for they are aware that it is usual to use the term repairs where new works would be more appropriate. For instance, the deepening of an existing channel, the widening of existing head sluices, the strengthening of existing masonry works, are often spoken of as repairs, when, in fact, they are improvements or new works. The Board would, therefore, be inclined to estimate at least 30 lacs as capital,* and 10 lacs as *bonâ fide* repairs. But whether their estimate or Colonel Cotton's is nearest the mark, it is evident that there do not exist the means of stating exactly what was the expenditure on new works and improvements and what on repairs, whereas it is known and can be safely asserted what is the total expenditure, viz.,† 40 lacs exclusive of the outlay of 9 lacs on roads.

18. The Board repeat that the question placed before them by Government was simply what is the present revenue compared with what it was 50 years ago, and what sums have been expended by the State on public works. Their reply was that the present revenue is 48 ½ lacs, whereas on first occupying Tanjore

* Out of the 40 spent on works of irrigation.

† The statements of expenditure were obtained by the Board from the Department of Public Works, and were prepared by a professional officer.

Tanjore it was 31 lacs; and that the total expenditure on public works within that period had been 52 ¼ lacs. In that reply they perceive neither bias nor error. The only inaccuracy that may be charged against their statement is, that they omitted the cost of the establishment, which has been a permanent annual charge upon the State. If this had been included, another 3 lacs at least would have been added to the expenditure, and its omission certainly does not look like a "violent bias" against Colonel Cotton.

19. In para. 5 of the "Memorandum" Colonel Cotton writes, "The Board again say, it may be assumed that Colonel Cotton alluded not only to the Land Revenue, &c.; what can be the use of these insinuations? I expressly say the revenue of Tanjore; not the Land Revenue."

20. The Board take leave to explain that as Mr. Smollett, to whose pamphlet the Government called their attention, all along repudiated the idea of bringing the extra sources of revenue into the calculation, and seemed to argue as if Colonel Cotton had excluded them, they considered it right to point out that the indirect taxes or "extra sources" of revenue, such as those derived from salt, abkarry, stamps, sea customs, &c., were included in Colonel Cotton's estimate of returns, though they themselves were of opinion, for reasons detailed in their report, that it was an erroneous assumption to attribute the increase under these heads of taxation altogether to works of irrigation and communication.

21. In para. 7, Colonel Cotton writes, "The Board then proceed to show that the average of the last five years was 48 lacs, not 50, as I have stated. In the first place, I beg to observe that it was quite unworthy of the Board to argue the matter in this way, because I was evidently speaking in round numbers; and the getting rid of 1 lac at the beginning, and 2 lacs at the end, did not affect the substantial truth of what I was saying."

22. The Board had no intention to criticise, but they had before them a statement carefully prepared from their own records and those of Tanjore, showing the revenue of each year for a long series; and if the total of five years amounted, as it did, to 2,40,65,601 rupees, they could not enter the average of this at 50 lacs when it was 48,13,120 rupees. What unworthy line of argument there is in this they are at a loss to conceive.

23. He proceeds (para. 7), "My statement however was exactly right: first, the Board give the average, not of the last five years of the series of 50 years of which I spoke, but of the 52 years of which they had given the expenditure."

24. Now the fact is, Colonel Cotton never gave any series of years at all. He did not mention a single date in his book which could guide the Board, and he admits (para. 6) that in his 50 years he did not mean the first year, though he gives no clue in his book to such an omission. For want of this definition of what years he alluded to, the Board concluded he spoke in round numbers (which in the beginning of para. 7 he says he did), and naturally, and in good faith, concluded he meant from the time Tanjore came under British rule, to the latest date on which he could have had complete statements wherewith to draw his conclusions; and this was from 1800 to 1851 inclusive, or 52 years. (The subject has been already referred to, in paras. 8 and 9 of this paper.)

25. In para. 8, Colonel Cotton says the fifth closing years he spoke of were 1846 to 1850 inclusive,* the average revenue of which he gives at 49 lacs, after giving his version of the revenue of each one of these five years.

26. The Board will therefore give their version of the revenue collections of these same five years, as compared with Colonel Cotton's; and it is clear that he has entered the revenues of the five years ending with and including 1851, and not 1850. The Board's figures are therefore correct for the years he refers to. This is another of those careless statements on which Colonel Cotton founds his supposed refutation of the results shown in the Board's report.

---

* The "50 years" of Colonel Cotton's book, being 1801 to 1850, both inclusive, as it now appears.

	Colonel Cotton.	Board's Office.
	Lacs.	*Lacs.*
A. D. 1846 - - - -	51	51·46
„ 1847 - - - -	51 ½*	48·24
„ 1848 - - - -	48 ¼	46·30
„ 1849 - - - -	46 ½	47·96
„ 1850 - - - -	48	48·95
Average - - - -	49	48·58

27. So that, even if their former estimate of 48 ¼ lacs is disputed, this gives 48 ½ lacs, and not 49, as Colonel Cotton asserts.

28. Colonel Cotton proceeds to state (para. 9), "The average would thus be 49 lacs, but this average was undoubtedly below the real average revenue of the district at the time, on account of the very low prices of the last three years. The average was at least 50 lacs."

29. Colonel Cotton seems determined to uphold his estimate of 50 lacs, by calculating an average of certain years, and then asserting that this is not the real average. It is true, that prices were low in two out of the five closing years, but on the whole it is as good an average as could have been taken. If not, why did he take it? At all events, if the revenues of five successive years are specified by Colonel Cotton for comparison, it is absurd to say that their mean is not a true average. Surely he could not pick out all the high price years, and take the average of them.

30. Colonel Cotton then goes on to state, what has been the revenue in succeeding years, since his book was written; but this has nothing to do with the question at issue.

31. The Board in their proceedings of 1855, after showing that the whole revenue of the district had increased 17 ¼ lacs, that is, from 31 to 48 ¼ lacs, pointed out that 17 ¾ lacs of this 17 ¼, was an increase in the revenue from salt, abkary, stamps and sea customs, which they considered could not fairly be said to be the result of works of irrigation and communication; that even in the Sea Customs Revenue, the increase was not in export duties (which Colonel Cotton in para. 5 of his "Memorandum" notes as dependent on public works), and that almost all these were taxes newly imposed, after those five first years which had been taken as a period for comparison with the last five years; similar items of taxation, they observed, were at the same time imposed in other districts, and had in like manner, caused a considerable increase in their total revenue, even though no public works had been undertaken. The Board do not doubt but that the result of public works has been to add greatly to the wealth of the country, and thus enable the people better to bear taxation; but they deny the propriety of carrying every rupee of the collections under these heads to the credit of public works. The imposition of a new tax may raise the revenue considerably, without any reference to State or private improvements, as in the case of the Income Tax in Great Britain.

32. The Board not only argued against Colonel Cotton claiming these 7 ¾ lacs from "extra sources," but they also maintained, and gave full reasons for, the following opinion, viz., that the increase in Land Revenue was owing greatly to improved administration. They proved from reference of official papers, that during the first few years, which have been made the period of comparison with the last, the district of Tanjore was so mismanaged, as to call for the direct condemnation and interference of Government. It was a natural consequence that when a regular system of administration was introduced, the revenues of the district would increase. This was a very marked and undeniable case, but Colonel Cotton refrains now from all allusion to it.

33. The Board do not lay to the account of improved management, the whole increase of 31 to 48 ¼ lacs of annual revenue, but they have given their reasons for

* What Colonel Cotton enters for 1847 belongs to 1846, and so on all through.

for asserting that it can be accounted for without admitting the truth of Colonel Cotton's assertion, that it all arose from the outlay on hydraulic and other public works.

34. To meet the arguments referred to in the preceding paragraphs, Colonel Cotton has nothing more to offer than this (para. 12): "I shall not attempt to answer the Board's arguments, that the greater part of the increase cannot be ascribed to the outlay on public works."

35. It may therefore be inferred, that he was unable to meet their statements, for he proceeds to generalise by saying that no one knows better than the Board the effect of irrigation on the produce, and on the wealth of the people, and on the value of the land; and he subjoins a statement of the revenue of Tanjore, as compared with South Arcot and Madura; and another of the revenue of Rajahmundry as compared with Vizagapatam and Masulipatam. All this is an evasion of the point at issue, viz.: Has the whole increase in the annual revenues of Tanjore (17 ¼ lacs, including salt, abkary, stamps and sea customs), been entirely owing to the outlay on public works, or has it not? Colonel Cotton asserts it has, the Board asserts (and give their reasons, which Colonel Cotton declines to argue upon), that it has not. They acknowledge the very great benefits derived from public works, especially those planned and executed by Colonel Cotton, and they have dwelt on them in their report to Government, but they cannot go to the length of endorsing his extreme views.

36. In para. 15, Colonel Cotton notices that the increase in the Tanjore revenue has taken place, notwithstanding a reduction of 1 ½ lac a year, formerly levied as transit duties. He however omits to mention, that at the same time (A. D. 1844), the monopoly price of salt was raised from 105 to 120 rupees a garce, and that extra duties were levied in the sea customs in order to meet the deficiency of revenue from the abolition of the transit duties, as was noticed by the Board in para. of their proceedings of 15th May 1855. The Board, however, as before stated, do not consider that any fluctuations of revenue arising from the imposition or abolition of such a tax as this, are attributable to the construction of hydraulic and other public works.

37. The Board adverted in their proceedings of May 1855, to the fact, that, during the 35 years previous to the construction of the Coleroon annicuts, namely from 1801 to 1836, 30 lacs of rupees were expended on public works, and the annual increase of revenue was 15 lacs; whereas, during the 17 years since the annicuts were built, 20 lacs had been expended, and the revenue had risen only 2 ¼ lacs annually.

38. To this Colonel Cotton replies in para. 17: "On this I beg to remark: 1st. That the increase not being proportioned to the expenditure proves nothing, unless the Board had shown *that additional taxes had been levied* in proportion to the increase of produce, and diminution of the cost of transit. Everybody knows this has not been the case in Tanjore; by far the greater part of the lands that have been so benefited by the annicuts *pay no* additional tax whatever, while on the other hand 1 ¼ lac of extra taxes have been taken off. But the benefits of the latter expenditure appear plain enough, in the enormous increase of the saleable value of land of late years. This is the same refuge that has been occupied in the discussion about the results of the works in Rajahmundry. The revenue officers determinately refuse to levy the water rate, and then *concealing this fact*, argue that the results of the works are not so great as was expected." (The *italics* are Colonel Cotton's.)

39. These remarks will apply more to the question as to the direct result of the Coleroon Annicut constructed in 1836, and will be therefore noticed hereafter (para. 60). It will be sufficient here to state, that if the civil authorities have been remiss in increasing the taxation on the irrigated land, the charge is as true in respect to those who administered the affairs of Tanjore previous to 1836, as to their successors; and the unresolved question remains as before, viz.: How is it that, during the years most money was spent on works of irrigation and communication in Tanjore, the revenues did not increase nearly as much as in the years when the expenditure was much less?

40. The subject was not adverted to by the Board with any view of cavilling

at the outlay on public works; but it struck them on going over the annual accounts of past years, as being a caution against receiving too implicitly the doctrine, that the greater the expenditure on works of irrigation and communication the greater will inevitably be the increase in the revenues of the State.

Part II. (on the Coleroon Annicuts).

41. The 2d question discussed by the Board, and on which from being of later date, they were enabled to give a more decided opinion, was the effect of the Coleroon annicuts; Colonel Cotton having stated in page 208 of his book as follows:—"Is it surprising that in Tanjore 1½ million sterling have been added to the saleable value of the land, since the construction of the Coleroon wears? Those works were executed in 1836, and up to the present time there has been expended on them, and on various other improvements in the Delta of Tanjore, perhaps 10 lacs (100,000 *l.* besides the outlay for necessary repairs), and the revenue has increased from 42 to 52 lacs. The increase of value of land has been, so far as I have been able to ascertain, from about 20 rupees an acre, to 40 or 45 rupees, making a difference on 700,000 acres of, at least, 1½ million sterling."

42. The Board, in their proceedings of May 1855, by way of comparing the revenue before and after the annicuts, took the 10 years previous to 1836, and compared them with the 10-years following. The result was an increase from 44 lacs to 47; or 3,10,000 rupees per annum in the total revenues of Tanjore (including 3,000 rupees in extra sources); and another 90,000 rupees increase in the portion of South Arcot, irrigated from these wears, or a total of 4 lacs. What portion of this sum is due to the annicuts will be hereafter discussed.

43. But it appears that Colonel Cotton's comparison was made between the five years preceding the annicuts, and the five years ending in A. D. 1850: as he did not state in his book what years he took, the Board were left to their own discretion as to the number of years to be taken for comparison. They will, however, now give the result in Colonel Cotton's quinquennial comparison.

44. In para. 18 of his "Memorandum," Colonel Cotton gives the revenue collections from Tanjore for each of the five years preceding the annicuts, and the figures agree with those of the Board's records. The annual average revenue is 46 lacs.

45. The revenue of each of the five years ending in 1850,* has already been given in this paper (para. 26), and the average annual revenue is there shown to be 48½ lacs. This, compared with the five years before the annicuts, gives an annual increase of 3½ lacs only, even including 1 lac for South Arcot, and not 10 lacs, as stated by Colonel Cotton in his book.

46. How does Colonel Cotton attempt to prove the correctness of his 10 lacs in his "Memorandum?" By a method which cannot certainly be considered justifiable. He ignores the quinquennial series preceding the writing of his book (though he had expressly said, as quoted in para. 41 above, "up to the present time.")† and takes five years (1853 to 1857, both inclusive,) after his book was written! during which the revenue of Tanjore received an addition of 1,70,000 rupees a year (in 1852) by a large extent of Pagoda-Maniem land coming into the hands of Government.

47. No real reply has therefore been made to the opinion expressed by the Board, that Colonel Cotton had exaggerated the increase which the revenues have shown, since the construction of the annicuts. That increase consisted not of 10, but of 4 lacs, and a portion of it must be assigned to other causes.

48. It is also to be observed, that although when the revenue declined Colonel Cotton has shown himself alive to the effect of low prices (see *ante*, para.

* The last of Colonel Cotton's 50 years (para. 8 of his "Memorandum").

† If the five years ending in 1853 are taken (the last edition of the book being 1854) the results would be still more adverse to Colonel Cotton's assertions.

para. 28), he here claims for the annicuts a temporary increase of revenue, caused by the accident of high prices. In the years subsequent to his book, ending with fusly 1265 (July 1855 to July 1856), to which he now refers, prices ranged unusually high, and the revenue rose accordingly; but the fallacy of attributing this increase to the annicuts will be apparent from the result of the next revenue year, or the recently expired fusly 1266, when prices underwent some decline. The annicuts still furnished irrigation, the irrigated area under cultivation showed a small increase, and yet from prices making some approach to their ordinary level, the annual revenue fell off at once more than four lacs of rupees, as shown in the following statement—

FUSLY.	Usual Bazar Price of Second Sort Paddy per Garce, being the Average of 10 Years.	Current Price for these Years.	Irrigated Cultivation.	Assessment.	Rate per Acre.
	Rs.	*Rs.*	*Acres.*	*Rs.*	
1265	74	93	6,98,472	42,87,358	6 2 2
1266		87	7,00,679	38,74,683	6 8 5
			Decrease - -	4,13,675	

These fluctuations of revenue from changes in the price of grain, affect so vitally the question in dispute respecting the annicuts, that the Board took care in their report (of May 1855) to show how, under the Ooloongoo system which prevails in Tanjore, the rate of the tax on irrigated land rises or falls with the price of grain.

50. But in para. 22, Colonel Cotton is thus compelled to speak of his own positive and repeated assertions: "I must acknowledge that I have made a mistake in what I said in my book about the increase on the latter years. I have said that the revenue had increased from 42 to 52 lacs since the construction of the annicuts. The first average of 42 lacs was not that of the years immediately preceding the annicuts,* but of those preceding the series of great works for properly regulating the supply and distribution of the water. It was in 1828 that I was first ordered to Tanjore," &c.

51. It is not impossible that if the comparison had been made with earlier years, the increase in later years might have been greater; but as Colonel Cotton expressly stated that he reckoned from the years preceding the construction of the annicuts, the Board, of course, followed on the same ground, and they cannot permit him to controvert their statements by shifting the period to years before the annicuts were constructed, when it is their effect that was under consideration. The "mistake" is the more extraordinary since in the very passage in which Colonel Cotton insists on the increase of 42 to 52 lacs, he expressly mentions the year 1836.—*Vide* para. 41 of this paper.

52. Here, then, instead of comparing the two quinquennial periods, one immediately before the construction of the annicuts, and the other immediately preceding the writing of his book, Colonel Cotton, to avoid the unpleasant alternative of admitting that his assertions were not borne out by facts when tested by official returns, changes the first into a period some years before the annicuts were built, and the latter into a period subsequent to the writing of his book, and then says (para. 25), "Allowing for this, the statement I have made of an increase of 10 lacs, is perfectly correct." And, as if the more the blunders the more perfect the accuracy, he says in the very next para., "I have also made a mistake in stating the revenue of Tanjore at 52 lacs, though it had in one year risen to 51½. The average, as I have shown above, was at least 50,† exclusive of abolished taxes." The extraordinary excuse that he offers for his over-estimate

* It was 46 lacs, as shown in para. 44 of this paper.

† The revenue, including extra sources, never reached 50 lacs but four times in 50 years; and the two best revenue years in Tanjore were before the annicuts were built.

over-estimate (which he still insists upon is perfectly correct, allowing for errors) is as follows, para. 26 :* "I must acknowledge that this passage was carelessly written; but the matter had been examined (?) by me a hundred times, and I had fully assured myself of the truth of what I meant to have said."

53. In para. 25, Colonel Cotton states that the Board, in assuming 4 lacs as the increase of revenue from all sources subsequent to the annicuts, do not include that in South Arcot; but it will be seen from para. 42 of this paper, that they did include 90,000 rupees annual increase in South Arcot.

54. The Board, in their proceedings of May 1855, after showing that on comparing the years before and after the annicuts, there was a total increase of revenue of about 4 lacs annually, argued that it is an error to suppose that the whole of this is owing to the annicuts. They observed that the revenue effect of the annicuts must be judged of by the effect on the revenue derived from the lands watered by them, and not by the revenue of the whole district; neither should the increase in the amount derived from the salt, stamps, abkarry, &c.,† be credited to them. Comparing the six years before the completion of the annicuts, with the last seven years up to the date of Colonel Cotton's book, they estimated the annual increase of revenue in Tanjore, from the river-irrigated lands, at 1,77,952 rupees; to which they added 90,000 rupees for South Arcot, making a total of 2,67,952 per annum. From this they deducted 10,419 rupees, the average annual expenditure on repair,‡ leaving 2,57,533 rupees as the net annual revenue, or 41,20,528 in 16 years, or a return of 118 per cent. per annum on the original cost of the works, which was 2,17,389 rupees.

55. The computation thus made of a capital of 2,17,389 rupees against an increase of 2,57,533 rupees, was the best that the materials before the Board enabled them to make. They obtained those materials from the Department of Public Works, and framed their calculation on the same principles as had been followed by the Commissioners on Public Works in making their estimates of the result of hydraulic works. But the Board omitted to make an allowance for the expenditure incurred by Government on account of "Establishment," which would probably amount to a lac of rupees. The result which they exhibited of the gain from the annicuts was, in consequence, over the mark, rather than under, and they cannot be therefore thought to have shown any "bias" against Colonel Cotton.

56. The Board further observed that the good result of the annicut was not limited to this pecuniary advantage, and they referred to the saleable value of land having risen 100 per cent., and to the discontinuance of "remissions" on account of short produce; and even as regards the increase of revenue, they pointed out that in many years, when the revenue fell short, the advantages of the annicuts were peculiarly conspicuous.

58. Colonel Cotton does not notice the correction made of his estimate of revenue increase (from 200 per cent. per annum to 118 per cent.), but says, (para. 27), "I do not go into all the details which the Board dilate upon in the following paras. Though generally intended to show the advantages of the annicuts, all such writing tends to obscure the truth. The broad facts as I have stated them, I beg to say, show the matter in its true light, and leave no possible room for mistake."

59. The Board here leave this part of the discussion, satisfied to place the result of their investigation against Colonel Cotton's "broad facts."

60. The Board must now return to para. 17 of Colonel Cotton's "Memorandum" quoted in para. 38 of this paper, which requires explanation, not so much for Colonel Cotton as for Government. He asserts that the effects on the revenue would have been much greater if a proper additional tax had been levied for the water supplied, but that the revenue officers determinately refuse to

---

* It is contained in the "revised Indian edition of March 1854."
† The increase in these "extra sources" of revenue was under 3,000 rupees during this period.
‡ For the mode of calculating the repairs, see para. of Board's Report.

to levy the water rate, and then concealing the fact,* argue that the results of the works are not so great as was expected.

61. It has already been shown that an additional revenue of upwards of two lacs of rupees a year has been levied from the lands under the annicuts, and this was of course levied from lands which formerly were not irrigated, but are so now; or else on lands which now yield regularly two crops, instead of one. So much for Colonel Cotton's assertion that by far the greater part of the lands that have been benefited pay no additional tax whatever. It appears from the correspondence which took place when the annicuts were proposed, and in which he himself bore a part, that their object was chiefly to restore the deteriorated irrigation of the District of Tanjore, and, therefore, it was not to be expected that an additional tax was to be levied on lands which were already taxed for an irrigation that had become defective. The subject was not lost sight of by the revenue authorities, and Mr. Kindersley (than whom no man knew Tanjore better), in 1838 distinctly stated, in regard to the annicut, that "its primary object was not to increase, but to keep up the cultivation and revenue; not to convert a desert into a garden, but to prevent a garden becoming a wilderness." There are peculiarities about Tanjore which should be considered, with reference to expectations of obtaining a very great increase of revenue from converting unirrigated land into irrigated, and from making single crop land yield two crops. In the first place, almost the whole area of Tanjore commanded by the river was under irrigation before the annicuts were constructed. Though the annicuts restored what had become deteriorated (chiefly by the silting up of the river Cauvery), it did not effect much (nor was it expected it would) in conveying water to higher levels, so as to bring under its influence lands hitherto unirrigated. Secondly, as regards increase in produce, it is known that the rice cultivation of Tanjore commences with the river freshes of July and August, and is brought to maturity by the rains of the N.E. monsoon in October and November. There is no storing of water in tanks in Tanjore, and when the monsoon is over, there is little or no water available for a second crop.

62. Colonel Cotton seems to think the assessment on the land should have been raised in consequence of the cost of transit being less than it was; but the means of transit in Tanjore are yet very indifferent, and even if it were better, the Board of Revenue would (as they think, rightly) object to making this a plea for now enhancing the land assessment.

63. Colonel Cotton also deprecates the non-imposition of an extra tax on the lands held "free" by grants of the former or present Government. It is to be observed that most of these rent-free lands have always been classed as "irrigated;" and it would be as unjust to put an extra tax upon them, as it would be to enhance the assessment on Government lands of the same classification. There are, no doubt, some rent-free lands which were not irrigated at the time of their gift, but are so now. There has been a discussion as to whether the terms of their grant admit of the imposition of an extra tax for the use of water, and it has eventually been ruled that they are not exempt, and perhaps some 15,000 or 20,000 rupees a year may be realised from them.

64. The next question is with regard to the saleable value of land. The Board in their report to Government pointed out this as a material advantage gained by the annicuts chiefly, and estimated the increase at double, or from 80 to 163 rupees per vaylie (of 6 $\frac{6}{10}$ acres); and they referred to a case where 138 vaylies were mortgaged for 200 rupees a vaylie. Colonel Cotton, in page 208 of his book, states that the selling value of land has risen from 20 to 40 or 45 rupees an acre; that is, from 132 to 264 or 297 rupees per vaylie; and in para. 35 of his "Memorandum" he says, 340 rupees per vaylie.

65. The revenue authorities have no official cognizance of private sales of land, and therefore the Board could not speak so decisively as in matters of revenue account, but their information was chiefly derived from the Report of the Collector, who had been many years in Tanjore, and who had taken the opportunity

* This imputation is beneath notice.

opportunity of examining several deeds of sale and mortgage. Colonel Cotton states that his information is derived from the present Collector, and also from the same officer as the Board referred to, but as he gives no data or memoranda to prove his statements, the Board must abide by their former estimate.

66. Colonel Cotton then deals with Mr. Smollett, and with the Board's view of that gentleman's pamphlet. Para. 29 of Colonel Cotton's "Memorandum" commences thus: "In para. 28 the Board think proper to say Mr. Smollett's figures are found, on examination, to be correct. They a little further on say, the years which he selected in his first pamphlet were open to objection, as not giving a fair comparison. How these two sentences can be reconciled I cannot guess."

67. There is no intention of reconciling them in the sense of making them express the same thing. Mr. Smollett gave long tables of the revenue of each year, and these were tested by the Board's records, just as Colonel Cotton's would have been, had he given any. This was the first process. They were, as far as they went, found correct; but during the next process, which was to see if they went far enough, they were found deficient, and were condemned as not giving a fair comparison; just as Colonel Cotton's comparative years, taken from a period subsequent to the printing of his book, are now condemned for going too far. Colonel Cotton calls this omission of Mr. Smollett's a "flagrant act, upon which the Board, I am grieved to say, have nothing to say expressive of abhorrence of such a proceeding."

68. In the same para. he continues: "Mr. Smollett endeavours to make these years prove exactly the opposite of what they truly show, and most wickedly thereby doing his utmost to prevent the prosecution of works which had thus palpably and notoriously saved millions of people from a calamity which cannot be calculated." * * * * "what but overwhelming caste feelings can be supposed to have blinded faithful and honourable men to pass over without one word of conscious indignation such an attempt by means of a garbled return to propagate a view which, if it could in the present day be adopted, would do much immeasurable mischief."

69. The Board had before them for consideration Mr. Smollett's revised edition, and that gentleman might very reasonably have objected to expressions of abhorrence at omissions in a table which had been corrected by him. The Board were not bound to notice Mr. Smollett's first edition more than Colonel Cotton's first edition.

70. The Board did not think it necessary in their report to Government to dilate much on Mr. Smollett's version of the Tanjore revenue. They pointed out that his conclusions drawn from the demand instead of the collections of successive years were valueless, and noticed that he argued from the revenues of the whole district, whereas the annicuts only affected a portion of the district, so that his statements were open to the same objections as were made to Colonel Cotton's; and the Board took special pains to show that even a decrease in the revenue did not necessarily tell against the annicuts, inasmuch as in the years when they brought in a very abundant supply of water, and increased the produce and breadth of cultivation, the revenue often diminished in consequence of its being dependent on the price of grain; and they explained these results by annual tabular statements showing what would have been the revenue at ordinary prices. In short, they ignored Mr. Smollett's disparagement of public works.

71. The Board certainly did assert, and do now assert, that "Colonel Cotton over-estimated the profits of the general maramut works in Tanjore;" and Colonel Cotton, in paras. 31 and 32 of his Memorandum, endeavours to refute this by giving a table of the revenues of Tanjore (including the revenue from salt, stamps, &c.) for every year from 1800 to 1857 both inclusive.

72. The Board cannot admit that this table improves Colonel Cotton's case. In the first place, he breaks it up into decennial series, giving the average of each, but omitting to include two of the best years "as they would entirely vitiate the averages." This mode of proceeding is somewhat akin to Mr. Smollett's omission, and is, to say the least, a departure from the professed object of averages,

averages, especially when two years, which would tell against what the party wishes to prove, are omitted from the calculation though entered in the table. In the second place, he brings the table up to 1857, or six years later than the date used in his book, and in this way he expects to refute the Board's statements, which of course could only have reference to the period stated in that book. Lastly, as before observed, statements of the revenue of the whole district are not a fair representation of the effects of the annicuts, which only irrigate parts of the district, and to attribute every rupee of increase derived from the salt, stamps, and spirit taxes to improved irrigation is a fallacy.

73. The Board having thus, as they trust, shown that their report of May 1855 was carefully prepared, with a scrupulous desire to arrive at just conclusions, and to point out the full benefits which have resulted from those most valuable works, and having, as they believe, successfully met every one of Colonel Cotton's objections to that report, must leave it to those who will have to dispose finally of the matter to decide whether the following comments of Colonel Cotton in para. 36 are justifiable.

74. "How can I conclude this paper without expressing my surprise, for I have had too long experience of the strength of caste feelings in the revenue officers to expect a paper from most of them which is free from conclusions arrived at manifestly under the influence of that bias, but my sorrow to see a body of faithful men when called upon solemnly by the Government to give a judicial decision upon a vital point in the question of the management of the country, endeavouring as far as possible to shelter this most wicked attempt to deprive the country of the works upon which not only wealth depends, but life and death."

75. In para. 39, Colonel Cotton says, "Here was an opportunity given to the Board to show that they were above all minor feelings, and when called upon could and would give a manly, conscientious, and unmistakable verdict in a case so vitally affecting the welfare of millions."

76. The Board purposely avoided assuming the position of a judge between two contending parties. They saw that the assertions of neither would stand the test of that investigation which the Government directed them to make, and their report was for the information of Government, and not to enable either pamphleteer to claim the award of accuracy. It was to the instructions of Government and not to the expectations of Messrs. Cotton and Smollett that they paid attention; and their instructions were as follows:—"The Board are aware that the correctness of the accounts given by Colonel Cotton in his publication have been impugned, and other writers have argued that the large returns anticipated from the outlay on these works have not been or cannot be realised. It is with a view of clearing up all doubts on this subject, so far as it is possible, that the Government have called for these reports, and it is, therefore, of the utmost importance that their accuracy should be rigidly tested by the Board both in the Revenue and Public Works Department." *

77. The Board cannot but think that any one reading their report will perceive that they have set forth most unreservedly the great success of the works of irrigation in Tanjore, especially the annicuts constructed by Colonel Cotton, but the offence taken by him seems to be that they did not go far enough in their eulogies of him, or their condemnation of his adversary.

78. As to entering into the general subject of the advantage of a liberal outlay on public works, the whole matter had been lately most fully and ably discussed in the First and Second Reports of the Public Works Commissioners, and the Board were not called upon to undertake what would have been a work of supererogation, however much it might have been in accordance with Colonel Cotton's wishes.

79. In para. 41, Colonel Cotton refers to Mr. Smollett's written assertion that the Godavery Annicut was a "gigantic swindle," and thus proceeds:—"This is the ground taken up by the gentlemen whom the Board endeavour to shelter; was

* At this time the Public Works Department was connected with the Board of Revenue.

was it too much to expect that a body of conscientious men would in an honest, manly, and conscientious manner express what is most assuredly their real opinion." * * "They know the truth of the case, and they write a long report calculated as far as possible to shelter the party which holds the view they know to be the false one. Can we be surprised if shortly gentlemen, who brought to a decisive test of this sort, utterly fail, are set aside, and other agents are sought for to carry out God's purposes of mercy to India?"

80. The Board do not know exactly what construction to put on Colonel Cotton's prophecy as to their being set aside; but with regard to this exhibition of petulancy, they have only to observe that the expression used by Mr. Smollett occurs in a pamphlet bearing date 30th June 1856, or more than a year after they had submitted their report. No such expression is to be found in the pamphlet, to which their attention was directed by Government. It was not possible, therefore, that the Board could have seen it, or tacitly admitted its truth.

81. With the same disregard of dates Colonel Cotton says in para. 44, "There is one passage in Mr. Smollett's pamphlet which I am surprised the Board do not notice. It seems to me that they might heartily have supported him in that without any suspicion of their motives, and that is where Mr. Smollett recommends that I should receive a grant of maniem land of 2,000 acres in the Delta of the Godavery." * * "Such a proposal seems to me unexceptionable, and it seems to offer a good opening for the Board to express their further approval of Mr. Smollett's views." However Mr. Smollett's ridicule might have provoked Colonel Cotton, it is only necessary to observe as regards the Board's possible view of it that it appears in the pamphlet above referred to which was written a year after the Board's report. Colonel Cotton might, therefore, in this case, as well as the other, have spared himself his remarks.

82. In conclusion, the Board assure Government that they have felt it imperative upon them to correct the mistakes into which Colonel Cotton has fallen regarding their report, but they have returned to the subject with reluctance. It is far more satisfactory to them, as their records show, to advocate the cause of hydraulic improvements than to enter into controversies regarding their precise value. The present discussion is, however, not of their seeking, and they must deplore any obstacles which are likely to retard the spread of public works, whether they arise from the attacks of open assailants or from doubts occasioned by the exaggerated statements of over sanguine partisans.

83. With respect to the Coleroon annicuts the Board took pains to prove that those works had yielded to Government a profit of no less than 118 per cent. on the capital expended in their construction, besides rendering the revenue of the Tanjore Delta more secure and adding largely to the wealth and prosperity of that province. Colonel Cotton is so little satisfied with this result as to accuse the Board not of mere inaccuracy, but of an unfair bias and a wish to suppress the truth. They, however, feel thorough confidence in the general correctness of their report, and believe that the results noted in it will be considered as sufficiently testifying to Colonel Cotton's skill, and sufficiently encouraging for Government to persevere in improving the irrigation of the country.

Madras, 5 June 1858. *W. H. Bayley.*

No. 23.

From *G. N. Taylor*, Esq., Acting Collector of South Arcot, to *W. H. Bayley*, Esq., Secretary to Government, Revenue Department, Fort St. George.

Sir,

I HAVE the honour to forward, for submission to Government, a short paper which I have written in correction of certain statements and figures occurring in para. 16 of a memorandum published by Colonel Arthur Cotton, on the causes of a recent breach in a branch of the Godavery Annicut.

2. Colonel

2. Colonel Cotton's pamphlet is, I believe, an official paper and printed copies have been circulated to public officers in every district of the Presidency. I refrain from entering into any discussion on the subject of which he writes in the paragraph alluded to, but it has appeared to me proper to bring to notice officially the errors into which he has fallen in regard to the revenues of the Sub-division of Rajahmundry.

I have, &c.

South Arcot, Collector's Cutcherry, Cuddalore, 31 May 1858.

(signed) *G. N. Taylor*,
Acting Collector.

MEMORANDUM.

Colonel Cotton's printed memorandum on the late breach in the Godavery annicut having reached me only within the last few days, I have been unable to take earlier notice of the remarks which he has been led to make regarding the increase of revenue in the Sub-division of Rajahmundry. I have no intention to discuss in this place the merits of the settlement which is called in question by Colonel Cotton, but I desire to correct the erroneous impressions which his observations, evidently written under great misapprehension, are calculated to convey.

In para. 16 of the paper in question, after stating that the present officiating Sub-Collector had shown him a letter prohibiting a departure from the terms of my settlement, Colonel Cotton proceeds to say, "as the whole former revenue was only four lacs, this prevents him (Sub-Collector) from levying more than 40,000 rupees." The inference to be drawn from this statement and from the remarks which follow, clearly is, that the former revenue independently of the annicut was four lacs, and that the present revenue is 4,40,000 rupees, and will continue at the latter figure until the survey. This, however, is far from being the fact. If by former revenue is meant the actual collections realised from the three talooks of the division in former years, the sum of four lacs is rather above the average. On referring to official returns in my possession, I find that the average collections for a series of years before the construction of the annicut, amounted to 3,75,000 rupees, and a paper recently received, gives the average of the last five years of the series (fuslies 1251 to 1255) as only 3,55,000 rupees. In the fusly year 1256, when the annicut was commenced, the collections were, however, a little above four lacs, the average of the succeeding six years (fusly 1257 to 1262) was nearly 4½* lacs, and the actual collections from the three talooks in each successive year since fusly 1262 have been in round numbers, as follows:

	Rs.
Fuslies 1263	4,73,000
„ 1264	4,74,000
„ 1265	5,20,000
„ 1266	5,44,000
„ 1267	5,57,000

The collections of the current fusly (1267) are not yet complete; the figures opposite to that year represent the demand. But as the uncollected balance for fuslies 1265-66 was only a few hundred rupees, there can be little doubt that the demand for fusly 1267 will be similarly realised. The present revenue therefore is 1,17,000 rupees above the limit supposed by Colonel Cotton.

Rs.
5,57,000
4,40,000
1,17,000

The settlement to which exception is now taken was made for fusly 1265, not by an addition of 10 per cent. to the former, but to the present revenue, *i. e.*, the revenue of 1264. It is shown by the above returns that the revenue of the current fusly (1857-58) from the three talooks of the Sub-division is 83,000 rupees in advance of the collections in fusly 1264 (1854-55); 1,10,000 rupees, or nearly 25 per cent., above the average of the six years immediately following the commencement of the annicut; 1,82,000 rupees, or nearly 50 per cent., over the average† former revenue; and a trifle more than two lacs, or 57 per cent. above the average collections from fusly 1251 to 1255. I am not aware of

* 4,47,000.

† 3,75,000.

of any error in the above figures, but believe that the records of the Collector's or the Sub-Collector's office, will prove them to be correct.

With respect to the watered area, it is impossible to determine anything with certainty until a survey is made. Colonel Cotton assumes the watered area of the Sub-division to be 200,000 acres, which, according to district accounts, is about equal to the entire culturable ayacut of the three talooks. His estimate is, I think, in excess of the truth; but assuming it to be correct, as the present collections are nearly two lacs of rupees above the former revenue, the increased teervah is at the rate of one rupee per acre. In advocating a survey, I have so repeatedly pointed out the palpable inaccuracy of the present district accounts, that I have no wish to go over this ground again. I suppose, however, that in the absence of more accurate returns, the revenue officers are compelled to accept the talook and village accounts for what they are worth, to check them by all available means, and to assess accordingly. The difficulty of this process can only be properly understood if we attempt to realise the hopeless confusion into which lands, classes, fields, and teervah must inevitably fall where a village has been rented out in common for a number of years. As the joint rents could not be disturbed until the survey, the object of my settlement was to enhance meanwhile the collective demand upon the ryots in a tangible form; and to secure a gradual increase to the revenue, without depending upon doubtful returns of watered area. I am not in a condition to compare the results with other parts of the Delta, where a different course has been pursued, but so far as the circar lands are concerned, I believe the comparison would not be unfavourable to the sub-division.

G. N. Taylor, Sub-Collector of Rajahmundry,
Cuddalore, 29 April 1858. and Acting Collector of South Arcot.

Revenue Diary, 17th April 1855, Nos. 15 and 16.

Para. 1. In the proceedings above recorded, the Board of Revenue and Mr. Goldingham, late Commissioner in the Northern Circars, furnish in compliance with the requisition of Government contained in extract Minutes Consultation 7th December 1854, No. 1592, information regarding the effects of the Coleroon

roon Annicuts in Tanjore, and Godavery Annicut in Rajahmundry, on the revenues and prosperity of those districts. The circumstances which led to the call for this information, and the object which the Government had in obtaining it, are stated in the resolution of the above date. It might be here briefly mentioned that the correctness of certain statements made by Colonel Arthur Cotton of the Engineers in his book on Public Works in India, regarding the results obtained and expected from the great works of irrigation on the Godavery, the Cauvery, and the Coleroon, which were planned and executed by him, having been impugned, and certain other writers having also argued that the large returns from the outlay on these works had not been, or could not be realised, the Government were most anxious that the matter should be fully investigated and finally set at rest. An opportunity for this purpose offered itself by the receipt of a report, dated 23d September 1854, from Mr. G. N. Taylor, the Sub-Collector of Rajahmundry then in charge of the district, showing the effects of the Godavery Annicut and its subsidiary works upon the general circumstances of the district; but as this report was unaccompanied by any opinion from the Board of Revenue, the Government resolved on having the statements it contained carefully tested. The Sub-Collector's report and statements, with others that had been received from the officers administering the affairs of the Tanjore and Guntoor districts bearing on the subject of the advantages derived from the annicuts in those districts, were accordingly sent to the Board of Revenue, and the Commissioner of the Northern Circars; the Commissioner to report on the results in the districts under his charge as affected by the Godavery and Kistnah Annicuts, and the two other members of the Board of Revenue upon the results in Tanjore and South Arcot, as affected by the Coleroon Annicuts, for the above purpose; and these authorities were informed that as it was intended to publish all these reports for general information, the Government were very desirous that they should exhibit with the strictest accuracy possible, and with the utmost impartiality, the results of the outlay on these important works.

2. The two reports of the Board and of the Commissioner having been forwarded to Colonel Cotton, have elicited the two papers, dated 19th September 1857 and 4th March 1858, and these again have a rejoinder from the Commissioner (who has now removed his seat at the Board of Revenue), dated 22d May 1858, and another from the two members of the Board who reported on the southern districts. It is not the desire of Government to enter into a discussion of the various, and in some instances, conflicting statements contained in these papers; the matter appears to have gone to a sufficient length, and as any further agitation would lead to an interminable controversy, the Government resolve to direct in pursuance of the intention of the order of the 7th December 1854, that the whole of these papers be printed, and copies of the compilation forwarded for the information of the Honourable Court of Directors, who will thus have the opportunity of forming their own opinion of the value of the different statements.

3. The Government have recently received a communication from Mr. G. N. Taylor from South Arcot, the district to which he now stands appointed Acting Collector, in reply on some remarks reflecting on his management of the Subdivision of Rajahmundry, which appear in a printed pamphlet by Colonel Cotton, and designated a "Memorandum on the late breach in the Murdoor section of the Godavery Annicut." As bearing on one of the points in discussion, the Government resolve to have it printed and submitted to the Honourable Court with the other papers.

4. As regards that part of the discussion which relates to the "area under the influence of the Godavery and Kistnah Annicuts, and the returns which should have been obtained from those works," and regarding which there are no absolute data at present, the Government would remark, that in reviewing on a recent occasion a report furnished by the Acting Collector of Masulipatam, on the effects of the two annicuts on the revenues of that district, the Government resolved on deputing a revenue officer to the two districts of Rajahmundry and Masulipatam, for the special purpose of ascertaining, in communication with the district engineers, the actual area irrigated in a certain number of villages under

under the influence of the annicuts and their increased produce. Mr. Dykes has been directed to undertake this duty, and it is to be hoped that his inquiries will set at rest the disputed point.

EXTRACT India Political Narrative, North Western Provinces; October, November, and December 1839.

77. RANA MOHUNDUR SING, chief of the Hill State of Bughat, demised on the 11th July 1839, without direct heir, and as there appeared in the present case no special reason for deviating from the rule by which jagheers and other maafee tenures lapse to the State on failure of heirs entitled to succeed to them, the estate was authorized to be sequestrated. Subathoo.

78. The annual revenue of the estate is estimated at *Rs.* 2,855. 3., out of which pensions to the extent of 1,282 rupees have been assigned to members of the late Rana's family, and all incumbents at present enjoying jagheer or maafee lands have been permitted to retain them during their respective lives.

79. An establishment at a monthly expense of 78 rupees has been sanctioned for the management of the estate.

80. The Political Agent at Subathoo submitted a recommendation that the estate be continued to Beejah Sing, the younger brother of the late Rana (now 60 years of age), during his life, and on condition of his paying an annual tribute of 800 rupees, and guaranteeing pensions to the extent of *Rs.* 1,080. 13. to other members of the family; but there appeared no grounds for adopting Colonel Tapp's suggestion.

81. The Political Agent also submitted a proposal from the Raja of Putteealah to purchase the escheat in question for the sum of 1,50,000 rupees, with a view to re-annex it to the other portion of the Bughat estate, which was sold to him for a lac and 80,000 rupees, shortly after the Hill Provinces had been acquired by us, but the proposition was deemed inadmissible.

EXTRACT Political Letter to India, dated 28 April (No. 10) 1841.

Death of Rana Mahunder Sing, Chief of the Hill State of Bughat, and lapse of that state to Government. Its annual revenue is estimated at *Rs.* 2,855. 3.

45. WE are unable to understand without explanations, which are not given, how this estate can have lapsed to Government when the chief has left a younger brother, and had himself succeeded to the estate by birth, not by adoption; Mr. Metcalfe states that Beeja Sing, the younger brother, never expected, and was never intended, to inherit the estate; but it was not without necessity that the Governor-general called upon Mr. Metcalfe, and the agents at Umballa and Subathoo, for a report (which will of course be transmitted to us) on the rights of collateral heirs in the Hill Provinces, especially as the admission of a distant collateral as successor to the Jheend State is *primâ facie* inconsistent with the decision in the present case.

(No. 18.)

POLITICAL DEPARTMENT.

To the Honourable the Court of Directors of the East India Company.

Honourable Sirs,

DURING my residence at Simla, I received a petition from Bijye Sing, brother of the late Mohundur Sing, of Bughat, claiming as his inheritance the family estate which had been in the possession of his late brother, but appropriated by the British Government on his death.

2. I requested Mr. Clerk to place before me the circumstances of the case, and I have the honour to enclose his letter to Mr. Maddock.

3. I entertained no doubt that Bijye Sing had a just claim to his late brother's estate, and I desired his attendance at Kussowly, which is part of the property, and there informed him that he was placed in possession of his inheritance. Bijye Sing, who is an old man without children, offered the mountain of Kussowly as a nuzzur to the British Government.

4. I declined the offer in that form, but accepted the property for an ample compensation in money which I informed him he should receive.

5. He will receive 5,000 rupees.

6. I subsequently, in order that the act of justice might be complete, desired Mr. Clerk to have the sum paid to Bijjee Sing at once, and likewise the annual value of the whole estate, from the time of Mohundur Sing's death, to which he seemed to me to be equally entitled.

I have, &c.
(signed) *Ellenborough.*

Camp, Ferozepore, 12 December 1842.

EXTRACT Political Letter to India, dated 4 October (No. 30) 1843.

Answer to Political Letter from the Governor-general, dated 12 Dec. (No. 18) 1842.

Restoration of the lapsed Hill Estate of Bughat to Beijee Sing, brother of the late Rana Mohunder Sing.

118. MR. CLERK's report of 10th November 1842, is quite conclusive in favour of the propriety of restoring this petty estate to the family of the late chief, which is in entire conformity with the opinions expressed by us in para. 45 of our political letter dated 28th April (No. 10) 1841.

119. The Governor-general very properly rendered this act of justice complete by making over all the revenues which have accrued since Mohundur Sing's death.

120. The new settlement of Kussowlie, which had been somewhat prematurely formed in the lapsed territory, was offered by Beejee Sing as a nuzzur to the British Government. The Governor-general, in a laudable spirit, declined the offer, but accepted the property for a pecuniary compensation, which has been fixed at 5,000 rupees.

(No. 19.)

FOREIGN DEPARTMENT.

To the Honourable the Court of Directors of the East India Company.

Honourable Sirs,

I HAVE the honour to solicit your instructions, upon a reference made by the Superintendent of the Hill States, through the Chief Commissioner of the Cis- and Trans-Sutlej States, regarding the succession to the chiefship of Bughat, consequent on the death, in January last, of Bijye Sing, the late Rana.

2. There is no direct heir to the estate; the nearest claimant is a cousin of the Rana's, named Omed Sing. Under these circumstances I might have been disposed to entertain the question whether the estate should not be regarded as having lapsed to the British Government; but referring to your Honourable Court's despatch, dated 4th October 1843, No. 30, I observe that you expressed your

your concurrence in the views of Mr. Clerk, stated in 1842, according to which Bijye Sing was recognised as successor to his uterine brother, the former chief; and the tendency of those views seem to be, to allow collateral succession to such chiefships as Bughat in any degree, however remote, that conforms with or is not opposed to the customs of the family or of the tribe.

3. I have therefore thought it right to refer, for your Honourable Court's instructions, the question which has now come before me for determination. I shall be glad to be in early possession of your sentiments upon it. Meanwhile the Superintendent of Hill States has been directed to assume the management of the estate for the present, making a suitable provision for the family not exceeding the net revenues of the country.

4. In referring this particular case for your instructions, I think it proper to point out the expediency of taking into your consideration the general question of escheats in the Hill principalities.

5. These States, which were of trifling importance when they first came under British protection, will rise in value with the extending cultivation of tea. At present, if we wish to establish a tea nursery, or a cantonment, we have to pay for the little patch more than the revenues of the whole state.

6. If the decision of your Honourable Court, in the case of Bijye Sing, is understood to have established a broad rule for admitting the claims of collateral heirs, even in a remote degree of kinsmanship, then there is a distinction made between the Hill States and jagheer tenures in our other provinces, for which, in my opinion, no adequate reasons can be adduced.

Court's Letter, No. 30, of 4th October 1843.

7. In the Koomharsein case, the renewal of the grant in favour of a collateral heir who has rendered services to the British, was perfectly in accordance with the prerogative of the paramount power to resume or continue a lapsed jagheer to other than direct heirs: it did not trench at all upon the general question to which I am adverting, and differed in that respect from Bijye Sing's nomination to the chiefship of Bughat. Mr. Clerk, in advocating Bijye Sing's claims, did not make it a special case. He seemed to base his arguments on two prominent grounds:

Proceeding, 3d July 1839, No. 3 to 6.
" 3d August " 3 to 6.
" *Vide* Coll. No. 54.
Vide paragraphs 54 to 56 of the Honourable Court's Despatch, No. 1 of 1841, dated 1st June.
Proceedings, 8th May 1841.
F. C., 22d March 1843, No. 132, 133.

1st. That when the Hill States were restored to their respective chiefs, the grants were declared to be "renewed from generation to generation."

2d. That it had been the custom among those States, before they came under our power, to recognise the nearest of kin as successor. Mr. Clerk affirmed that there were no uniform Hindoo laws for settling questions of succession, and that the best plan would be to judge each case on its own merits, and to recognise the "prescriptive customs of inheritance."

8. It is questionable whether the term "from generation to generation" admits the claims of collateral heirs. It may fairly be supposed that it restricts the descent to direct issue. It is worthy of notice, that from the wording of several sunnuds, Mr. Metcalfe was of opinion that it was not originally intended that the estates should be continued in other than the direct line.

Nar. Pro. 1841, 11th Nov., No. 25.

9. It is true that the custom of admitting collateral succession alluded to above, was observed during the Goorkha supremacy; but this originated from motives of policy, and not from a deference to the wishes of the conquered. The Goorkhas seldom availed themselves of lapses, because they preferred extracting as much money as they could from these States in the shape of tribute, to taking the management, with all its attendant trouble, into their own hands. It was stated by Mr. Metcalfe and Colonel Tapp, when Bijye Sing's claims were referred to them for their opinions, that the right of the paramount power to resume or continue lapsed jagheers to other than direct heirs, and even to choose successors, had never been questioned in the Hill Provinces.

Nar. Pro. 1839, 9th Oct., No. 10.
Nar. Pro. 1841, 11th Nov., No. 2.

10. Under the above circumstances your Honourable Court may perhaps be disposed to reconsider the question of collateral succession. On the occurrence of a lapse, the entire, or nearly entire revenue at the time of resumption, can be paid in the shape of money pensions to the family of the deceased chief.

I have, &c.

POLITICAL DEPARTMENT.

Our Governor-General of India in Council.

Succession to the Chiefship of Bughat.

Para. 1. IN a letter in the Foreign Department, dated 14th April (No. 19) 1849, the Governor-general requests our instructions on the question of succession to the Hill Chiefship of Bughat, in consequence of the death of Bijye Sing, the late Rana.

2. This estate formed part of a much larger chiefship which existed previously to 1814. In consequence of the unfriendly conduct of the chief at that time towards the British Government, the whole territory was, on the expulsion of the Goorkhas, confiscated, but subsequently a small portion of it was restored to the Rana, Mahendur Sing, under a new sunnud, granting it to him and his heirs from generation to generation.

3. In 1839 he died, without legitimate male issue, and the then Government considered the estate to have become an escheat, the person who derived his title from the British Government having left no direct heirs; it was accordingly resumed, and held in our possession from 1839 to 1842.

4. Doubts, however, were expressed by us as to the propriety of the resumption, and the question was referred by Lord Ellenborough for the opinion of Sir George Clerk, then envoy at the court of Lahore; on whose report, dated 10th November 1842, Lord Ellenborough reversed the decision of the former Government, and recognised the succession of Bijye Sing, the younger brother of the deceased; of this decision we expressed our approval.

5. In January last Bijye Sing died, also having no direct heir; Mr. Edwards, the Superintendent of Hill States, submitted the claim to the succession advanced by Omed Sing (a first cousin of the late chiefs, Mahendur Sing and Bijye Sing), who, as he stated, "was regarded by the people as the heir to the chiefship, and appears from his character and abilities to be in every way fitted for the position." The Governor-general, however, has assumed the management of the territory pending a reference to us, and had it not been for the previous decision with respect to the estate, his Lordship would have considered it as a lapse to the British Government; his Lordship has at the same time referred for our decision and orders the whole subject of escheats in the Hill principalities.

6. With respect to the general question, we are not prepared at present to lay down any rule; we shall therefore content ourselves with deciding the case immediately under consideration.

7. In the war against the Goorkhas, the Chief of Bughat adhered to our opponents, and his estate came into our possession by conquest; the portion, therefore, which we thought fit to restore to him, he must be considered to have held by virtue of the new grant; and his family can claim no rights in excess of those which the terms of the sunnud conceded to them.

8. We are therefore of opinion that the succession to Bughat could only be claimed by the direct descendants of Mahendur Sing; that the admission of his brother, Bijye Sing, was an indulgence, and that by the death of both brothers without legitimate issue the estate has lapsed to Government.

9. We leave it to your judgment, with reference to the feelings of the people, and as a question of general expediency, either to annex the estate to our territories, or to grant it by a new sunnud to Omed Sing, subject to such a tribute, and to such other conditions of any kind as may be consistent with the respectability of the family and with the credit of our own Government.

10. Should you resume the estate, you will make an adequate provision for all relatives and dependents who have an equitable claim on it.

We are, &c.
(signed) *A. Galloway*,
J. Shepherd,
&c. &c.

London, 21 November 1849.

EXTRACT Foreign Letter from India, dated 29 April (No. 18) 1850.

102. UNDER the consideration of the Governor-general at present.

Letter from, dated 21st November (No. 37) 1849, communicating instructions on the question of succession to the Hill Chiefship of Bughat.

EXTRACT Foreign Letter from India, dated 2 June (No. 17) 1851.

1850.
Cons. 14 June, No. 98.
Cons. 15 Nov. No. 100 & 101.
Cons. 29 Nov. No. 202 & 203.

123. UNDER the discretion vested by your Honourable Court in the letter dated 21st November, No. 37, of 1849, the Governor-general resolved to treat the Bhugat estate as a lapse to Government; the Board of Administration was requested to issue orders to that effect, making at the same time an adequate provision for all relations and dependents of the late Raja who may have an equitable claim upon it. His Lordship has been informed that no objection existed to immediate annexation, and that the feelings of the people would be consulted in bringing them under British rule.

124. Petitions were presented by Meeah Oomed Sing complaining of having been dispossessed of the Bughat estate, and by certain inhabitants of that estate praying that it might be restored to Oomed Sing; but they were informed that the decision in the case was final.

EXTRACT Political Letter to India, dated 19 November (No. 39) 1851.

14. YOU will not fail to make a liberal provision for the relatives and dependents of the late Raja of Bughat.

Letter, dated 2 June (No. 17) 1851. (123, 124). Under the discretionary authority granted by Court, the Bughat estate has been declared a lapse to Government.

EXTRACT Political Letter to India, dated 21 September (No. 39) 1853.

5. THE pensions assigned to the various members and connexions of the late Rana's family are liberal; but those individuals, with a few exceptions, refuse to accept them. You have fixed a period of two years, after which, if the pensions be applied for, no arrears will be granted. Bughat.

(No. 451½.)

From the Envoy to the Court of Lahore, to *T. H. Maddock*, Esq., Secretary to the Government of India with the Governor-General.

Sir,

THE Governor-general having put into my hands the petition of the widows of Mohindur Singh of Bughat, and the petition of Bijjee Singh, the brother of Mohindur Singh, and having desired me to report upon them, I have the honour to submit the following observations:

Mohindur Singh, of Bughat, died on the 11th July 1839. His estate was considered an escheat to the British Government. He left a brother, and he left wives; these claim the restoration of Mohindur Singh's small chiefship, yielding about 1,500 rupees a-year net revenue. There appear to be no rival pretensions between these parties, the widows advocating the cause of their husband's brother.

Colonel Tapp, in his report on this case (11th September 1839) terms these Hill States jageers, and the term has been since applied by others to them. I do not regard them in the light of jageers, or the rules relating to jageers as at all applicable to them. A jageer is an assignment of part of the revenues of the state, frequently for services to be performed, and is neither alienable nor hereditary. The Hill Chiefships are territories conquered by these chiefs some six centuries ago, invaded by the Goorkhas, who in some cases occupied them, in others relinquished them to the rightful owners; and wrested from the Goorkhas by the British, who, previous to making the attempt, called upon all the chiefs by

written proclamation, to aid in the recovery of their own possessions; and finally, in restoring them, declared the grant to be "renewed" (*az sir-ir-no*) "from generation to generation" (*nuslun bād nuslun*). I deem that our views towards these Hills were then one thing, and our view now a very different one; and it is this inconsistency, caprice, and mutability in our opinions, regarding all great principles, that is the bane of our supremacy in India. Colonel Tapp, in advocating the escheat, admits that "the Hindoo law of inheritance generally holds good in these Hills" (meaning Hill principalities); but this cannot be, because the Hindoo law of inheritance relates only to private property. If this position were correct, there would be little need, one would suppose, for the British Government to be devising rules. Colonel Tapp, however, might have said that the general rule from time immemorial has been, for these Hill Chiefships to descend entire to the nearest of kin; and this, too, should suffice to relieve the British Government from the necessity for introducing other rules.

Mr. Erskine, when called upon for a report on rules of inheritance, commences by affirming (30th September 1841) that "the paramount power is invariably considered to possess the right of exercising its own judgment in admitting or rejecting the claims of collateral heirs to a state or jagheer, where the reigning chieftain may have died without legitimate issue." It is, then, inferred that Bughat "is a fair unexceptionable lapse," because "Mohindur Singh's conduct in the Goorkha war was such as to forfeit all claim to indulgence." This reasoning is open to some objections, 1st. It is not a jageer; 2dly. There are heirs of a degree deemed legitimate for all kinds of inheritance all over Hindostan; and 3dly. Mohindur Singh paid the forfeit of his omissions, in the transfer, to his vigilant greedy neighbour, of a proportion of his ancestral domain, estimated at three-fourths of the whole.

In the present case it was not, I conceive, the intention of Sir David Ochterlony to exclude collateral heirs from the succession. It was Mohindur Singh personally who had been neglectful; his having previously married his daughter to the Goorkha general, Ummur Singh Thappa, was enough to cause some backwardness on his part in co-operating with us; still a portion of his ancestral territory was restored to him "from generation to generation." I doubt the benevolence of this grant was rather out of consideration for the family generally, which would have been otherwise destitute, than for the delinquent himself. But he no sooner dies than, in order to constitute it an escheat, the grant is construed as limited to himself, because he leaves no heir nearer than an uterine brother.

These Hill Chiefs are extremely ignorant, and often brutal; they have yet scarce had the means of acquiring the knowledge that should make them better. They tremble at our standard of fitness for princes, which they hear is very high, and feel it very capricious, varying with the dispositions of the British officers connected with them. But a just Government, in the exercise of its paramountry, should assign a long period for amendment, during the operation of its most fostering care, before it measures the crimes of its barbarous allies by its own standard of morality.

The proper punishment for the paramount state to inflict for gross mismanagement and oppression, such as prevails to a considerable extent in these Hills, would be sequestration of the chieftaincies; but this would not be fair until we had revived their interest in their ancestral territories, by our manifesting the same respect for their rights, founded on a possession of many centuries, as is entertained by the people in general. Could we inspire them with confidence in our general disinterestedness, our severity, when called for, would be rightly and beneficially understood; and, for the most part, that confidence would correct the motives to neglectful or tyrannical conduct requiring punishment.

I have for some years had under my charge the three principal Hill States between the Sutlej and Jumna, bordering on the plains, and I have occasionally been deputed on duty still further within the Hills. I have almost everywhere observed signs of deterioration—the poorest peasantry; extensive tracts, thrown out of cultivation half a century ago on the Goorkha invasion, still lying waste; and the chiefs screwing the utmost out of the lands and people as they are. Enquiries have suggested to me no other cause for this but in the apprehension of the vigilance, benevolence or avidity, of the British Government (for our encroachments are described by us by all these epithets, according to our opinions at the time). I omit further allusion to the Goorkha dominion. It was a period of strong universal military dominion, new and distressing. But previous to that, these

these chiefs, of the highest caste originally in Rajwara and Bundelcund, and subsequently of many centuries as rulers here, had felt perfectly secure in their Hills from any interference on the part of the strongest of the Mahomedan governments of Dehlee, to the degree of ejecting their dynasties. They served the empire, one with a quota of horse (for a money allowance), another with ice, another with beautiful brides and slave girls, but as long as they fulfilled all reasonable demands of the empire, they never felt an apprehension that a continuance of their immemorial customs, many of which we call vices, and mark for punishment, would draw attention to their domestic administration, or be regarded as faults to be dealt with by the paramount State. Hence they regarded their people as their children, and improved their lands, and laid out money in advances to cultivators, and fed them in times of drought and famine. Now, on the contrary, they feel most insecure, first, in their knowledge that we deem Suttee, female infanticide, witchcraft, and poison, downright crimes; and secondly, in the apprehension that, do what they will to prevent abominations of such a complexion, there is still an indefinite extent of our moralities which can be conveniently stretched, in order to allege the infraction of some of them, for the transfer of territories to our grasp. And thus they grind and hoard treasure, to provide means of resistance, or bribes, or flight, as the times may be when the encroachment comes. At the time of the last hard year, I had occasion to pass through these Hills, and I noted that the only chief who opened his granary and treasury to assist his zumeendars, was the Chief of Kotaba, a Mahomedan of the plains, to whose father Sir David Ochterlony gave the Hill district of Mornee, for his zealous co-operation, to the extent of his humble means, when the general called on him for a quota of troops during the Goorkha war.

Thus are our notions of escheat in respect to the domains of these chiefs (notions borrowed from I know not where, certainly not from our country or from theirs) detrimental to this region, by alienating its chiefs from its people. Those of the former class, who have no direct heirs, look upon their chieftaincy as a mere life tenure; and those who have, are little more at ease, because they fully comprehend that our appropriating their estates at all arises, not from any fixed ideas upon the subject of heirdom, but from the desire to get all we can under our direct dominion. They consequently apprehend that pretexts may be found to further our schemes, even where lineal heirs exist, and they know that whatever the British Government desires to do in India, with the rights of the people, it sooner or later does it.

The annexed copy of a report upon one of these States, may serve to illustrate some points to which I have adverted. It was written after my deputation to inquire into the condition of Keonthul.

I have observed, in the Bughat correspondence, a confounding together of things which bear no analogy. What has the decision of the Jeend case, or any other Sikh inheritance, to do with the ancient customs of these Rajpoots? Shortly before our connexion with the Sikhs they were mere associations of robbers, a mixture from all castes, destitute of any interest or property in the soil; and without any law but the sword. On the other hand, the customs of the Rajpoots are so ancient and so comprehensive, that it seems folly or worse for us to dictate rules for their inheritance of real property, except in cases between rival parties claiming our arbitration.

But, after all, it is hunting after a shadow to search for laws of inheritance to chiefships here, or elsewhere in India, so fixed as the Government desires to obtain. The inheritance often descended amid anarchy; the sword, the dagger, or the poison cup sometimes varied and determined a succession. The Hindoo law, which is so comprehensive regarding rights in private property, provides not distinctly for chiefships. It is not fair, therefore, to desire a claimant to support his pretensions by adducing fixed laws. We should be content to recognise their prescriptive customs of inheritance; to arbitrate dispassionately between rival claimants; to judge every case requiring interposition on its own merits, abandoning the vain hope of introducing uniformity throughout provinces and classes differing essentially in their customs and prejudices; and to prevent that minute and ruinous subdivision of landed property which speedily follows on our aversion to see native chiefships maintained in respectability.

I have, &c.
(signed) *George Clerk*, Envoy.

Envoy's Office, Camp, Simla,
10 November 1842.

(No. 9.)

From *John Inglis*, Esq., Secretary to the Honourable the Chief Commissioner Cis- and Trans-Sutlej States, to *H. M. Elliot*, Esq., Secretary to the Government of India, with the Governor-General.

Sir,

I AM directed by the Honourable the Chief Commissioner to forward, for the information and orders of the Right honourable the Governor-general of India, the accompanying copy of a despatch from the Superintendent Hill States, No. 157, dated 30th December 1848.

2. The Chief Commissioner considers, under the circumstances stated, the proposition of Mr. Edwards to be judicious, and recommends that Omeid Sing be acknowledged as the successor to the chiefship of Bughat on the demise of the present Rana Beejah Sing.

I have, &c.

Lahore, 11 January 1849. (signed) *John Inglis.*

(No. 157.)

From *W. Edwards*, Esq., Superintendent Hill States, to *J. F. D. Inglis*, Esq., Secretary to the Honourable the Chief Commissioner Cis- and Trans-Sutlej States.

Sir,

THE advanced age and great infirmity of Beejah Sing, the present Rana of Bughat, appear to me to render it advisable to bring the circumstances of that small principality to the notice of the Honourable the Chief Commissioner, in order that his Honor may take into his consideration the measures to be adopted in the very probable event of the chief's early demise.

2. The state of Bughat, originally consisting of nine purgunnahs, yielding an annual revenue of 19,000 rupees, was, on the first establishment of the British power in these Hills, held by Rana Mahendur Sing.

3. This chief having connected himself by marriage with the Goorkha leader, Kajee Ummur Sing, refused to avail himself of the terms of the general proclamation issued by Government in 1814, to all the Hill Chiefs, promising them, on condition of their espousing British interests, protection against the Goorkhas, and guaranteeing them restoration to and confirmation in their ancestral possessions, rights, and privileges, but persisted in maintaining his connexion with the Goorkha power, and in refusing to listen to the overtures made to him by the British General Sir David Ochterlony.

4. To mark its sense of the Rana's unfriendly conduct, the British Government, on the expulsion of the Goorkhas, resolved at first that the entire territory of Bughat should be confiscated.

5. Subsequently, however, these orders were modified, and four pergunnahs out of the original nine, estimated to yield 4,000 rupees per annum, were directed to be made over to Mahendur Sing, for the maintenance of himself and family, and the remaining five pergunnahs were transferred to the Maharaja of Puttiala, in lieu of a nuzzerana of one lac of rupees. A sunnud was granted to Rana Mahendur Sing, confirming to himself and his heirs for ever the above-mentioned four pergunnahs upon certain conditions therein detailed.

6. In July 1839, Rana Mahendur Sing died without male issue, and there appearing no special reason why the rule that all jagheers and maafee tenures, on failure of direct heirs, are to lapse to the paramount power, should in the instance of Bughat be departed from, that state, under the orders of the Government of India, dated 9th October 1839, was declared an escheat, and resumed accordingly, a certain

a certain amount of jagheer and pensions being secured to the family and dependents of the deceased Mahendur Sing.

7. Bughat remained under British management until 1842, when the brother, widows and relatives of the late Rana presented a petition to the then Governor-general, Lord Ellenborough, praying that the state might be restored to Beejah Sing, the uterine brother of the late Rana.

8. The petition was referred by the Governor-general for report to Sir George Clerk, then envoy to the Court of Lahore.

9. That officer, in his reply, dated the 10th November 1842, stated his opinion that the Hill States, and Bughat among the rest, were erroneously considered in the light of jagheers, and that the rules relating to jagheers were not consequently applicable to them. Jagheers being assignments of part of the revenues of the state, frequently for services to be performed, and neither alienable nor hereditary; whereas the Hill chiefships consisted of territories conquered by these chiefs some centuries back, which were subsequently invaded by the Goorkhas, and wrested from these latter by the British Government, who, previous to making the attempt, called upon all the chiefs of the Hills, by written proclamation, to aid in the recovery of their own possessions. These states were ultimately restored by the British Government to their original possessors, under new sunnuds, which distinctly declared the grants to be " renewed" (*uz sir-ino*) " from generation to generation."

10. Sir George Clerk further stated it to be his opinion, that the British agent, Sir David Ochterlony, on first making the grant of four pergunnahs to Mahendur Sing, did not intend to exclude collateral heirs from the succession, for the grant was rather out of consideration for the Rana's family generally, than for himself, as he deserved no indulgence at the hands of the British Government. The envoy further remarked, that there happened to be, in the present instance, an heir existing of a degree deemed legitimate for all kinds of inheritance all over Hindoostan, viz. an uterine brother, and that therefore Bughat should be made over to him.

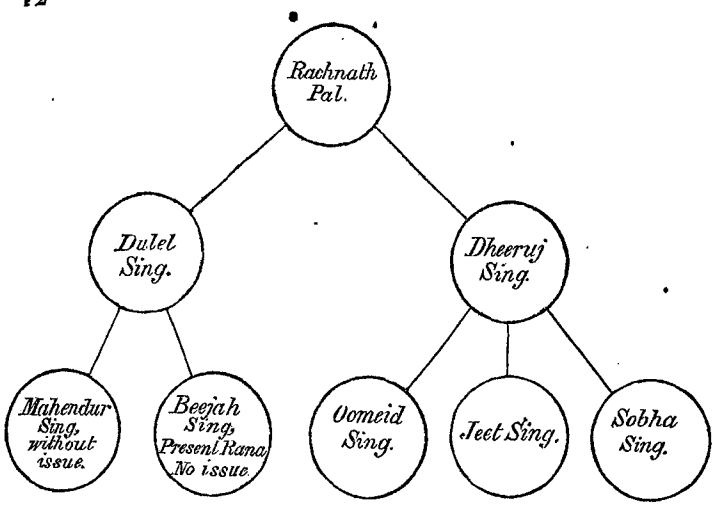
11. The Governor-general acquiescing in the view taken by Sir George Clerk, informed that officer, in Mr. Assistant-Secretary Edwards' despatch of the 18th November 1842, that the Bughat State should never have been withheld from the brother of the late Rana, and that his Lordship intended that it should be restored to him, together with the entire revenues realized therefrom during the period of its resumption by the British Government.

12. In accordance with these instructions, the four pergunnahs of Bughat, valued at the time of their restoration at 7,000 rupees per annum, were, in May 1843, made over to Rana Beejah Sing.

13. At the same time it was agreed, that the Rana should make over to the British Government for a European cantonment, the Hill of Keessowlie, receiving as an equivalent for the same 5,000 rupees, a sum which was considered greatly to exceed its value.

14. From the date of its restoration up to the present time, Rana Beejah Sing has continued in undisturbed possession of the state, realising the revenue at which the lands were assessed by the British Government on their restoration to him. He has however bestowed a large portion of the country in jagheer, upon members of his deceased brother's family.

15. The Rana has no legitimate son, but as the Supreme Government has admitted the right of collateral heirs to succeed to these Hill principalities, and as the principle has been acted upon in the instance of Kyhloor and also of Bughat, I beg to lay before the Honourable the Chief Commissioner the claims of Meean Omeid Sing to succeed to the chiefship on the death of his cousin, the present Rana.



16. From the genealogical tree inserted in the margin, the Honourable the Chief Commissioner will perceive the position in which Omeid Sing stands to the present chief; and as this person is regarded by the people as the heir to the chiefship, and as he appears, from his character and abilities, to be in every way fitted for the position, I would recommend, that on the present Rana's demise I may be authorised to nominate Omeid Sing as his successor, and to place him at once on the guddee.

17. I am led to make the above recommendation, because the Bugdalee Ranee, widow of Mahendur Sing, the former Rana, has a natural son, whose claims to succeed to the chiefship she is constantly urging, declaring that she has a written promise to that effect from Beejah Sing, the present Rana. I consider it probable, that as she has a considerable party in her favour in the state, she may, on the demise of the present chief, unless the question of succession be at once decided, endeavour to create a disturbance in the state, with the view of securing the succession to her child.

18. This Ranee has a money-pension allowed to her from the Bughat State, under the orders of the Government, amounting to 261 rupees per annum. Of this amount she has hitherto received 100 rupees in money, and three villages instead of the remainder; but her intrigues have been lately so constant, and she has given so much anxiety to the Rana, that he has, with my permission, resumed the three villages, and pays into this Treasury the total amount of the Ranee's pension, in order that she may not have any longer any ostensible reason for interfering in the affairs of the Bughat State, or to carry on intrigues, which she would have continued to do, so long as she held jagheers therein, or were permitted to reside upon them.

I have, &c,

From *John Inglis*, Esq., Secretary Chief Commissioner Cis- and Trans-Sutlej States, to *H. M. Elliot*, Esq., Secretary to Government of India with the Governor-General.

Sir,

No. 4, dated 11 January 1849.

In continuation of the Chief Commissioner's letter, dated 11th instant (No. 9), suggesting the expediency of acknowledging Oomed Sing as the successor to the chiefship of Bughat, I am desired by his Honour to forward, for the information and orders of the Right honourable the Governor-general, the copy of a letter from the Superintendent Hill States, reporting the death of Rana Bejey Singh.

I have, &c.
19 January 1849. (signed) *J. Inglis.*

(No. 4.)

From *W. Edwards*, Esq., Superintendent Hill States, to *J. F. D. Inglis*, Esq., Secretary to the Chief Commissioner Cis- and Trans-Sutlej States, Lahore.

Sir,

With reference to my despatch to your address relative to the affairs of the Bughat State, I have the honour to report, for the information of the honourable the Chief Commissioner, the demise, on the 9th instant, of Rana Bejey Singh. No. 157, dated 30 December 1848.

2. In consequence of this event, it appears desirable that I should be favoured at an early date with the views of Government relative to this small State.

I have, &c.

Simla, 11 January 1849. (signed) *W. Edwards.*

(No. 239.)

From the Secretary to the Government of India with the Governor-General to Lieutenant-Colonel Sir *H. M. Lawrence*, K.C.B., Chief Commissioner Cis- and Trans-Sutlej States.

Sir,

The Governor-general has had under consideration Mr. Inglis's letters, No. 9 and 13, dated respectively the 11th and 19th ultimo, regarding the succession to the chiefship of Bughat consequent on the death of Bijye Sing, the late Rana, and recommending Oomeid Sing, a cousin of the deceased, as the successor.

2. In reply, I am directed to inform you that a reference on the above question has been made to the Honourable the Court of Directors. In the meanwhile, his Lordship requests that you will direct the Superintendent of Hill States to take the management of Bughat for the present into his own hands, till the pleasure of the Court is known, making a suitable provision for the family not exceeding the net revenue.

I have, &c.

Camp, Ferozepore, 26 February 1849. (signed) *H. M. Elliot.*

Extract Fort William Foreign Consultation, 14 June 1850.

(No. 261.) No. 98.

From Sir *Henry Elliot*, K.C.B., Secretary to the Government of India with the Governor-General to the Board of Administration for the Affairs of the Punjab.

Sirs,

With reference to my letter to the address of the Chief Commissioner Cis- and Trans-Sutlej States, No. 239, dated 26th February 1849, requesting that officer to direct the Superintendent Hill States to take the management of the Bughat estate into his own hands, pending the orders of the Honourable Court, and to make a suitable provision for the family of the late Bijye Sing, I am desired to acquaint you that the reply of the Honourable Court to the reference then made to them has been received. Acting upon the discretion vested in him by those orders, the Most Noble the Governor-general has resolved to treat the estate as a lapse to Government, and you are requested to issue orders to that effect, making at the same time an adequate provision for all relations and dependents of the late Raja who have an equitable claim upon it. His Lordship is given to understand that no objection exists to immediate annexation, and that the feelings of the people would be consulted in bringing them under British rule.

I have, &c.

Simla, 20 May 1850. (signed) *H. M. Elliot.*

EXTRACT Fort William Foreign Consultation, 15 November 1850.

No. 100.

To the Most Noble the Governor-General of India.

The humble Memorial of *Meeah Oomeid Sing*, Cousin to Beejoy Sing, late Rana of Bhughat in the Agency of Simla.

Most humbly showeth,

THAT your Lordship's memorialist most humbly begs to take the liberty of submitting his deplorable circumstances before your Lordship, in hopes of obtaining redress. Your Lordship's memorialist is the son of Dheeruj Sing, who was paternal uncle to Mahendra Sing, Rana of Beghaut. Mahendra Sing died in 1839 without issue, so that the State of Beghaut was taken by the British Government for a period of more than three years, but afterwards the Guddee of Beghaut was conferred upon Beejoy Sing, who was younger brother to Rana Mahendra Sing, and apparent heir to the State, and thus a sunnud was granted to the late Beejoy Sing in 1843, under the signature of the Honourable J. C. Erskine, late sub-commissioner of these States. Rana Beejoy Sing died on the 3d of January 1849, leaving no issue. Your Lordship's memorialist is the cousin of the late Rana, that is, the son of the Dheruj Sing, who was paternal uncle to the late Beejoy Sing. After the death of Beejoy Sing your Lordship's memorialist had had orders from the Superintendent of the protected Hill States, W. Edwards, Esq., to manage the affairs of the State regularly, that is, in the same way as his cousin Beejoy Sing has been doing, and your Lordship's memorialist was executing all orders of Government with zeal and obedience, but after a lapse of three months an ameen was sent to Beghaut for the management of all duties, and subsequently the State was taken from your Lordship's memorialist on the plea that he has no right claim for the State in question. But your Lordship's humble memorialist most respectfully begs to say that Government has never disappointed any apparent heir from his claim but your memorialist. In want of direct descendant the British Government has on many similar cases been pleased to sanction the installation to guddees to the nearest relations of the deceased chiefs, such as Billaspore, Khoomarsain, and many others; but your memorialist being the cousin to Rana Beejoy Sing deceased, was deprived of the guddee, which is only novel to your memorialist, and as he can claim, both in accordance of Hindoo laws and religion and in there having been no precedent, so he hopes your Lordship will be graciously pleased to inquire on your memorialist's case, and should his declarations be just and right, your Lordship will be pleased to restore to him his rightful State.

Major-general Sir D. Ochterlony has granted to the Raja of Pettealah five pergunnas from Bughaut; the remaining pergunnas were only adequate to yielding a common support for so large a family; the restoration of these pergunnahs will oblige the whole family to pray for your Lordship's grace and prosperity.

And your memorialist, as in duty bound, will ever pray.

Simla, 25 October 1850.

ORDERED, That the following Office Memorandum be issued:

No. 2416.—FOREIGN DEPARTMENT.

OFFICE MEMORANDUM.

READ a petition from Meeah Oomed Sing, dated 25th October 1850, complaining of having been dispossessed of the Bughat estate.

Ordered, that the petitioner be informed that the decision in his case is final.

(signed) *E. C. Bayley,*
Under Secretary to the Government of India
with the Governor-General.

Camp, Gurshunker, 6 November 1850.

EXTRACT Fort William Foreign Consultation, 29 November 1850.

PETITION from the Jemadars of Bughat to the Right Honourable the Governor-General of India. No. 202.

Humbly showeth,

OH! our Lord,—That your poor petitioners, being hopeless no remedy of any other, they humbly beg leave their deplorable case before your Lordship as following. *Sic orig.*

That the Rannah Beejoy Sing, of Bughat, when he was dead, during which time his brother Omed Sing, been protected the state of Bughat, by order of the Superintendent Hill State of Simla, also an order by the Superintendent Hill States, "on the Meah Oomed Sing, you do not fear, I have reported to the Government for you."

Oh! our Lord, after three months the Superintendent Hill States has appointed an ameen on the above State, and entirely given an order to Meah Oomed Sing, and proclamation purwanahs on the Bughat, that the late Rannah Beejoy Sing's state taken possession of by the Government could not get the state of his brother, Meah Oomed Singh.

Oh! our Lordship, we were never heard nor seen in the Hill Country during the time of the Honourable Company's possession in this present state on the Meah Oomed Singh, of Rannah of Bughat.

Oh! our Lord, where can we give an example as "That the present Raja of Belaspore he is a relation of the late Raja Khurug Chund, about five poostan from the late Raja Khuriuj Chund, between Juggut Chund and a Rannah Koomar Sain, about seven poostan between the late Rannah Kehere Sing and Preetun Sing, how can they their relations state, and why not yet Beejoy Singh's state, Meah Oomed Singh, because it is very surprising that the Beejoy Sing's and Meeah Oomed Sing's father, they are two brothers, named elder Rannah Dallell Sing, and younger Meah Dhin Sing. Beejoy Sing, the son of Rannah Dallel Sing, and Meah Oomed Sing, the son of Meah Dhow Sing. Oh! our Lord and God, it is considerable, and we hope your Lordship will bestow kindness upon poor Meah Oomed Sing by your Christian justice towards that poor Meah and the jummundars of Bughat, by which Meah Oomed Sing to have the state of Bughat, and he shall ever pray for your Lordship's long life. *Sic orig.*

25 October 1850.

No. 2597.—FOREIGN DEPARTMENT.

OFFICE MEMORANDUM.

READ a petition from certain inhabitants of the Bughat estate, dated the 25th ultimo, praying that that estate may be restored to Meah Oomed Sing. No. 203.

Ordered, that the petitioners be informed in reply to the above, that the case having been decided under instructions from the Honourable the Court of Directors, it cannot now be altered.

(signed) *H. M. Elliot,*
Secretary to the Government India with the Governor-general.

Camp, Deenanuggur, 16 November 1850.

Sir, Bush-lane, 21 July 1851.

WE have the honour to enclose a Memorial, addressed to the Directors of the Honourable the East India Company on behalf of Mean Oomaid Singh, of Bughaut, Simla; and we request that the same may be laid before the Court at the earliest opportunity.

Requesting that the answer of the Company to the Memorial may be forwarded to us,

We have, &c.
(signed) *Vandercom, Cree, Law, & Comyn.*

J. C. Melvill, Esq.,
&c. &c. &c.

To the Honourable the Directors of the East India Company.

The MEMORIAL of *Mean Oomaid Singh*, Cousin and Heir of Beejai Singh, late Rana of Beeghaut, in the Agency of Simla.

Showeth,

That your memorialist's ancestor, Rana Rogonauth Paul, as independent Raja of Beeghout, was possessed of nine villages at Beeghaut, paying an annual rent of 14,000 rupees, and that the same villages were taken possession of by the Government of your Honourable Company during the Ghoorka war: that at the close of the Ghoorka war, four of the above-mentioned nine villages were restored by the Government to Rana Mohinder Singh, the lineal descendant and representative of the said Rana Rugonath Paul, and the remaining five villages were granted to the Raja of Puttealah.

That Rana Mohender Sing continued in undisturbed possession of the said four villages, and received the rents and profits thereof until his death, which took place in the month of June 1839.

That upon the restoration of the said four villages to the said Rana Mohender Singh, a sunnud or grant by the Government of your Honourable Company, under the hand and seal of General Sir David Ochterlony, was made to the said Rana Mohunder Sing, securing to him and to his posterity the possession of the said four villages; a certified copy of which grant is now in the possession of your memorialist, and to which he craves leave to refer.

That upon the death of the said Rana Mohender Sing, Colonel Horatio Tapp, the Resident at Simla, acting on behalf of the Government of your Honourable Company, took possession of the said villages, whereupon your memorialist's cousin, the late Beejai Singh, being the brother and heir of the said Rana Mohender Singh, presented a memorial to the Government of your Honourable Company, praying that the possession of the said villages might be granted to him as the representative of the said Rana Mohender Singh; and in the year 1843, after a delay of three years, possession of the said four villages was conferred on the said Rana Beejai Singh, by a sunnud or grant of the Honourable J. C. Erskine, late Sub-commissioner of the Hill States, and the arrears of the income of the estate for the three years from the time of Rana Mohender Singh's death were paid to the said Rana Beejai Singh, who continued in possession of the estate to the time of his decease.

That the said Rana Beejai Singh died without issue on the 3d day of January 1849, leaving your memorialist, his cousin and heir; your memorialist being the son of Dherey Singh, who was the paternal uncle of the said Beejai Singh.

That the said Rana Beejai Singh left a will in the Hindee language, dated 17th November 1843, and thereby declared that your memorialist was to succeed him in the estate of Beeghaut, if he, Beejai Singh, should die without issue.

That the will is signed by the said Rana Beejai Singh, and witnessed, and is in the possession of your memorialist, and he craves leave to refer thereto, and to produce same to your Honourable Court.

That on the death of Rana Beejai Singh your memorialist wrote to Mr. Edwards, the Superintendent of the Hill estates, informing him of the death of the Rana, and that your memorialist was the successor to the estate. And your memorialist received in reply directions from Mr. Edwards to superintend and manage the affairs of the country as they had been theretofore conducted.

That your Memorialist accordingly executed all orders of Government, and superintended the affairs of the state with zeal and obedience, and without any complaint having been made against your memorialist; but after a lapse of about three months, Bishen Doss, the Naib Tehsildar of Joobbul, was sent to Beeghout, and took possession of the estate on behalf of the British Government, and your memorialist was deprived of the estate.

That your memorialist received a letter from Mr. Edwards, the Superintendent of the Hill States, dated the 10th July 1850, stating that he had been directed by the Board of Administration for the Affairs of the Punjab to inform your memorialist that his claim to the estate of Beeghaut had been submitted to the Honourable the Court of Directors, and that, in their opinion, the claim of your memorialist was not proved, and therefore a suitable pension would be granted to your memorialist for his maintenance.

That your memorialist is utterly unable to comprehend the grounds on which the opinion of your Honourable Court was formed, your memorialist having undoubted proofs of his pedigree and relationship to the late Rana Beejai Sing, and which proofs he is desirous and ready to submit for the examination of your Honourable Court, and also the said Rana Beejai Sing having made his will directing that your memorialist should succeed him in the estate, as before set forth.

That on the 25th day of October 1850, your memorialist presented a petition to the Governor-general of India, stating the death of the late Rana Beejai Sing, and showing your memorialist's claim as his lawful heir to the estate at Beeghaut, of which he died possessed, and praying that your memorialist's case might be inquired into, and that as the rightful heir and successor of Rana Beejai Sing, he might be put in possession of the villages or estates of which the said late Rana died possessed.

That the only reply your memorialist received to his petition was a memorandum or document, of which the following is a copy; viz.

"No. 2416.—Foreign Department.

"Office Memorandum.

"Read a petition from Meean Oomaid Singh, dated 25th October 1850, complaining of having been dispossessed of the Beeghaut estate:

"Ordered, that the petitioner be informed that the decision in his case is final.

(signed) "*E. C. Bayley,*
"Under Secretary to the Government of India
"Camp, Gurshunker, 6 Nov. 1850." with the Governor-General."

That beyond the reason given in Mr. Edwards' letter of the 10th July 1850, your memorialist has received no explanation of the grounds for the refusal of the Government to grant to your memorialist the possession of the villages or estate of which the late Rana Beejai Singh died possessed, and to which your memorialist humbly submits he is in justice entitled as the lawful heir and successor of the deceased Rana; and your memorialist submits that it would be contrary to the principles of British justice, as well as to the Mahomedan and Hindoo laws, that he should be deprived of his lawful succession and inheritance without any cause assigned.

That in cases similar to that of your memorialist's, where there has been no direct descendant, the British Government have been pleased to confer the estate on the nearest relation of the deceased owner, such as in the cases of Billashore, Khormarsain, and many others, and in the case of the estate in question, on the death of Rana Mohunder Singh, the estate was granted to his brother, the late Rana Beejai Singh.

That your memorialist's conduct has at all times been approved of by the British authorities, and in the recent wars with the Sikhs your memorialist, with his sowars, or cavalry, rendered great assistance to the British forces, and gained the highest approbation of the British authorities.

That the late Rana Beejai Singh, being desirous of appointing your memorialist as his Mooktear Kar, or Prime Minister, in the year 1844, addressed a letter to the Honourable J. C. Erskine, Sub-commissioner of Kohistan, for his approbation of such appointment, who addressed a letter in reply to Rana Beejai Sing, on the 10th January 1844, and stated, that having seen the intelligence, activity, and capability of your memorialist, he reposed every confidence in him, and highly approved of your memorialist being selected for the office.

That on the 28th February 1846, the Honourable J. C. Erskine addressed a letter to the late Rana Beejai Sing, stating that your memorialist and Ram Dutt Wuzzeer had remained with him, the Honourable J. C. Erskine, together with the troops of Rana Beejai Singh, during the Sutlej campaign against the Sikhs in 1845 and 1846, and had performed their duties to his entire satisfaction.

That on the death of Rana Beejai Singh, all the vassals or ryots of the Beeghaut estate presented a petition to Mr. Edwards, praying that your memorialist might succeed Rana Beejai Singh, thereby testifying the popularity of your memorialist with the subjects or vassals of the estates.

Your memorialist, therefore, humbly prays that your Honourable Court will take the case of your memorialist into consideration, and direct such inquiry to be made with reference to your memorialist's petition as may be deemed necessary; and that the villages or estate of Beeghaut, of which the late Rana Beejai Singh died possessed, may be granted to your memorialist, and that he may be put in possession of the same as the lawful heir and successor to the deceased Rana.

And your memorialist will ever pray, &c.

(signed) *Meean Oomaid Singh,*
By Vandercom, Cree, Law, & Comyn,
23, Bush-lane, his Agents.

Gentlemen, East India House, 31 July 1851.

In reply to your letter, dated the 21st instant, enclosing a memorial to the Court of Directors of the East India Company on behalf of Mean Omaid Singh, of Bheeghat, I am directed to inform you that all applications from persons in India complaining of the acts of the local governments, must be transmitted through these Governments, who are required to forward such applications, accompanied by their remarks, to the Court, without delay.

I am, &c.,
(signed) *James C. Melvill.*

Messrs. Vandercom, Cree, Law & Comyn.

Sir, Bush-lane, 23 December 1851.

On the 21st July last we had the honour of addressing you on the subject of the case of Mean Omeid Sing, of Beeghat, and of enclosing to you a memorial on his behalf, addressed to the Honourable the Court of Directors of the East India

Company, praying that the Court would grant to the petitioner the estate of Beeghat, which the British Government had taken possession of, he being the heir of Beejai Singh, who died possessed of the estate, in the month of January 1849, and being also the person designated as successor thereto under Beejai Singh's will.

In answer to our letter you favoured us with a reply, of which the following is a copy:—

Gentlemen, East India House, 31 July 1851.

"In reply to your letter, dated the 21st instant, enclosing a memorial to the Court of Directors of the East India Company, on behalf of Mean Oomaid Singh, of Beeghat, I am directed to inform you that all applications from persons in India, complaining of the acts of the local Governments, must be transmitted through these Governments, who are required to forward such applications, accompanied by their remarks, to the Court without delay.

"I am, &c.
(signed) "*James C. Melvill.*

"To Messrs. Vandercom, Cree, Law, & Comyn."

In consequence of the intimation thus given us, we forwarded the memorial, with a copy of your letter, to Omaid Singh, in India, that he might, in compliance with the directions contained in it, present the memorial, through the local Government, which he accordingly did, accompanied by a letter from himself to Sir H. M. Elliot, the Secretary of the Government, and of which the following is a copy:—

"To Sir *H. M. Elliot*, K.C.B., Secretary to the Government of India with the Governor-General.

"Honoured Sir,

"Accompanying this letter, I enclose a Memorial addressed to the Honourable the Court of Directors of the East India Company, praying that the Raj of Beeghat may be granted to me as the next of kin and successor of the late Rana Bijjai Sing, of Beeghat, and I have the honour to request that you will lay the memorial before the Governor-general, and that it may be forwarded to the Honourable the Court of Directors in London, with, I hope, the favourable recommendation of his Lordship and yourself.

"I have, &c.
(signed) "*Oomaid Singh.*"

In reply to this letter, Oomaid Singh received an official communication, under the signature of the Secretary of the Government, returning to him the Memorial. The communication is as follows:—

No. 3211.—Foreign Department.

"Office Memorandum.

"Read a letter from Rana Omeid Sing, of Beeghat, dated the 25th ultimo, submitting memorials in triplicate, to the address of the Honourable the Court of Directors, praying that the Raj of Beeghat, which had been resumed by the British Government, may be granted to him as the next of kin and successor of the late Rana Bejye Sing.

"Ordered, that the memorials above alluded to be returned to Rana Oomeid Sing, with an intimation that the Honourable the Court of Directors having already most fully considered the case, there seems no occasion to transmit the Memorials in question to that authority.

(signed) "*H. M. Elliot,*
"Secretary to the Government of India with the Governor-General."

"Simla, 14 October 1851."

We do not presume to complain of the time which has been lost, or of the disappointment which our client has experienced by the refusal of the local Government to transmit the memorial to the Honourable Court of Directors; but we venture to ask that our client's interests may not suffer by the delay, or by the unusual course taken of returning the memorial to the memorialist, instead of forwarding

forwarding it to this country, and as Oomaid Singh and the writers alike regard the reconsideration of the case on the facts now presented as essential to a just disposal of the memorialist's claims, we anxiously and earnestly ask either that the Honourable the Court of Directors will be pleased to receive the memorial here through us, or that an instruction may be given to the Local Government to receive and transmit the memorial for the consideration of the home authorities.

We would, however, take leave to remark, in answer to the observation contained in the official memorandum "that the Honourable the Court of Directors had already most fully considered the case;" that a former memorial presented to the Honourable Court by Omaid Sing contained but an imperfect statement of his case, and of the facts on which his claim is founded, and that these are supplied in the memorial, the receipt of which we are instructed to solicit; and we venture to entertain a confident expectation that, if it shall be the pleasure of the Honourable Court to receive the present memorial, the facts stated in it, and which it is desired to bring under the Court's consideration, will lead to a favourable answer to our client's application.

We have, &c.

J. C. Melvill, Esq.,
Secretary, India House.

(signed) *Vandercom, Cree, Law, & Comyn.*

Gentlemen, East India House, 3 January 1852.

I HAVE laid before the Court of Directors your letter, dated the 23d ultimo, stating that a memorial to the Court from Mean Oomad Sihgh, of Beeghat has, conformably to Court's letter of the 31st July last, been presented to the Government of India, with a request that it be forwarded to the Court, and that the Government have declined to transmit it; and requesting in consequence that the Court will receive the memorial through you, or that the local Government may be instructed to forward it to the Court.

I am directed in reply to inform you that the rules applicable to the case having been complied with, the Court will no longer refuse to receive the memorial transmitted through you.

I am, &c.

Messrs. Vandercom, Cree, Law, & Comyn,
Cannon-street.

(signed) *James C. Melvill,*
Secretary.

Sir, Bush-lane, 5 January 1852.

REFERRING to your letter of the 3d instant, in which you inform us that the Honourable Court of Directors will no longer refuse to receive the memorial of Meean Oomaid Singh, of Beeghat, transmitted through us, we have now the honour to place the same in your hands to be laid before the Honourable Court.

We are, &c.

J. C. Melvill, Esq. (signed) *Vandercom, Cree, Law, & Comyn.*

Gentlemen, East India House, 19 February 1852.

YOUR letter, dated the 5th ultimo, enclosing a memorial from Mean Oomaid Sing, of Bughat, claiming the succession to that estate, has been laid before the Court of Directors, and I am instructed to inform you that the Court's reply to that memorial will be communicated to the memorialist by the Government of India.

I am, &c.

Messrs. Vandercom, Cree, Law, & Comyn. (signed) *James C. Melvill.*

COPIES of a TREATY between *Ramchund Rao,* Soubadar of Jhansi, and the British Government, concluded in the Year 1817: And of all REPORTS and CORRESPONDENCE relative to the ANNEXATION of the TERRITORY of JHANSI to the British Territories.

TREATY with *Rao Ramchund,* Soobadar of Jhansi, dated the 17th November 1817.

Treaties, &c., Bombay.

WHEREAS a Treaty of defensive alliance was concluded between the British Government and the late Sheo Rao Bhaoo, Soobadar of Jhansi, under date the 6th February 1804, (or 10th of Phalgoon Vud 1860, Sumvut), when the said Soobadar was in the condition of a tributary to His Highness the Peshwa; and whereas the whole of the rights of His Highness the Peshwa over the Principality of Jhansi have since that period, been transferred to the British Government, in virtue of the Treaty concluded between the Government and the Peshwa, under date the 13th June 1817,* (corresponding with the 14th Ashadh 1874, Sumvut), and in consequence of that transfer, the relations established by the former Treaty between the British Government and Jhansi have become virtually extinct; and whereas the British Government, in consideration of the very respectable character borne by the late Soobadar, Sheo Rao Bhaoo, and his uniform and faithful attachment to the British Government, and in deference to his wish expressed before his death, that the Principality of Jhansi might be confirmed, in perpetuity, to his grandson Ramchund Rao, to be conducted during the minority of the said Rao Ramchund Rao by Rao Gopal Rao Bhaoo, manager nominated by the late Bhaoo, and confirmed by the British Government; on these considerations, and in the confident reliance of the continuation of the same friendly disposition on the part of the Government of Jhansi, and of its strict adherence to the engagements comprised in this Treaty, the British Government has consented, on certain conditions, to constitute Rao Ramchund the hereditary chief of the lands actually held by the late Rao Sheo Bhaoo at the commencement of the British Government in Bundelkhund, and now possessed by the government of Jhansi. The following Articles have, accordingly, been concluded between the British Government and Rao Ramchund Rao, under the direction and with the concurrence of his said manager, Gopal Rao Bhaoo.

* *Vide* pp. 530 to 536.

Article I. THE treaty concluded between the British Government and the late Sheo Rao Bhaoo, under date the 6th February 1804 (or 10th of Phalgoon Vud 1860, Sumvut), is hereby confirmed, excepting such parts as are altered or rescinded by the provisions of this treaty.

Art. II. The British Government, with a view to confirm the fidelity and attachment of the Government of Jhansi, consents to acknowledge, and hereby constitutes Rao Ram Chund, his heirs and successors, hereditary rulers of the territory enjoyed by the late Rao Sheo Bhaoo at the period of the commencement of the British Government, and now in the possession of Rao Ram Chund, excepting the pergunna of Mote, which being held by the Jhansi Government in mortgage from Raja Bahadoor, will continue on its present footing, until a settlement of the mortgage takes place between the parties. The British Government further engages to protect the aforesaid territory of Rao Ram Chund from the aggression of foreign powers.

Art. III. The British Government having, by the terms of the foregoing Article, engaged to protect the Principality of Jhansi from the aggressions of foreign powers, it is hereby agreed between the contracting parties, that whenever the Government of Jhansi shall have reason to apprehend a design on the part of any foreign power to invade its territories, whether in consequence of any disputed claim, or any other ground, it shall report the circumstances of the case to the British Government, which will interpose its mediation for the adjustment of such disputed claim; and the Jhansi Government, relying on the justice and equity of the British Government, agrees implicitly to abide by its award. If the apprehended aggression shall be referable to any other cause, the British Government will endeavour, by representations and remonstrances, to avert the design; and if, notwithstanding the Soobadar's acquiescence in the award of the British Government, the other power shall persist in its hostile designs, and the endeavours of the British Government should fail of success, such measures will be adopted for the protection of the Soobadar's territories as the circumstances of the case may appear to require.

Art. IV. In consideration of the guarantee and protection afforded by the two foregoing Articles to Rao Ram Chund, the chief of Jhansi, that chief hereby binds himself to employ his troops, at his own expense, wherever required to do so, in co-operation with those of the British Government, on all occasions in which the interests of the two Governments may be mutually concerned. On all such occasions, the Jhansi troops shall act under the orders and control of the commanding officer of the British troops.

Art. V. Rao Ram Chund hereby agrees to submit to the arbitration of the British Government all his disputes between other States, and implicitly to abide by its award.

Art. VI. Rao Ram Chund engages at all times to employ his utmost exertions in defending the roads and passes of his country against any enemies or predatory bodies who may attempt to penetrate through it into the territories of the Honourable Company.

Art. VII. Whenever the British Government may have occasion to send its troops through the dominions of Rao Ram Chund, or to station a British force within his territories, it shall be competent to the British Government so to detach or station its troops, and Rao Ram Chund shall give his consent accordingly. The commander of the British troops which may thus eventually pass through or permanently occupy a position within the Jhansi territories shall not in any manner interfere in the internal concerns of the Jhansi Government. Whatever materials or supplies may be required for the use of the British troops during their continuance in the Jhansi territories, shall be readily furnished by Rao Ram Chund's officers and subjects, and shall be paid for at the price current of the bazaar.

Art. VIII. Rao Ram Chund hereby binds himself to maintain no correspondence with foreign States, without the privity and consent of the British Government.

Art. IX. Rao Ram Chund engages to give no asylum to criminals nor to defaulters of the British Government, who may abscond and take refuge within his territories; and should the officers of the British Government be sent in pursuit of such criminals and defaulters, Rao Ram Chund further engages to afford such officers every assistance in his power in apprehending them.

Art. X. This treaty, consisting of 10 Articles, having this day been concluded between the British Government and Rao Ram Chund, through the agency of John Wauchope, Esq., in virtue of powers delegated to him by the Most Noble the Governor-general, on the one part, and Narayun Bulwunt Rao, the Vakeel, on the other, Mr. Wauchope and the said Vakeel have signed and sealed two copies of the treaty in English, Persian, and Hindee, one of which, after being ratified by the seal and signature of the Most Noble the Marquis of Hastings, Governor-general, will be returned to the said Vakeel; and the said Vakeel having

having obtained the ratification of the Soobadar to the other copy, engages to deliver it within the same time to Mr. Wauchope.

Signed, sealed, and exchanged at Pipree, on the 17th day of November 1817 (corresponding with the 24th Kartik 1874, Sumvut, and 7th of Mohurrum 1233, Hijree).

(signed) *J. Wauchope,*
Superintendent Political Affairs.

Signature of Nana Bulwunt Rao.

MEMORANDUM.—Ratified by His Excellency the Governor-general, in camp at Pipree, on the 18th day of November 1817.

(signed) *G. Swinton,*
Persian Secretary to Government.

EXTRACT Foreign Letter from India, dated 4th March (No. 21) 1854.

2. THE chief of the State of Jhansi, which was created by the British Government a tributary and dependent principality, adopted a son the day before his death. We have decided, in accordance with a precedent in the case of this same State, that this adoption shall not be recognised as conferring any right to succeed to the rule of the principality, and that as the chief has left no descendants, and no descendants of any preceding chief of this State are in existence, the State has lapsed to the British Government.

Fort William, Foreign Department, 29 April (No. 39) 1854.

To the Honourable the Court of Directors of the East India Company.

Honourable Sirs,

WE have the honour to transmit herewith copies of the further correspondence which has taken place subsequent to the despatch of our letter, No. 21, dated 4th March last, in regard to the affairs of the State of Jhansi.

We have, &c.
(signed) *Dalhousie.*
J. Dorin.
J. Low.
Fred. Jas. Halliday.

Fort William,
29 April 1854.

EXTRACT Political Letter to India, dated 2 August (No. 34) 1854.

2. The Raja of Jhansi adopted one of his cousins as his son, and his widow has demanded that this boy should be acknowledged as the future ruler of the principality; but after full consideration of our relations with this State, you have determined not to recognise the adoption as conferring any right to the succession.

3. In 1804 a treaty was concluded with Sheo Row Bhow, Subadar of Jhansi. That engagement was merely personal. In 1817 the British Government "resolved to declare the territory of Jhansi to be hereditary in the family of the late Sheo Rao Bhow, and to perpetuate with his heirs the treaty concluded with the late Bhow. Accordingly a treaty was made with Rao Ram Chund, grandson of Sheo Row Bhow, by the second Article of which the British Government consents to acknowledge, and hereby constitutes, Rao Ram Chund, his heirs and successors, hereditary rulers of the territory enjoyed by the late Rao Sheo Bhow." By an indulgent construction of this engagement, it was held not to be confined to the lineal descendants of Rao Ram Chund, but to extend to the lineal descendants of Sheo Row Bhow. There is no such

descendant now living; and we have no hesitation in approving your intention to annex the territory of Jhansi to the British possessions; and you will make such provision for the widow or widows of Gungadhur Rao as you may deem expedient.

No. 24 of 1853.

From Major *D. A. Malcolm*, Political Agent, Gwalior, Bundlecund, and Rewah, to the Secretary to the Government of India.

Sir, Foreign Department, Fort William.

It is with much regret I have to report, for the information of the Most Noble the Governor-general in Council, that Gungadhur Rao, the Maharajah of Jhansi, died on the 21st instant at that place.

2. The day previously to this event the Maharajah adopted a boy five years of age, named Damoodur Gungadhur Rao, *alias* Anund Rao, whom he styles his grandson (Naheerah Khood), but who is in reality, I believe, the fifth in descent from their common ancestor, Rajhoonath Rao, and would, by our mode of reckoning degrees of consanguinity, be denominated his fifth cousin.

3. Copies of Major Ellis's letters and enclosures, reporting his interview with the Maharajah on the 20th instant, and the Maharajah's demise on the following day, are herewith enclosed for his Lordship's information. A copy and translation, also, of the Maharajah's khareeta to my address of the same date, detailing the reasons which had induced him to adopt the boy Anund Rao, will also be found among the annexed papers.

4. The sudden resolution of the chief of Jhansi to adopt a successor on his deathbed has, I believe, taken every one at his court by surprise. It was understood that he would probably make an attempt to induce us to allow him to leave his estate in the hands of his widow during her lifetime; but, from the circumstance of there being no heir male existing in the line of Sheo Rao, the Soobadar of Jhansi, with whom our first treaty was concluded, or no near relative of any description, the question of adoption was, I believe, considered one which was not ever likely to be brought forward.

5. I annex, for the information of Government, a rough genealogical tree of the Jhansi family, which may, I believe, be considered correct. From this it will be seen that the boy now adopted is descended from Rughonath Rao, the great great grandfather of the late Maharaja of Jhansi, and great grandfather of Sheo Rao, the Subadar of that State, with whom our first treaty was concluded.

6. Major Ellis has proceeded to act under the instructions conveyed in my letter of the 2d instant, a copy of which was submitted to Government on the 3d idem; and he will, of course, abstain from taking any notice of the adoption made by the late Rajah pending the instructions of Government as to the course to be adopted in regard to the affairs of the State.

7. A short sketch of our relations with the Jhansi family may, perhaps, prove acceptable to Government in this place, and assist it in forming a definite opinion as to the right, which appears to me very questionable, of the Rajah to nominate by adoption an heir to his principality.

8. On our first connexion with Bundlecund in 1804, we formed a treaty with Sheo Rao Bhow, as a servant and a tributary of the Paishwa, and in 1817, when the whole of the rights of the Paishwa over the Jhansi principality were transferred to the British Government by treaty, we acknowledged his grandson Rao Ram Chunder as the hereditary ruler of the State, with reversion to his heirs and successors; and subsequently, in 1832, we conferred the title of Raja upon him in lieu of that of Soobadar, which he had held under the Paishwa Government, and under our own subsequent to the treaty of 1817.

9. On the demise of Rao Ramchunder in 1835, without male heirs, the question of resuming the State was, I believe, discussed, but as it was found that there

there were still two sons of Sheo Rao alive, namely, Rughonath Rao and Gungadhur Rao, the State was allowed to continue in that line, which has now been brought to a close by the death of the late Raja, Gungadhur Rao.

10. I may here mention, that on the demise of Rao Ramchunder, in the year 1835, two individuals laid claim to the State, one on the plea of adoption by the late Rajah, the other by his widow, but that both were rejected as inadmissible. The records of that period are not at present with me; but the correspondence which took place on the subject will be found in your office, and a reference to it will probably show that the terms under which the State of Jhansi was held under us, precluded, in the opinion of Government, the Raja or his widow from making any adoption to the prejudice of the paramount power.

11. The widow of the late Gungadhur Rao, in whose hands he has expressed a wish that the government should be placed during her lifetime, is a woman highly respected and esteemed, and I believe fully capable of doing justice to such a charge; but as, under all the circumstances of the case, I do not consider it probable that Government will forego its right to resume this State, I trust that I may be allowed to assure her that she will be allowed to retain all the personal property of her late husband, and the palace situated in the town of Jhansi, and that such an allowance will be made for herself and the old adherents of the family as will maintain them in comfort and respectability during the remainder of their lives.

12. It is difficult for me to assign a sum which may be considered sufficient for the wants of the Ranee; but as this is the last of the Maharatta families settled in Bundlecund, and the funds derived from the Peshwa and Venaik Rao are no longer available for purposes of charity, many adherents of these chiefs will probably look to her for maintenance and support, and as Government, taking all these things into consideration, will probably wish that a liberal settlement should be made upon her, I would respectfully submit, for its consideration, that the stipend assigned to her should not be less than 5,000 rupees per mensem.

13. With regard to the adherents of the family, I have no means at present before me of stating their numbers or the amount they have hitherto received from the late Rajah; but their case can be left for future consideration, when a list of them has been prepared.

14. The State of Jhansi was for many years under our control, and so little deviation has been made in the mode in which it was managed by Major Ross, that I believe, should Government decide on resuming it, very little difficulty will be experienced in placing it on the same footing as the districts we manage for Scindia in its immediate vicinity.

15. Should Government deem it advisable that I should assume charge of it, I shall of course be prepared to do so; but as neither Major Ellis, my assistant, or myself, have any experience in revenue matters, and are much occupied with our political duties at Gwalior and Bundlecund, which will frequently require our presence in distant parts of the country, I would respectfully beg to suggest, as the preferable course, that the State of Jhansi should be incorporated with the districts in Bundlecund, now under the charge of Captain Erskine, Commissioner at Jubbulpore.

I have, &c.

(signed) *D. A. Malcolm,*
Political Agent, Gwalior, Bundlecund, and Rewah.

Political Agency Office, Camp Puna,
25 November 1853.

To Major *Malcolm*, Political Agent for Bundlecund, Camp.

Sir,

WITH reference to the instructions contained in your letter, dated 2d instant, I have the honour to forward a khurreeta, in original, delivered to me this morning by the Raja of Jhansi, stating that he had adopted Wamand Rao Gungadhur, *alias* Anund Rao, a boy of five years of age, a descendant of his grandfather, to be his successor, and appointed his widow to manage affairs during the minority, and begging that the sanction of Government might be obtained to the arrangement.

I returned from camp this morning, at the request of the Rajah, in consequence of finding himself worse, and when Captain Martin and myself visited him, as we did at his own request, I regret to state that we found him in what appeared to us to be the very last stage of existence; the khurreeta was read over in his presence, and it was scarcely finished before he was seized with a fit of convulsion, when we left the room, and shortly afterwards returned home.

I have, &c.
(signed) *R. R. W. Ellis*,

TRANSLATION of a Khareeta from *Maharaja Gunga Dhur Rao* of Jhansi, to the address of Major *Ellis*, Political Assistant in Bundlecund and Rewah; dated 19th November 1853.

After Compliments,

The manner in which my ancestors were faithful to the British Government previously to the establishment of its authority (in Bundlecund?) has become known even in Europe, and it is well known to the several agents here that I also have always acted in obedience to the same authority.

I am now very ill, and it is a source of great grief to me that notwithstanding all my fidelity and the favour conferred by such a powerful Government, the name of my fathers will end with me; I have therefore, with reference to the 2d Article of the treaty concluded with the British Government, adopted Damoodhur Gungadhur Rao, commonly called Anund Rao, a boy of five years old, my grandson through my grandfather (Nabeerah Juddee*).

I still hope that by the mercy of God and the favour of your Government I may recover my health, and as my age is not great I may still have children, and should this be the case I will adopt such steps as may appear to be necessary. Should I not survive, I trust that in consideration of the fidelity I have evinced towards Government, favour may be shown to this child, and that my widow during her lifetime may be considered the Regent of the State (Malikeh) and mother of this child, and that she may not be molested in any way.

(True translation.)
(signed) *D. A. Malcolm*,
Political Agent, Gwalior, Bundelkund, and Rewah.

Sir,

IN continuation of my letter of yesterday's date, I have the honour to inform you that I went to see the Rajah a second time yesterday evening, accompanied on this occasion by Dr. Allen, the medical officer at Jhansi; we were met on the road to the palace by a sowar telling us that the Rajah was in a fainting fit and could not receive us, in consequence of which we were returning home when a second sowar came after us, saying that the Rajah had heard of our intention to visit him, and begged that we would return and do so. We did so accordingly, and on arrival at the palace found that since the morning he had been removed from the upper storied apartment which he then occupied to one on the ground floor adjoining the female apartments as a sign that his attendants considered his end to be near at hand. He appeared however to have rallied a good deal since the morning, and entered into a detal of his ailments to Dr. Allen, from which it appeared that he was suffering from dysentery; he has consented to take any medicines which Dr. Allen might send him, provided the liquids were mixed

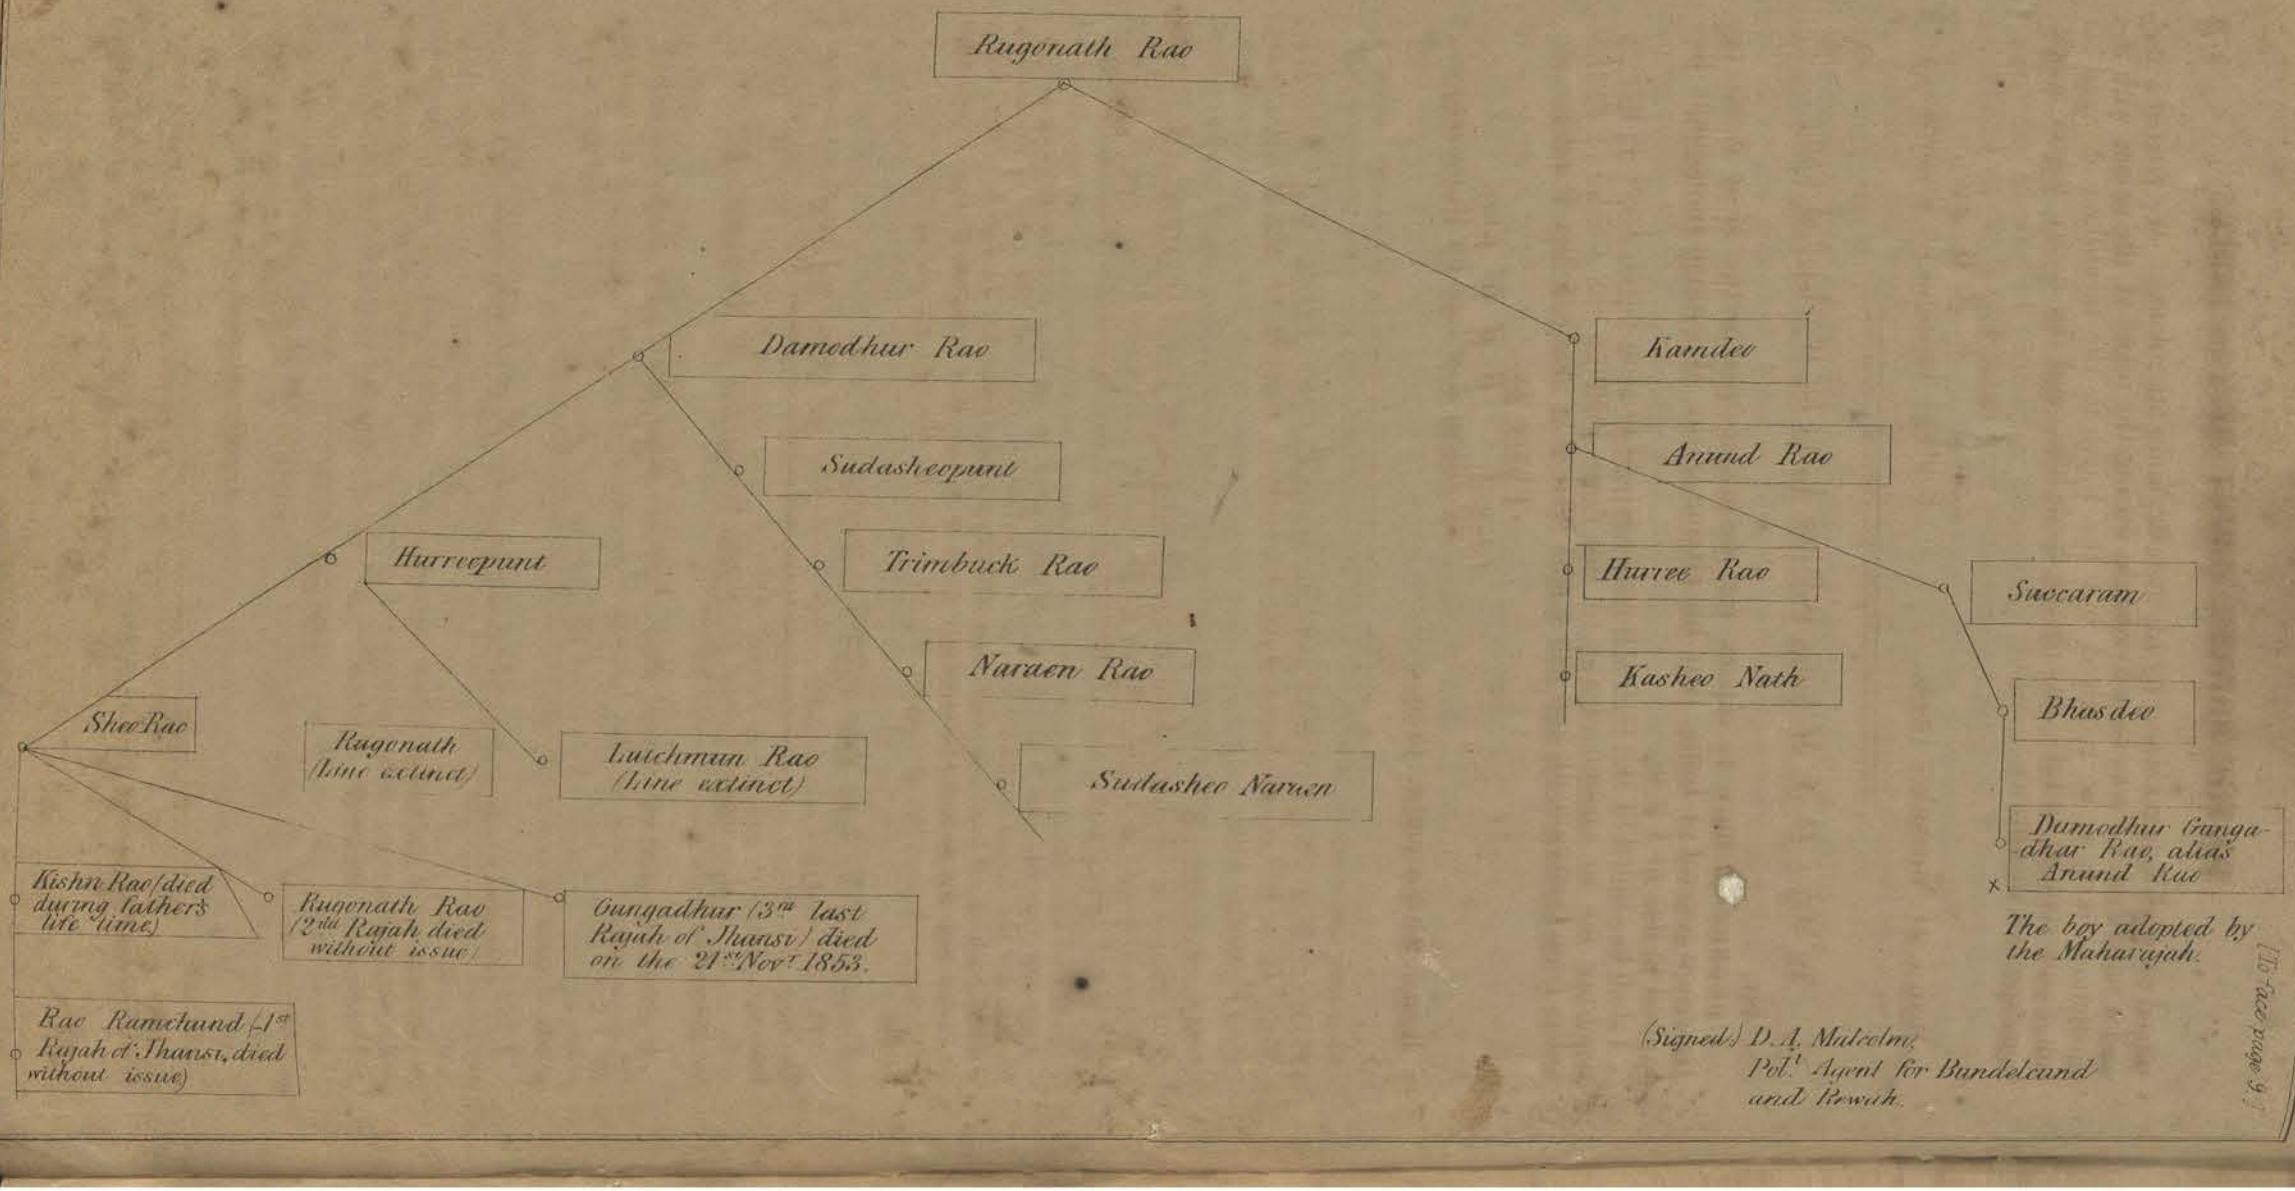
PAPER EAST INDIA. (ANNEXATION OF JHANSI)

Genealogical Tree of the late Rajah of Jhansee Gungadhur Rao, and of the Boy Anund Rao he has adopted.



(Signed) D. A. Malcolm
Pol.l Agent for Bundelcund and Rewah.

To face page 4.

mixed up with Ganges water by his own Brahmin attendants. We retired home, and a native doctor was sent to remain during the night at the palace with the medicines likely to be required, but the Rajah in the meantime changed his mind and refused to take any of the medicines, and the native doctor was in consequence withdrawn.

I have, &c.
(signed) *R. R. W. Ellis,*
Political Assistant for Bundelkund.

Jhansi, 21 November 1853.

To Major *D. A. Malcolm,* Political Agent for Bundelkund, Camp.

Sir,

I REGRET to have to report, for the information of the Most Noble the Governor-general of India, that his Highness the Maharajah Gungadhur Rao expired to-day at 1 p. m.

I shall be guided by the instructions contained in your letter, dated 2d instant, requiring me to assume charge of the State pending the receipt of further orders from Government, and will report further as occasion may require.

I have, &c.
(signed) *R. R. W. Ellis,*
Political Assistant for Bundelkund.

Jhansi, 21 November 1853.

TRANSLATION of a Khareeta from *Maharaja Gungadhur Rao* of Jhansi, to the Address of Major *D. A. Malcolm,* Political Agent for Gwalior, Bundelkund, and Rewah ; dated 20th November 1853.

After Compliments,

THE manner in which my ancestors were faithful to the British Government previously to the establishment of its authority (in Bundlecund?) has become known even in Europe, and it is well known to the several agents here that I also have always acted in obedience to the same authority.

I am now very ill, and it is a source of great grief to me that notwithstanding all my fidelity, and the favour conferred by such a powerful Government, the name of my fathers will end with me; I have therefore, with reference to the following 2d Article of the treaty concluded with the British Government, adopted Damoodhur Gungadhur Rao, commonly called Anund Rao, a boy five years old, my grandson through my grandfather (Nabeerah Juddee).*

The article of the treaty above referred to, is this:

"The British Government, with a view to confirm the fidelity and attachment of the Government of Jhansi, consents to acknowledge, and hereby constitute, Rao Ramchunder, his heirs and successors, as hereditary rulers of the territory enjoyed by the late Sheo Rao Bhow at the period of the establishment of the British Government in Bundlecund, and now in the possession of the Jhansi Government."

In compliance with my request Major Ellis and Major Martin, the officer commanding the troops, waited upon me, and I explained to them all that I have written in this paper, and I gave them a letter which I prepared to the above effect intimating my having nominated my grandson (Nabeerah i Khoord) in my place, and I feel assured that these gentlemen will forward it to you.

I still hope that by the mercy of God and the favour of your Government I may recover my health, and as my age is not great I may still have children, and should this be the case I will adopt such steps as may appear to be necessary. Should I not survive, I trust that, in consideration of the fidelity I have evinced towards Government, favour may be shown to this child, and that my widow during her lifetime may be considered the Regent of the State (Malikeh) and mother of this child, and that she may not be molested in any way.

(True translation)

Political Agent,
Gwalior, Bundelkund, and Rewah.

---

* This is a term used to denominate cousins in the third and fourth degrees, tracing their descent by the male line to a common ancestor.

No. 26 of 1853.

From Major *D. A. Malcolm*, Political Agent for Gwalior, Bundelcund, and Rewah, to *J. P. Grant*, Esq., Officiating Secretary to the Government of India, Foreign Department, Fort William.

Sir,

I BEG to submit, for the information of the Most Noble the Governor-general in Council, the accompanying copies of letters, with enclosures, received to my address from Major Ellis, Political Assistant in Bundlecund, reporting the steps adopted by him on the demise of the late Rajah of Jhansi, and offering an opinion in regard to the number of troops which he thinks would be required in the event of our assuming the permanent management of the country.

2. When the country was formerly under our charge there were I believe several zemindars at large, who gave us considerable trouble, and required to be strictly watched, but as they have either been placed in confinement, or brought under complete subjection, the necessity of permanently employing the same number of troops in the country appears no longer to exist.

3. Still, as it is, I believe, the intention of Government to retain only a wing of native infantry at Jhansi, and this small force will be unable to furnish detachments to garrison the fort of Jhansi and Kureira, both of which should be occupied for a short time if we assume the permanent charge of the country, I would suggest that in the event of no Company's troops being available for that purpose, I should be authorised to retain the wing of the 6th Regiment, Scindiah's Contingent, now at Jhansi, till further orders, in addition to the wing of the Regiment of Bengal N. I., now on its march from Mooltan to this place.

4. As the latter force will not probably reach Bundelcund for some weeks to come, I would suggest as a temporary measure, and pending their arrival, that Brigadier Parsons, commanding the Contingent, should be directed to detach to Jhansi four additional companies of infantry from Moovar, with which a garrison of two companies might be furnished for the fort of Jhansi, and two for that of Kureira.

5. Whatever may be the decision of Government in regard to the estate of Jhansi, I do not contemplate that any disturbance will be excited against us by any members of the late Rajah's Government; but as a measure of precaution against the zemindars of the districts, it will, I think, be as well for a few months, till our Government is established, that our force at Jhansi should not be less than a regiment of Native Infantry and one of Irregular Cavalry.

I have, &c.

Political Agent for Gwalior, Bundelcund, and Rewah.

Agency Office, Camp Sahawul,
1 December 1853.

To Major *Malcolm*, Political Agent for Bundelcund and Rewah.

Sir,

IN continuation of my letter of yesterday's date, reporting the death of the Rajah of Jhansi, I have the honour to report that immediately on receipt of the above intelligence I proceeded to the palace, accompanied by Captain Martin, the officer commanding the station, and attended by an escort of Irregular Cavalry, and offered my condolence to the Lakshim Bai, the widow of the Rajah, on the occasion.

2. I then proceeded to the fort, where the greatest part of the public treasure is lodged, and where all the prisoners are kept, and in the presence of the Killadar and Jevala Nath, pundit, on the part of Jhansi, placed seals on the locks of the apartment, where Government treasure to the amount of *Rs.* 2,45,738. 15.

23 November 1853.

To Major *D. A. Malcolm,* Political Agent for Bundelcund and Rewah, Camp.

Sir,

I HAVE the honour to forward copies of the correspondence as per margin, regarding the present temporary occupation by our troops of the Fort of Jhansi in co-operation with those in the service of the late Rajah, and if the measure is likely to be considered permanently necessary, would beg leave to suggest that the wing of the 6th Regiment, Scindiah's Contingent, now stationed here, should be increased to the strength of a full regiment, and that military detachments should likewise be stationed in the fort of Kurrara, also at Mhow, Ranipore, Moyapore, and other places where they were stationed during the former period of Jhansi having come under our rule in 1838.

No. 24, dated 22d instant, from Captain Martin, commanding at Jhansi. Reply from Major Ellis, dated 23d instant.

I have, &c.
(signed) *R. R. W. Ellis,*
Political Assistant for Bundelcund.

Political Assistant's Office, Jhansi,
23 November 1853.

No. 24.

To Major *R. R. W. Ellis,* Political Assistant, Jhansi.

Sir,

I HAVE the honour to bring to your notice that from the number of men belonging to the Jhansi Raj employed in the fort guarding property of the State, the large guard necessary over 250 prisoners, and also from the size of the fort and the numerous buildings in it, I consider the company of the Gwalior

Contingent placed on duty there yesterday quite inadequate, n case of any disturbance, and that it can in reality only be considered as nominal, to show that the Raj is now under the protection of the British Government.

I have, &c.
(signed) *A. P. Martin*, Captain,
Jhansi, 22 November 1853. Commanding at Jhansi.

To Captain *A. P. Martin*, Commanding at Jhansi.

Sir,

I HAVE the honour to acknowledge the receipt of your letter, No. 24, of yesterday's date, and in reply, to inform you that the occupation of the fort of Jhansi by our troops, in co-operation with those of the late Jhansi Rajah, is intended to give public confidence, by showing that the territory is under the protection of the British Government, and that any attempt to create disturbances will be punished accordingly.

2. Copy of your letter and my reply has been forwarded to Major Malcolm for such further instructions as he may consider necessary.

I have, &c.

MINUTE by the Honourable the President of the Council of India.

Adoption of the Raja of Jhansi.

I DO not think this adoption can be supported, but it is a case that had better lie over for the consideration of the Most Noble the Governor-general. Meanwhile the political agent may be cautioned not to commit the Government in any manner whatever, and informed that its ultimate orders will be communicated to him hereafter.

(signed) *J. Dorin.*

9 December 1853.

THE question should lie over, I think, till the return of the Governor-general; public tranquillity being in the meantime preserved under the immediate authority and orders of the political agent, without his altering any of the native modes of administration, and neither confirming nor rejecting the adoption, as was done at Kerrowlee.

10 December 1853. (signed) *J. Low.*

12/12. (signed) *Fred. Jas. Halliday.*

MINUTE by the Honourable the President of the Council of India.

State of Jhansi.

I DO not think the Jhansi question can be settled without reference to the Governor-general, but meanwhile the political agent may be instructed to keep all quiet, and, if necessary, apply for such military aid as he may require to Brigadier Parsons.

(signed) *J. Dorin.*

12 December.

I concur entirely.

No. 28 of 1853.

From Major *D. A. Malcolm*, Political Agent for Bundlecund and Rewah, to *J. P. Grant*, Esq., Officiating Secretary to the Government of India, Foreign Department, Fort William.

Sir,

I BEG to submit, for the information of the Most Noble the Governor-general in Council, the copy of a letter, under date the 4th instant, which I have received from Major Ellis, giving cover to a khurreeta (with translation) from Lukshmee Baee, the widow of the late Maharaja of Jhansi, to his Lordship's address, soliciting the sanction of Government to Anand Rao, styled Damodhur Rao Gungadhur, the boy adopted by her husband before his death, being recognised as his successor in the rule of the Jhansi principality.

2. I also beg to transmit a genealogical tree of the Jhansi family, as prepared by Major Ellis, from information derived from the Jhansi durbar.

3. This document agrees entirely with the paper I forwarded to Government on the 25th ultimo, with the exception of making Anand Rao, the boy adopted by the late Raja, the representative of the elder branch of the family, and the sixth in descent from their mutual ancestor, Rughonath Rao, instead of the fifth, as stated in the document above referred to.

(signed) *D. A. Malcolm,* Political Agent.

TRANSLATION of Khareeta from Her Highness the Lukshmi Baee, the Widow of *Gungadhur Rao,* the late Maha Raja of Jhansi, to the Address of the Marquis of *Dalhousie,* the Most Noble the Governor-General of India.

After Compliments,

THE services rendered by Sheo Rao Bhao, the father of my late husband, to the British Government, before its authority in this part of the country was established, are recorded, with other State documents, and have been amply rewarded by the unceasing flow of benefits which his family have derived from the acknowledged favour and protection of such a mighty power.

The concluding article of the treaty with my late husband, signed by Colonel Sleeman in 1842, guarantees to the Jhansi Government the continued existence of all the benefits claimable by virtue of a former treaty made with Ramchand Rao in 1817, not specifically cancelled by the terms of the new agreement then made.

This treaty was declaredly made in consideration of the very respectable character borne by the late Subadar Sheo Rao Bhao, and his uniform and faithful attachment to the British Government, and in deference to his wish expressed before his death, that the Principality of Jhansi might be confirmed in perpetuity to his grandson, Ramchand Rao.

As the means of effecting this, and with the view to confirming the fidelity and attachment of the Government of Jhansi, the second article acknowledges and constitutes Rao Ramchand, his heirs and successors, hereditary rulers of the territory enjoyed by the late Sheo Rao Bhao; thereby meaning that any party whom he adopted as his son to perform the funeral rites over his body necessary to ensure beatitude in a future world would be acknowledged by the British Government as his successor, and one through whom the name and interests of the family might be preserved.

The Hindu Shastras inculcate the doctrine that the libations offered to the manes of a deceased parent are as efficacious when performed by an adopted as by a real son, and the custom of adoption is accordingly found prevalent in every part of Hindustan. My husband, therefore, upon the evening of the 19th November last, sent for Dewan Nara Sing, Rao Appa, Lalla Lahori Mull, and Lalla Tatti Chund, the ministers, and myself, and told us to consult with the Shastra, and select a duly qualified child from his own "Gote" (clan), to succeed him as ruler of Jhansi, as he found himself getting worse, and the medicines doing him no good.

Ramchund Baba was in consequence summoned, when, at his recommendation, out of several children of the Gote, it was agreed that Anand Rao, a boy of five years of age, the son of Basdiva, was the best qualified for the purpose. My husband then ordered the shastri to perform the rites of adoption. The next morning Benaik Rao, pundit, performed the sangkalpa, when Basdiva, the father of Anand Rao, having poured water on my husband's hands with the usual ceremonies, the boy was named Damodhur Rao Gungadhur, when the ceremony was completed.

The ministers, by order of the Raja, wrote to Major Ellis, who was encamped at Sayer, six coss from Jhansi, and to Major Martin, the officer commanding the station, requesting their attendance at the palace, with the view of bearing witness to what had been done. These two gentlemen came to the palace at 10 a. m. the next morning, the 20th November, when my husband delivered a letter to Major Ellis, requesting him to obtain the sanction of Government to the adoption, which was read over in their presence, when Major Ellis promised that he would make known his wishes to your Lordship.

The next day, Monday, the 21st November, my husband expired; the different funeral rites required to be performed by a son have all been discharged by Anand Rao, styled Damodhur Rao Gungadhur.

My late husband before his death made the boy over to the protection and favour of the British Government; and as the adoption made by Parakshata, the late Raja of Datia, that of Bala Rao, the last chief of Jalown, and that of Tej Sing, the last Raja of Urcha, have all been sanctioned by Government, I hope that the present adoption will also be sanctioned by your Lordship, the more strongly as the term ("Dawana") perpetuity, made use of in the treaty with the Jhansi State, is not mentioned in theirs.

(True translation.)

No. 34 of 1853.

From Major *D. A. Malcolm*, Political Agent, Gwalior, Bundlecund, and Rewah, to the Secretary to the Government of India, Foreign Department, Fort William.

Sir,

I BEG to acknowledge the receipt of your despatch of the 16th instant, a copy of which has been forwarded to Major Ellis, for his information and guidance.

2. Since the death of the Raja of Jhansi two persons have advanced claims of right of succession to the Gadi, namely, Kishen Rao, and Sadasheo Narain.

The first is a nephew (sister's son) of Ramchunder Rao, the Raja of Jhansi, who died in the year 1835. The claims of this individual were then, I believe, rejected as totally inadmissible, and his present appeal appears to be deserving of no consideration.

The second individual is a person called Sadasheo Narain, now in the Deccan. It will be seen, from the enclosed letter from Major Ellis, that he considers this man's claims also inadmissible; but on an examination of the genealogical tree herewith enclosed, it will be seen, that if the claims of heirs male of the ancestors of the late Raja are admitted, this individual is actually the nearest relative left to claim the Gaddi on these grounds.

I have, &c.

Political Agency Office, Camp Antree,
13 January 1854.

No. 36.

To Major *D. A. Malcolm*, Political Agent for Bundlecund and Rewah, Camp.

Sir,

WITH reference to your letter, No. 71, dated 20th instant, I beg leave to observe that we have a treaty of alliance and friendship with the Jhansi as well as the Urcha State, and that I cannot discover any difference in the terms of the two which would justify our withholding the privilege of adoption from one State and allowing it to the other.

2. The right of the Native States to make adoptions is most clearly acknowledged in paragraphs 16 and 17 of despatch No. 9, dated 27th March 1839, from the Honourable the Court of Directors; and it appears to me that it would be opposed to the spirit of enlightened liberality which dictated those orders, if the privilege was to be now refused to families created by ourselves as a reward for the services rendered to the British Government, on the grounds that they were not of so ancient an origin as others.

NOTE.

Jhansi adoption.

MAHARAJAH GUNGADHUR ROW of Jhansi died without issue on the 21st of November last. A day before his death he very unexpectedly adopted a boy of five years of age, named Damooda Gunga, a distant cousin, and the recognition of this adoption is solicited by the widow.

Major Malcolm reports that this adoption by the late chief of Jhansi, on his deathbed, has taken every one at his court by surprise, and that officer does not appear to recognise the right of the Rajah to nominate an heir to his principality by adoption.

Besides the adopted son, two other claimants to the succession have since come forward.

The claim of one of them, Krishna Rao, appears to Major Malcolm to be deserving of no consideration. He is stated to be the son of a sister of Raja Ramchand Rao, who died in 1835; and Major Malcolm observes, that his claim was then put forward, and rejected.

The

The other claimant, Sudasheo Narain, belongs to a branch of the family, none of the members of which have ever shared in the succession; but if the claims of heirs-male of the ancestors of the late Raja are admitted, the political agent states that this individual is actually the nearest relative left to claim the guddee on these grounds.

The following history of our relations with Jhansi, and of the origin of this chiefship, will show that in this State the grant of the British Government goes no further back than Ramchand Row, the third Subahdar, and that the extreme point to which succession has been extended, is to the descendants of the two first Subahdars; also, that adoption in this family has been very decidedly not recognised.

In 1804 a treaty of friendship and amity was concluded with Sheo Rao Bhow, Subadar of Jhansi. As afterwards explained by Government, this "treaty with the Bhow, as distinctly implied in the terms of the preamble, was, in fact, concluded by the British Government on the part of the Peishwa, under the sanction of whose nominal authority indeed our operations and measures in Bundlecund were undertaken and conducted." The Subahdar in 1812 wished this treaty to be renewed in favour of his grandson, Rao Ramchand; but the British Government declined to do so, inasmuch as it would encroach on the rights of the Peishwa, whose subject the Subadar was. The Governor-general in Council pronounced that the British Government were not entitled to declare the subahdaree of Jhansi "to be hereditary, without the consent of the Peishwah." The former treaty was declared to be strictly personal.

Vide Cons. 3d March 1804, No. 238/240.

On this occasion the Governor-general in Council reviewed the past history of the Bhow's relations with the Peishwa, and distinctly explained the position of that Subahdar. He showed that the "tenure of the Bhow has been more that of an aumil or governor of the Subadaree of Jhansi, than of a chief possessing a proprietary right in the soil." The Governor-general in Council remarked, that "several of the papers furnished by the Bhow designate the person vested with the charge of the district of Jhansi by the title of collector; and the accounts which he has transmitted of receipts and disbursements correspond with that designation."

Orders of Government of 17th July 1812.

Sheo Rao Bhow died in 1814, and was succeeded by his grandson, Rao Ram Chand, who applied to the British Government for a khelat of investiture, which was refused, in the following terms: "The Governor-general is of opinion that, under the present state of suspense as to the confirmation of Rao Ram Chunder by the Peishwa, the investing of him with a khelat might imply the recognition of his title by the British Government, and might have the effect of giving umbrage to the Peishwa, by appearing to bar his pretensions to the superiority of the "Soubah of Jhansi."

Orders of Government, 24th March 1815.

In 1817 the Peishwa having ceded to the British Government all his rights, feudal, territorial, and pecuniary, in the province of Bundlecund, the British Government, adverting to the fidelity and attachment of the Subadhars of Jhansi, "resolved to declare the territory of Jhansi to be hereditary in the family of the late Sheo Rao Bhow, to perpetuate with his heirs the treaty concluded with the late Bhow, and to relinquish all claim to tribute, on condition of the chief furnishing at all times, when required by the British Government, a small body of good horse." The Governor-general in Council directed that the above stipulations should "be reduced to the form of a supplemental article, professedly founded on the transfer to the British Government of the Peshwa's supremacy over Jhansi, and reciting the motives for the concessions in favour of the chief of that State."

Letter dated 29th July 1817.

Government orders of 29th July 1817.

The treaty concluded with Rao Ram Chund, of 17 November 1817, is of the above tenor. The 2d Article "constitutes Rao Ram Chund, his heirs and successors, hereditary rulers of the territory."

In 1832 the title of Rajah was conferred by the Governor-general on the Subadar of Jhansi.

In 1835 Rao Ram Chund died, without issue. Four claimants appeared: Rao Rugnath Rao (second son of Sheo Rao Bhow, and therefore paternal uncle of the late Raja), was considered the rightful successor to the estate by the agent, Mr. Begbie. His succession was accordingly recognised by the Supreme Government, "it being presumed that he was able to establish his authority, and that his succession would be acknowledged by disinterested parties at Jhansi."

On this occasion the lawful heir by blood, descended of the body of Sheo Ram Bhow, was recognised as successor to the Raj, to the disallowance of a boy alleged to have been adopted, or nominated as successor by the late Raja the day before his death, who, if adopted, would have been unquestionably the heir to any property of his adoptive father, to the exclusion of the uncle; and this was done without inquiry into the fact of adoption or nomination (which was doubtful), as though it was an immaterial circumstance. Rugnath Rao died in April 1838.*

The following persons advanced their claims to succeed to the Raj; viz.

1st. Gungadhur Rao, who grounded his claims upon his natural right, as the only surviving son of Sheo Rao Bhow.

2d. Krishna Rao, the alleged adopted son of the late Rajah's predecessor, Rao Ram Chund.

3d. Allee Bahadoor, an illegitimate son of Rugnath Rao.

4th. The widow of the late Rajah.

A commission, composed of Lieutenant-colonel Speirs, Resident at Gwalior, Mr. Simon Fraser, and Captain D. Ross, were appointed by the Governor-general to examine into the rights of these several claimants to the chiefship of that State.

The attention of the commission was particularly drawn to the fact that, though the treaty strictly confirmed the succession of the Raj of Jhansi to the heirs and successors (or descendants) of Rao Ram Chund, the Government seemed to have waived this strict limitation by the admission of Rugnath Rao in 1835. Lord Auckland was therefore disposed to adopt the more liberal construction, which would admit to a right of inheritance all the descendants of Sheo Rao Bhow.

The commissioners declared an opinion in favour of Gungadhur Rao's right to succeed. This was a confirmation of the principle acted upon in 1835, Gungadhur Rao being the younger brother of the late Rajah.

This history will show that Jhansi unquestionably falls within the class of those who hold by gift from a sovereign or paramount power, and whose grants therefore, "the power which granted, or the power standing in its place, would have a right to resume on failure of heirs male of the body," according to Sir C. Metcalfe's Minute on the question of adoption in respect of Bundlecund chiefs, dated the 28th of October 1837.

There is now no male heir of the body of any Rajah or Soobadar of Jhansi.

Rughoonath Row was a leper, and was an incapable ruler. The late Raja Gungadhur Rao was kept out of real power till 1843, owing to his incompetency and the bad state of the country. The revenues of Jhansi once yielded 18 lacs, but had fallen in 1832 to 12 lacs; and in 1838, owing to gross mismanagement, to three lacs. Under our management it rose next year to seven lacs and a half. Territory to the value of 2,27,458 rupees was ceded in 1843, in lieu of the maintenance of half the Bundlekund legion. The settlement of 1844–45, for the remainder of the territory, was at a jumma of 5,91,970 rupees.

See De Cruz's Book, p. 27.

Amongst the papers now laid before Government is a letter from the widow of the late Raja of Jhansi, asking for the acknowledgment of her late husband's adopted son, and his succession to the Raj. She cites the cases of adoption allowed in Oorcha, Dutteea, and Jaloun as examples in favour of her claim.

The cases of the States of Oorcha and Dutteea are not in point, because they were neither granted by the British Government nor the Peshwah. They were independent States before the Mahrattas entered Bundlecund, and on that ground the Government recognised the adoption of sons by Rajas of those States.

The case of Jaloun is not quite the same, either with the cases of Dutteoa and Oorcha or with that of Jhansi. It belonged to a Mahratta family who emigrated from the Deccan. In 1806 we made a treaty with the chief of Jaloun, as though he were independent, without reference to the Peshwah, guaranteeing to him his territory as an hereditary possession; and taking in exchange territory from him, also without reference to the Peshwah. But in 1817

* Agra Narrative of Proceedings, for the fourth quarter of 1838, pp. 10 to 32; and first quarter of 1839, p. 18.

1817 a treaty was made with the same chief, in which he was certainly described as having been subordinate to the Peshwah, whose right of supremacy was stated, and in that second treaty the right of the chief was assured in the following words: "The British Government moreover acknowledges, and hereby constitutes, Nana Govind Row, his heirs and successors, the hereditary rulers of the territory at present in the Nana's actual possession."

In 1832 the ruler died without issue; and his widow adopted a son, whom we recognised, because it was agreeable to the wishes of the people.

The State, however, has since, in 1840, on the death of the adopted son, lapsed to Government. In 1832 its revenue was stated at 15 lacs, but under the adopted minor successor the rule was extremely disastrous. The Governor-general, Lord Auckland, thus described it: "Its Rajah, at 11 years of age, was under the tutelage of his sister and her minister. In the course of nine or ten years the lands had been most profusely alienated; debts to the amount of more than 30 lacs had been contracted; extensive districts had been mortgaged as security for them; there was neither order nor security in the territory; every village was exposed to the attacks of plunderers; cultivation was deserted, and a country which had been fruitful and prosperous, was day by day becoming desolate." To rescue the territory from ruin, we assumed the management in 1838. In 1839 the revenue amounted to seven lacs and a half; in 1843–44 it had risen to upwards of 12 lacs.

As the paramount power has it, in any case, in its discretion to authorise an adoption if it conceives that measure best for the public good, the fact of authorisation in the case of any particular State is no proof that authorisation was accorded as of right; far less can it be accepted as a proof that authorisation can be claimed as a right in the case of any other State.

As to the question of whether the grant to an adopted son of succession to the rule of a Bundela State be or be not a measure likely to be the best for the public good, so far at least as the people of the State itself are concerned, the case of Jaloun, relied on by the widow, may perhaps appear to his Lordship in Council very much to the point.

(signed) *J. P. Grant,*
Officiating Secretary to the Government of India.

MINUTE by the Most Noble the Governor-General of India.

Jhansi.

1. MAHARAJAH GUNGADHUR RAO, the Rajah of Jhansi, died in the end of the month of November 1853. He left no child; but on the day before he died he adopted a son, and his widow, the Luchsmee Baee, now solicits the Government of India to recognise the adopted son as the successor to the Raj of Jhansi.

2. The note prepared by the Secretary has given a full and clear exposition of the relations between the British Government and the State of Jhansi. Having carefully considered these statements, and having examined the correspondence that has passed since we first came into communication with Jhansi, I have the honour to submit the opinion I have formed regarding the proper disposal of the territory lately ruled by the Raja of Jhansi.

3. It is my opinion that this territory, which has lapsed to the British Government, should be retained by it, in accordance equally with right and with sound policy.

4. The principles which must govern the disposal of Jhansi have very recently been fully considered and discussed in connexion with the case of Nagpore and Tehree. Guided by them, I have no hesitation in concluding that the right of the British Government to retain Jhansi, as a lapse or escheat, is clear, both under the general principle laid down by the Honourable Court in 1849, regarding dependent States, and on the particular principle laid down by the Lieutenant-governor, Sir Charles Metcalfe, and accepted by the Supreme Government, in 1837, regarding the petty States in Bundlecund.

 5. For

5. For the sake of perspicuity, I will quote again the terms in which those principles have been communicated.

The Honourable Court of Directors declared, that "by the general law and custom of India, a dependent principality like that of Sattara cannot pass to an adopted heir without the consent of the paramount power; that we are under no pledge, direct or constructive, to give such consent; and that the general interests committed to our charge are best consulted by withholding it."*

Minute, 28th Oct. 1837. Printed Papers, p. 141.

In reference to the chiefs of Bundlecund, Sir Charles Metcalfe wrote thus:—"The question is, whether chiefs and princes, not having heirs of the body, have a right to adopt a successor to the exclusion of collateral heirs, or of the supposed reversionary rights of the paramount power, and whether the British Government is bound to acknowledge the adoption."

"In the disposal of this question there is a wide difference, to which Mr. S. Fraser has not adverted, between sovereign princes and jageerdars, between those in possession of hereditary sovereignties in their own right and those who hold grants of land or public revenue by gift from a sovereign or paramount power." * * * * *

"In the case, therefore, of Hindoo sovereign princes, I should say, that in failure of heirs male of the body, they have a right to adopt to the exclusion of collateral heirs; and that the British Government is bound to acknowledge the adoption, provided that it be regular, and not in violation of Hindoo law." * * * * *

"With respect to chiefs who merely hold lands or enjoy public revenues under grants such as are issued by a sovereign to a subject, the power which made the grant, or that which by conquest or otherwise has succeeded to its rights, is certainly entitled to limit succession according to the limitations of the grant, which in general confirms it to heirs male of the body, and consequently precludes adoption. In such cases, therefore, the power which granted, or the power standing in its place, would have a right to resume on failure of heirs male of the body."

6. Jhansi is a "dependent principality," in like manner as, and even more distinctly than Sattara; it was held by a chief under very recent grant from the British Government as sovereign; it is, therefore, liable to lapse to the Government that gave it on the failure of heirs male.

7. The dependent nature of the chiefship of Jhansi does not admit of dispute.

It never was a sovereign State, even in the sense in which Tehree was so regarded; it was, in fact, a portion of Tehree, separated from it by the Peishwa, the superior of Tehree, and placed under the superintendence of a Soubadar.†

Cons. 3d March 1804. Government of India, Cons. 17th July 1812, para. 2. Para. 4.

In 1804, a treaty, which recited that the "Soobedar of Jhansi is a tributary of his Highness," was formed by the British Government with Sheo Rao Bhow. Subsequently the Government, in reference to the treaty, observed, that "Sheo Rao Bhow," in the wajib-ool-urz which he transmitted to the late Commander-in-chief, Lord Lake, in 1803, and which formed the basis of the existing treaty, distinctly acknowledges that he held his country under the authority of the Peishwa; "on whose part the treaty with the Bhow, as is distinctly implied in the terms of the preamble, was, in fact, concluded by the British Government."

Accordingly, in reply to the application made by Sheo Rao Bhow to have the treaty confirmed to his grandson as his successor, the Government of India stated that it was "not" . . . . . "entitled to declare it (the State of Jhansi) to be hereditary without the consent of the Peishwa."

Cons. 17th July 1812, para. 4.

In the course of this correspondence the real position of the Soobedar of Jhansi was clearly ascertained and defined.

Letter, 25th June 1812, para. 3.

The agent to the Governor-general in Bundlecund stated thus: "From the documents produced, it appears that the tenure of the Bhow has been more that of an aumil, or governor of the Soubedaree of Jhansi, than that of a chief endowed with proprietary right to the soil; and that the sole claim of this chief to retain his possession, or tenure, whatever it may be termed, rests upon his demand on the Poonah Government."

The Governor-general in Council observing that this statement is consistent with

---

* Court of Directors to Government of India, No. 4, 24th January 1849, para. 8.
† Political Relations, De Cruz, p. 27; also Consultation, 17th July 1812.

with "what is known of the history of Bundlecund," further illustrates the definition given by the agent of the position of the Subadar of Jhansi in these words: "Several of the papers furnished by the Bhow designate the person vested with the charge of the district of Jhansi by the title of collector; and the accounts which he has transmitted of receipts and disbursements correspond with that designation." Cons. 17th July 1812, para. 3.

Throughout the whole of this record the Soobedaree of Jhansi is viewed as a dependent chiefship, entirely under the authority of the Peishwa, with whom rested the option of "continuing the succession to the Soobedaree of Jhansi in the family of the Bhow." Cons. 17th July 1812, para. 6.

The British Government, acting consistently on this principle, refused to acknowledge the succession of Rao Ram Chund, in 1815, by investing him with a khellat, lest "it might imply the recognition of his title by the British Government, and might have the effect of giving umbrage to the Peeshwa, by appearing to bar his pretensions to the superiority of the Soobah of Jhansi." Cons. 24th March 1815, para. 2.

In 1817, "the whole of the rights of his Highness the Peeshwa over the principality of Jhansi" were transferred by treaty to the British Government. That Government, however, did not recognise the Soobedar Ram Chund as being in his own right the hereditary chief of Jhansi; but in consideration of the attachment of the late Sheo Rao Bhow to the British Government, and in deference to his wish, it "consented, on certain conditions, to constitute Rao Ram Chund the hereditary chief of the lands actually held by the late Sheo Rao Bhow at the commencement of the British Government in Bundlecund, and now possessed by the Government of Jhansi." Accordingly the second article of the treaty of 1817 "constitutes Rao Ram Chund, his heirs and successors, hereditary rulers of the territory enjoyed by the late Sheo Rao Bhow." . . . . . Treaty, 17th Nov. 1817.

The chief thus made hereditary retained, however, his inferior position, and was not named a Rajah until 1832.

In 1835, Rao Ram Chund died. Although he had adopted a boy as his successor the day before his death, the adoption was not recognised; and his uncle, Raghonath Rao, was declared to be Rajah. In 1838, Raghonath Rao having died, the succession was granted to his brother, Gungadhur Rao, the Rajah just deceased.

8. Gungadhur Rao has left no heir of his body. There is no male heir of Rao Ram Chund, on whom the hereditary chiefship was conferred. There is no male heir whatever of any Rajah or Soobedar of Jhansi, who has ruled since the first relations of the British Government with that State were formed. There is, therefore, no male heir whatever existing to the hereditary chiefship of Jhansi. *See* Genealogical Tree, in letter from Agent, 31st Dec. 1853.

9. The boy whom the late Rajah adopted on the day before his death, as will be seen from the genealogical table, is but a very distant relation of the late Raja. The adoption of a boy by any man when he is almost in the last agonies is liable to suspicion; it is, in the present case, more than usually so, for it was well known beforehand that the Rajah had never contemplated making an adoption. The Political Agent, when reporting the death of the Rajah and the adoption made by him, observed, "The sudden resolution of the chief of Jhansi to adopt a successor on his deathbed has, I believe, taken every one at his court by surprise. It was understood that he would probably make an attempt to induce us to allow him to leave his estate in the hands of his widow during her lifetime; but, from the circumstance of there being no heir male existing in the line of Sheo Rao, the Subadar of Jhansi with whom our first treaty was concluded, or no near relation of any description, the question of adoption was, I believe, considered one which was not ever likely to be brought forward." 25th Nov. 1853, para. 4.

10. The Ranee, in a khurreeta which she has addressed to the Governor-general in Council, solicits a recognition of the adoption, on the ground that adoption has been recognised in Tehree, in Duttia, and in Jaloun, States of Bundlecund.

Tehree and Duttia are independent States, the succession to which forms no precedent for the course of succession in dependent States, such as Jhansi.

In Jaloun, a dependent State, an adoption was allowed; but it is to be observed, that a concession by the British Government of the privilege to adopt

on any particular occasion, from motives of friendship or of policy, by no means involves the admission of a right to adopt, on the part of the rulers of that or of any other State. It certainly was not so regarded in the case of Jaloun itself; for Jaloun has, since the adoption in question, been treated as a lapse by the British Government.

11. Still less can it be conceded, as the Ranee contends, that the present adoption should be recognised, because, in the second article of the treaty of 1817, constituting Rao Ram Chund, his heirs and successors, hereditary chiefs of Jhansi, the British Government meant "thereby . . . . that any party who he adopted as his son . . . . would be acknowledged by the British Government as his successor."

Letter from Agent, 15th Dec. 1853.

There is no need of, and no room for argument on this head. The historical facts on record negative the Ranee's assertion conclusively; for Rao Ram Chund did adopt a boy, but the British Government did not acknowledge the boy as successor, and it nominated another person to be the Rajah.

12. It has thus been established in the preceding paragraphs, that the territory of Jhansi is a dependent State; that the Raja is one of those "chiefs," in Bundlecund, "who merely hold lands or enjoy public revenue under grants, such as are issued by a sovereign to a subject;" with respect to which, "the power which made the grant, or that which by conquest or otherwise has succeeded to its rights, is certainly entitled to limit succession according to the limitations of the grant, which in general confines it to heirs male of the body, and consequently precludes adoption;" that there is no heir of the body of the late Raja; that there is no heir whatever of any Rajah, or of any Soobedar of Jhansi, with whom the British Government has at any time had relations; that the late Raja was never expected by his own people to adopt; and lastly, that a previous adoption by the Rajah whom the British Government constituted hereditary chief of Jhansi, was not acknowledged by the British Government.

Sir C. Metcalfe, 28th Oct. 1837, para. 7.

Wherefore it follows, that the right of the British Government to refuse to acknowledge the present adoption by the late Rajah Gungadhur Rao is placed beyond question, equally by the existence of precedent, by the general principles regarding adoption laid down by the Honourable Court of Directors, and by the particular rules laid down for successions in Bundlecund by Sir C. Metcalfe, who has himself been quoted as an authority generally favourable to the recognition of adoptions made by Hindoo rulers in certain specified cases.

13. The sound policy of regarding Jhansi as a State lapsed by failure of heirs male, is not less clear than our right to do so.

The British Government will not derive any material advantage from the possession of this territory, for it is of no great extent, and the revenue is inconsiderable; but as it lies in the midst of other British districts, the possession of it as our own will tend to the improvement of the general internal administration of our possessions in Bundlecund. That its incorporation with the British territories will be greatly for the benefit of the people of Jhansi, a very brief reference to the results of experience will suffice to show.

14. Since Rao Ram Chund, who received the grant of hereditary succession in Jhansi, there have been two rulers recognised as successors. The first, Raghonauth Rao, was a leper, and during his short rule of three years, from 1835 to 1838, he proved himself altogether incapable of governing. The revenue of Jhansi, which was once 18 lacs, and which had fallen even in the time of Rao Ram Chund, did not exceed three lacs on the death of Rughoonath Rao.

The British Government permitted Gungadhur Rao to succeed him, but so incapable was he also of governing, that the management of affairs was assumed by us, and was not made over to the Raja for many years afterwards.

15. Our experience of the results of recognising succession by adoption is not more favourable in the case of Jaloun, the precedent to which the Ranee now solicits this Government to conform.

In 1832, when the adoption was permitted in that State, the revenues amounted to 15 lakhs of rupees. Eight years afterwards the revenue had fallen to less than one-half, and the Governor-general thus described the condition to which the State had been reduced, in the Minute quoted by the Secretary:—

"Its

"Its Rajah, at 11 years of age, was under the tutelage of his sister and her minister. In the course of nine or ten years the lands had been most profusely alienated; debts to the amount of more than 30 lacs had been contracted; extensive districts had been mortgaged as security for them; there was neither order nor security in the territory; every village was exposed to the attacks of plunderers; cultivation was deserted; and a country which had been fruitful and prosperous was from day to day becoming desolate." 24th Feb. 1840.

16. Such were the results of the policy of permitting adoptions and irregular successions in Jaloun and Jhansi.

Warned by these results, I hold that sound policy combines with duty in urging that the British Government in the present case of Jhansi should act upon its right, should refuse to recognise the adoption by Gungadhur Rao, and should take possession of Jhansi as an escheat.

The Ranee should be liberally provided for in the manner suggested by the Political Agent; and the administration of the district should ultimately be made over to the Lieutenant-governor with the other districts lately transferred to him.

(signed) *Dalhousie.*

27 February 1854.

MINUTE by the Honourable *J. A. Dorin.*

Jhansi.

I AM of opinion, that the State of Jhansi is one of those dependent possessions which the British Government has the absolute right to resume in failure of heirs male of the chieftain, and that as the failure on the present instance is complete, and the paramount power is under no obligation to recognise any adoption, even if that adoption were unequivocal, and in favour of a collateral descendant of the original grantee, which is not now the case, this Government is at liberty to resume the lapsed territory of Jhansi, and is justified in doing so by considerations of sound policy.

(signed) *J. A. Dorin.*

28 February 1854.

MINUTE by the Honourable Colonel *J. Low*, C. B., concurred in by the Honourable *F. J. Halliday.*

Jhansi.
Minute by the Governor-general, dated 27th Feb. 1854.

WITH reference to the similarity which exists in respect to power, and (according to general estimation) in respect to political position also, between petty chiefs in Bundlecund, such as the rulers of Jhansi and Chuttercote, and petty princes in Rajpootana, such as those of Kerowlee and Serobee; and adverting also to some of the general considerations stated in my Minute on Nagpore affairs, dated the 10th ultimo, I should have preferred it if the Governor-general had pursued a similar course towards Jhansi to that which we lately adopted towards Chuttercote and Kerowlee, making some modifications in the terms of our engagement with Jhansi in order to prevent future misrule.

But the facts and the reasoning now recorded by the Most Noble the Governor-general in his Minute of the 27th ultimo have combined to bring entire conviction to my mind that the native rulers of Jhansi were never sovereigns; that they were only subjects of a sovereign, first of the Peishwah, and latterly of the East India Company. For those reasons, and for others, also, which are clearly stated by his Lordship, I consider that the Government of India has now a full right, if it chooses to exercise that right, to annex the lands of Jhansi to the British dominions, and, therefore, I have nothing more to say on the subject.

(signed) *J. Low.*

1 March 1854.

I entirely concur with the Most Noble the Governor-general.

2 March 1854. (signed) *Fred. Jas. Halliday.*

No. 19 of 1854.

From Major *D. A. Malcolm*, Political Agent, Gwalior, Bundlekund, and Rewah, to the Secretary to the Government of India, Foreign Department, Fort William.

Sir,

I BEG to submit, for the information of the Most Noble the Governor-general in Council, the accompanying khareeta to his Lordship's address from Lutchmee Baee, the widow of the late Gungadhur Rao Raja of Jhansi.

2. Lutchmee Baee, it will be seen, advocates the right of her late husband to adopt an heir to the principality of Jhansi, on the grounds that by the treaty of 1817 the insertion of the term "joh nasheenan," or successors in general, as opposed to the term "warrisan," or heirs of the body or collateral heirs, warranted his doing so, and also that the fidelity evinced by the Jhansi chiefs towards our Government in past years ought to be taken into consideration by us in coming to a final decision on the fate of the principality.

3. The term above referred to by the Baee is to be found in the second article of the treaty of 1817, but in the preamble the words "nuslun baad nuslun" are used as laying down the terms on which the successor to the principality is to be acknowledged by our Government. The term "joh nasheenan," in a subsequent part of the treaty, undoubtedly of itself implies successors in general; but as the term "bilirs" is used previous to the introduction of the words "warrisan wo joh nasheenan," it is a question for Government to decide whether the latter term conveys any permission on the part of our Government to the Raja to nominate whom he pleased to succeed him on the Gadi, or that the term "bilirs" restricted the succession to persons who were legal heirs to the same.

4. The Baee in her khareeta does not I believe in the slightest degree overestimate the fidelity and loyalty all along evinced by the State of Jhansi towards our Government, under circumstances of considerable temptation before our power had arrived at that commanding position which it has since attained.

I have, &c.
(signed) *D. A. Malcolm*,
Political Agent, Gwalior, Bundlecund, and Rewah.

Political Agency, Gwalior,
28 February 1854.

TRANSLATION of a Khureeta from Her Highness the *Lakshmi Bai*, the Widow of *Gungadhur Rao*, late Maharajah of Jhansi, to the Address of the Marquis of *Dalhousie*, the Most Noble the Governor-General of India, dated Jhansi, 16th February 1854.

After Compliments,

Distress at recent affliction when I addressed your Lordship upon the 3d December last prevented my entering as fully as I ought to have done into the circumstances of the adoption made by my late husband, an omission which I now beg leave to supply.

It was the good fortune of Sheo Rao Bhao, the father of my late husband, to be the first of the chiefs in this part of the country who tendered their allegiance to the British Government, which he improved by subsequent exertions in inducing them to follow his example; at which Lord Lake was so pleased that he directed him to submit a paper of requests as to the manner in which the interests of himself and family could be best served. In obedience to these orders a paper, wajib ul urz, containing seven different articles, was submitted, through Captain John Baillie, the political agent for Bundelakund, which were all sanctioned by order of the Most Noble the Governor-general of India. Sheo Rao Bhao having omitted to define certain requests in the wajib ul urz, which he was anxious to make, and having in the meantime had an opportunity of rendering further services, his Lordship entered into a new agreement, for the purpose of rectifying this omission, and thereby becoming an additional pledge of fidelity and attachment on his part to the Government. The new agreement consisted of nine articles, in which the benefits of two new articles were added to those already derivable from the seven articles of the wajib ul urz, and having been duly signed and sealed by the Governor-general, was delivered to him by Captain John Baillie, at Kotra.

In the 6th article of the wajib ul urz, Sheo Rao Bhao reports that the Rajas of Urcha, Duttia, Chanderi, and other neighbouring States, are ready to tender their allegiance to the British

British Government, provided the different places then in their possession was confirmed to them, and prepared to pay their accustomed tribute to the British Government. Upon which an order was passed, to the effect that any chief who imitated his example in showing obedience and attachment to the British cause should be confirmed in possession of all the advantages then belonging to them; moreover, that other marks of friendship might be expected from service in such a cause.

It was from the same desire to reward past services like these that the British Government entered into a treaty, in 1817, with Rao Ramchundra Rao, the grandson of Sheo Rao Bhao, the second article of which acknowledges Rao Ram Chundra Rao, his heirs and successors, as hereditary rulers in perpetuity of the Jhansi principality, and guaranteed its protection to them from foreign aggression.

During the Burmese war in 1824, Rao Ram Chundra Rao advanced upwards of 70,000 rupees to branjarahs employed in carrying grain to the troops in Burmah. Mr. Ainslie reported his having done so in favourable terms to the Governor-general, who ordered the money to be repaid; but Rao Ramchunda Rao having declined repayment on the grounds that he was an ally of the British Government, and that the interests of the two States were identical, the Governor-general was pleased to send him a dress of honour, with a complimentary khareeta, thanking him for his services upon the occasion. I regret to say that this khareeta has been mislaid, and would esteem it a favour if your Lordship would kindly order my being furnished with a copy of it.

Shortly afterwards, during the siege of Wharutapoor, the city Kalpi, in the British territory, being threatened with an attack from Nannay Pandit, at the time in rebellion against Jaloun, Mr. Ainslie, the agent, called upon Bhikraji Nana, Kamdar of Jhansi during the minority, to despatch troops with the utmost expedition to Kalpi, with the view to protect the Kooneh district from plunder; in consequence of which, Bhikraji Nana made immediate arrangements for sending off 2 guns, 400 sowars, and 1,000 foot soldiers, to Kalpi, and which arrived in time to save Kalpi from being plundered, and proved the means of restoring general confidence to the people in the Kooneh district. Copies of letters from Mr. Ainslie to Ramchundra Rao, the minor Raja, and Bhakaji, his kamdar, thanking them for their services upon this emergent occasion, are submitted with the view of showing that the Jhansi State was always foremost in the field when opportunity occurred for displaying its loyalty to the paramount power.

When Lord William Bentinck was at Jhansi in 1832, he visited Rao Ram Chunder Rao in the fort on the evening of the 19th December, and conferred upon him the title of Maharaj Dhiraj Fidmi Badshah Janujah Englistan, Maharajah Ram Chunder Rao Bahadur, ordering him to have it engraved upon his seal, investing him at the same time with the insignia of the Nakara and Chonar, with permission to adopt the British flag, telling him, in open durbar, that of all the chiefs of Bundelakund, his uncle, Sheo Rao Bhao, had done the best service, and that the honours now conferred were the reward of his meritorious services to the British Government. On arrival at Saugur, his Lordship was further pleased to send him a complimentary letter in English, having a gold-leaf border, dated 20th December 1832, copy of which is forwarded, repeating what he had stated in durbar, and adding, that the letter then issued would serve ever afterwards as the patent of his rank and authority.

Raghoonath Rao, who succeeded his nephew, Ram Chundra Rao, in 1835, died in 1838, when the right of my husband to the succession was acknowledged; but owing to the State being in debt at the time, it was placed under the superintendence of Captain D. Ross for a period of three years, at the expiration of which it was restored to him, with an agreement on his part by which he ceded Dulioh, Talgong, and other districts, valued at 2,55,891 Jhansi rupees, as payment towards a legion to be employed for the purpose of coercing any of his turbulent feudatories who might set his authority at defiance; and one on Colonel Sleeman's part, dated 1st January 1843, confirming to the Jhansi State all the advantages guaranteed to it by virtue of former treaties.

It cannot be denied that the terms warisan, " heirs," and janisinan, " successors," made use of in the second article of the treaty with Ram Chundra Rao, refer to different parties; the term warisan being confined in meaning to national or collateral heirs, while janishinan, on the contrary, refers to the party adopted as heir and successor to the estate, in the event of there being no national or collateral heir entitled to the succession. Treaties are studied with the utmost care before ratification; and it is not to be supposed that the term janishinan used in contradistinction to warisan was introduced in an important document of this kind, of the authority almost of a revelation from Heaven, without a precise understanding of its meaning, the advantages of which are further explained by the clause declaring the gift then made to have been one in perpetuity to the family. It was with this understanding of the terms of the treaty that my husband, the day before his death, summoned Major Ellis and Captain Martin, the officer commanding the station, to the palace, and with his dying breath, in full durbar, made over Anand Rao, his adopted son, to the care and protection of the British Government, delivering at the same time a kharita, or testament, further declaratory of his wishes on this solemn occasion for communication to your Lordship.

I take the liberty of enclosing a list of some of the precedents which have occurred in Bundelakund in which the right of the native chief or his widow to adopt a successor to the gadi, in default of national heirs, has been sanctioned; and as it is the firm reliance which they feel in the integrity and justice of the British Government which enables them to pass their days in peace and quietness, without other care than how to prove their loyalty,

venture to express a hope that the widow of the son of Sheo Rao Bhao will not be considered undeserving of that favour and compassion which others similarly situated have been declared entitled to.

(True translation.)

(signed) *R. R. W. Ellis,*
Political Assistant for Bundelkund.

Enclosure 1.

FOUR precedents quoted in favour of the adoption of Anand Rao being sanctioned.

1. Bijaya Bahadur, the present Raja of Duttia, was a foundling, of unknown caste, picked up on the road by Parikshat, the last Raja; this adoption was sanctioned.

2. The last Chief of Jaloun, like the Jhansi State, a Brahmin family, was adopted by his sister, the widow of Bala Rao, Chief of Jaloun, after his death; and this adoption from a different gote or clan was sanctioned.

3. The last Raja of Urcha, Sujan Singh, was an adopted son of Tej Singh, the former Raja; and this adoption was sanctioned.

4. In 1839, Khanday Rao, a Brahmin Jagirdar, of Algi, but not connected in alliance with the British Government, died without leaving issue; Mr. Fraser confiscated his estate, as having lapsed, but Colonel Sleeman, taking a more liberal view of the case, obtained the sanction of Government to his widow being allowed to adopt. She adopted the son of a very remote ancestor; when the revenue collections for the four years, during the period that it had been confiscated, were made over to her.

Enclosure 2.

TRANSLATION of a Letter from *M. Ainslie,* Esq., Agent to the Governor-General for Bundelkhund, dated 16 December 1824, to *Ram Chunder Rao,* Minor, Raja of Jhansi.

My Friend,

I HAD the gratification of bringing your good conduct regarding the Brandjarahs to the notice of the Most Noble the Governor-general of India; and I have much pleasure, by his directions, in sending you a khilaut, with a letter from his Lordship, thanking you for your services upon this occasion.

Enclosure 3.

TRANSLATION of a Perwanah from *M. Ainslie,* Esq., Agent Governor-General, dated 11 January 1825, to *Bhikaji Nanee,* Kamdar of Jhansi.

YOUR letter, stating that the Jhansi State, in compliance with my requisition, had detached troops under the command of Abaji Bakshi to Kooneh, for the purpose of protecting it against attacks of Minnay, Pandit of Parasan, has come to hand, and has afforded me much satisfaction, as showing your zeal in the British cause. You will have heard of the arrival of the British troops, and those from Jhansi can be recalled.

Enclosure 4.

TRANSLATION of a Letter from *M. Ainslie,* Esq., Agent Governor-General for Bundelakund, to *Ram Chunder Rao,* Minor, Raja of Jhansi, dated 22 January 1825.

My Friend,

YOUR letter, reporting that you had ordered Bhikaji Nanah to send a force to Kooneh has arrived; but previous to its arrival I had informed Bhikaji Nana, as you will have heard, that it was no longer required. I feel much gratified by what Mir Ahmud Ali, your vakil, has made known to me.

No. 1036 of 1854.—Foreign Department.

From *J. W. Dalrymple*, Esq., Officiating Under-Secretary to the Government of India, to Major *D. A. Malcolm*, Political Agent for Bundlecund and Rewah.

Sir,

In reply to your letter dated 28th ultimo, No. 19, submitting a khureeta from the widow of the late Rajah of Jhansi, in which she advocates the right of her late husband to adopt an heir to the Principality of Jhansi, I am directed by the Governor-general in Council to refer you to the letter to your address, dated 7th instant, No. 881, on the subject.

I have, &c.
(signed) *J. W. Dalrymple*,
Officiating Under Secretary to the Government of India.

Fort William, 17 March 1854.

No. 24 of 1854.

From Major *D. A. Malcolm*, Political Agent, Gwalior, Bundlecund, and Rewah, to the Secretary to the Government of India, Foreign Department, Fort William.

Sir,

I have been favoured with your despatch of the 7th instant, No. 881, conveying to me the decision of the Most Noble the Governor-general in Council, in regard to the State of Jhansi, and directing me to adopt measures for taking possession of the same as British territory.

2. I beg you will do me the favour to submit, for the information of his Lordship, the papers noted in the margin *, which will apprise him of the steps I have taken to give effect to his wishes.

3. It will be seen that I have directed Major Ellis to assume charge of the country, and as the simplest mode of carrying on the duties of its Government during the short period which I presume it will remain under my supervision, to adhere to the rules and regulations introduced by Major Ross, the late Superintendent at Jhansi, with which the people are, I believe, perfectly familiar.

4. I have directed Major Ellis to pay up and discharge the small party of the irregular troops still in the service of the Jhansi State. These men, I think, if they peaceably take their discharge, should receive a donation to enable them to reach to their homes; and if it meets the approval of Government, I will direct Major Ellis to advance two months' pay to each soldier for that purpose.

5. The State of Jhansi has been under our supervision since the death of the late Raja, on the 21st of November 1853; but as there has been no reduction made in the establishment, and everything has been carried on in the native manner, I would beg to suggest the most liberal, and at the same time most simple mode of adjusting the accounts of the State, that all the receipts and disbursements should be made up to the close of the present official year, 1st May 1854 (six weeks hence), on account of the Jhansi Government, and that the British Government should commence from that period to collect the revenues of the country.

6. This will enable the Jhansi Government to pay up and discharge its troops and establishments without any inconvenience, and enable us to enter with the year 1854–55 on the Government of the country, without mixing ourselves

* 1. Letter to Major Ellis, dated 15th March 1854.
2. Proclamation issued to the inhabitants of Jhansi and its dependencies.

ourselves up with the collections for the short period which is still required to complete the present official year.

7. In my letter of the 25th November last I recommended, for the consideration of Government, that a liberal provision of 5,000 Company's rupees per mensem should be made to the Ranee during her lifetime, and I presume the sanction of Government to the above proposition is contained in the second paragraph of your letter; but as the amount is not quoted, I have refrained from mentioning the sum in the khareeta which I have addressed to the Ranee.

8. I therefore beg to submit, for the consideration and sanction of Government, the following proposition in regard to this lady, who bears a very high character, and is much respected by every one at Jhansi:

1st. That a pension of 5,000 Company's rupees should during her lifetime be paid to her monthly from the treasury at Jhansi, or at any place at which she may choose to reside.

2d. That the palace at Jhansi should be made over to her for her residence, and to be considered as her private property.

3d. That during her lifetime she and her personal female attendants should be exempted from arrests and from the processes of our courts.

4th. That in compliance with her husband's last request, all the State jewels and private funds, and any balance remaining in the public treasury after closing the accounts of the State, should also be considered as her private property; and, finally, that a list of the old adherents of the family should be prepared and submitted to the Government of India, with the view to their obtaining during their lifetime some stipends for their support.

9. I do not anticipate that any obstructions will be thrown in our way in giving effect to the wishes of Government in regard to the State of Jhansi; and now that all anxiety in regard to Tehri has been removed by the late orders of Government, I am of opinion that one entire regiment of native infantry will be sufficient for the present for the duties of Jhansi itself.

10. It will be seen that I have directed three companies to occupy the fort of that place, and two companies to be detached from Sipree to Korara. I have adopted the first of these measures, both as a matter of precaution, and also to afford the men of Scindiah's Contingent now at Jhansi shelter during the hot winds, to which they would otherwise be exposed in tents, when the wing of the 12th Regiment Bengal Native Infantry occupy the lines at that place.

11. Should any symptom of disaffection show itself, which I do not anticipate, Captain Hennessy can, in one forced march, reach the Jhansi territories from Sipree with 500 men, two guns, and a troop of cavalry; and Brigadier Hill can also, on any emergency, furnish a detachment of two regiments of native infantry, with cavalry and guns in proportion, at a few days' notice.

12. Before closing this report, I beg to call the attention of Government to the 15th paragraph of my letter of the 25th of November 1853, No. 24, in which I requested, in the event of this State lapsing to the British Government, the charge might be placed in the hands of Captain Erskine, the commander at Jubbulpore. At this distance it is difficult for me to supervise in a satisfactory manner the management of so extensive a charge; and Major Ellis has so many other duties to attend to, that if it is intended that any length of time should elapse before the district is made over to the Government of the North-Western Provinces, an assistant should be allowed him to aid in carrying on the duties of the office.

13. Much inconvenience would, however, I think, be avoided by making over the management of this district at once to the Lieutenant-governor of the North-Western Provinces, who, by placing them on the same footing as the other districts in the charge of the Commissioner for the Saugor and Nerbudda territories, would avoid all the bad effects which a transfer from one system to another must naturally tend to produce.

14. As a change has to be made from the present system to that in force in our districts in the neighbourhood, it appears to me that it would be better that it should be made at once than that it should pass through an intermediate stage,

stage, which will be the case if it is allowed to remain in my hands without any separate establishment to enable me to place it on the footing on which it is intended permanently to remain.

I have, &c.
(signed) *D. A. Malcolm,*
Political Agent, Gwalior, Bundlekund and Rewal.

Political Agency, Gwalior,
16 March 1854.

No. 67 of 1854.

From Major *D. A. Malcolm,* Political Agent, Gwalior, Bundlekund, and Rewah,
to Major *Ellis,* Political Assistant for Bundlekund and Rewah, Jhansi.

Sir,

I BEG to forward, for your information and guidance, the copy of a despatch which I have received from the Government of India, intimating to me that the Most Noble the Governor-general in Council declines to recognise the adoption by the late chief of Jhansi as conferring any right to succeed to the rule of that State, and that his Lordship in Council has resolved to take possession of the principality of Jhansi as British territory.

2. I beg to transmit a khareeta to the address of the widow of the late chief, intimating to her the decision of his Lordship in her case, and I beg you will do me the favour to cause it to be delivered into her hands as early as practicable.

3. You will be so good as to assure the Ranee that a liberal provision will be made for her support, and that she will be treated with respect and consideration.

4. The Government having directed me to adopt measures for taking possession of the State of Jhansi as a lapse to the British Government, I have to request that you will, on the receipt of this, assume charge of it in addition to your other duties.

5. A proclamation, under my hand and seal, intimating to the inhabitants of Jhansi and its dependencies the changes which are about to take place, is herewith enclosed; copies of it should be immediately prepared and transmitted to every part of the Jhansi territories.

6. One of the first steps which you should adopt is to pay up and discharge the regular troops in the service of the late Maharaja. I shall apply to the Government of India for permission to grant these men two months' extra pay to enable them to return to their homes; but in the meanwhile the amount should be ascertained and liquidated from assets to be provided by the late Government of Jhansi.

7. In regard to the establishments to be maintained for carrying on your new duties, and the number of Seebundees to be employed in the districts, you cannot do better than to be entirely guided by what was considered necessary by Major Ross while he held a similar charge.

8. It is understood that the regulations in force during Major Ross's incumbency are in a great measure still adhered to. In this case very little change will now be necessary; but should I, however, be mistaken, I beg you will, as a general rule, in all cases, whether civil or criminal, be guided as much as practicable by the rules and regulations adopted by that officer.

9. I would not wish to interfere with you in any way in the selection of the officers you may wish to employ; but where it is not likely to interfere with the interest of Government, I think it will be advisable that as many of the old servants of the late Government as you may consider deserving of trust should be employed on the new establishments, especially in the revenue department.

10. The family and adherents of the late Raja have so much at stake in the present occasion, that I do not anticipate that we shall experience any obstructions from them in carrying out the orders of Government we have now received;

but, as a precautionary measure, I think it will be advisable that the detachment now in the fort of Jhansi should be increased to three companies, and that two or more companies should be posted in the fort of Kurara.

11. The former garrison you can obtain from the 6th Regiment Scindia's Contingent, now at Jhansi; and the latter, by a communication addressed to Captain Hennessy, commanding at Sipree, who has been requested to attend to any requisition you may address to him, to the amount of 500 men, two guns, and a troop of cavalry.

12. I have applied to Government to be allowed to withdraw to Morar on the arrival of the wing of the 12th Native Infantry, a wing of the regiment of Scindiah's Contingent now at Jhansi, as I think, with the reinforcement you can command from Sipree, a complete regiment of native infantry, a corps of cavalry and guns will be found, now that the Tehri question is settled, ample for any duties which we may require of them. Should any symptom of disaffection show itself, an additional force can immediately be detached from this to any part of the country where its presence may be required.

13. There are several points connected with winding up the affairs of the late Government, and the provision to be made for the widow of the late Raja and her adherents, on which I am about to address Government, and will communicate the result to you as early as practicable.

14. In the meanwhile I feel assured, from my knowledge of the conciliatory spirit by which your proceedings have always been characterised, that you will have no difficulty in establishing the authority of Government, and carrying on your new duties without opposition throughout the territories now made over as a temporary measure to your immediate charge.

I have, &c.

Political Agency, Gwalior, 15 March 1854.

(signed) *D. A. Malcolm,*
Political Agent, Gwalior, &c.

(True copy.)

(signed) *D. A. Malcolm,*
Political Agent, Gwalior, Bundlekund, and Rewah.

TRANSLATION of a General Proclamation issued by Major *D. A. Malcolm*, Political Agent, Gwalior, Bundlekund, and Rewah, for distribution in the Jhansi Territories, dated 13 March 1854.

WHEREAS the Maha Raja Gungadhur, Rao of Jhansi, having departed this life on the 21st of November 1853, and having previously to his death adopted Damodhur Rao as his heir, and whereas a letter has been received by me this day from the Secretary to the Government of India, dated the 7th instant, informing me that the Most Noble the Governor-general in Council had, for several reasons, declined to confirm and sanction the said adoption, and had directed that the principality of Jhansi should be taken under the charge of the British Government, the present proclamation is issued to all, to notify that the said principality has been assumed by the British Government, and that I have for the present placed Major Ellis, the political agent in Bundlekund, in charge of the same. It is therefore incumbent on all the subjects of the said principality to consider themselves under the authority of the said Government, and, paying the revenue due by them to Major Ellis, remain happy and contented.

(True translation.)

(signed) *D. A. Malcolm,*
Political Agent, Gwalior, Bundlekund, and Rewah.

MINUTE by the Most Noble the Governor-General of India.

1. THE view of the Political Agent seems to be quite correct as to the expediency of transferring the principality of Jhansi at once to the jurisdiction of the Lieutenant-Governor, with whom it is intended ultimately to rest. Jhansi.

The Lieutenant-Governor should be addressed accordingly, and his opinions should be solicited as to the arrangements which he would wish to make.

2. Major Malcolm should be informed that this had been done, and that he will be again addressed, when a reply shall have been received from the Lieutenant-governor.

3. All the proposals of Major Malcolm regarding the Ranee, &c. at Jhansi were very proper, and may be approved subject to one exception, which is an important one. He proposes that all the property of the late Rajah should be given to the Ranee; but I apprehend that it is beyond the power of the Government so to dispose of the property of the Rajah, which by law will belong to the son whom he adopted. The adoption was good for the conveyance of private rights, though not for the transfer of the principality.

4. The gratuity to the discharged soldiers should be, as usual, six months' pay.

25 March 1854. (signed) *Dalhousie.*

No. 1381 of 1854.—Foreign Department.

From *J. P. Grant*, Esq., Secretary to the Government of India, to Major *D. A. Malcolm*, Political Agent for Bundlecund and Rewah.

Sir,

I HAVE the honour to acknowledge the receipt of your despatch, dated the 16th instant, No. 24, forwarding copies of papers reporting the measures adopted by you for taking possession of the Jhansi State as British territory, and submitting certain proposals in regard to that territory, and the Ranee and her dependants.

2. In reply, I am directed to acquaint you that the Governor-general in Council approves of the proposals which you have made, with the exception of your proposal that all the property of the late Rajah should be given to the Ranee. His Lordship in Council apprehends that it is beyond the power of the Government so to dispose of the property of the Rajah, which by law will belong to the son whom he adopted. The adoption, if regularly made, was good for the conveyance of private rights, though not for the transfer of the principality.

3. His Lordship in Council sanctions your paying up and discharging the small party of the regular troops still in the service of the Jhansi State, with a gratuity of six months' pay to each soldier, which is the usual gratuity in such cases, instead of two months' pay, as proposed by you.

4. His Lordship in Council concurs with you as to the expediency of transferring the principality of Jhansi at once to the jurisdiction of the Lieutenant-governor of the North-Western Provinces, with whom it is intended ultimately to rest. His Honour has been addressed accordingly, and he has been asked

what arrangements for this purpose he would propose to make. When the Lieutenant-governor's reply is received, you will be addressed again on this subject.

I have, &c.

EAST INDIA (TREATY WITH KHELAT).

RETURN to an Address of the Honourable The House of Commons, dated 27 February 1873;—*for*,

COPY "of the TREATY made between the INDIAN GOVERNMENT and the KHAN of KHELAT in 1854."

India Office, 3 March 1873.

J. R. MELVILLE, Assistant Secretary, Political Department.

EXTRACT from AITCHISON'S TREATIES, Vol. vii., pp. 77 to 79.

No. XVII.

TREATY between the British Government and *Nusseer Khan*, Chief of *Khelat*, concluded on the Part of the British Government by Major *John Jacob*, C.B., in Virtue of full Powers granted by the Most Noble the Marquis of *Dalhousie*, K.T., &c., Governor General of India, and by *Meer Nuzzeer Khan*, Chief of *Khelat*.

WHEREAS the course of events has made it expedient that a new Agreement should be concluded between the British Government and Meer Nusseer Khan, Chief of Khelat, the following Articles have been agreed on between the said Government and his Highness:

Article 1.—The treaty concluded by Major Outram between the British Government and Meer Nusseer Khan, Chief of Khelat, on the 6th October 1841, is hereby annulled.

Article 2.—There shall be perpetual friendship between the British Government and Meer Nusseer Khan, Chief of Khelat, his heirs and successors.

Article 3.—Meer Nusseer Khan binds himself, his heirs and successors, to oppose to the utmost all the enemies of the British Government, in all cases to act in subordinate co-operation with that Government, and to enter into no negotiation with other States without its consent, the usual friendly correspondence with neighbours being continued as before.

Article 4.—Should it be deemed necessary to station British troops in any part of the territory of Khelat, they shall occupy such positions as may be thought advisable by the British authorities.

Article 5.—Meer Nusseer Khan binds himself, his heirs and successors, to prevent all plundering or other outrages by his subjects within or near British territory, to protect the passage of merchants to and fro between the British dominions and Affghanistan, whether by way of Sindh, the seaport of Soumeeanee, or other seaports of Mekran, and to permit no exactions to be made beyond an equitable duty, to be fixed by the British Government and Meer Nusseer Khan, and the amount to be shown in the schedule annexed to this Treaty.

Article 6.—To aid Meer Nusseer Khan, his heirs and successors, in the fulfilment of these obligations, and on condition of a faithful performance of

them

them year by year, the British Government binds itself to pay to Meer Nusseer Khan, his heirs and successors, an annual subsidy of fifty thousand (50,000) Company's rupees.

Article 7.—If during any year the conditions above mentioned shall not be faithfully performed by the said Meer Nusseer Khan, his heirs and successors, then the annual subsidy of fifty thousand (50,000) Company's rupees will not be paid by the British Government.

Done at Mustoong this Fourteenth day of May, One thousand eight hundred and fifty-four.

East India House,
3 August 1855.

T. L. Peacock,
Examiner of India Correspondence.

COPIES of DESPATCHES of the Governor-General of *India* in Council, and MINUTES of the Members of Council, respecting the Annexation of *Kerowlee*:—And, of DESPATCHES of the Court of Directors in reply thereto.

No. 56 of 1852.

Fort William, Foreign Department, 7 September 1852.

To the Honourable the Court of Directors of the East India Company.

Honourable Sirs,

WE have the honour to transmit a copy of a correspondence with the Governor-general's agent in Rajpootana, respecting the succession of the chiefship of Kerowlee, together with copies of the minutes recorded thereon, as noted in the margin.

From Agent Rajpootana, dated 29 June. To Agent Rajpootana, dated 20 July. From Agent Rajpootana, dated 17 July. From Agent Rajpootana, dated 21 July. From Agent Rajpootana, dated 22 July. From Agent Rajpootana, dated 24 July. Minute by the Governor-general, dated 30 August. Minute by the Hon. Sir F. Currie, dated 31 August. Minute by the Hon. J. Lowis, dated 2 Sept. Minute by the Governor-general, dated 3 September.

2. Maharajah Nursinghpal, the young chief of Kerowlee, died on the 10th of July, adopting, on the day before his death, a boy who is a distant kinsman. Colonel Low has strongly recommended that the adoption should be recognised, and he has urged that the recognition should be declared at once; but, with advertence to the orders of your Honourable Court respecting adoptions by native princes, as communicated to us in your despatch dated 24th January 1849, and to the principle laid down therein, it has become a question whether we were at liberty to confirm this adoption without your previous sanction.

3. Your Honourable Court will observe, that the Governor-general and Mr. Lowis considered the arguments adduced by them, in their minutes, to preponderate in favour of declaring Kerowlee a lapsed State, while Sir Frederick Currie is against such a measure. We beg to refer your Honourable Court to the several minutes in which both the right and the policy of the proposed arrangements are fully discussed, and we shall await your instructions, which we hope to receive at an early date. Meanwhile, the Governor-general's agent in Rajpootana has been informed that we have referred the decision of the question to your Honourable Court, and Colonel Low has been instructed to enjoin on all the leading persons of this State, the observance of the most perfect tranquillity until the decision of your Honourable Court be received.

We have, &c.

(signed) *Dalhousie.*
F. Currie.
J. Lowis.

Fort William,
7 September 1852.

Political Department, 26 January (No. 1.) 1853.

Our Governor-General of India in Council.

Succession to the State of Kerowlee.

Para. 1. WE now reply to your letter in the Foreign Department, dated 7th September (No. 56) 1852, in which you report the death of Nursing Pal, the young Raja of Kerowlee, after adopting as his son and successor a boy who is a distant kinsman, and request our instructions whether the adoption should be recognised.

2. Colonel Low gave his opinion in favour of recognising the adoption, and Sir Frederick Currie supported the proposal. The Governor-general, with

whom Mr. Lowis expressed his concurrence, inclined rather to declaring the state a lapse to the British Government.

3. The Governor-general has given a fair and impartial statement of the arguments on both sides of this important question. After having given the fullest consideration to the circumstances of this case, we have come to the decision that the succession of Bhurt Pal to the raj of Kerowlee, as the adopted son of Nursing Pal, should be sanctioned.

4. In coming to this conclusion, we do not intend to depart from the principle, as laid down in our despatch of the 24th of January 1849, relative to the case of Sattara, which is referred to by the Governor-general, that there is no validity in an adoption for conveying succession to a throne, and to the rights of sovereignty in a dependent principality in India, unless the adoption shall have received the sanction of the supreme power. But it appears to us that there is a marked distinction, in fact, between the cases of Sattara and Kerowlee, which is not sufficiently adverted to in the minute of the Governor-general. The Sattara State was one of recent origin, derived altogether from the creation and gift of the British Government, whilst Kerowlee is one of the oldest of the Rajpoot States, which has been under the rule of its native princes from a period long anterior to the British power in India. It stands to us only in the relation of a protected ally, and probably there is no part of India into which it is less desirable, except on the strongest grounds, to substitute our Government for that of the native rulers.

5. In our opinion such grounds do not exist in the present case, and we have therefore determined to sanction the succession of Bhurt Pal. The country will continue, as at present, to be administered by a British officer, and we trust that before the expiration of the minority, the State will be freed from debt, and restored to prosperity.

We are, &c.

London, 26 January 1853. (signed) *J. W. Hogg.*
R. Ellice.
&c. &c.

No. 12.

Fort William, Foreign Department, 4 February 1854.

To the Honourable the Court of Directors of the East India Company.

Honourable Sirs,

WITH reference to previous correspondence,* we have the honour to forward copies of correspondence as detailed in the accompanying abstract,† and of minutes recorded thereon, relative to Kerowlee affairs.

* Our Letter, No. 56, dated 7 Sept. 1852. Our Letter, No. 69, dated 6 Nov. 1852. Our Letter, No. 8, dated 21 Jan. 1853. Hon. Company's Despatch, No. 1, dated 26 Jan. 1853. Our General Letter, No. 25, dated 2 April 1853, paras. 9 and 10. Hon. Company's Despatch, No. 32, dated 17 August 1853, para. 6.

† Abstract, No. 3 to 24.

2. In your Honourable Court's despatch of 26 January 1853, you sanction a recognition of the adoption of Bhurt Pal, by the late Maharajah of Kerowlee as his successor. In the interim, however, doubts had arisen whether the adoption was a valid one, and it had become apparent that the reigning family, the chiefs and the people of Kerowlee, objected to the professed adoption of Bhurt Pal, and desired to have as Maharajah, Muddun Pal, as being a successor of maturer years, and a nearer relative than Bhurt Pal.

Dated 17 Nov. 1853.

3. Upon this, further inquiry was directed, and the report from the agent to the Governor-general (transmitted herewith) contains the result.

4. Applying in the 32d para. of his report the principles he had expounded regarding adoption in Rajpootana, Sir H. Lawrence gave it as his decided opinion that Muddun Pal, as nearest of kin, as accepted by the Ranees, by the nine most influential Thakoors, by three-fourths of the lesser feudal chiefs, and, "as far as can be judged, by the almost general feeling of the country," should be recognized

recognised by the Britssh Government as the Maharajah of Kerowlee, in the absence of any valid adoption by the late Maharajah, Nursing Pal.

5. Although your Honourable Court have sanctioned the recognition, as Maharajah of Bhurt Pal by name, we apprehended that we should be acting in conformity with your wishes, though we should now recognise Muddun Pal. The question that was at first referred to your Honourable Court, was not a personal one between the two kinsmen, but one regarding the recognition of any adoption. Your Honourable Court having determined that adoption shall be permitted, we considered that we should be fulfilling the intentions of your Honourable Court, if we now permitted the adoption and succession of Muddun Pal, who had been found to be the proper successor, since the name of Bhurt Pal was first brought forward.

6. The unsettled state of the succession being objectionable, we have instructed the agent to the Governor-general at once to recognise Muddun Pal as successor to the Kerowlee chiefship, and to take the necessary steps for hs installation.

7. We have directed that the administration of the Government should be, at the same time, relinquished by the Political Agent; but that he should continue at Kerowlee for the present. We are however doubtful as to the expediency of maintaining a permanent Political Agent there; our decision on this point will be communicated to your Honourable Court hereafter.

8. It having appeared to us necessary to take an engagement for the punctual payment of the debt of 94,312 rupees by instalments, before the administration of the State was made over to Muddun Pal, the agent has been directed openly to inform him, that any breach of promise for the regular payment of the required annual instalment would render him liable to have one or more of his districts taken possession of for a time by the British Government, and managed exclusively by a British officer, till the whole of the debt should be liquidated.

We have, &c.

(signed) *Dalhousie.*

Fred. Jas. Halliday.

Fort William,
4 February 1854.

Political Department, 5 July (No. 30) 1854.

Our Governor-General of India in Council.

1. THE communications noted in the margin relate to Kerowlee affairs.

Foreign Letter, dated 4 Feb. (No. 10) 1854, paras. 139 to 142.
Foreign Letter, dated 4 Feb. (No. 12) 1854, entire.

2. Before replying to these communications, we have again perused your despatch of the 7th of September 1852, and the papers which accompanied it. It seems to us, that at the time, both your local officers and yourselves entertained and expressed the opinion that the circumstances attendant upon the adoption of Bhurt Pal by Nursing Pal, as fully reported by Lieutenant Monck Mason, were of a character to make that ceremony valid and effectual for all purposes, provided that the British Government consented to the political recognition of it.

3. This was the view which we took in 1853, and, acting upon that view, we, by our letter of the 26th of January, not only directed that the State of Kerowlee should continue under a native ruler, but sanctioned specifically the succession of Bhurt Pal.

4. Lieutenant Mason is still favourable to the pretensions of that boy; but all the other opinions contained in the papers accompanying your letter of the 4th February 1854, are in favour of the claims of Muddun Pal, a chief of mature years.

5. Sir Henry Lawrence, the present agent of your Government in Rajpootana, offered his "recommendation, that, as nearest of kin to Nursing Pal, and as

accepted by the Ranees of Kerowlee, and by all the nine most influential Thakoors, who, under a strictly native *régime*, would probably be the electors, also by more than three-fourths of the 38 feudal chiefs, who in Lieutenant Mason's opinion, are alone entitled to vote in important State matters, and as far as can be judged, by the almost general feeling of the country, he (Muddun Pal), be nominated by the Governor-general in Council to the raj of Kerowlee, and that Maharanee Warsoo Kejee, the senior widow of Maharajah Pertab Pal, be permitted, according to the existing customs of the country, to adopt him as her son, in succession to Nursing Pal."

6. Colonel Low now admits that "satisfactory proofs have been obtained that certain forms, and also the sanction of certain individuals which are, strictly speaking, required for a legitimate adoption, were omitted by the late Raja and his advisers, which omissions caused the adoption of Bhurt Pal to be invalid, according to the rules by which such matters are generally judged in Rajpoot families."

7. And the Governor-general says, that Muddun Pal "has been found to be the proper successor, since the name of Bhurt Pal was first brought forward."

8. In consequence of this change of opinion, you, on the 16th of January 1854, directed Sir Henry Lawrence to "at once recognize Muddun Pal as successor to the Kerowlee chiefship, and take the necessary steps for his installation."

9. On this decision we must remark, that you should have waited for our previous sanction. So far as we had given an opinion, our opinion had been given in favour of Bhurt Pal; and there was no necessity for immediate action, as the people of Kerowlee would not have suffered by the continuance of British management for a few months longer.

10. We cannot help observing also, that if you had in 1852 intended only to ask whether Kerowlee was to be considered as a lapse to the paramount power or not, you would have done well to have put that question simply before us, without any mention of Bhurt Pal, and not have led us to sanction a course, on your representations, which eventually you have seen good reason to refrain from adopting.

11. We hope that your previous opinion has not been made known at Kerowlee, otherwise we should regret exceedingly such an appearance of the want of sufficient consideration on the part of the Government.

12. Muddun Pal being of mature years, you are doubtful of the necessity of retaining a political agent at his Court. We observe, however, that, in the opinion of Colonel Low, the agency should be maintained for at least two years longer. You will, of course, inform us of the result of your deliberation on the subject.

13. The agent has very properly been directed to state to the new Raja that the annual instalment of the debt due to your Government must be paid regularly, and that, in the event of failure, one or more of his districts will be attached until the debt is paid.

14. The measures taken against the rebellious garrisons of Potghur and Nerowlee were proper; and we are glad to observe that the object was in both cases attained without bloodshed.

We are, &c.

London, 5 July 1854. (signed) *J. Oliphant.*
E. Macnaghten.
&c. &c.

EXTRACT Foreign Letter from India; dated 8 February (No. 14) 1855.

17. * * * Your Honourable Court, in your Despatch on Tehree, incidentally observe that the home authorities should have been allowed an opportunity of pronouncing an opinion on the Kerowlee case, before the succession of

of Muddun Pal was allowed. But a separate despatch, dated 5th July last, on the subject of Kerowlee, has been received, and in the 9th and 10th para. of it you take exception to the course followed by the Government, observing, "so far as we had given an opinion, our opinion had been given in favour of Bhurt Pal, and there was no necessity for immediate action, as the people of Kerowlee would not have suffered by the continuance of British management for a few months longer."

18. With regard to these remarks of your Honourable Court, we beg to state, that, though the rebellion at Narowlee in favour of Muddun Pal had been repressed by the promptitude and vigour of Sir H. Lawrence's proceedings, and though since that demonstration no disturbances had occurred in Kerowlee, and the active movement in favour of Muddun Pal had apparently subsided, the question of the succession to the vacant throne had been pending since July 1852, or for a period of 18 months, and the further postponement of our decision, until your pleasure might be expressed, would perhaps have been hazardous. There seemed the less necessity for such postponement, as the point previously submitted to your Honourable Court was not a personal one between the two kinsmen, Bhurt Pal and Muddun Pal, but a general one, viz., whether there should be any adoption at all, and also because Sir H. Lawrence's elaborate report left no room to doubt that the adoption of Bhurt Pal was wholly informal, and that Muddun Pal was the rightful successor to the throne of Kerowlee.

19. In the 11th paragraph of your despatch No. 30, of 1854, dated 5th July, you express a hope that "the previous opinion of this Government has not been made known at Kerowlee; otherwise we should regret exceedingly such an appearance of the want of sufficient consideration on the part of the Government."

20. In answer to this, we can assure your Honourable Court that neither the orders which were first issued, under date the 20th July 1852, desiring the Governor-general's agent to "discountenance" an adoption, nor the opinion subsequently expressed by us, favouring the validity of the adoption of Bhurt Pal, was divulged at Kerowlee. In communicating the former to the Political Agent at Kerowlee, Colonel Low addressed him in the secret department; and as regards the latter, the proclamation which Colonel Low issued is most cautiously worded, and gives no inkling whatever of the opinion which we had expressed: it merely informs the people that the case has been referred to the Honourable Court, that, pending orders, people had better be quiet, and that those who disregard this injunction will be severely punished.

MINUTE by the Most Noble the Governor-General of India.

1. THE Raja of Kerowlee, a boy 15 years old, has died, adopting on the day before his death another boy, a very distant kinsman. **Kerowlee.**

The Governor-general's agent, Colonel Low, strongly recommends that the adoption should be recognised, and urges that the recognition should be declared at once.

But under the orders of the Court of Directors, respecting adoption by native princes, communicated to the Government of India in their despatch dated 24 January 1849, and having regard to the principles laid down therein, I question whether we are at liberty to confirm this adoption without the previous sanction of the Court.

2. Colonel Low states that he is able, from personal knowledge, to give assurance that Sir C. Metcalfe, by whom the existing treaty with Kerowlee was made, intended to place that State on the same footing as every other Hindoo principality; and he adds, "We know, beyond all doubt, when a head of a Hindoo family departs this life without children, that an adopted child is always considered to occupy exactly the same position and to possess precisely the same right, as a legitimate and acknowledged son would have done."

3. The Court of Directors have acknowledged the principle laid down in these words, so far as all private property, or private rights, are concerned. But they have denied the validity of an adoption for conveying succession to a throne, and to the rights of sovereignty, unless the adoption shall have received the sanction of the supreme power.

4. This principle was asserted in the case of the State of Sattara, in 1849. The circumstances of Kerowlee appear to me to resemble those of Sattara in all essential particulars.

5. Kerowlee is a small Rajpoot State, near Kotah.

A treaty was made with it by the British Government, in 1817. The supremacy of the British Government was practically declared therein by its remission of the tribute payable to the Peishwa, whose rights had passed to us; and it was, moreover, specifically acknowledged by Kerowlee, in the 3d Article of the treaty.

The revenues of this State amount to about four lacs a year. It is burdened with a debt of more than six lacs, of which one lac and a quarter are due to the British Government.

The confusion and misgovernment which prevailed, rendered it necessary for us to assume the management of the country some time ago, and it is now under the charge of Mr. Monck Mason.

The boy adopted is of a very distant branch of the family, and the adoption is admitted to have been voluntary and regular.

These are the facts of the case.

6. The supremacy of the British Government over Kerowlee being established by treaty, its sanction is confessedly necessary to the validity of the adoption for conveying the succession to the throne of Kerowlee.

The question is, whether that consent can justly or properly be withheld. According to the decision delivered in the case of Sattara, I consider that it is clearly competent to the Government of India to withhold its sanction if it shall think proper.

The treaty with Kerowlee is made with the "Raja and his descendants." Admitting that the word "descendants" was meant to bear, and does bear, the same signification as "heirs and successors" (which Colonel Low asserts, but which may be disputed), still the right of the British Government to withhold its sanction to the adoption in this case is clear.

For in the case of Sattara, it was decided by the Court of Directors that a guarantee of the succession to "heirs and successors" extended only to natural heirs, and not to an adopted child.

Since, then, the proposed successor of the late Raja is neither his natural heir, nor a descendant of the Raja, with whom the treaty was made in 1817, I am of opinion that on every ground the Government of India is justly and properly entitled to refuse to recognise him, if it is thought expedient for the general interests of the empire to do so.

7. In the minute upon the case of Sattara, in 1848, I recorded my own opinion that the British Government should not neglect such rightful opportunities as might occur, of extending its rule over native States which fell to its disposal, either by total lapse, or by the succession depending on the recognition of an adoption. I did not advise that adoption should universally be refused the sanction of the Government, but I was of opinion that it should not be admitted in States which recognised formally the supremacy of the British Government in India, unless strong political reasons recommend the exception in any particular case or cases.

8. We have to consider whether there are any political reasons which should induce the Government of India to forego the right it possesses of refusing confirmation to the adoption of an heir to his throne by the deceased Raja of Kerowlee.

The arguments in favour of disallowing the adoption or of reorganising it, may be shortly set forth.

9. The State of Kerowlee has not entitled itself to favourable consideration by the British Government, for it has been troublesome, and inclined to be turbulent.

Its

Its internal government has not been of such a character as to lead to the presumption that a continuance of the native government there will be for the advantage of its people. For, as I have already stated, the administration was so bad, that we were compelled to take it into our own hands for the sake of the State itself, and of the general tranquillity.

It is not an inducement to the Government to continue the succession in the present family, that the nearest kinsman to the late Raja is more than suspected of having caused his Highness's death by poison.

And although that kinsman is not the proposed successor, there seems as little reason to continue the succession in the person of a young boy, so remote of kin, that it is difficult to state his relationship, so remote, that his ancestor's name has never until now appeared in the pedigree of the family submitted to the Government.

For many years to come we shall have to bear the labour of governing this State, employing, always at inconvenience, a British officer for the purpose; and at the end of those years, we shall, if the adoption be sanctioned, hand over the country, with its revenue of four lacs, only to see it, in all probability, fall again into the same system of improvidence and misrule which has long prevailed under its native princes.

These considerations would seem to urge the Government to declare Kerowlee a lapsed State, and at once to reduce it to submission and order, which in such case would be permanent.

10. On the other hand, the State is isolated, and would not consolidate our territories, as in the case of Sattara. Though not a very old State, still it is a Rajpoot principality; and, unlike the existing Mahratta and Mahometan dynasties, has the claims of antiquity in its favour.

The refusal of sanction to adoption in the case of Kerowlee might create alarm and dissatisfaction in the elder and more powerful states in Rajpootana, as being apparently significant of the intentions of the British Government towards themselves.

Such an alarm would be unfounded. For I presume that the Government of India would not at any time be disposed to interfere with the customary mode of succession among these old Rajpoot States, whose antiquity, whose position and feelings, would all make it our policy to leave them in the possession of such independence as they now enjoy. But although the alarm would be unfounded, it may possibly be considered undesirable to run any risk of exciting it by refusing to allow the adoption in Kerowlee.

Lastly, it may be urged that the Government of India cannot refuse sanction to this adoption, because it has twice recognised adoptions by the Rajas of Kerowlee since 1817.

The adoptions were certainly recognised, but upon the last occasion only with reluctance, and not till after hesitation and long delay.

11. The arguments appear to me to preponderate in favour of causing Kerowlee to lapse. But as the Honourable Court may desire to continue the succession on the ground of its being a Rajpoot State, I do not propose to refuse at once the sanction of the Government to the adoption, but to refer it to the Court of Directors, soliciting an immediate reply.

12. An immediate declaration of the final intentions of Government, for which Colonel Low presses, would no doubt be very desirable if there were not good reasons for withholding it; and I see no more risk to the peace of Kerowlee in withholding it upon this occasion, than there was upon the similar occasion a few years ago, especially as the Kotah contingent is already there, and assistance can be obtained from Nusseerabad, if necessary.

13. The reference to the Court should be made by the ensuing mail.

14. It will be sufficient to inform the Governor-general's agent that the views expressed by him regarding the clear right of adoption by the Raja of a successor to his principality, are not in accordance with the principle laid down by the Honourable Court of Directors in 1849. The Governor-general in Council, therefore, does not feel himself justified in confirming the adoption without a reference to the Court of Directors as before. He will inform the family and the leading persons at Kerowlee that a reference has been so made,

as upon the death of the Raja in 1848. And he will enjoin upon them the observance of perfect tranquillity till the decision of the Court shall be received.

The Governor-general's agent has already taken precautions for preserving the peace of the country by the military arrangements that have been made. If the duty is found to press heavily upon the Kotah contingent, the agent may obtain aid from Nusseerabad, or perhaps borrow a regiment from Sindia's contingent.

15. The Government of India may express, with propriety, its full concurrence in the praises bestowed by Colonel Low upon Mr. Monck Mason, for the judgment, decision, and ability he has shown in these affairs.

The letter to Colonel Low may be sent under flying seal to Mr. Mason, in order to save time, as Colonel Low has suggested.

(signed) *Dalhousie.*

30 August 1852.

MINUTE by the Honourable Sir *F. Currie*, Bart.

Kerowlee.

THE Most Noble the Governor-general has decided that the question of succession to the chiefship of this principality shall not be determined in this country, but by the Court of Directors. Still it seems necessary that, as a member of this Government, I should record my view as to the propriety of confirming the adoption which has been made by the late Maharaja, and as to the disposal of the State, in the event of that adoption being set aside.

2. After full consideration of the facts set forth in these papers, of the arguments contained in the printed Sattara correspondence, and of the Governor-general's minute of yesterday's date on the Kerowlee succession, I am obliged to differ from his Lordship as to the course which justice and policy, in my opinion, demand that we should adopt on this occasion.

3. The question is a very important one; not so much with respect to the interests of this small principality, or ours in connection with it, but as opening the question of the nature of our paramount rights, in regard to the ancient sovereignties of Rajpootana, which is involved in its decision; and in reference to the feelings with which the decision will be viewed by the Rajpoot States throughout Central India.

4. I think that the arguments which were used in considering the Sattara question, are in many points not applicable to that now before us. There is little analogy between the position of the Mahratta States generally to us as the paramount power, and the Rajpoot principalities, and far less in regard to that of the late Sattara raj.

5. The Mahratta dynasty was one of recent usurpation. The Sattara principality was, in its resuscitated state, the offspring of our own gratuitous benevolence. The British Government bestowed a portion of the territory which it had acquired by right of conquest, on the titular Raja, whom we found in a prison, and, subsequently, on account of his misconduct, set him aside in favour of his brother; and on the death of that brother, there being no natural heir to the immediate object of our bounty, and the Government not being disposed to recognise an adopted one, we resumed the territory which we had bestowed, and incorporated it in our own possessions.*

* Despatch of Court of Directors, dated 24 January 1849, para. 9.

6. The ancient Rajoot princes stand in a very different position in regard to our paramountcy, whether this be considered as derived from the Emperors of Delhi, or as appertaining to us as the *de facto* rulers of the Indian continent.

7. Kerowlee is a small and inconsiderable outlying State, but it is one of the old Rajpoot principalities, in treaty relations with us, similar to those of the larger ones, and the treatment it may receive at the present juncture will involve the principle on which all other Rajpoot States may be treated hereafter.

8. I will

8. I will first consider the adoption, which has been reported to us by Colonel Low.

It is admitted by all that this adoption was made in due form. Some days before the death of the Maharaja, it was communicated in the usual manner to the representative of the British Government; the customary khureeta to the Governor-general was formally written, and sealed by the Maharaja, and nothing can be objected to the boy, who is a distant relative of the late Maharaja, and a lineal descendant from the founder of the Kerowlee raj. Nothing seems to me to be wanting to the legal completeness of the ad option, except, it may be argued, the formal recognition of the paramount power.

9. I think the Governor-general, in stating the general principle of the necessity for recognition by the supreme power, in the third paragraph of the minute of yesterday's date, has gone far beyond the statement of the Court of Directors, contained in paragraph 8 of the despatch of 24th January 1849, to which his Lordship refers. The Court's despatch declares, "That by the general law and custom of India, a dependant principality, like that of Sattara, cannot pass, &c., &c.," but no more.

10. I will admit, however, that the general law and custom of India do, usually, require the recognition of the paramount power to the adoption of an heir of a dependant or protected principality; but, so do the law and custom require the same recognition to the succession of a natural heir; and I am not prepared to admit that the supreme power is more competent to withhold its recognition of the one than of the other. The setting aside of either must be an extraordinary act, adopted only on special considerations.

11. I concur, therefore, with the Governor-general's agent, that the adoption in this case, by Maharaja Nursing Pal, of the boy Bhurt Pal, should, as an act of justice, be confirmed and recognised.

12. But supposing it to be determined that the Government of India is not bound to recognise this adoption, and that circumstances are considered to exist rendering it expedient to disallow it; it seems to me impossible that we can, on that plea, with any semblance of good faith and fidelity to treaty, declare the territory to be ours, and, as in the case of Sattara, annex it to the British dominions.

13. The Kerowlee treaty is not one of a personal character between the British Government and Maharaja Hurbuksh Pal, and the heirs of his body. It is a treaty, in my view at least, between the British Government and the Kerowlee State. The name of Hurbuksh Pal does not once occur in any article of the treaty. The engagement is between the British Government on the one hand, and the Kerowlee Government on the other, the contracting party in each case being the representative for the time being of the respective government.

14. It is true the English version of the treaty has in Article 1, the words, "the Raja of Kerowlee and his descendants, &c.," but the Persian version of the same article, which bears the seal and signatures of the contracting parties, and a note by Lieutenant Adam of the ratification of the Governor-general, was "between the two Governments, from generation to generation for ever."

15. It is clear that it was not the intention of the treaty to confine and limit the succession, by the literal meaning of the English word "descendant." Neither Colonel Low's personal testimony, nor the express terms of the Persian version, are required to prove this; for Raja Hurbuksh Pal had no descendant in the literal sense of the term, when the treaty was made, and never had one; but the adoption of Pertab Pal, as his successor, was recognised. In like manner, Pertab Pal had no descendant, but the adoption of Nursing Pal was unquestioned, and the lad whom Nursing Pal has now adopted, stands in precisely the same relation, collaterally to him, in which he stood to Pertab Pal.

16. It is evident to me therefore that as long as there is in existence a legal heir to the guddee, as lineally descended from Dhurum Pal, the first known chief of Kerowlee, we cannot claim the territories of Kerowlee, as a lapse to the British Government.

17. I am disposed to think that this latter point has not been adverted to by

the Governor-general. His Lordship makes no mention of it in his minute; and I know that his Lordship's strict sense of justice, and scrupulous feelings in regard to fidelity to treaties, would prevent his advocating for a moment the appropriation of territories to which he conceived that another party had a just or could adduce even a doubtful claim.

18. With my views of the justice of this question, I need hardly say that I think no argument of policy could warrant our annexing these territories; but I think the recognition of the adoption will be not only just, but politic. The next heir, failing the adoption, seems to be Sooruk Pal, the father of Muddun Pal, who is strongly suspected of having compassed the death of the late Maharaja. We know that Muddun Pal is ready to claim the guddee, and we must either allow his succession, or take steps to prove his delinquency, and unfitness on that score to succeed; but having done that, we must acknowledge the next heir; there are plenty, it seems, in existence.

19. If we recognise the adoption, we may take entire charge of the property in behalf of the minor. This will enable us to put the administration on a better footing than it has been of late years, and to make arrangements for the payment of the debt due to us, and also perhaps for the liquidation of the claims of the other creditors. The superintendence should not be made a charge to us; but the whole cost should be defrayed from the revenues of the State.

20. I think the chiefs of Rajpootana will await with some anxiety the settlement of this question. I trust therefore that the Court of Directors will not delay their decision; and I think that nothing should be said to Mr. Monck Mason, or to the Governor-general's agent, to lead to the supposition that the recognition of the adoption will not be eventually communicated.

31 August 1852. (signed) *F. Currie.*

MINUTE by the Honourable *J. Lowis.*

Kerowlee succession.

THERE are two points in this case of the Kerowlee succession, one involving the right, the other the expediency of setting aside the adoption made by the late Raja.

After giving the whole subject my best consideration, I am of opinion that the decision of the Honourable Court on the Sattara succession must govern this case; and I agree therefore with the Most Noble the Governor-general, in thinking that we have a right to set aside the adoption.

It does not appear to me that the antecedent history or condition of these principalities really affects the question now before us; because the treaties with the two States are what we have alone to deal with; and the first article of the Sattara Treaty, in which the British Government agrees to cede "in perpetual sovereignty to the Raja of Sattara, his heirs and successors, the districts specified, &c.," does confer, and must be held to confer, upon the Raja of Sattara quite as full a title of sovereignty as was possessed by the former Rajas of Kerowlee, under the Peishwa; and we must look at the other articles of the two treaties to see in what way or degree the plenary sovereign rights conferred, or antecedently existing, were in each case limited. Some stress, I perceive, is laid on the wording of the first article of the Kerowlee Treaty; and my honourable colleague, Sir F. Currie, adverts to a discrepancy between the English and Persian versions; but the point, I respectfully submit, is of no consequence, because all that the first article does is to declare that the treaty itself is to be perpetual; and the real gist of the matter lies in the force and meaning of the terms employed in the second and third articles.

In the former of these the raj is placed ملک under the protection of the British Government (hufazut) حفاظت care; custody, is the term used; and in the latter the Raja acknowledges the supremacy of the British Government; the Persian term used is "ataint," اطاعت (obedience, subjection); and the question is, whether these terms, coupled with the remission of the tribute, as made in the fourth article, are sufficient to prove that the two States stand to each

each other relatively in the positions of paramount and dependent States? In my opinion they do this fully. They acknowledge plainly the paramount authority of the British Government, within the meaning of the term, as used in the proceedings regarding Sattara; and I hold therefore that the authoritative decision of the highest authority in the one case, must govern the decision of this other, now under discussion.

The question of expediency is not quite so clear to me. As a general rule, I think that it is a wise policy in all points of view, both as regards the Government and the people, to consolidate our empire, and to absorb these isolated and ill-governed principalities, when it can be done without injustice; but I am not sufficiently well versed in the politics of Rajpootana to be able to say with confidence whether, on the present occasion, we might not with propriety abstain from exercising a just right, and carrying out a sound principle. I must say, however, that, as far as the correspondence now before us goes, there is nothing which satisfies me that any local expediency calls for such an abandonment of what I believe to be the right course. On this point also I therefore concur with the Most Noble the Governor-general; but, pending the reference to the Honourable Court, I should be glad that Colonel Low had an opportunity of stating more at length his reasons for thinking that the absorption of Kerowlee would be impolitic and inexpedient.

2 September 1852. (signed) *J. Lowis.*

MINUTE by the Most Noble the Governor-General of India.

Kerowlee.

1. I SHOULD have proposed according to our usual custom, where there is any difference of opinion, to reserve this question for consideration in Council. But as we all agree that it is desirable to obtain the decision of the Court of Directors upon the Kerowlee adoption as soon as possible, and as the mail goes on the 8th, I beg to add a few words upon record.

2. There is a double question, as Mr. Lowis observes, in this case of Kerowlee, a question of right and a question of policy.

3. After considering the arguments of Sir F. Currie, I still think that the right is clear of withholding confirmation, founded upon the decision of the Honourable Court in 1849.

That decision, as I construe it, did not rule merely as to cases exactly corresponding with that of Sattara. It ruled generally that all "dependent" States required the sanction of the supreme power to any adoption proposed by them.

The State of Kerowlee is, by its own admission, not only dependent on, but subject to the British Government.

Therefore, an adoption by Kerowlee must ever be made subject to the right of the British Government to confirm or to annul it, as it might judge right.

4. In regard to the question of policy, I still think, as before, that on the whole the arguments for assumption of the country preponderate. I do not conceive that, whether we take the wording of the English or of the Persian version of the treaty, the intention of it was to recognise all heirs of the original founder of the raj, or any other than the heirs of the Raja with whom it was made. Nor do I think that it would be an impolitic act, or one attended with risk, if the Government of India were to take possession of Kerowlee at once.

At the same time, I freely admit that the continuance of the raj would be a measure calculated to reassure and to conciliate the good-will of the States of Rajpootana.

5. Briefly stated, then, my opinion is, that after the declaration of the Court of Directors in the case of Sattara, the Government of India would not be justified now in confirming the adoption at Kerowlee, without previous reference to the Court.

I think the right of the Government of India to refuse confirmation of the adoption is quite clear. And I think that, as regards policy, there is no injustice

and no risk in refusing confirmation; while the granting of it, and the continuance of the raj of Kerowlee under its native rulers, would undoubtedly be the more liberal policy, and the one most acceptable to native States.

3 September 1852. (signed) *Dalhousie.*

MINUTE by the Most Noble the Governor-General, concurred in by the Honourable Sir *F. Currie*, Bart., and the Honourable Mr. *Lowis.*

Kerowlee.

1. THE agent in Rajpootana reports that there has appeared a strong party in Kerowlee adverse to the adoption made by Nursing Pal.

2. The orders to be given are very clear.

The question of adoption has been referred to the Honourable Court. Till their orders are received, no obedience to the adopted boy or to any other candidate is to be enforced. But the State of Kerowlee is in the interval under the authority of the British Government, as it was in the lifetime of the Raja. Entire obedience must be rendered to that authority by everybody in Kerowlee. If obedience on any point be refused to the British agent, acting on behalf of his Government, it must be enforced by arms; and the Governor-general's agent will be prepared to do so.

3. In the meantime, disturbance of any kind cannot be otherwise than injurious to the interests of the State of Kerowlee, and of everybody concerned with it.

4. These orders should be transmitted to the Resident.

It may be added, that the opinion he expresses, that if the adoption had been at once confirmed by the Government of India, no opposition would have been made to the boy adopted, does not appear to the Governor-general in Council to be borne out by the correspondence before him.

2 October 1852. (signed) *Dalhousie.*

I concur. The question of the future disposal of the State of Kerowlee having been referred to the Court of Directors, the British powers must conduct the Government, and put down all opposition, or refractory conduct, by the strong hand, if necessary, till the decision of the Court is received.

2 October 1852. (signed) *F. Currie.*

I concur.

(signed) *J. Lowis.*

MINUTE by the Most Noble the Governor-General of India, concurred in by the Members of Council.

Kerowlee.

1. THE prompt measures taken by Sir H. Lawrence for putting down open resistance may be fully approved, and he may be so informed.

2. By this mail a despatch has been received from the Court of Directors, recognising the adoption of Bhurt Pal, and his succession to the raj of Kerowlee. Since the Court were addressed on this subject, some feeling has been shown in that State on behalf of Muddun Pal. Sir H. Lawrence in his present despatch states that several of the native princes round have expressed opinions strongly in his favour. It is not stated what are the grounds of these opinions; whether it is mere preference for Muddun Pal, or whether they consider him the rightful heir.

Doubts were at one time expressed as to the validity of the adoption, even according to their own laws. I would beg the secretary to have a précis of the facts relating to this point prepared.

3. I think

3. I think I remember that a doubtful case of inheritance in one of the Rajpoot States was some time ago (1851 ?) submitted to a sort of punchayet of thakoors. I beg to have the particulars of that case also.

21 March 1853. (signed) *Dalhousie.*

I concur.

23 March. (signed) *J. Lowis.*

I concur. The secretary might also make a note of the course which was followed for ascertaining the opinions of the more influential Rajpoot durbars, in the case of Ahmednuggur; the chiefship of which was claimed by Eedur and Jodhpore.

I think Sir H. Lawrence should be asked what, as far as he could judge, was the cause of the Rajas he mentions, showing so strong a feeling in respect of Rao Muddun Pal; whether they consider him the rightful successor to Hurbux Pal, in preference to the adopted boy; or if, construing the delay which has taken place in the recognition of the adoption, and our present position in Kerowlee, into an intention on our part to disallow the said adoption, they are apprehensive that we mean to take possession of the principality as our own; and are therefore thus earnest in advocating the claims of Muddun Pal; a chief who derives his claims, not as a lineal descendant from the chief with whom we made our treaty with Kerowlee, but as the next heir in the line of the original founders of the principality, the possessors thereof, as the Court observe, long before our appearance in the East.

22 March. (signed) *F. Currie.*

MINUTE by the Most Noble the Governor-General of India in Council (concurred in by the Board).

Kerowlee.

1. FROM the note of the secretary I perceive that the case in Shekawattee does not bear on the present one.

2. I think that Sir H. Lawrence should be asked to state what were the grounds on which the chiefs whom he names urged the claims of Muddun Pal to the raj of Kerowlee; whether on the ground of informal adoption, or of family custom, or on any other ground which would render Bhut Pal not the rightful heir to the raj.

3. Respecting general formality of the adoption, according to Hindoo law, a case might be put to learned pundits.

As to the custom of the family, inquiry could best be made on the spot.

Captain M. Mason, I think, has shown the previous objections of Muddun Pal to the adoption to be futile.

If the case should still be doubtful, reference might be made to high Rajpoot chiefs, as was done in the case of Edur.

4. I should be glad if the secretary would search the minute of Mr. Willoughby (which was a text book upon adoption) for anything which may bear directly on this case.

5. The fort of Narowlee has surrendered at once. I do not anticipate any risk of disturbance in Kerowlee from delay in deciding the case. If there were, I should still pursue these investigations; for it would be far better to risk tumult, than to give a wrongful decision on the succession to a throne.

26 March 1853. (signed) *Dalhousie.*

I concur.

28 March. (signed) *F. Currie.*

I concur.

(signed) *J. Lowis.*

MINUTE by the Most Noble the Governor-General of India in Council.

Kerowlee. THE tendency of the several extracts made from Mr. Willoughby's minute is adverse to the validity of the late adoption in Kerowlee. I think the point should be referred to the Governor-general's agent, his attention being drawn to the several doubts connected with the case.

31 March 1853. (signed) *Dalhousie.*

MINUTE by the Honourable Sir *F. Currie,* Bart.

THE rules for Hindoo adoption are very comprehensive and conflicting; and, in practice, the exceptions are very numerous (witness the last adoption in the Holkar family in 1844); I concur that the point should be referred to the Governor-general's agent; but for report, I think, not for decision.

2 April 1853. (signed) *F. Currie.*

MINUTE by the Honourable *J. Lowis.*

THE validity of the adoption appears very doubtful if the strict rule of Hindoo law be adhered to, but precedents adverse to law were, I have no doubt to be found. In a case like this of Kerowlee, the permanent authority may very well be guided in sanctioning, or withholding its sanction of the adoption, by what appears to be most conducive to the welfare of the principality, and I would ask the agent's opinion on the whole question, I mean on the expediency, as well as on the validity, of the adoption.

2 April 1853. (signed) *J. Lowis.*

MINUTE by the Most Noble the Governor-General of India.

Kerowlee. 1. SIR H. LAWRENCE has reported very fully on the question referred to him some time ago, relative to the rule and practice observed in the adoption of heirs to their sovereignties by the princes of Rajpootana.

Sir H. Lawrence has investigated this question with great care and labour, and has furnished the Government with an able, lucid and authoritative exposition of the law and custom relating to adoption, as they have been observed time out of mind by the sovereign princes of Rajpootana.

Sir H. Lawrence does not wish that his remarks and recommendations should be understood as applying to adoption in any other part of India but Rajpootana.

2. It will be recollected that the late Maharaja of Kerowlee declared, a few hours before his death, that he had adopted a boy, a distant relative, named Bhurt Pal. On a reference made, the Honourable Court sanctioned a recognition of the adoption of Bhurt Pal. In the interim, however, doubts had arisen whether the adoption was a valid one, and it had become apparent that the reigning family, the chiefs and the people of Kerowlee, objected to the professed adoption of Bhurt Pal, and desired to have as Maharaja, Muddun Pal, as being a successor of maturer years, and a nearer relative than Bhurt Pal.

Upon this further inquiry was directed, and the report before me is the result.

3. Sir H. Lawrence, applying, in the 32d paragraph of his report, the principles he has expounded regarding adoption in Rajpootana, gives it as his decided

decided opinion that Muddun Pal, as nearest of kin, as accepted by the Ranees, by the nine most influential Thakoors, by three-fourths of the lesser feudal chiefs, and, "as far as can be judged, by the almost general feeling of the country," should be recognised by the British Government as the Maharaja of Kerowlee, in the absence of any valid adoption by the late Maharaja Nursing Pal.

4. Although the Honourable Court, in their despatch, sanctioned the recognition as Maharaja of Bhurt Pal, by name, I apprehend that the Government of India will be acting in conformity with the wishes of the Honourable Court, though it should now proceed to recognise Muddun Pal. The question referred to the Honourable Court was not a personal one between the two kinsmen, but one regarding the recognition of any adoption. The Honourable Court having determined that adoption shall be permitted, the Governor-general in Council will be fulfilling the intentions of the Honourable Court if he now permits the adoption and succession of Muddun Pal, who has been found to be the proper successor since the name of Bhurt Pal was first brought forward.

5. The continuance of the present unsettled state of the succession is objectionable, and as Sir H. Lawrence has now supplied the Government with the means of forming a decision, I would at once instruct Sir H. Lawrence to recognise and to instal Muddun Pal at Kerowlee.

6. It still remains to determine what arrangements shall be made for the government of the raj.

The administration was placed in the hands of the British Government in the time of the late Nursing Pal, who was a minor. Muddun Pal being of years fit to govern, and apparently likely to secure the submission of the people, I certainly think the Government should be made over to him. A Political Agent is recommended to be retained at Kerowlee.

I think that proper guarantee for the repayment of the debt of 94,000 rupees, due by Kerowlee, ought to be obtained before the administration is made over to Muddun Pal; but I hesitate as to the expediency of maintaining a Political Agent there now, if (as I apprehend will be the case) the office will fall as an additional expense on the British Government when the administration is no longer in his hand.

(signed) *Dalhousie.*

On board H. C. S. "Zenobia,"
13 December 1852.

MINUTE by the Honourable the President in Council.

Kerowlee. Minute by the Most Noble the Governor-general, dated 12 Dec. 1853.

I AM quite prepared to carry out the views expressed by the Most Noble the Governor-general as to the Kerowlee adoption, in the minute under consideration.

9 January 1854. (signed) *J. Dorin.*

MINUTE by the Honourable Colonel *J. Low*, C.B., concurred in by the Honourable *F. J. Halliday*.

The succession to the Kerowlee sovereignty and the Minute by the Governor-General dated 12 Dec. 1853.

1. WHEN I remember the state of things which existed at Kerowlee and its vicinity at the time the late Raja died, and for many weeks after that event, I have great reason to believe that if the adoption of Bhurt Pal had at once been sanctioned, the measure would have been a popular one, both in Kerowlee and in the neighbouring States; that general tranquillity would have prevailed; and that the affairs of the principality, and especially so as regards the Khalsa lands, would have continued to prosper under the able management of Lieutenant Monck Mason.

2. But the case is widely different now, from what it was in 1852. Proofs have been obtained by the inquiries of Sir Henry Lawrence, and, I think, satis-

factory proofs, that (even allowing for the difficulty to the family of the late Raja, caused by our orders then issued, that the chiefs should not come to the capital), certain forms, and also the sanction of certain individuals, which are, strictly speaking, required for a legitimate adoption, were omitted by the late Raja and his advisers; which omissions caused the adoption of Bhurt Pal to be invalid, according to the rules by which such matters are generally judged in Rajpoot families.

3. And what, in my opinion, is of greater importance, as connected with the course which ought to be pursued by the paramount State at present, is this fact: viz., that Muddun Pal, who, although a distant relative, is still somewhat nearer of kin to the late Raja than the other competitor, has now obtained the votes in his favour of such a very large proportion of the chiefs and other men of high rank in the whole principality, that there would certainly be great discontent among that influential class, if Bhurt Pal were now to be elevated to the position of Raja. Not only would all those chiefs, and some of the principal Ranees also, feel hurt at their declared opinions being so disregarded after we had apparently consulted them in the matter, but in this case those feelings of dissatisfaction would be much aggravated in the minds of the chiefs, from their knowledge, that in the event of such a young boy as Bhurt Pal being selected, their country would, for many years to come, be under the direct and sole management of an officer of a foreign Government; and the last-mentioned prejudice, which I attribute to the chiefs of Kerowlee, does not differ from the feelings which would exist under similar circumstances among the nobility and other men of local influence in any country of the known world.

4. Moreover, Muddun Pal being a remarkably good-looking man, with pleasing manners, I have no doubt that there is now a sort of personal partiality for him on the part of the chiefs, as the Raja of their own selection, which would add to their feeling of disgust if that selection should be disregarded by the British Government.

5. When a Rajpoot sovereign dies, without leaving a son, and without there being any dispute in the family and among the principal chiefs respecting the proper person to succeed (whether from relationship or adoption), I consider the choice of a successor to be so entirely an interior affair of the native State, that we ought not to take any active part in the matter. According to the spirit of our treaties, and according to the intentions of both the contracting parties when those treaties were formed, it certainly is not our business to name successors to Rajpoot principalities, except in cases where there are two or more competitors, which is precisely the case now at Kerowlee, and thus it becomes both our right and our duty to pass a decision in favour of one or other of those competitors.

6. I entirely concur with Sir Henry Lawrence's opinion, as expressed in the following extract from the 27th paragraph of his despatch now before me, dated the 17th of November last, viz. "The confirmation of the suzerain is necessary in all cases; he is the arbitrator in all contested adoptions; he can set aside one or other for informality, irregularity, or for misconduct; but it does not appear by the rules or practices of any of the sovereignties, or by our own practice with the Istumrardars of Ajmere, that the paramount State can refuse confirmation to one or other claimant, and confiscate the estate, however small."

7. Under all the circumstances above described or adverted to, I consider that Muddun Pal, as proposed by the Governor- eneral, should, without further delay, be installed as Raja of Kerowlee, from being (as described by Sir Henry Lawrence) the adopted son of "the senior widow of Maharaja Purtab Pal;" I would be satisfied, however, with whatever security Muddun Pal may offer for the payment of the debt, as far as his security need be taken into consideration; but I would openly inform him, through the Governor-general's agent, that any breach of his promise for the regular payment of the required annual instalment, would render him liable to have one or more of his districts taken possession of for a time by the British Government, and managed exclusively by a British officer, till the whole of the debt shall be liquidated.

8. But

8. But I would not at present remove the British agent from the Kerowlee durbar; my knowledge of the Kerowlee people, and the reasons stated by Sir Henry Lawrence in the 27th paragragh of his despatch of the 17th of November, combine to convince me of the necessity of retaining the Political Agent for at least two years after the elevation of Muddun Pal: and I would advocate that measure even if the whole cost of the agency should be charged to the British Government, because many of our own general purposes will be promoted by such a measure, while positive and extensive good will be effected to a large portion of the inhabitants of the Kerowlee territories. I observe that the Most Noble the Governor-general, at present, has some doubts as to the expediency of retaining the Political Agent, if he is to be paid from the British treasury; but I trust that those doubts will soon be removed from his Lordship's mind, and at all events I feel fully convinced that his Lordship will readily confirm the act if the Honourable the President of the Council will at once order the whole plan to be carried into effect, including the retention of the British agency at Kerowlee, the latter part of the plan being considered as a temporary measure, and the exact duration of the agency being thus left for the future consideration and decision of Government.

— No. 1. —

COPY of Minute of Major *Moore*, then a Member of the Court of Directors of the East India Company, on the alleged Debts of his Highness the Nizam to the British Government, dated the 7th day of November 1853, and other Minutes or Dissents of Members of the Court on the same subject.

Dissent by Major *Moore*.

THE rejection by the Board of Control of certain parts of the Political Draft, No. 803 (new treaty with the Nizam), and which passed the Court as altered on the 26th ultimo, enables me to offer the following objections:

1st. I object to the treaty, because I am convinced it will ultimately prove eminently disadvantageous, and perhaps even ruinous to the pecuniary, the political, and the sovereign interests of the Nizam. It is possible we might be able to justify our proceedings with reference to legal right, and the maxims of writers on international law, but we shall never be able to do so on the higher and superior grounds of a liberal and generous treatment of the Nizam, and a maintenance of that principle by which we always professed to be influenced, viz., a desire to uphold, not to subvert the Nizam's independence. We shall, in my judgment, have by deed that word of promise to the sense which we have spoken to the ear.

2. Because, as already observed, we might have had a legal right to insist upon the Nizam's cession to us of a part of his country in payment of the debt he had incurred, and which experience had shown he was either unable or unwilling to liquidate, yet the enforcement of this right involves a great increase of the Nizam's embarrassment, particularly as regards his irregular troops, already in a constant state of mutiny from the arrears due to them, and will thus lead to the decline, and finally to the annihilation, of his authority as an independent prince, which we have always professed it to be our intention and *bonâ fide* desire to maintain. It would have been more just and more generous to have avoided such a result, and to have negotiated with him (in lieu of this partial, and, as it will no doubt prove, permanent cession of a part of his Highness's territories) for our entire and exclusive control of the administration of the country for a limited period, when we might have restored it to him free of its embarrassments, and in that condition of order which would have ensured the welfare of the country, and upheld the Nizam himself in the position he ought to be in amongst the princes of India. With this would, of course, have been combined several other important measures, such as the reduction of an enormous amount of useless expense by the discharge of thousands of irregular troops, whose existence (and in many cases nominal existence only on paper) serves but to swell the emoluments of the officers of Government. By the establishment of courts of justice, of which there are scarcely any in the Nizam's country that deserve the name; by the organisation of the ancient and admirable system of Munneewarree police now quite in abeyance; by the immediate removal from the country, after payment of their just claims, of the Arabs and foreign mercenaries, who are now the very curse of the country; by the establishment of one universal system of coinage throughout the whole of the Nizam's country, assimilated as much as possible to the standard value of the Company's coinage, but without infringement of the Nizam's undoubted sovereign right of coining money; by a revision of existing treaties, and such modification of them as the changed condition of India, and our political relations with native princes might seem to demand. These are some of the advantages that would have ensued, and would have been better for all parties than that which has been adopted, ultimately more beneficial to the Nizam, and certainly more in accordance with our often-expressed opinion, that it was desirable to maintain the Nizam's independence and position as a sovereign. I do not advocate a policy of conquest for this enlarged policy upon the ground that it would be more acceptable to

the Nizam. I believe he would have evinced much more repugnance to a proposition to relieve him from the duties of administration over his whole country than to place certain districts under the management of British officers; but I am not disposed to allow great weight to his Highness's personal feelings in such a question, or to permit them to stand in the way of measures for his manifest advantage, as I regard those I have suggested.

3. I dissent from the provisions of the second article of the new treaty, because, although the Nizam has given apparently a ready consent to the modification of the future distribution and strength of the subsidiary force, I object to the terms in which that proposal was made. To show the grounds of this part of my dissent, I must go somewhat into the details of our political dealings with the Nizam, which, I apprehend, are not fully understood or duly appreciated in general. Our treaty with the Nizam in 1800, which forms the basis of our present political relations with the State of Hyderabad, expressly stipulated that we should maintain for his protection, &c. within his territories a force consisting of eight regiments of infantry (sepoys) of 1,000 firelocks each, two regiments of cavalry, or 1,000 horse, with the requisite complement of guns, European artillerymen, &c., which would amount altogether to about 9,500 men of all arms; and that for the payment of this force he should cede to us the Dooab (now styled the ceded districts), then yielding a nominal revenue of about 93 lacs. How have the two parties performed the respective engagements? The Nizam duly ceded to us the districts. We have reduced the numerical strength of our regiments of the subsidiary force from 1,000 firelocks to 750 of infantry, and from 500 sabres to 420 in each regiment of cavalry, and the number of troops kept up by us within the Hyderabad territory for the last 30 years has been more than one-fourth less than the number for which we had contracted, and received payment in advance, thus gaining very largely upon both transactions; for it, as I believe, the revenues of the ceded districts have increased, while the payments we make to the force (from the reduction in numbers) have decreased, the balance of profit must be greatly in our favour.

When this treaty of 1800 was made we were a mercantile as well as a political body, but now that we have dropped the former character and call ourselves the paramount power of India let us look somewhat more closely to the transaction, and take a more extended and liberal view of it. Upon what plea did we fall short in the due performance of our contract? By what right have we received payment for troops we did not furnish? If these facts are true, are we or are we not bound to account to the Nizam for what we have received from him for an equivalent we have not fulfilled?

The treaty of 1800 was duly confirmed by us on the accession of the present Nizam to the musnud, and in that engagement, dated the 20th September 1837, is the remarkable expression, "The stipulation of all existing treaties shall be duly observed till the end of time."

By the treaty the Nizam bound himself to assist us in time of war with a certain contingent force. I will not stop to discuss whether we were justified in modifying this article of the treaty to suit our own views by changing the character of the contingent, substituting highly disciplined regiments under British officers of our own for a larger irregular body officered by the Nizam's nobles, and affording patronage and provision to many natives of the Nizam's country of the higher classes, but I cannot help alluding to the fact (admitted by all) that the provisions of the treaty were for the contingent to be furnished in time of war only, and we had no right to admit of its being maintained upon its present footing in time of peace. Looking to the state of the Nizam's finances, even the expression of a positive disinclination on the part of his Highness for any reduction in this force, is not in my judgment sufficient. We have rendered it permanent, contrary to the principle of the treaty, and have altered it so as to be useful for our own purposes. Its commands and staff appointments have afforded rewards for meritorious officers who had distinguished themselves in our own armies, and it has been altogether a fertile source of patronage. The Nizam had no voice in the organisation and equipment of this force; it was entirely managed by us, and although paid by his Highness, we have always assumed a right to withhold its services from him; when we choose to disapprove of the object. Hence he has been obliged to maintain large numbers of other troops on his own account for ordinary service in his territories, and the advantages he has derived from his contingent have been nearly similar to the advantages derived from the subsidiary force supplied by us.

[illegible] revenues of the Nizam were calculated at about 1 crore and 60 lacs. The cost of the contingent was nearly 70 lacs; with such an impost on its finances, it is all to be wondered that from time to time funds for its maintenance were not forthcoming? We all know to what shifts the Nizam's ministers have had to resort to meet any unusually heavy demand for the monthly pay of the contingent! What evils it has been the cause of! Loans from money dealers at exorbitant interest; farming of districts at ruinous loss, forestalling of revenues, and a host of attendant miseries. Overwhelmed with financial difficulties, the Nizam was at length unable to pay the contingent, and we kindly lent him the money from our own treasury, first at 12 per cent., and latterly at 6 per cent. interest, and thus our staunch ally has incurred a debt to us of about 50 lacs, the consequences of which are the present

"REVISED TREATY."

Now considering the great advantages we have ourselves derived from our dealings with the Nizam, and that we have had no small share in bringing him into his financial difficulties, I maintain that he was entitled to more liberal treatment at our hands than he has experienced. Does it accord with the high character we assume to ourselves as rulers of the Indian empire, to take the opportunity of the embarrassed position of the Nizam to frame a treaty so prejudicial to his interests? Was there no other way to extricate him from his difficulties than by placing him under so dangerous an obligation? The obvious cause of the financial difficulty was the contingent, the obvious remedy was its partial reduction. Did we urge its reduction? By no means. Previous to discussing the new treaty, the Nizam had the option given him, and it is said that he was strenuously opposed to the slightest reduction of it. The very reasonable question by his Highness to the Resident, Colonel Low, as to why the contingent was not reduced after the war, was considered by that able diplomatist as "a remarkable and unexpected speech." Let us not shelter ourselves under such a pretext. The Governor General considers that there are more regular troops in the Nizam's country than are necessary in these times of peace, therefore the contingent is maintained which enables us to withdraw two brigades of the subsidiary force which will be applicable to other purposes of our own in Pegu or elsewhere. This is called a *slight* modification of its distribution—a transfer of a part of the subsidiary force to the duties of general service in our own province.

Why is not the Nizam to have the advantage of considerable reduction in his own standing army in time of peace? I would ask, is it right, just, or proper, that we should concur in his desire to maintain troops to perform duties which we have contracted to perform ourselves, and been paid for? We may, if we choose, insist upon the repayment of every rupee advanced to the Nizam, but I cannot admit we are justified in disregarding our own engagements by lessening the force we had stipulated to keep up.

Is it becoming, on our part, to endeavour, by specious arguments, to show that the Nizam is a gainer by a measure of which the whole benefit is ours? or that eight regiments of 1,000 firelocks, as specified in the original treaty, meant, in spirit, eight regiments of 750? No; let us call things by their right names. It is not on grounds of benefit to the Nizam that the treaty can be upheld, for it really appears as if we had taken the occasion of turning his difficulties to our own advantage.

The result may be shown in a few words:—

By the original treaty, we were bound to keep up about 9,500 men within the Nizam's territories, for which he paid in advance

By the present, we are bound to keep up about 5,000 men.

By the original treaty, the Nizam had to provide a contingent in time of war

By the present, he provides a territorial fund to keep up a contingent in time of peace or war, and cedes districts in perpetuity for the payment thereof.

There is still another point of view exhibiting the impolicy of the treaty. We assume for the payment of the contingent the districts of Berar, &c. &c. We did not allow the Nizam to assign such as would be most convenient to himself, but we selected those districts as adjoining our own provinces; and, as being especially improvable, are we justified in seizing, with a strong hand, that to which others have no equal, or, perhaps, a better claim? How are hundreds of others

Who

who have claims on the Nizam's Government fully as legal as our own. Would equity have us to alienate these provinces from the general purposes of the State and apply their revenues exclusively to the payment of the contingent and the gradual liquidation of our own debt, with interest? I do not see how we can disregard claims similar to our own; and we shall find ourselves involved in further pecuniary questions with the Nizam, which must lead to further interference in his affairs, and further cession of territory.

I shall conclude the observations I have ventured to make, by appending to this dissent a short extract from the papers of the late Henry St. George Tucker, than whom a more able and energetic man never occupied a seat in this Court; as I consider the views therein expressed as peculiarly applicable in this case.

Extract from Memorial "of Indian Government," page 251.

We are told, indeed, that our Government has become the "paramount power" in India; and as such may deal with its vassals and dependents according to the dictates of an enlightened policy. True, we wield the power of the sword, and our political supremacy is everywhere acknowledged; but we do not possess, and never can possess, the power to violate treaties, the power to do wrong and to commit injustice, the power to dominate over those who cannot resist us, while we hesitate to enforce it in our relations with those States who enjoy, with a large territory, a greater degree of independence.

"To apply to the weak a rule which it would be unsafe to extend to the strong would ill become the British character; and I must contend that in giving effect to the obligations of a treaty, we consult alike the dictates of justice, and of sound policy."

Dissent by Sir *H. Willock.*

Affairs of the Nizam.

I dissent from the Political Draft, No. 868, on the affairs of the Nizam, which has this day obtained the sanction of the Court, for the following reasons:

The Government of India from time to time made advances for the support of the contingent force which eventually amounted to 72 lacs of rupees. All endeavours to obtain repayment of this sum failed, and the Governor General determined to sequestrate certain provinces of the Principality for the absorption of this debt and to provide for the future payment of the force.

The Nizam, by an unlooked-for effort, has provided for the liquidation of this debt, and the sequestration of the provinces is suspended.

The maintenance of the contingent has occasioned a pressure on the Nizam's finances, and has matured the embarrassment under which he at present labours; it is therefore to be considered, if his Highness is bound by treaty to the support of the contingent, as at present constituted, absorbing as it does nearly a third part of his Highness' net revenue.

I shall best prosecute this inquiry by a reference to public documents. The first notice on the part of the Court of Directors respecting "The Nizam's Contingent Force," is contained in a Despatch to the Governor General of India of the 21st January 1824, and in that communication it is notified that the Secret Committee, on the 3d April 1815, expressed disapprobation of its formation.

In the 81st paragraph of that Despatch, the question of the right we possess under the treaty to establish the contingent is thus treated:

"With reference also to the 12th article of the treaty of 1800 with the Nizam, it appears to us very doubtful whether the proceeding be consistent with good faith, particularly if, as stated by the Marquis of Hastings, the mode of officering and paying the reformed corps render them in effect a part of our army, on whose fidelity we may rely, even on a rupture with their nominal chief."

In a subsequent part of the same Despatch, the evil consequences of placing too heavy impositions on Native States are strongly depicted:

It

"Upon mature consideration, whether in case where they (Native States) are found to be by treaty to maintain a certain force, it might not be politic, if not absolutely to dissolve them from such engagements, at least to modify or relax those obligations, so as to bring the cost of them within the means of a native state. When a larger force is kept up than the State can afford to pay, revenue [illegible] is extorted at the point of the bayonet, inapacity soon defeats its own ends, the public resources, instead of improving, decline, the pay of the troops falls into arrear, discontent leads to mutiny, &c. &c. &c."

These predictions have unhappily been realised at Hydrabad.

In the early stage of the reformation of the irregulars, the Minister steadfastly persisted that the officers appointed to discipline them should not be servants of the East India Company. He could not but foresee that under such a constitution, they would pass from his control. It soon became the rule of the service, "that the Nizam's army, so long as it shall be officered by British subjects, is not to obey the requisition of the Minister until he (the Resident) has first satisfied himself that their services are to be required in a just cause."

The Minister, being thus deprived of the services of these irregulars, who were the personal guards of the Nizam, and constituted the force relied upon by the collectors of revenue and officers of police, to maintain peace and order in the country, and regulate its internal management, was necessitated to organise another and very objectionable force, composed of Patans, Rohillas, and Arabs, to enable him to carry on the administration, and support the authority of his Highness the Nizam's Government.

The gradual transition of the Nizam's irregulars to a disciplined corps is thus described in two paragraphs of Sir Charles Metcalfe's minute of 1832:

"The contingent furnished by the Nizam being found inefficient, we gradually assumed the management of it until we finally established a force in lieu of it, completely under our own control.

"This we were enabled to do by the subserviency of the Minister who was the creature of our ascendancy, and who saw in the existence of this force the means of maintaining his power against rival nobles, as well as refractory subjects."

It appears also by Sir C. Metcalfe's Minute of 1832, that he considered the charge of the contingent as too onerous on the Nizam's Government:

"When I was minister at Hydrabad, I made several attempts to reduce the expense of the force (the contingent). A regiment of cavalry was discharged; the rest of the cavalry was reduced in number; some staff appointments were abolished; but all to no purpose, as to any relief it afforded to the State finances. The minister (Chundoo Lal) squandered the amount thus saved, and so he will do with respect to any reduction of expense that can be effected."

In pursuance of this inquiry, I will advert to the opinions of successive residents at Hydrabad. Those of Colonel Stewart I find quoted in the Court's Despatch to the Government of India of the 8th September 1835:

"Those who have witnessed the course of our policy at this Court during the last 30 years, who have seen how we have put up the creatures of our own as ministers, and supported them against their Sovereign; how we have obtained the control of all the effective troops of the State: and how we assumed the civil control of the country, can hardly feel a doubt, least of all the Nizam himself, that we have considered ourselves the actual rulers of the country. Many evils which exist in this State are unquestionably the almost unavoidable result of our connexion with it. It seems hardly fair, therefore, to hold either the Nizam or his minister responsible for these evils. Situated as they were, I do not think they had the power to correct them; in fact, we may perhaps more properly be regarded as responsible for them, having the power in our own hands, and having shown that we are in no way scrupulous about making use of that power when we thought fit to do so."

General Fraser, in his Despatch to the Government of India, of 26th July 1842, says:—

"If the Nizam is permitted to retain the impression of his being absolutely and actually independent, it is not improbable that, besides other evils which may arise, we shall experience one of great magnitude in a proposition on the part of his Highness for the disbandment of the contingent, to which he is known to be averse, and of which neither the continued maintenance nor the original organisation are provided by any existing treaty."

It may be collected from General Fraser's observations, that the utility of the contingent

contingent force is not commensurate with the evils attending its continued maintenance on its present footing. Without doubt it is an useful and efficient instrument of war; but, surrounded as the Nizam's country is by our territory, protected as he is by the subsidiary force of 8,000 men, mostly stationed at Secunderabad, and under the circumstances of there being no necessity for defence against foreign aggression, it may safely be asserted that the strength of the contingent may be greatly diminished without prejudice to the internal security of the country.

General Fraser observes—"An amount of nearly 40 lacs of rupees per annum, being nearly a third of the revenue of the whole country, is expended for the maintenance of an army from which more aid and advantage might be looked for than has hitherto been effected."

The following memorandum of an interview of Captain Malcolm with the Minister forms an accompaniment to General Fraser's Despatch of 20th July 1842:—

"The Minister then told me to communicate to the Resident that during the period of upwards of 30 years he had been minister, he had never been in such embarrassed circumstances at at present; that his predecessors had no difficulties, in comparison with his, to contend with. The revenues in those days were more flourishing than at present; the allowance to the Nizam's family was smaller; while they were not called upon to meet the heavy demand of 3½ lacs of rupees per mensem, on account of the contingent force under British officers."

I now come to the opinions of Colonel Low, conveyed in his report to Government, of the 20th July 1848:—

"It is still more grievous to reflect that a considerable portion of these pressing pecuniary difficulties of the Nizam's Government has been indirectly brought upon it by our own annual demand upon its revenues for 40 lacs of rupees per annum for the pay of the contingent force.

"It is really painful to me to mention all these facts and circumstances connected with the Nizam's contingent, but I have observed since I arrived here the pecuniary embarrassments of the Government to be so extensive that I have considered it an imperative duty to state my opinion candidly for submission to the Governor General in Council, and upon the same principle I now close the report by expressing my opinion that immediate steps ought to be taken for reducing the expenses of the contingent to a sum not exceeding 20 lacs of Hydrabad rupees per annum at the utmost, because whatever may have been the case formerly, it appears to me quite manifest that the Hydrabad Government cannot now afford to make the large ready money payments that are required by us for the maintenance of that force. I am convinced that if that constant drain were kept up for three years longer, it would cause a very serious increase to the confusion and distress of this capital, and that it would probably bring the whole machinery of the administration to a stand-still, whosoever might be the minister at the head of it, and how much soever he might be supported by our influence."

The decision of the Court of Directors respecting the contingent was clearly expressed in a Despatch to the Government of India, adopted on the 26th October 1849. It is true that this Despatch was cancelled by Her Majesty's Commissioners for the Affairs of India, but as it is a recorded document of the opinion of the Court, I am at liberty to quote it:

Para. 13. "It is here necessary to observe that the view taken by your Government of our right by treaty to demand of his Highness that he should maintain a body of 8,000 disciplined troops is contrary to the opinion which has hitherto been professed and acted upon, both by the Government of India and by ourselves. The 15,000 troops stipulated for in the 12th Article of the Treaty of 1800 were to act in conjunction with the subsidiary force, and only in case of war; and it has been invariably admitted that the arrangement by which a force under British officers is kept up at all times for internal service in the Nizam's own dominions does not rest on any treaty, although the contingent was formed, and the corps organised with the consent of the Nizam's Government, and is kept up by his continued tacit concurrence."

The foregoing statements establish the fact that the Court, on their first and last review of the contingent, have declared that the Nizam was not bound by treaty to maintain it as at present constituted. Secondly, that the Court foresaw in 1849 that the resources of the Hydrabad State were not adequate to its maintenance, and that the evils then predicted by them have come to pass.

Successive

Successive Residents of Hyderabad, officers of high character and standing (viz. Sir Charles Metcalfe, Colonel Stewart, General Fraser, and Colonel Low) have generally declared that we are not justified by treaty in making such large calls on the Nizam's treasury, and that the burthen of the contingent has materially operated in producing the financial embarrassments which now paralyse the powers of the State. It may be as well here to state that the expense of the contingent, at the period of its establishment, absorbed one-fifth of the income, and that under the present diminished resources it forms a charge of nearly one-third of the net revenue.

I have shown that the Court of Directors do not concur in Lord Dalhousie's interpretation of the treaty. His Lordship on the 7th October 1848, expressed the opinion that the British Government commits no injustice, and practises no extortion, in requiring that the contingent force "maintained by virtue of treaty" be kept up by the Nizam, and that his Lordship does not think that we are called on in justice to reduce a man of that force, and he is very certain that in policy we ought not to adopt any such measure; but as his Lordship concurred in opinion with Colonel Low that the contingent has become a much heavier burthen than it ought to be, he expressed an intention to diminish the unnecessary expenses of the staff as vacancies might occur, but even these reductions were to be made dependent on the co-operation of the Nizam with the views of his Lordship.

The Despatch of the Court of the 18th December 1849, sent by order of the Commissioners for the Affairs of India, sanctioned a more extended relief to the Nizam than that contemplated by the Governor General. "We are of opinion that these measures ought not to be made dependent on the conduct of the Nizam. If the contingent imposes upon the finances of the Nizam a greater burthen than is required by the maintenance of efficiency, the Nizam ought at once to be released from such unnecessary pressure." Since the issue of the above instructions, the embarrassments of the Nizam have increased, his country has been distracted by internal commotion, the services of the contingent have been refused on occasions they might legitimately have been afforded, the revenue has been further on decline, the pressure of the contingent has more sensibly been felt, and no step has been taken to carry out the instructions of the Court. Vacancies have occurred in the staff of the contingent, and they have been filled up by the Governor General.

I conceive that the above circumstances ought to have been adverted to in the draft.

The recent partial payment of the heavy debt to the British Government, and the provision made for its total liquidation, are events quite unlooked for; they relieve, for a moment, the sequestration of provinces, and produce a deceptive appearance of improvement, while they really involve him in deeper embarrassment. No explanation has been offered as to the terms on which so large a sum has been raised, and inquiry on this point is not deemed expedient; but as his Highness' credit was exhausted, and as the Soukars had declined to make further advances, it is evident that the effort must have entailed a great sacrifice, must have left the Nizam's finances in a greater state of exhaustion, and that his Highness will have to maintain the undiminished expenses of his government on a diminished revenue. The alteration in his position is this: he paid the British Government 6 per cent. on his debt of 72 lacs of rupees, and he will have to pay his new creditors from 15 to 20 per cent. on the like sum.

The draft does not touch upon these inferences, but expresses the hope that the arrangement made for the prospective discharge of the pay of the contingent may be effectual. The fallacy of this expectation is so obvious, that it compromises the sincerity of the Court.

When we see the country of our ally sinking deeper and deeper into disorder and financial difficulty, it behoves us, as his protectors, to take efficient measures for his preservation; and it is by extending substantial acts of relief in the present crisis, and by an extension of paternal interference in assisting his minister to effect necessary reforms, that we may best prove the sincerity of our expressed and continually repeated desire to maintain the integrity of the Nizam's [illegible]. We have to deal with a prince incapable of breaking through the trammels which surround him.

Every item of public retrenchment and reform which he is expected to [illegible] through affects him personally, or diminishes the incomes of his [illegible] favoured followers. By an existing regulation of the State, the portion

PAPERS RELATIVE TO THE NIZAM.

devoted to the maintenance of the Nizam and family as the lines of expenditure for the present ought to be restricted. He has been accustomed to receive nuzzer big gah to every Nuzzeranah, raised on the promotion of officers to public places, and also a per-centage on all public disbursements; and these sources of expenditure ought to be closed. Talookdars will be called upon to reside at their talookes, Jemadars and Ressaldars will have reduced commands, and every person of rank who has access to the Nizam will be a loser by the projected reforms. Under such influences the minister is not likely to meet the support of the master; all the weight of private opposition will counteract his endeavours to benefit the state. Every latitude ought, therefore, to be given to the Resident to assist the Minister in his most arduous undertaking, and it is only by an exercise of interference almost daily exercised by the Resident, that any efficient reformation can be worked out.

Such a course is not contemplated by the Court.

I object to this draft which has now passed, because it curtails the relief accorded in the Court's Despatch of December 1849, sent by order of the Commissioners for the Affairs of India; and because the Court do not sanction due assistance to the Nizam in the reduction of the expenses of the contingent. Vague and undefined as the expressions of the draft are on this head, having before us the opinion of the Governor General honestly and manfully expressed, that we are not in justice bound to reduce a man of that force, and that in policy we ought not to accept such a measure, I think the present instruction of the Court conveys to Lord Dalhousie license to carry out relief only to the extent of reducing the staff as suggested by his Lordship, and that no effective stay to the Nizam's disasters will be afforded by such unimportant concessions.

I regard the rapid deterioration of the Nizam's affairs as now inevitable. He must soon fail in prospective payment of the contingent force. The partial sequestration of provinces having received the sanction of the Court, will be enforced without further reference to the Home Authorities, and his inability to effect reform will entail increased disorder, which will soon lead to a state of insolvency, and to a termination of his rule. It was to prevent such an issue that I ventured to recommend an amendment to the draft now carried, which has not received the Court's approbation.

Since I have had the honour of a seat in the East India Direction, it has been my study to respect the condition of Native States, and to make allowances for their not fulfilling expectations, when judged by the rules of an enlightened state of society; but I have not touched in this paper on the good effect which a generous consideration of the failings of native administration produces on the minds of neighbouring nations, and which gives a satisfaction to our rule in the estimation of Europe. In pursuance of the course I have observed on this occasion, in placing prominent the opinions of others rather than my own, I will here quote the notice of Lord Hardinge in alluding to the misrule of the King of Oude, and to the policy of endeavouring to maintain rather than to absorb such principalities:

"I should strongly deprecate any policy which would deprive the reigning family of its just power under the treaty of 1801. It is most desirable to maintain the reputation of the East India Company for good faith in their transactions with Native States. The fame of our rule is a tower of strength, not only as regards our connexion with the Native States of India, but also with European powers, and I am confident your Honourable Court will repudiate any compulsory arrangements by which the British Government could be accused of a desire of profit at the expense of a faithful and powerless ally."

If such principles of equity and liberality influence our proceedings towards the Nizam, and other native allies, I feel satisfied that our dominion in Asia, already characterised by gentleness and humanity towards the masses of the population immediately subject to our rule, will be both flourishing and permanent.

We must not lose sight of the fact, that in demanding from the Nizam more than his finances are able to render, he is compelled to practise undue extortion on his subjects, and a question arises, which it may be convenient to answer, as to who are the parties responsible for such oppression.

I lament the occasion of my present dissent.

(signed) *Henry Willock*

East India House,
December 1851.

No. 77.

Protest by Colonel *Sykes*.

Affairs of the Nizam.

1. A CAREFUL consideration and review of Hydrabad affairs places me under the necessity of recording an earnest and deliberate protest against the Court's Draft, No 803 of 1851, which approves of the proposed seizure or appropriation of territory from the Nizam in liquidation of a debt accruing from the occasional advances of money since 1842 by the Indian Government in payment of a body of regular troops exclusively under British officers and British authority, but denominated the Nizam's Regular Infantry; and for other reasons.

Because the manner in which the debt has been incurred admits of a question being raised whether a legal, equitable, or moral responsibility can be fixed upon the Nizam for the repayment of the total advances made by the British Government.

Nizam's regular troops not being the Nizam's contribution to the Contingent of the treaty of 1800.

3. Because the responsibility fixed upon the Nizam for repayment of advances of money to complete payments to this body of troops is founded upon the erroneous supposition that the Nizam substituted the body of troops in permanency in place of the Contingent he bound himself by the treaty of the 12th October 1800, to furnish to the British Government in time of war only the following being the text of the treaty:—

Terms of treaty.

"Article XII. The contracting parties will employ all practicable means of conciliation to prevent the calamity of war; and for that purpose will at all times be ready to enter into amicable explanations with other States, and to cultivate and improve the general relations of peace and amity with all the powers of India according to the true spirit and tenor of this defensive treaty. But if a war should unfortunately break out between the contracting parties and any other power whatever, then his Highness Asoph Jah engages that with the reserve of two battalions of sepoys, which are to remain near his Highness' person, the residue of the British subsidiary force (consisting of six battalions of sepoys and two regiments of cavalry, with artillery), joined by 6,000 infantry and 9,000 horse of his Highness' own troops, and making together an army of 16,000 infantry and 10,000 cavalry, with their requisite train of artillery and warlike stores of every kind, shall be immediately put in motion for the purpose of opposing the enemy; and his Highness further engages to employ every further effort in his power for the purpose of bringing into the field as speedily as possible the whole force which he may be able to supply from his dominions, with a view to the effectual prosecution and speedy termination of the said war, the Honourable Company in the same manner engaging on their part in this case to employ in active operations against the enemy the largest force which they may be able to furnish, over and above the said subsidiary force."

It was, therefore, only on a war breaking out with another power that the treaty bound the Nizam to join the British with a Contingent of 6,000 (irregular) infantry and 9,000 horse; and that the permanent maintenance of the Contingent for the exclusive preservation of order, or the suppression of insurrection within the Nizam's dominions, was never contemplated by the treaty is testified by the 17th Article, the text of which is as follows:—

"XVII. By the present treaty of general defensive alliance, the ties of union, by the blessing of God, are drawn so close that the friends of one party will be henceforward considered as the friends of the other, and the enemies of the one party as the enemies of the other; it is therefore hereby agreed that if in future the Shorapoor or Gudwal zemindars, or any other subjects or dependents of his Highness' Government, should withhold the payment of the Sircar's just claims upon them, or excite rebellion or disturbance, the subsidiary force, or such proportion thereof as may be requisite after the reality of the fact shall be duly ascertained, shall be ready, in concert with his Highness' own troops, to reduce all such offenders to obedience. And the particular interests of the two States, being now in every respect identified, it is further mutually agreed that if disturbances shall at any time break out in the districts ceded to the Honourable Company by this treaty, his Highness the Nabob Asoph Jah shall permit such a portion of the subsidiary force as may be requisite to be employed in quelling the same within the said districts. If disturbances shall at any time break out in any part of his Highness' dominions contiguous to the Company's frontier to which it might be inconvenient to detach any portion of the subsidiary troops, the British Government in like manner, if required by his Highness the Nabob Asoph Jah, shall

to direct such proportion of the troops of the Company as may be most conveniently stationed for the purpose to assist in quelling the said disturbances within his Highness' dominions."

British subsidiary force and proportion of artillery.

4. Hence it appears that the British subsidiary force of 8,000 infantry, 1,000 horse, and proportion of artillery, for which territory had been ceded by the Nizam to the Company of the annual value of 18,18,188 Company's pagodas, or 63,16,158 rupees, were to be ready at all times to aid the Nizam's troops in suppressing disorder and punishing rebellion; and that the Contingent of irregulars of the treaty was in no way identified with any body of regular infantry then in the Nizam's service, as testified by the fact that on war breaking out between the British and Scindiah, and the Rajah of Berar in 1803, the Nizam, in conformity with his treaty, supplied a body of 6,000 infantry and 9,000 horse, whose efficiency was favourably spoken of, and which served under the orders of General Wellesley in the war, and acquitted itself well and did good service, although at that very time a remnant of Raymond's regular French Infantry, which was the nucleus of the present overgrown infantry Contingent, was doing duty in the province of Berar under European officers not in the Company's service. In 1804, when the war broke out with Holkar, the Nizam's Contingent was less efficient than it had been in the campaign of the previous year; and, in consequence, the Resident proposed that the Nizam should entertain a body of horse under British officers. The British Government negatived this proposal, but at the suggestion of General Wellesley, proposed to the Nizam that he should keep up 10,000 Silledar Horse; but after lengthened discussions the Nizam refused, and matters remained in their previous state.

Nizam's infantry in battle valuable adjunct to the Contingent of the Nizam's army in co-operation.

5. In May 1807, when Mahiput Ram, who, as Governor of Berar, was superseded by Govind Buksh, these troops were devoted to the interests of Mahiput Ram, and with French predilections; and Lieutenant C. Russell says, letter 5/8/1807, para. 16, "I have already had the honour to state to you my opinion that the defects of the infantry establishment are so deeply seated, that no measure scarcely short of dismissing and reforming on a new system the whole of the corps will be adequate to remove them. This measure might be gradually effected at Baussam by Rajah Govind Buksh, assisted by the advice of the officer commanding the (British) detachment; as fast as one corps had been formed it might be detached on duty, and another called in to be submitted to the same change. The strength and number of these corps would of course be determined by Govind Buksh." They appear then to have consisted of six regiments, with a European commanding officer and adjutant. Lieutenant Russell did not propose to reform the horse, which, he says, is like all other irregular horse in India. The Governor General, in Mr. Secretary N. B. Edmonstone's letter 21/5, 1807, approved of Mr. Russell's views, and admitted that the horse could not be reformed. At this time there were six English Europeans, Elliott, Drew, Lloyd, Freeman, Norris and Blake, and a Portuguese, Ferroobio in the regiments, besides other foreigners. The pay of the Commandant was 400 to 500 rupees a month, and Adjutant 200 to 250.

The Nizam's infantry badly trained.

Lieut. C. Russell's opinion of regular infantry.

Horse could not be reformed.

Europeans in the Nizam's service.

6. Consequent upon the approval of the Supreme Government, Captain Sydenham, the Resident at Hydrabad, wrote to Lieutenant-colonel L. Doveton, 25/6, 1807, commanding the British detachment in Berar, as follows, para. 5: "With respect to the reform of the corps of infantry in Berar, Mir Allum has instructed Govind Buksh to form six corps of 1,000 men each, and the Rajah has been furnished with a list of the rates of pay to be allowed to each rank of the service. The subadars are to receive each 30 rupees; jemedars, 15; hout havildars, 12; havildars, 10; naiques, 8; and sepoys 6 rupees."

Reform of infantry ordered.

"Para. 7. Secondly, the appointment to the command of the several corps of attentive and respectable Europeans, whose attachment to the united interests of the British Government and the Nizam may be depended upon. It would be desirable if all the Europeans attached to the corps were of that character. I have every reason to be satisfied with the character and conduct of Messrs. Elliott, Drew, Lloyd and Freeman, who are at present in Berar. I have also heard that a Portuguese of the name of Ferriolbio, and who is at present stationed near Hurweekeir, with Iewar Khan, is an active and intelligent man. I should not wish to interfere with the employment of any European of inoffensive character who may be in the service of the Nizam, but I shall feel no hesitation in effecting the discharge of any European who, by his principles, character or conduct, may render it dangerous or inconvenient to retain in the service."

The Resident appoints the European officers to the reformed infantry.

Resident retains the power of dismissal.

"Para. 9. I beg that you will furnish me with the names of those officers from you may consider best entitled to hold the commands of the corps, and of those who may appear to you best qualified to be appointed to the adjutancies of them."

It is hence manifest that from the moment of the reform of the Nizam's regular infantry, the absolute control and consequent responsibility, even to pay and promotions and dismissals, was assumed by the Resident at Hydrabad, a control and responsibility which has never been relaxed from that day to the present.

7. In July 1807, Colonel J. Doveton reported that the French interest was not yet extinct amongst the regulars. Consequent upon their reform, Colonel Doveton proposed to have two officers to command brigades of three regiments each; the additional allowance to be 200 rupees a month, in addition to regimental command.

8. On the 22d June 1810, the Resident, Captain Sydenham, reported to Lord Minto the state of these troops in Berar, consequent upon their reform; and in the 22d paragraph they are, for the first time, called "The Nizam's Contingent Infantry in Berar" (for which term there does not appear a shadow of authority); and in the following paragraph he spoke of "the measures which are still required to accomplish the original intentions of the British Government." Hence they are still dealt with as completely under British control for the realization of a British object. He reported "that all remains of French influence were extirpated, and recommended that the troops should be supplied with arms, accoutrements and ammunition from British arsenals, at the expense of the Nizam's Government, and that a commandant and superintendent of the whole force should be appointed, to be responsible for their discipline, efficiency and uniformity;" and further stated, "that, under the gradual operation of this system, the Nizam's Contingent Infantry would be rendered effective and serviceable troops; they could at all times be advantageously employed in maintaining the tranquillity and supporting the authority of the Nizam's Government, and they would become useful auxiliaries to the British subsidiary force on any occasion of actual service in the field."

He then reminded Government, that he "had before stated that Govind Buksh could not restore Berar to a flourishing state if the British subsidiary force were not actively employed in expelling and destroying the bands of freebooters who infest the country;" but that, as the Nizam's infantry became efficient, the subsidiary force would be saved the labour.

Here, again, one of the objects of the reform of the Nizam's infantry was to save the British subsidiary force from military operations, which it was bound to afford by the 17th article of the treaty. Although Captain Sydenham, the Resident, for the first time designates the Nizam's infantry as the Nizam's Contingent, he does not claim a shadow of authority for the designation; the Resident neither adverted to the authority of the Nizam for it, nor does it appear that the Nizam either directly or indirectly sanctioned it, or even knew of it; in short, that it was a term gratuitously assumed by the Resident, and could not honestly be identified with a Contingent which the Nizam was only bound to supply in the time of actual war; but the term has, unhappily for the Nizam, adhered to this body of troops ever since, and has occasioned mistaken assumptions in the minds of successive authorities in India, that the Contingent was a commutation of the Contingent stipulated for in the treaty of 1800, and that we were therefore justified in exacting its maintenance.

In the penultimate paragraph of the Resident's letter he says, "I cannot here omit to observe, that it would give great facility to the immediate equipment of the corps, and would secure the future efficiency of them, if the ministers of the Nizam's Government would consent to apply the amount of the peshcush of the Northern Sircars to the payment of the infantry establishment in Berar."

Further proof of the troops being entirely under the control of the Resident is shown in the report of Lieutenant George Sydenham, June 15th, 1810; in paragraph 19, he recommends that, to obviate the regiments on distant commands being broken up into several detachments, "the infantry in general be not employed upon duties of revenue unless they be absolutely required by the

---

The British Government had to pay the Nizam annually the cost of a peshcush of Berar for the Northern Circars.

the future of the customary revenue officers and abandoned all their collections. He then recommends the supply of 5,000 stand of arms, six ex-perimental guns, six howitzers (6½-inch) and carriages, &c., and further recommends inspection and relief reports and returns, precisely as if they were British troops.

10. In 1813 most of these recommendations, except the surrender of the peshcush, had been carried out, and on the 1st January 1813, the force consisted of 37 European officers, 69 non-commissioned officers, 267 Native officers, and 5,652 rank and file. At this time the troops were made the first charge upon the revenue of Berar.

On the 31st March 1813, the Resident, Mr. Henry Russell, reports to Government that the system was extended to a corps at Hydrabad. A battalion under a Mr. Garden having mutinied, was transferred, by orders of the minister Chundoo Lall, to a Mr. Beckett, with orders to complete the strength to 800, and to raise a second regiment; the whole to be denominated the Russell Brigade; and their pay was to be disbursed from the Residency treasury on the 1st of every month, the amount being deducted from the peshcush payable by the British Government to the Nizam. This seems to be the first instance of the payment of any portion of the Nizam's infantry from a British treasury. Artillery was attached to this brigade, and the minister Chundoo Lall asked permission to purchase their equipments from the Company's stores. The European commanding officers (seven) were not in the British service. In 1813 for the first time, officers of the Royal and Company's Services were appointed to the so-called Contingent in Berar and the Russell Brigade; and in 1822, 1824 and 1828, the Court of Directors forbade the employment of any but Company's officers in the service of any of the Native States.

11. The Nizam's Horse had remained in the same state as in 1807; but the depredations of the Pindarries, particularly in 1816, led to 4,000 Horse being placed under Captain Davis, assisted by five British officers, together with 2,000 Jagheerdar Horse. The object of this force was the repulse of the Pindarries, and the protection of Berar; but no mention is made of this body being the equivalent of the 9,000 horse of the treaty, and the advantage to the British interests is testified by the letter from the Supreme Government to the Resident, dated 22/2, 1817, in which it is termed "highly desirable" and "important," and in the letters addressed to the Governments of Fort St. George and Bombay of the 22d February 1817. In para. 1, is the following:—"The Resident at Hydrabad having reported the accomplishment, under the instructions of this Government, of a highly desirable arrangement by which a body of 3,000 cavalry in the service of his Highness the Nizam, is to be organized and disciplined under the superintendence and control of European officers, and Captain Davis, the commandant, having been permitted to nominate the officers, &c. &c. &c.;" and in para. 2, that there might be no mistake about the interest of the parties, the following occurs:—"Adverting to the essential benefit which the interests of the British Government will derive from the formation of a regular corps of cavalry in the Nizam's pay under British superintendence, his Lordship in Council has been pleased to determine that the officers now proposed to be employed in that service shall continue to draw their regimental pay and allowances from the Honourable Company, in addition to the pay which they are to receive from the Nizam. (signed) [illegible] Acting Chief Secretary to Government."

12. During the war of 1817/18, both the reformed horse and the Nizam's regular infantry served with much distinction, and greatly to our advantage, with the different divisions of the army of the Deccan; and the Russell Brigade was in the battle of Maniilpoor; and no corps was in finer order or better performed its duty, and both horse and foot were repeatedly mentioned in General Orders.

13. Sabaht Khan of Ellichpoor, a Jagheerdar in Berar, was bound to assist the Nizam with 2,000 troops. In 1820 he was induced to put 1,000 foot and 780 horse under British officers on the footing of the Nizam's troops. Here again our influence was extended and our interests strengthened.

14. In 1818 the troops were formed into two divisions, and the horse and foot were placed, under one superintending military authority, to the [illegible] Ellichpoor Brigade. With the share of even a smaller number of troops these two divisions have been augmented to five divisions, with proportional staff, at an annual cost for the staff alone of £3,88,000 (rupees), to the serious impoverishment of the Nizam's income.

14. Again the Peishcar (acting Minister) in conversation on the 23rd and 24th of [illegible] and successive days with Captain Fraser, on the part of the Resident, complained bitterly of his financial difficulties, pointed out the increased expense of the force from 2½ lacs per annum in Sir Charles Metcalfe's time to 12 lacs per annum at that moment, and said, before Sir Charles Metcalfe interfered with the revenue administration of the country, it yielded 2 crores and 6 lacs per annum, and with regard to an outlay for guns and mortars, he exclaimed, "What is the use of all this expenditure in time of peace?"

15. In 1826 regular military returns of the force were made to the British Government, and they have been continued ever since, as if the troops were constituents of the Indian armies.

16. The transition of the Nizam's irregulars to the disciplined state is described in two paragraphs of Sir Charles Metcalfe's Minute of 6th March 1832:

"The Contingent furnished by the Nizam being found inefficient, we gradually assumed the management of it until we finally established a force in lieu of it completely under our own control.

"This we were enabled to do by the subserviency of the Minister who was the creature of our ascendancy, and who saw in the existence of this force the means of maintaining his power against rival nobles as well as refractory subjects." Sir Charles Metcalfe adds, "Since the formation of this force, exclusively under our orders, neither the late nor the present Nizam has taken cognizance of it; they have left it, like other matters of their government, to the management of their minister, being either unwilling or unable to interfere with his uncontrolled administration of their affairs. It is, in reality, a joint concern between Rajah Chunder Lall and us, in which the Nizam himself takes no interest as in other affairs of his dominions."

17. The following observations of Colonel Stewart are quoted in the Court's Despatch to India of the 8th September 1835:

"Those who have witnessed the course of our policy at this Court during the last 40 years, who have seen how we have put up the creatures of our own as usurpers and supported them against their sovereign, how we have obtained the control of all the effective troops of the State, and how we assumed the civil control of the country, can hardly feel a doubt, least of all can the Nizam himself, that we have considered ourselves as the actual rulers of the country. Many of the evils which exist in this State are unquestionably the almost unavoidable result of our connexion with it. It seems hardly fair, therefore, to hold either the Nizam or his minister responsible for these evils; situated as they are, I do not think they had the power to correct them, in fact, we may, perhaps, more properly be regarded as responsible for them. Having the power in our own hands to remedy them, and having shown that we are in no way scrupulous about making use of that power when we thought fit to do so, &c. &c. &c."

18. Sir Charles Metcalfe states, "When I was minister at Hydrabad I made several attempts to reduce the expense of this force (the Contingent). A regiment of regular cavalry was discharged; the rest of the cavalry was reduced in number, some staff appointments were abolished, but all to no purpose as to any relief that it afforded to the State finances. The minister (Chundoo Lall) squandered the amount thus saved, and so he will do with respect to any reduction of expense that can be effected."

19. General Fraser, treating on this always embarrassing subject, in his Despatch to the Government of 26th July 1842, says:

"If the Nizam is permitted to retain the impression of his being absolutely and actually independent, it is not impossible that, besides other evils which may arise, we shall experience one of great magnitude in a proposition on the part of his Highness for the disbandment of the Contingent," to which he is known to be averse, "and of which neither the continued maintenance nor the present organisation are provided for by any existing treaty."

Here the Resident testifies to the aversion of the Nizam to a body of troops, which we nevertheless persisted in upholding and paying for at his expense.

20. General Fraser further observes: "An amount of nearly 40 lacs of rupees per annum, being nearly a third of the revenue of the whole country, is

expended for the maintenance of an army from which more aid and advantage might be looked for than has hitherto been effected."

21. From the above combination of circumstances it very soon became the rule of the service, "that the Nizam's army, so long as it is officered by British subjects, is not to obey the requisitions of the Minister until he (the Resident) has first satisfied himself that their services are to be required in a just cause." The Minister was therefore under the necessity of employing another army, composed of Patans, Rohillas and Arabs, at an annual expense of 95 lacs of rupees, for the service of the State.

22. The origin and progress of the Nizam's troops under British officers has thus been shown in detail; and there can be no question whatever, even though the Nizam were constantly cognizant of what had been done by the British Government, that he was entirely passive and helpless throughout. The organisation, management, and entire control and disposition of this body of troops has been assumed by us, chiefly for the promotion of our own interests. I therefore protest against the sanction, by the Court, to the proposed measure of the Supreme Government to appropriate part of the Nizam's territory for the repayment of advances of money which we wilfully incurred upon our own responsibility, knowing as we did, that the resources of the Hydrabad State were inadequate to the annual cost of the body of troops under British officers upon the footing on which we had placed them.

23. Because the XVth Article of the Treaty of 1800, expressly secures the Nizam against our interference with his subjects or servants, the text being—

"As by the present treaty the union and friendship of the two States are so firmly cemented as that they may be considered as *one* and the *same*, his Highness the Nizam engages neither to commence nor to pursue in future any negotiations with any other power whatever, without giving previous notice and entering into mutual consultation with the Honourable East India Company's Government, and the Honourable Company's Government, on their part, hereby declare that they have no manner of concern with any of his Highness's children, relations, subjects or servants, with respect to whom his Highness is absolute."

Nevertheless our constant control of the Nizam's regular troops has been a continual contravention of the spirit of this article of the treaty.

24. Because our control and responsibility were not confined to the military organisation of the force, but extended to all pay arrangements and contingent expenses, as is manifested in the progressive annual expense in which we involved the Nizam from 1807, when the reform of the remnant of Raymond's Corps first took place in Berar, under Colonel Doveton, to the present day. Colonel Doveton, who commanded two regiments of the Company's infantry, accompanied Govind Buksh when he was sent to supersede Mahiput Ram in the government of Berar. Colonel Doveton was stationed with him to maintain his authority, and he was commissioned by the Resident at Hydrabad, Captain Sydenham, to effect a reform in the Berar Regular Infantry, which consisted of six battalions.

In Colonel Doveton's letter of the 28th January 1807, he reported that he had acted upon his instructions, and that the past and proposed future cost would be as follows, founded upon the monthly pay abstract of one of the unreformed battalions, viz., that commanded by the most respectable European in the Nizam's service, Mr. Elliott.

OLD FOOTING.	PER MENSEM.	REFORMED.	
	Rs.		*Rs.*
6 European Officers and 1,000 Men - - - - -	9,599	2 European Officers and 1,000 Men - - - - -	10,750
Cost of 6 Battalions monthly -	59,594	Cost monthly of 6 Battalions prospectively - -	64,680
Cost of 6 Battalions annually -	6,97,128	Cost of 6 Battalions annually -	7,76,160

so that the prospective annual cost of the reformed infantry was less than six lacs per annum. Owing to the horse being added to the Contingent in 1817, and successive additions of brigadiers and other staff officers, the annual cost has ranged from 24 lacs since 1816–17, to 42,56,185 rupees, including 2,70,791 for civil disbursements in 1828, to 39,16,074 rupees on the 1st January 1848, according to the following statement, the infantry costing roughly 12 lacs, the horse 17 lacs, the artillery, pioneers, &c., 5½ lacs, and the staff, the very large and disproportioned amount of 2,88,960 rupees, and the military and medical stores 1½ lacs; total 39 lacs, instead of eight lacs in 1807.

The Return shows that the annual cost of European Officers in 1848 was equal to the total cost of the whole Infantry in 1807.

26. The original arrangement for the payment of the reformed force has long since terminated. In 1817 the payment of the troops at Dowlutabad was under an agreement with the Nizam, undertaken by the house of Palmer & Co., of Hydrabad; this arrangement the Court interfered with, and ordered to be discontinued.

Court interferes with mode of payment of the troops.

On the 24th May 1820, the Court directed the Supreme Government to instruct the Resident at Hydrabad to refuse his sanction to any further pecuniary arrangement between the house of Palmer & Co. and the Nizam; the object of which arrangement had been chiefly for the payment of that part of the Contingent stationed at Hydrabad; and again, on the 21st November 1821, the Court ordered Messrs. Palmer's money transactions, called the Aurungabad arrangement for the payment of the troops, to be closed.* The Supreme Government, in letters the 16th and 20th October, and 20th December 1822, informed the Court that its orders had been obeyed. Chundoo Lall, the minister, had been in the habit of borrowing money lavishly from Messrs. Palmer's house, at the rate of 25 per cent., to the extent, with interest, of 65 lacs, which, on the 20th July 1822, had increased to 83,04,569 rupees, and the debts of the Government to other creditors were 46,34,509 rupees. The Supreme Government, in the 54th paragraph of their Despatch of the 20th December 1822, informed the Court that the extreme embarrassment in which the minister at Hydrabad found himself consequent upon those debts,† had induced him to apply to the British Government for aid, and the result was, that the Government consented to grant a loan of a crore of Calcutta sicca rupees at six per cent., upon the security of the pesheush of seven lacs of Madras rupees, and upon certain districts. There was not, however, a total absence of suspicion of collusion between Chundoo Lall and Palmer's house. This loan and redemption of the pesheush put an end to any further payment to the Hydrabad division of this force from it, and the resumption of the Ellichpoor jageer, made the whole force dependent upon the minister for the time being, to provide funds from the revenue of the State; in fact, substituting an uncertainty for a certainty for the payment of part of the troops. The extreme financial difficulties of the minister induced him from time to time to urge a reduction in the expense of the force, and some curtailments in consequence took place in the military disbursements between 1828 and 1838.

Debts to other creditors.

Part of troops fall into arrears.

Of late years, however, the troops had been allowed to fall four or five months into arrears; and on the 2d May 1842, the Resident, General Fraser, wrote to the Supreme Government that the irregularities were such as to threaten serious consequences, and as it was impossible to allow their pay to be contingent upon the minister being able to raise money, he asked permission, in cases of sudden stoppages or other difficulties, to make advances of money. He then detailed repeated communications with the minister, through Captain Malcolm, in which the appeal of the minister on the subject of his financial difficulties, the total inability to raise money and at the expense of the force (the perusal of which excites painful feelings), and the Resident finally asks to make advances from the British treasury of two months' pay, there being, however, at the time a balance in the treasury to the credit of the Nizam of 1,00,000 rupees. The Supreme Government gave its consent to advances only in the

cases

---

* Note. But our interference went the length even of the Resident, Mr. Metcalfe, making a tour of the provinces, with a view to a recommendation to the minister for a settlement for a term of years of the land-revenue; and on the 7th November 1821, he reported to the Supreme Government "the settlement and limitation of the revenue."

† Note. At this period the estimated revenues, including the pesheush, were - 1,50,03,000
Expenditure, inclusive of interest on debt - - 1,41,13,360
Surplus applicable to debt - - - 8,89,640

cases mentioned by the Resident, which have, nevertheless, continued until the Nizam has been brought in as a debtor to the amount of 70,77,416 Hyderabad rupees.

26. Because, admitting that the debt were founded upon a legal, equitable, or moral basis, it militates against the high character of the British Government for justice and generosity that a prince who, on more occasions than one, aided the chief native powers in India were in confederation to crush the British power, proved himself a faithful and efficient ally, should not experience the utmost degree of forbearance on the part of the British Government.

27. Because the exaction of payment of the debt involves the British Government in the *odium* of condemning to ruin, not only the Nizam himself, but all the other creditors of the Nizam, some of whom advanced money for the payment of the Contingent, precisely as the British Government has done, particularly in the instances of the Parsee bankers, Viccajee Mirjee and Pestonjee Mirjee, to the amount of 3,73,140 rupees, who have as legal and equitable and moral a claim against the Nizam's Government as ourselves, and are just as much entitled to be repaid. All other creditors condemned to ruin. Debts to Parsee bankers.

28. Because the severe measures proposed to the Government of India are a mockery of the tone, professions, objects, and spirit of the treaty of 1800 which, in Article XV., holds the following language: "As by the present treaty the union and friendship of the two States are so firmly cemented as that they may be considered as one and the same." And Article XVII. holds the following language: "By the present treaty of general defensive alliance, the ties of union, by the blessing of God, are drawn so close that the friends of one party will be henceforward considered the friends of the other, and the enemies of the one party as the enemies of the other." Nevertheless, our acts militate in every instance against such professions.

29. Because the use and employment of the Nizam's own troops under British officers have been refused to him by the Resident at Hyderabad, on various occasions, when the Nizam's interests demanded their employment. In 1850 the Resident reported serious disputes between the Nizam and Ghulam Hussain Khan, of Illichpoor; and on the 1st February 1850, the Resident reported that he had refused the aid (on the demand of the Peishcar Rajah, Hindoo Dewan) of the Contingent to enable the Nizam to crush the anarchy which prevailed. He also refused the aid of the Contingent when called upon to assist in removing all chiefs of the military classes from the jaghirs they held; and when the Nizam's Government also applied for the aid of the Contingent to remove Sultan Newas ool Moolk from his jaghir, the Resident refused, unless he could have a personal interview with the Sultan, which the Nizam refused to grant. The aid of the Contingent was also refused to effect a settlement between a zemindar and zemindaree, at Pabdrachellum. Orders disobeyed by Nizam.

30. Because the Despatch does not give specific instructions to the Supreme Government for the immediate adoption of measures of retrenchment in the cost of the Contingent, or for such amicable arrangement with the Nizam as may relieve him from impending ruin.

31. For the above reasons, I protest against the Court's Draft, No. 863.

East India House, 19 November 1851. (signed) *W. H. Sykes.*

(No. 770.)

DISSENT by Major *Oliphant* and Others.

Affairs of the Nizam.

I CANNOT concur in the Despatch which passed the Court on the 19th instant, in regard to the debt due by the Nizam, for the following reasons: Because, in approving the measures of the Governor General for enforcing payment of that debt, by which the finances of the Nizam's Government must be still more seriously embarrassed than before, it appears to me that this Court, instead of reiterating in general terms the necessity of retrenchment, which experience has proved to be of no effect, ought to have taken into its consideration the whole question of the administration of the Government, with the view of suggesting to the Governor General some definite measures of reform which the Resident, under his orders, should have been instructed to press upon the Nizam's adoption by every means in his power short of absolute compulsion.

I venture to think that such a course of proceeding would be a legitimate exercise of our power; and I am persuaded that the concurrence of the Nizam could be obtained to any measure which his Highness believed the British Government was really anxious to carry into effect; nor in doing this need the Nizam's authority be set aside. In the same way that the Contingent has become a most efficient body of men by the introduction of British officers to reform and discipline them, so with equally beneficial results might similar agency be employed in concert with the Nizam's minister for the reform of the civil administration of the country; good government would take the place of disorder and misrule; the necessity of keeping up so large an army would no longer exist. The services of the Hydrabad subsidiary force would, according to treaty, be available should any emergency arise; and turbulent bodies of retainers would be gradually discharged in proportion as life and property became secure.

(No. 775.)

DISSENT of Lieutenant General *Caulfield*, C. B., from the India Political Draft, No. 863, relative to the Affairs of the Nizam.

BECAUSE, his Highness having complied with the demands of the Governor General, the time appears to have arrived for our going fully into the affairs of Hydrabad, as that principality has seemingly reached a crisis that must terminate disastrously or otherwise, as we may withhold or afford it our assistance.

Because after a patient and dispassionate review of all our proceedings in connexion with Hydrabad from the period of his Highness's subsidiary alliance with the British Government, I am constrained to declare my painful conviction that it is deducible from the records of this House, that the anarchy which prevails in the State of Hydrabad, in which we have a regular army of 20,000 men, together with the impoverished condition of the Exchequer, may fairly be attributed to the injudicious exercise of British influence in the affairs of that principality, as, notwithstanding all that may be said of constitutional rights and international law, as prohibitory of interference, it cannot be denied that neither of these barriers have proved a protection to Hydrabad when the views of our Indian Government invited interference, as is exemplified in the nomination of Rajah Chundoo Lall (in direct opposition to the Nizam's reliance) clothed with plenary power, to be paid to the minister, and exempt alike from

Subsidiary force, 10,000; contingent, 10,000.

his control, and that of his sovereign * as verified by the avowed intention of our Resident to interpose the authority of the British Government, to shield Tehah Chundoo Lall from the unquestionable authority of the prince, in direct violation of a treaty binding us not to interfere with the Nizam's relatives or subjects.

Because we impose an unnecessary expense of 42 lacs of rupees annually upon the Nizam in maintaining a Contingent, organised, disciplined, and officered by us, to perform those duties which by treaty devolve upon the subsidiary force, and withheld its services from the Nizam on grounds that cannot be defended by the principles of international law or constitutional rights, and thereby render it necessary for his Highness to maintain, at a heavy charge (95 lacs of rupees) to the State a large and inefficient force, with a view to avoid vexatious interference, and afford employment to those of his adherents who have no other means of living.

Because interference of a certain character, and to a certain extent, is absolutely requisite to enable his Highness to place his affairs in a train that will hold out reasonable expectations, that under a tolerably efficient minister he may be enabled, without our assistance, so to conduct his affairs as will ensure an improved condition of his State.

Because I do not consider that we are justified in requiring prompt payment by the Nizam under a heavy penalty of a debt, mainly created by measures concerted with a minister over whom in fairness he cannot be deemed to have exercised any control.

Because we have the means to aid his Highness in the reduction of his expenses to an extent that would enable him gradually to liquidate our demands, and without such a reduction it appears impossible for his Highness to maintain the integrity of his dominions, and satisfy the just claims of other creditors.

Because, in my humble judgment, it is the duty of this Court to communicate, without reserve, its opinions and views on all matters of importance to our Governor General, without a knowledge of which he may frequently find himself involved in difficulties of a perplexing nature.

Because this Court cannot, by any possible procedure, divest itself of that responsibility with which by law it is invested, nor evade participation in the consequences arising out of the acts of a Government over which it is empowered to exercise a constitutional control.

East India House,

* See Protest of 16 East India Directors, No. 74, page 136 Blue Book, Affairs of William Palmer & Co., and the Resident at Hydrabad's letter in 1835, which says, "Those who have witnessed the course of our policy for these last 30 years, who have seen how we have put up the creatures of our own as ministers, and supported them against the sovereign, have obtained the control of the effective troops, and how we have assumed the civil control of the country, can hardly feel a doubt, least of all can the Nizam, that we have considered ourselves the actual rulers of the country."

— No. 2. —

From Colonel *A. Cotton*, Commandant of Engineers, to *T. Pycroft*, Esq.,
Chief Secretary to Government.

Sir,

I have the honour to transmit a Memorandum, on the proposed railway in the Southern Mahratta Country, in obedience to the orders of Government dated 19th September 1858, No. 1678.

I have in many late papers respectfully requested the earnest attention of Government to this fundamental question, the question of how money should be expended for the material improvement of India.

This proposal of the Bombay Government seems to bring us fully to an issue on it.

Will three millions expended on a railway from Hydrabad to Beitkul, relieve that tract of country from its principal material evils on the one hand? or on the other, will it (as I think I prove) be the most effectual step that could be taken to prevent that tract from ever obtaining the essential benefits of cheap production and cheap transit?

Most certain it is, that if the latter is the effect of spending money upon a railway there, every additional million that is spent in this way is an additional obstacle thrown in the way of the relief of India generally from its main material evils! The railway interest is already very considerable, and its very existence depends upon its succeeding in depriving India of cheap transit, and it is absurd to expect that its influence will not be exerted to resist that which is certainly directly antagonistic to it. And so also with respect to the other great fundamental point of finance.

Will this three millions if spent on a railway afford a great and important relief to the at present insolvent state of the Government? or will it add a further permanent burden of 150,000 *l.* a year? (on a doubt whether the railway will pay its expenses.)

This Government has in its most important Despatch of the 13th July last clearly declared the conclusion, which its ample experience had taught it to be, that expenditure on hydraulic works was extraordinarily remunerative, and would afford a complete relief to the finances.

Such a declaration from the only authorities in India who could give it from their own knowledge and experience, seems to me to be of the very first importance, but not second to it (I think) will now be as decided a protest against the proposed extension of the railway system to the Southern Mahratta Country, if, as I cannot but hope, the facts and arguments of this Memorandum are sufficient to satisfy them that my conclusions are in the main sound, as to the effects of such a work in that locality.

I look upon this opportunity as one of the most valuable that could be offered to India's authorities. A decided stand now made will certainly secure at length a real examination of this vital point, and I am quite sure nothing more is required than a real examination to satisfy everybody who is willing to be satisfied about it.

The late Secretary to the Government of India in the P. P. W. was certainly right when he protested against "adverse discussion" on the railway question: nothing but its suppression could secure the further expenditure of millions on works which would shut out India from cheap production and cheap transit, and thus effectually prevent it from meeting other lands on equal ground in the markets of the world.

Minute by Colonel A. Cotton on the Bombay Minutes of the Members of Council on a Railway from Beitool Harbour to Hydrabad, prepared in obedience to Orders of the Madras Government, 13th September 1858.

The order transmitted to me with these minutes so clearly requires my explicit opinion on the subject, that I trust I shall be excused in stating opinions so entirely opposed to those expressed in all the Bombay minutes. I regret that I should differ so entirely from those so much superior to me both in office and knowledge of other matters; but as my whole attention has been given to engineering matters, and especially to this subject of communications, and I have had such peculiar opportunities of investigating the subject both from the information of others, and from that I have obtained from works with which I have been more or less connected, I am in hopes that I may be allowed to give an opinion without presumption on such a matter, even though contrary to the views held by those who have not such professional knowledge and experience.

I may premise that all these minutes are written on the grounds, as if already established, 1st., that railways in India will be profitable speculations; 2d., that they will be more profitable upon the whole, that is, directly and indirectly, than any other way of spending the same money; 3d., that they will answer the purposes of the country as communications, that is, that they can carry the great traffic of the country, that they can do what is required for that purpose, both in respect of goods and passengers, and in respect of cost and quantity.

The minutes take it for granted that railways are such communications as will meet those three evident demands. What I beg to submit is, that they thus, in fact, beg the whole question.

This is certainly in accordance with what has been done by others respecting railways. They were entered upon without the slightest investigation on either of the two latter points. On the first, indeed, there was a sort of inquiry, but no "extensive discussion" was allowed, and in consequence the calculations were ill tested, and in my opinion, which is supported by present results, they would not have stood any test. I have not seen even a calculation of the cost of transport on a railway in India, and I have every reason to believe that there was no careful investigation of this fundamental point. I have not the original papers about the Bengal railway with me; but to show how loosely the whole subject was handled, I may mention that in the calculation of the present cost of transit by the river, two of the items allowed were interest and insurance on an average cargo of goods at 10 *l.* a ton for the whole traffic, the great mass of the traffic being grain, &c., value from 3*l.* to 5*l.* a ton, so that probably the average does not exceed 6*l.*, thus making a miscalculation in these items of seven to one.

As to the great question whether railways were the communications that were suited to the particular circumstances of India generally, or of certain parts of it, it was never, I believe, raised at all.

It seems to be a peculiarly suitable time to examine these points, so intimately connected with the material welfare of India, now that actual results of the working of some railways in each Presidency afford in some measure sound grounds for our conclusions.

The question immediately before me seems to be, is it expedient to construct a railway (of course for high speed like those already constructed) from the proposed harbour of Beitool to Hydrabad?

I conclude that this question may be fairly divided into the three above proposed, viz.:

1st. Will a railway answer as a speculation?

2d. Is it a more beneficial way of spending money on that tract of country than any other?

3d. Will it answer its purpose, that is, will it carry such quantities and at such cost as the country requires?

The comparison of such a communication with other kinds, viz., with common roads, local railways and waterways, will necessarily be examined in the course of these enquiries.

With respect to the 1st question, in one of the minutes it is given as an opinion, "that it would be a very profitable undertaking as regards the company who carry it out," and in another, that "of the financial [illegible] value of it * * * * there can be no doubt."

Matters have now so far advanced that we may best form a judgment on this point by the actual results on the lines now in operation.

In Bengal the line from Calcutta to Burdwan, 120 miles, has been open three years. I give in the Appendix returns of receipts and expenditure up to the end of last year.—They were

		Rs.
For 1857, Receipts	-	14,50,000
Expenses	-	5,90,000
	120	8,60,000
Profits per mile	-	7,000

I don't know exactly the cost of this line up to the present time, but I believe it is about 1,20,000 rupees a mile, including rolling stock, &c., on which the apparent profit has therefore been six per cent.

But I must observe that the publication of the accounts in this way, though true in the letter, is calculated to convey an entirely false impression of the financial results; the two great items of the current expenditure on railways do not appear in them, viz., depreciation and repairs. For the first nothing at all is allowed, and for the latter a mere trifle, because there is not an old locomotive or carriage or rail on the line; everything is new. It is therefore quite certain that this six per cent. does not represent the true profits on this line. What the actual cost of repairs and renewal will be in India we have no positive data; we can only form an estimate of it from such data as we have.

By a very complete account of the expenses, &c. of all the railways in the State of Massachusetts, in the United States, the best railway accounts I have been able to obtain, the average cost of repairs and renewal of the road only on 1,367 miles, is 2¾ per cent., and the total locomotive expense is 1½ per cent., so that adding for rolling stock, the total cost of repairs and renewal came to very much under three per cent. [illegible].

The report from which this is taken adds, "this experience of nine years' working cannot be very flattering to railway proprietors. The expense of keeping up the track, that is, of maintenance of way, has greatly disappointed expectation in America as it has here" (in England). I should think, considering the great heat and heavy rains of Bengal, the cost under these heads will be greater than in Massachusetts. Allowing the same, it reduces the profits to three per cent.

Now in considering this result, we must remember that this, the first 120 miles out of Calcutta, is without any comparison, the line of greatest returns of any line that could be formed in India. Nothing like the great mass of passengers that go for a moderate distance to and from the most wealthy city of India, can be found at any distance from the great cities.

This is therefore an extreme case.

On the Bombay line I have not the traffic for any length of time, but the traffic receipts for the last half of June 1858, were 330 rupees per mile (one hundred and thirty miles), or at the rate of 3,600 rupees per annum; 9¼ per cent. if the road has cost 30,000 rupees, but I have no statement of the actual cost. I cannot, however, I believe, be very far wrong in that sum. The per-centage of expenses upon gross receipts was, in 1857, about 47 per-cent.: allowing the same for 1858, it will leave for profits just five per cent. This line is like that of Bengal, it is the first 130 miles out of a great city, and the accounts include no sufficient sum for repairs and renewal, in consequence of everything being new. But this calculation also omits the cost of the Bhore Ghaut, I mean about 80 lacs which would add about 20,000 rupees a mile to the cost of the whole 130 miles.

of

of which the road will then consist; and the above profits on 150,000 rupees a mile would be only three per cent., and deducting from this three per cent. for repairs and renewal, there would remain no profit on this, one of the great lines the first 140 miles out of one of the capitals of India. If the cost of the Ghaut is distributed over a greater length of line, then we must allow diminished receipts: for the average receipts of 400 miles, for instance, from Bombay, cannot equal the average of the first 130. On the Madras line of 96 miles out of Madras, the present receipts are on an average about 90 rupees a week, or 4,700 rupees a year, seven per cent. on 70,000 rupees a mile, and allowing the same proportion of expenses as last year, the net profits would be 3¼ per cent., and deducting here also three per cent. for renewal and repairs, ¼ per cent.

It is, in my opinion, impossible to mistake in the conclusion to be drawn from these actual results on three different lines, immediately adjoining three of the capital cities of India.

It is commonly said that the traffic will increase as the lines extend. It will undoubtedly increase on the part now worked, but the average of the whole will diminish. It cannot be imagined that the traffic on the second and third 100 miles from a capital will not be greatly less than on that of the first, and therefore if the whole of such traffic were added to the first, it would not very greatly increase the average, but in point of fact by far the greater part of the traffic of each portion will be local traffic, and will not affect that of the other portions. Of course, up to a certain distance, the average traffic will increase, because no extremely short line will not draw the whole traffic even of the tract through which it passes, but it is impossible that the average of 500 miles from a capital can equal that of the first 100 miles.

I therefore submit that these results are alone quite decisive as to the question of great railways being profitable speculations in India while in its present state of wealth, and consequently that we have far stronger proof that on the particular line here proposed, not leading to a capital, even anything like interest for the capital can be obtained.

Further, we have the results in England. The net profits, according to the returns, are now just 4 per cent. on the capital, and the average cost about 36,000 *l.* per mile. Certainly the average cost of railways in India will be only about a quarter of those in England; but if we compare the enormous disproportion of wealth in the two countries, it is also certain that nothing like one quarter of the number of travellers could afford to use railways here at English charges. We cannot be wrong, therefore, in concluding that throughout India railways will not make such profitable investments as in England.

Again, in Massachusetts, where the average cost was only 9,000 *l.* a mile, the profits were 6¼ per cent., and the wealth of the community there is of course many times that of India. Also the value of money there is much less than in India, and the 9,000 *l.* a mile represents a less capital than 90,000 rupees invested in India.

I must also observe, that there is great doubt thrown upon English accounts, as there must be till there are independent Government inspectors appointed to examine them. Almost all the lines are making very small dividends, some, as the Great Western at this time, none at all; and of course, in such a state of things, there is a strong bias on all concerned to put as much as possible of the expenditure to the item of new capital, and also to have large sums under the head of unadjusted accounts, both which must necessarily cause considerable doubt as to the reality of the sums set apart for dividend.

Thus, the following railways have added these sums to their capital account in the last half year:

	£.
London and North Western - - - - -	454,000
South Western - - - - - - - -	225,000
Great Western - - - - - - - -	62,000
Brighton - - - - - - - -	35,000

And the following are outstanding accounts:—

	£.
London and North Western - - - -	109,000
Manchester and Lincolnshire - - - -	258,000
Lancashire and Yorkshire - - - - -	330,000
Great Northern - - - - - -	143,000

While such enormous items as these appear in accounts which are not inspected and publicly reported on by Government officers, there must be great uncertainty that the present dividends will be supported.

By a letter in the Railway Journal, 15th May 1858, it appears that 20,000,000 *l.* have been added to the capital of the Great Northern in 10 years, that while the gross receipts had increased by 730,000 *l.* the dividends had fallen from 10 to 4½ per cent., the goods traffic having increased from 300,000 tons to 5,000,000. Of course no other possible conclusion can be drawn from this than that even after charging 20,000,000 *l.* to capital in 10 years, the increase of goods traffic has still caused an enormous loss. Without rigorous and strict inspection of accounts by officers publicly responsible and totally unconnected with any individual railway, we cannot be certain that current expenses are not charged to capital. From all the information I have been able to obtain, I have myself no doubt that the real profit on English railways is considerably under 4 per cent.

I must also particularly notice the fact above stated, which is common to many English railways viz., continual increase of receipts with a constant diminution of dividends. There is, of course, also a strong bias in all concerned, in order to keep up the appearance of prosperity, to show an increase of receipts, and hence to carry at losing rates, and that this is done is certainly proved by the above fact. Consider also the following admission in an editorial in Herapath's Railway Journal, the great advocate for railways: "In many railways we have noticed that during the last half dozen years (and in some cases longer) they have spent each half year" (as capital) "sums about as large as the profits paid away in dividends."

The consulting engineer of the Madras Railway showed in his last half-year's report that there had been a clear loss both on 1st class passengers and on all goods, though the latter are carried at an average rate of 10 *d.* (6¼ *d.*) per ton per mile, and though nothing is allowed for depreciation, and of course only a small proportion for repairs, as all is now new. The results of the Madras Railway up to the end of 1857, were as follows:—Length 81 miles, cost without rolling stock for a single way, 53,000 rupees. Receipts 104,000 rupees for the half year; expenses 56,000 rupees, or 54 per cent., which on a supposed total cost of 70,000 rupees a mile, would be a nominal profit of ¾ per cent., or for the year 1½ per cent., and allowing 3 per cent. for renewal and repairs, a loss of 1½ per cent.

It seems to me impossible that there can be any question, after this investigation, as to the line from Beitkul to Hydrabad being profitable. If none of the lines immediately adjoining the three capitals pay even merely the guaranteed interest, we have the most certain grounds for concluding that this line, in an out-of-the-way part of the country, will not do much more than pay its expenses, if it does that. I do not see how we can be mistaken on this point. These data are surely quite sufficient to establish it.

Before proceeding to the other two points, I may here properly refer to a minor one started in these minutes, viz., as to how a line can be laid out so as not to compete with the Bombay line. It seems to me most certain that whatever line is laid to Beitkul must be a directly competing line with that to Bombay. Beitkul will become a large port and city, and will, even with a railway, draw off a very large proportion of the traffic both in goods and passengers from the Bombay line. I cannot see how there can be any question about this. Any line running from a certain tract of country to a port must compete with all other lines in that part, whether it runs nearly parallel to them or perpendicular. The only question with the proprietor and the merchant

...now he can get his goods cheapest to the port; and the passenger traffic must follow the line of the goods traffic in India, and it does not matter to them whether the line runs to a port due north, or due east or west. Thus the North and South Canals at Madras compete directly with the railway, although they run perpendicular to it, because the people of Madras do not care whether the consumable articles come from districts west of Madras, or north and south.

The proposed line, therefore, while it will not yield profit itself, will undoubtedly greatly diminish the traffic on the Bombay line.

My second question is, Is this railway a more beneficial way of spending money on that tract of country than any other?

Surely this is only a question of common sense. The grand object is to promote the material improvement of the country: it is for this that capital is spent on public works. Surely, if we are going to spend a million on a certain tract, we should all conclude that we had made a great mistake, if we afterwards discovered that, as we had spent it, it had only yielded one per cent. of profits, while a more judicious mode of spending it would have yielded 100 per cent.

I append to this memorandum a report on the traffic on the Bengal Railway, with some remarks I made upon it, at the desire of the Lieutenant Governor of Bengal, together with a comparison of the actual cost and results of that railway, and an estimate of those of a canal on the same line. I give this as a striking illustration of the effects of taking a work in hand without properly examining into it. From this it will be seen that there is good ground for believing that even on the present traffic there would be a saving of 15 lacs a year, adding together the profits to the shareholders and the diminished cost of transit to the public, and, probably, including the new traffic that would be promoted by the lower rate of transit, not less than 25 lacs a year, had a canal been constructed on this line instead of a railway, and that had the same money that has been spent on this 120 miles of railway been spent on waterways, it would have been ample to provide all Bengal with a complete system of such waterways of several thousand miles, conveying both passengers and goods at 1-5th or 1-10th of the railway rates.

I cannot but think this is a sufficient example to warn us against entering upon such an expenditure as is now proposed without first examining the matter in this point of view. What possible object can there be in spending money upon the country in a way that will yield one per cent. if we could spend it in another that would yield 100? and of course we are liable to do this if we do not first make inquiry.

Even if it were settled that the most profitable expenditure would be on communications, it would remain to consider on what kind of communications in that particular tract of country; for instance,—

Whether on Common roads,
Light railways,
Heavy railways,
Canals, or
Rivers.

It will be sufficient for our present purpose that for the cost of a mile of heavy railway, we might have—

16 miles of road,
10 or 15 of light railway,
15 or 25 of canal, or
25 of improved river navigation.

Now, surely, this is a real question. Tried by the test of direct and indirect profits, which I am convinced is the only true test of such expenditure, nobody could doubt that one set of these works might be many times more profitable for the same money expended as a heavy railway, as the actual circumstances

of that tract of country. And I must again observe that no road or railway can carry the quantity required on a main road in India.

But there is also the question of irrigation, particularly as that can be combined with navigation in the same works. Suppose that 400 miles of railway were to be laid at 80,000 rupees a mile, costing 3½ millions sterling, and that for the same money, at 10 rupees an acre, 3½ millions of acres could be irrigated. The cost per acre in Rajahmundry is only about four rupees; and with respect to the value of the increase of produce, Captain Meadows Taylor shows that in those countries the ryots water their lands at an average cost of 27 rupees an acre per annum, showing that the value of produce must exceed that. In Rajahmundry we reckon an increase of 16 rupees on one crop. At this latter rate, the increased value of produce on 3½ millions acres would be 500 lacs a year. But this would at the same time provide, probably, at least 2,000 miles of canal navigation, besides connecting, perhaps, as much more of navigable rivers. Can there be any comparison between the benefits to be derived from the money so expended and those of the same sum expended on a railway, and what can possibly be said why a railway should be constructed in preference?

As I have quoted the case of the Bengal Railway, so also I may mention that of the Bhore Ghaut. It is said to cost 80 lacs; the direct distance is about six miles, but it is lengthened to 13, to obtain the required gradients. Now compare the results obtained in this way with the same sum to be expended on irrigation from the Kistnah and Godavery. The results there will be 2,000,000 of acres irrigated, and more than 2,000 miles of navigable canal and rivers. The increase of produce alone will be on an average of 20 rupees an acre, including some two-crop land, 600 lacs a year, besides 2,000 miles of communication conveying goods at one pie a ton a mile.

I cannot but believe that when these things are pointed out, it will be acknowledged that in future they warn us to consider this question: Whether under the present circumstances of India it is wise to spend money in one way rather than another? This one ghaut has saddled India permanently with a charge of four lacs a year, while the same money might have certainly yielded a relief of 40 per cent., or 32 lacs a year, to the finances, and have left an enormous amount besides in the hands of the landowners. Were India like England, overloaded with wealth, and covered with almost every kind of public works, it might be a question whether we might not amuse ourselves with spending three quarters of a million upon six miles of ghaut; but while the country is so poor, almost entirely without public works of any kind, and insolvent in its finances, I must insist upon it that the question whether we are going to spend our money to something like the best advantage, is an essential one in every proposed work. Whether the work we are setting about will, like the Bhore Ghaut, be a great addition to the burthens of India, or whether, like the same sum spent in the hydraulic works for irrigation and navigation in Rajahmundry, Masulipatam and Guntoor, it will be both an immense relief to the part of the country improved by it, and at the same time not only provide its own interest, but also afford a very large relief to the finances of India, already at least 10 lacs a year, and there is every reason to believe when the works are completed, much more than half a million sterling a year.

I come now to the 3d question I have proposed, viz.: Will this railway answer its purpose; that is, will it carry such quantities and at such cost as the country requires?

Is a railway the kind of work that will effectually carry the great traffic of a country?

This I urge is the question—not, Will it carry a small portion of the passengers and goods that ought to be moved at a high speed and a high price, and that only at the cost of taxing the country in other ways to pay for this advantage? From the data and calculations above offered, I conclude certainly, that, supposing on the 350 miles now at work at Bombay, Calcutta and Madras, 2½ millions sterling have been spent, and that the *bonâ fide* profit does not on an average exceed two per cent., there is already a clear addition to the burthens of India of 7½ lacs a year, which must be paid by additional taxes of some kind. And every additional million, as it is expended in such works at a greater distance from the capitals, must entail a greater loss. On the 40,000,000 already

already guaranteed, we cannot suppose less than an average loss of three per cent., or nearly a million sterling, thus doubling the previous average deficit in the finances of India.

I return, therefore, to the question I propose myself.

Let us on this point go upon the same safe ground as in examining the former questions, viz. the results on the Indian lines already open.

First, the Calcutta line. The total number of passengers per annum is something above a million, but they travel, on an average, only about 30 miles or a quarter the length of the road (*vide* Appendix A.), so that the average number travelling the whole length is 250,000, or 800 a day, on the first 120 miles out of the chief city of India, on the main line leading to the interior. From the vast numbers who travel in the populous parts of India, even without any facilities, we cannot be wrong in supposing that, on such a line as this, if they were carried cheap enough to meet the actual necessities of the people, this is not a tenth part of the number that could and would travel along it. On one of the four main approaches to Madras, 3,000 a day travel on one of the main roads. In Tanjore, away from any great city, 1,200 men a day; over a bridge three miles from Trichinopoly, a city of 100,000 inhabitants, 20,000 people a day pass. We may confidently conclude, that if on those lines there were cheap facilities for travelling, these numbers would be greatly increased. I cannot think, judging from these and many other such facts, that less than 10,000 would travel on the first 120 miles of the Great North Western Line out of Calcutta, if they could be conveyed at prices suited to the state of the country.

On the Madras line the number is 250 per day on the average of the whole line, and the consulting engineer says in his report, dated 15th December 1856: "If Mr. Fletcher will take a trip any new moon on his own rail, he will find ocular demonstration to the contrary. He will find many travellers of both sexes, but very few of them on the rail, though the charge is reduced to 4 pie a mile." Again: how does he account for all those crowds of people walking or driving in bullock carriages along the road to Trivelloor on occasions of festivals. The railway authorities are prepared to give, and do give, any amount of special accommodation on those days, yet the people walk. They give them the means of going and returning the same day, yet they walk 26 miles and back, and probably lose three whole days in doing it."

Again, "The rate (4 pie) is altogether too high; it is too high, whether we consider the condition of the people, the value of money, or the cost of the line." Again, "The mass of the people do not travel on the line, yet they do travel, on foot and in bullock carriages." Again, "The actual results are notorious. As a rule, none but the wealthier classes of the native community have travelled by this rail. On all occasions of feasts at Trivelloor, which lies close to the rail, and at 26 miles from Madras, a common and very inferior road, running nearly parallel with it, has presented to the railway officials the unsatisfactory spectacle of thousands of people, some in bullock carriages, others on foot, passing to and fro between that town and Madras." All these quotations are not from opponents of the railways, but from one of their strongest advocates. Colonel Pears wrote a book two or three years ago, strongly advocating railways as the works which were best suited to the country.

That is, the railway so far from accommodating many who could not travel before, carries only a small proportion of the numbers of previous travellers.

On the Bombay line the numbers were 2,000 a day, and, as the average distance travelled was 24 miles, or rather more than a quarter of the whole length of the line, the average number for the whole distance was about 550 a day, of which the 1st and 2d class together were only 1-20th part, or about 30 a day.

The results of the Bombay line up to the end of 1857 were, length 88¼ miles, of which double 33, single 55½ miles. Average cost, 91,000 rupees a mile. Receipts per mile, 4,000 rupees; expenses, 1,900; nominal profits, 2,100 rupees, which, on 91,000 rupees, gives, per annum, 4⅔ per cent., and deducting from this 3 per cent. for renewals and repairs, it leaves 1⅔ per cent. for the probable real profits.

Captain Rivers the consulting engineer's remarks on this are: "The ordinary traffic for this half year is 21,000 tons. The railway had, at the close of this report, been open more than 18 months to the foot of the ghauts, and yet on

89 miles there is shown an average of 60 tons each way daily, a traffic insignificant, considering either the trade of Bombay, or the cost of the line, or the expectations which Government and the originators had in constructing it. But this remark supposes that the 21,000 tons were carried the whole length of the line. Probably they were not carried half of it, so that the average quantity carried along the whole distance could not have been 30 tons a day each way, or at the rate of under 20,000 tons per annum, a quantity insignificant indeed on the only land line leading into one of the capitals of India; and had it been 50 times as great, or 1,000,000 tons, which a communication on such a line ought to carry, it would still be of no consequence, while the goods are carried at a charge only a shade below that of the old means of transport.

The remark of the Bombay Government on this is: "The returns continue to show that the Company have succeeded in diverting only a very inconsiderable portion of the goods traffic of the interior, and strengthen the opinion of Government that the present rates operate injuriously to the Company's interest." But this supposes that the Company could afford to carry cheaper than they do, of which we have no proof. It is certain, from the lowness of the profits (probably not more than 1½ per cent.), of which by far the greater part must be derived from passengers, that the profits on the goods, even at the present rates, are insignificant, but it is much more probable, that on this railway also (as the consulting engineer has shown to be the case in Madras) there is an actual loss in the goods traffic; the fault is not in the managers of the railway, but in the apparatus itself. After all this enormous expenditure goods cannot be carried by it so cheaply as by the old means, without allowing anything for interest.

Compare these quantities carried by the railway on all the three most important lines in all India, the principal entrances into each of the three capitals, 20,000 to 30,000 tons a year on each, with the 150,000 tons already carried on the Coconada Canal, though it is hundreds of miles from any great city, and has not a town of more than 20,000 inhabitants anywhere near it, and though the supply of boats is so far from keeping pace with the demand, that the charges are three times as high as they need to be. There are no discussions as to why the goods are not carried by the canals in preference to the old modes.

I must especially notice the utter insignificance of the number of first class passengers, those for whom all this enormous expense has been incurred; in Calcutta the average for the whole length of the line is 15 a day, in Madras 2. Now we may safely say that, excepting those, almost the whole of the remainder would prefer, if they could obtain it, a lower speed and lower charge; they only travel in this way because they have no choice, therefore speed is not a benefit to them, but because necessarily united to a high charge, a real loss. Probably nine-tenths of these travellers, if they could, would travel at half the speed and half the charge.

I must also notice that, after all this expense has been incurred, even the proposed object is not attained, viz., high speed. These railways are all worked at from 10 to 18 miles an hour less, after all, than the speed at which the Hudson River is worked by steamers. The reason is, that after the expense of construction has been incurred, it is necessary, in order to keep the fare cost of transit down even to the present high charges, to work at a moderate speed. Were there a steam-boat canal by the side of these railways it might be worked very cheaply at a higher speed than the latter. The charge on the Hudson is 2½ pies a mile for first class passengers, one-seventh of the charge on these lines, without allowing for the difference in the value of money in America and India, which is six or eight to one, so that 2½ pies there is not equal to ½ pie here, 1-36th of the charge here. And so also in England, passengers are carried at from ½ d. to ¾ d. per mile from London to Edinburgh, with all the expenses due to a very bad sea navigation, equal to from ¾ to 4 pies per mile, and allowing for the difference in the value of money, from ⅛ to ⅔ pie in India, and it is evident that on a steam-boat canal, these charges might be still reduced. Such is the difference between land and water carriage, even at high speeds.

It is thus clear that at present the railways do not meet the wants even of the second class passengers, and they scarcely touch the third class at all.

Let us consider this point also by means of the charges themselves. In Calcutta the lowest charge is 3 pies (¼ d.), this is equivalent to six times as much as at home, or 2¼ d. nearly, two and a quarter times the charge for the lowest class

class in England, and it is notorious that for one that has money to spare here, there are 10 there. To put the people of India on a par with those in England, the charge ought not to be reduced merely in proportion to the value of money, but below that. It ought to be under ½ pie per head.

On the Rajahmundry canals, the charge is 1 pie, and it is fully ascertained that this excludes by far the greater part of those who would travel; it is now proposed to reduce the charge to ¾ pie, in order to obtain greater profits. And, if the boats were worked by steam instead of by men, they could afford to carry at ½ pie with a good profit; worked by men, and charging 1 pie, they are yielding now 30 per cent.

How grievous it is thus to see this enormous expenditure incurred, and, after all, the main wants of the country, as respects even passenger traffic, unsupplied by it. Even in this respect, what is wanted is, to convey from 5,000 to 10,000 persons a day at prices of from ½ to 2 pies, and whether they go at 10 or 20 miles an hour, whether it takes two or four days to travel 1,000 miles, is a matter of entire insignificance in comparison.

The certain consequence of the construction of a railway on the proposed tract will be that an insignificant proportion of those who used to travel will be carried at these ruinous charges, and that for this even, the country will have to be taxed in other ways to provide interest for the capital expended.

Secondly, let us consider the goods traffic. I urge that this is in reality the first point in the question of communications, in the present state of India. India is not in the position of the gentleman whose question is not about money, but how he may travel most speedily and with the greatest ease; but in that of the farmer, with whom the grand point is how he may get his produce to market at a charge that will enable him to sell it profitably. When India has by means of obtaining access to markets been enabled to sell its produce, and so secured more than the bare necessaries of life, then it might entertain the question of travelling with ease and speed, if the two questions were really separable, but they are not; the same means that will provide them sufficiently cheap transit for their goods will also provide them both speedy and pleasant transit for their persons.

We have, then, to consider the suitableness of railways as respects goods traffic, using the actual results on present lines for this inquiry also. First, on the Calcutta line. The total quantity of goods last year (not coals) was 49,000 tons; supposing that they are carried 50 miles, the average for the whole length of line would be 20,000 tons. The distance carried may be more than 50 miles, but the average quantity cannot be above 25,000 or 30,000 tons, which supposes the average distance to be 60 or 70 miles. But the highest of these numbers is utterly insignificant, even as respects quantity. Compare it with the water traffic to Calcutta. Compare it with the reported traffic in four months on the Nuddea rivers, 600,000 tons. I cannot find a memorandum of the total traffic on the two Calcutta canals, but unless my memory fails it is about 3,000,000 tons a year. The boats entering the circular canal alone were 170,000 last year, a year of confusion, probably containing 2,000,000 tons.

When we look at these quantities and see the railway carrying 1-60th or 1-100th part, it is clear that even as respects quantity it is a matter of entire insignificance. But when we examine the prices we find that even if it carried 50 times as much it would still be a matter of no sort of importance, because it carries at prices only just a hair's breadth under those at which the goods were previously carried. What does it matter whether the goods are carried by rail or by road, if there is no tangible reduction of cost? It has an appearance of being a point gained, when the rail succeeds in abstracting the traffic from the old modes of conveyance, but the change is no real benefit to anybody, that is, no benefit worth mentioning. In this case, suppose 30,000 tons have been transferred to the rail, and that there had been so great an actual reduction of cost as ¼ anna per ton per mile, the total saving to the public is 500 rupees a mile, or 60,000 rupees a year, an insignificant sum in comparison of an expenditure of 150 lacs.

But there is also a traffic peculiar to this line, viz., the coal traffic. It is evident that there may be anywhere a peculiar mineral traffic of this kind, which is in some important respects distinct from the general heavy traffic of the country, and each case requires separate consideration. This mineral was before carried entirely by the Damoodah, a small river flowing only a short distance,

liable to sudden changes, and never affording a steady navigation; a river navigation, in short, of the lowest kind, for a great part of the year without water, and in the monsoon alternately in flood and very low. It also enters the Hooghly so near the sea that that river there is very wide and exposed, and the distance is 40 miles more than the direct line. The expense of transit on it is accordingly very high for water transit, viz., 6¼ pies per ton per mile of distance carried, and 8½ pies per mile of direct distance, while the cost on the Nuddea rivers is about 4 pies per mile of distance, and by the river and Soonderbunds 2 pies for grain, and it would be less for minerals. The coal trade up river to the Ganges is carried at 1 pie per ton per mile. The total quantity carried last year was 90,000 tons by rail, and 54,000 by water. The charges were 3 annas a maund = 5¼ rupees a ton by the latter, and 2 annas 10 pies = 5 rupees nearly by rail. Thus, as was stated for goods, the least possible difference is made, and were the whole of this ¼ rupee saved it would only amount to 22,500 rupees a year; but it is not, for at Howrah the coal has to be discharged into boats to be conveyed to the different points where it is required, so that the saving must be quite insignificant; and this is further proved by the fact that the difference of charge is not sufficient to transfer more than 3-5ths of the whole to the rail. There is thus the least possible benefit to the public by the change.

It is no fault of the railway management; it is the defect of the apparatus itself; it is like a man cutting up firewood with a knife, he must of course charge high. The fact is, the railway is not suited for this work. A canal on this line would certainly carry the coal at one pie a ton a mile, or 10 annas for the 120 miles, and thus save 4 rupees 6 annas per ton, or 5½ lacs of rupees on the whole present quantity; and as such a reduction amounts to 60 per cent. on the cost of the coal at Calcutta, it would certainly cause a very great increase of consumption; and probably a saving to Calcutta of 10 lacs a year would thus be produced on this one article, were a suitable means of transit afforded, instead of much under 22,500 by the railway. By the present arrangement it is, in fact, just as if all the grain on a gentleman's estate was carried to market in carriages instead of in waggons.

This is a striking proof of the entire unsuitableness of railways for the heavy traffic of India, and is surely a warning to us in planning future communications.

We may safely say that Calcutta is paying 10 lacs a year in this one item for the privilege of having a magnificent railway to Raneegunge; and this is only a part of the loss, for a reduction in the price of coals from 9½ rupees to 5 would give a vast stimulus to her in all sorts of ways, both to her internal trade, and to her external commerce. And what also is the loss to the coal-owners by this mistake? What the effect of cheap transit will be in India we have positive proof in the Rajahmundry canals. There the supply of new boats cannot nearly keep pace with the increase of demand. On the day I left Dowlaishwarum more than 80 boats had passed through the head of the main canal by 5 P.M., and 33 were waiting to pass the lock, more than 110 in one day, containing probably 1,000 tons. In the first year about 700 boats passed, in the last month more than double that number of much larger boats; this increase is in seven years. And this is in spite of increased charges, in consequence of the inadequate supply, and in a part of the country without even large towns, and hundreds of miles from any city.

But there is another great point in this matter, and which is in fact one of the leading questions on the whole subject of Indian communications; it is no other than this: What is the actual cost of carriage by railway? Most strange to say, I have not seen any discussion of this essential point in projecting those works; and yet most assuredly without a right decision of it, no right conclusion can be arrived at.

In the present case, how can we possibly settle the matter whether a railway ought to be constructed to Beitkul, without knowing at what cost it can carry? Suppose, when we have made it, we see 5-6ths of the old traffic still going by the roads, as we do in Madras? It is strange indeed that this point should not have been thoroughly investigated. In one of the Punjaub reports we have an example of the strange, loose way with which this essential point has been dealt with. It is there said, "It will now be proper to state briefly what the advantages of this line are likely to be." But in the following discussion, it is only said, "If the carriage by rail should be kept low, so as to attract commodities which

which can only afford to pay cheap transit;" and again, "the present water traffic would preferentially take the railway, provided always the cost of transit be cheap," and so on. But not a word is said on the subject of what the cost would actually be at which the railway could carry. The carriage by river, with the present clumsy navigation by human power, is 5 pie per ton a mile, and it is certain it can be reduced, probably more than half. Is there from such data as we have, a probability that a railway would carry at 2 or 3 pie?

On the Calcutta line, I have only these data. The receipts from coals were about 2.20,000, viz., 44,000 tons at 2 annas 10 pie per maund, and the total receipts were 7,50,000, the former 2-7ths of the whole. Now, we may be sure that the profits on the coal were less than those on the passengers, the one carried at 8 pie a ton, and the lowest passengers at 3 pie a head, or 5 annas a ton. And as allowing for repairs and renewal, the profits could hardly have exceeded 3 per cent, on the whole it follows that that on the coal must have been much less than 2-7ths of 3, or certainly not $\frac{1}{2}$ per cent, that is, 60,000 rupees on 44,000 tons, or 1 rupee 5 annas per ton, equal to 2 pie a ton a mile, which would make the actual cost of carrying the coal, exclusive of renewals and repairs, 6 pie a ton a mile. It seems impossible that it can be less than this.

On the Madras line there is a most careful examination of the actual cost by the late consulting engineer, and his result is above 6 pie a ton, without an allowance for renewals and repairs; and in the last report on six months' traffic there, there is shown an actual loss on the goods traffic, though the average charge is 10 pie.

Judging from these things, from the very low profits on the railways, even as the accounts are now kept, from my knowledge of the cost of carriage in England and America (for instance, the above case of the great diminution of profits on the Great Northern, attending upon an enormous increase of goods traffic, showing indisputably a positive loss upon the goods traffic at the rates there charged) judging from these and other things, I must say, that at present there is no indication whatever that these high-speed railways in India will carry at less than 8 pie a ton, a mile; more likely 10 pie for bare cost of carriage, without any allowance for interest.

The one fact, that the Madras Railway has failed after two or three years trial, to take more than a small part of the traffic off the common road by the side of it, "and that not a very good one," is a fact that speaks pretty plainly; and we may be quite sure that rather than suffer such an opprobrium, all the parties connected with the railway would strain every nerve, and be under a strong influence to carry at the lowest possible charge.

I cannot but think that these facts and reasonings will be conclusive as to the necessity of a careful investigation of this essential point, before the Beitkul Railway is decided upon.

But this is by no means the whole of the question. It is not whether the railways can carry at 8 pie or 10 pie, nor even at 4 pie; it is, do we not require to carry at a much lower cost than the lowest of these? Even 4 pie will not answer the purposes of the country. We have to carry goods of a very low value, hundreds of miles, and we must have very low rates, or India's resources will not be developed. A charge of 4 pie on 500 miles is 10 rupees a ton, which would be 30 per cent. on the value of grain for instance, probably the great bulk of the traffic. Wheat, in Goandwanah, costs 8 rupees a ton; such a charge as 4 pie would more than double its cost; thus we should throw away our peculiar advantage of cheap production, if we only have a means of transport of 8 or 10, or even of 4 pie a ton; we must have transit at half or 1 pie a ton a mile, if possible.

And further, this transit we can have; we have abundant proof that on a good steam-boat canal, traffic can be carried on at a rate not exceeding 1 pie; even on the Hudson, where men earn $1\frac{1}{2}$ or 2 rupees a day, the goods are conveyed at $1\frac{1}{3}$ pie a ton, a mile; and we have ample proof from the working of the river and canals in Rajahmundry, that for long distances, with steam-power at the extremely low cost of fuel in India, goods can be conveyed for less than 1 pie; this cost of fuel is a particular point. On the Godavery we pay 1 rupee a ton for wood, equal to $2\frac{1}{2}$ rupees for coal, and I have every reason to believe, that when the river is regularly worked, it will be lower than this.

This is about one-fifth of the cost of fuel on the Ganges, where the actual cost of carriage up river by steam, according to such information as I have, is 4 rupees a ton. The charge is from two to three times this, but the profits are enormous, 50 per cent. and more. Every waterway in India will touch or approach some jungle, so that we may confidently reckon upon very cheap fuel; and this is particularly the case in the tract of country under review. I should think 1 rupee a ton for wood, equal to 14 rupees for coal, might be calculated upon. We may not be aware of the extreme cheapness of water-carriage when fuel can be obtained at such prices, till we make the calculations.

I am thus perfectly satisfied from actual results, that both in respect of passenger and goods traffic, these railways fail entirely to answer the purposes of the country, in respect of cost of transit.

There remains the question as to numbers and quantity to be carried.

I will not go so closely into this part of the subject as the last.

I have no doubt that a railway in India will be able to carry as great a traffic as offers, but this is only because its charges must be so high as to prevent 9-10ths or 19-20ths of the traffic there would be, if carried at such rates as are necessary, but it will thus effectually keep down the traffics; and the question, therefore, of whether it could carry such a traffic as there would be on many lines in India, is thus of small importance.

But on the line to the north-west, from Calcutta for instance, where the traffic is even now so enormous, and rapidly increasing, with very low rates, I should think we ought certainly to provide for 10,000 passengers a day, and 3,000,000 tons a year, and it is quite certain not even a double railway could carry that. No railway in England carries one-fourth of this, and some of them are most seriously crowded, and as in the case of the Great Northern, their expenses are so great in consequence of the speed they are obliged to push on the goods in order to escape from the passenger trains, the constant delays in sidings while other trains pass, &c., that there is an enormous loss on the goods traffic, as I have shown by the diminution of dividends.

I have no doubt that if Beitkul is made a port, and if the upper country is thoroughly opened up by a great extent of very cheap communication, that the main line will, in a very few years, have an immense traffic on it, and for this we must be prepared.

But it is a matter of very little importance that railways can neither carry at the rates nor the quantities that India requires, when we have a means in our reach, procurable at 1-5th or 1-10th of the cost of railways, that will in every respect most fully answer the purposes of the country as a communication; and especially when it will not only do so, but will at the same time enable us to attain to an object of still greater importance even than communications, viz. both as far as possible securing the produce, and greatly diminishing the cost of production.

One of the principles on which I consider that the examination of the present question should be conducted is this, that in India, at present, communications are not the works of the first importance, but that works which will, as far as possible, secure the population from famine and scarcity, and afford the cheapest production, are the first, and that communications are certainly second to this. What satisfaction would there be in a railway passing through a population dying of famine, and in abject poverty, because their means of raising produce was so imperfect that almost the whole population was employed in raising food, as is the case at this moment in the Southern Mahratta country, as well as in almost all India. I am aware that railways were proposed as a means of preventing famines, and I allow that they would, in a manner, mitigate them; but I urge, first, that they would do it in a very small degree, because in famines in India the great mass of those who perish, do not die for want of food, but for want of money to buy it with; second, that when a population are suffering from famine, no communication can possibly rescue them; 10,000,000 of people would require 5,000 tons of food a day, costing, at such a time, probably seven lacs of rupees a day. What was the state of Ireland with its sea-board, providing the cheapest possible conveyance of food to within a moderate distance of every part of the interior? was famine prevented? how many hundreds of thousand perished even on the very coasts? and if the monsoon failed hundreds of thousands would perish in the Southern Mahratta country in spite of a railway

railway that cost three millions. Further, the expense of carriage, as I have shown, is so great by a railway, that if the grain should be brought 300 or 400 miles, which it of course would, the cost of carriage alone would be at 8 pie a mile, 12 to 16 rupees a ton, or 60,000 to 80,000 rupees a day for 5,000 tons; and could a railway bring the quantity, and could all this money be found, still this would only bring it to the line of the rails, it would not distribute it throughout the tract, which would therefore remain to be done by other means. So utterly ineffective would a line of railway be in every respect. There is one more point to be considered with respect to this proposed line of railway. When it arrives at the top of the Western Ghauts, is it proposed to make a locomotive line down them, like the Bhore Ghaut? Though it would not be so expensive, yet it would certainly be an enormous addition to the cost of the line, and would make the average cost very high.

What is first required is to make the country, as far as its circumstances admit of, independent of other countries for food, and then, to provide it with communications which shall both carry extremely cheaply, and also in some good measure pervade the tract. A single line of communication through a country is not what is wanted, it is a net-work of them, a mile of cheap transit to every five or ten square miles of country.

I do not of course mean to say that we can absolutely secure the country from famine; if it pleases God to withhold rain for a certain time, all our works will be useless; but what I do say is, that beyond all comparison, our first work in India should be for the purpose of securing a supply of water to the land, and happily in doing this, we cannot but at the same time gain our second grand point, the pervading the country with a net-work of the cheapest possible lines of transit, capable also of carrying an almost unlimited quantity, and at ample speeds.

With respect to such works in this particular tract, I need not here go into detail, because I have already done so in the report I have forwarded on the Beitkul harbour.

I will only here state the leading points. The first is the remarkable fact that many hundreds of miles of the rivers here have so slight a fall that they are either now good navigation, or can be made so at a trifling cost. The Mootah Moolah, Beemah and Kistnah, for instance, form one line, with a fall of 900 feet in 600 miles, to near Kurnool, being a fall of only 1½ foot per mile. Wherever the fall is so slight as this, one of two things is the case: either the fall is equally distributed, and then the navigation is already good, or there are parts where the fall is rapid, and then these can be corrected by annicuts and locks, at a moderate expense, and the principal part of the river must have a still less fall than that average. For keeping up the navigation during the dry season on such small rivers as this, it can be done at a very moderate cost by storing water in tanks. Thus there can be no doubt that many hundred miles, probably not less than 2,000, of good river navigation can be obtained there for probably 1,000 or 2,000 rupees a mile, or 1–100th of the cost of a railway. The second point is, that though a great part of this tract is liable to very scanty supplies of rain (there was a partial famine there only four years ago, and one threatens now) yet the rivers are as well supplied as any in India, because the sources of the Kistnah, for a length of 400 miles, are in the Western Ghauts, and the whole country is thus traversed at every few miles by streams which I believe have never been known to fail. We have therefore as sure grounds as we could have for hoping that an effective system of canals for irrigation and navigation led from these rivers would be completely effective, and would really in every way fully answer the purpose for that tract, both securing cheap production and providing every talook with very cheap transit. One grand line in the southern borders of this tract, viz., from the sources of the Toombuddra, past Bellary and Kurnool, and thence by Cuddapah and Nellore to Madras, has now been examined throughout, and it has been ascertained that it is a perfectly practicable line from the very summit of the Western Ghauts, for a line of river and canal navigation. This line would unite with the Beemah and Kistnah line near Kurnool.

For the connexion with Beitkul, I have ascertained that the Kala Nuddee is capable of being made effective to about 40 miles from the coast, and from the information I have received I have no doubt that a canal could be brought along the high country opposite to that point. I would then connect the two by a series of inclined planes, which might be done at a practicable expense.

Now surely it is a question whether, under these circumstances it is best to spend three millions on 400 miles of railway here or on irrigating probably at least two millions of acres, yielding thereby an additional produce, at 15 rupees an acre only, of 300 lacs a year, and as far as possible providing for certain and cheap production, in addition to at least 3,000 miles of water communications to carry at ample speeds for all our purposes, and at one-fiftieth or one-tenth the cost of railway carriage. Or rather I should say, can there be the smallest room for question about it?

I must most earnestly urge a real consideration of these facts and arguments before so fatal a mistake is made as to enter upon this proposed work. It will not be the mere waste of three millions; it will be incomparably worse; it will in all probability seal up this beautiful tract of country for an unknown time from all the blessings of cheap production and cheap transit. For men once committed to these unhappy railways in India are under a sort of necessity to resist every attempt to give the country either of these two vital benefits.

I may just mention one most important point in this tract, viz., that it is perhaps of all India the best suited for European colonization. The situation of a great part of it so near the sea, and at the same time at an elevation of from 1,800 to 2,400 feet, makes it a delightful climate, and perfectly fit for European occupation. In this respect it is perhaps the most important tract in India, and worthy of the most particular attention from Indian statesmen.

I must again apologise for expressing myself so strongly and decidedly opposed to the views contained in these minutes; but I feel that it is a vital question to India, which requires the most explicit avowal of opinion by those who have had such opportunities as I have, however they may unhappily differ from those who, in office and everything else, are so much their superiors.

We are all agreed so far as that the grand object now is to bring to bear the energy, science and capital of the West upon the fertile soil and vast population of the East, as regards material things. The whole matter is resolved into the question, is the connecting link between these two to be iron or water? Which of these materials will most effectually accomplish our object?

Shall we make use of a material which we have on the spot in the utmost profusion, and which is procurable at an almost nominal cost, in comparison of its value; or shall we send to the other end of the world for one which is only procurable at a monstrous cost, and which, when brought, will not accomplish the real objects in view?

Supposing we bring a ton of iron into the interior for 150 rupees, we might for the same money apply to the land permanently at least 150,000 cubic yards of water a year, watering 30 acres, with an increase of produce of 450 rupees, and providing the cheapest transit besides. But the total cost of the iron, including the actual application of it to the work for which it is intended, is about 700 rupees a ton, viz., 110 tons of rails per mile costing 80,000 rupees, and for this 700,000 cubic yards of water may be brought to the land.

Spending our money on railways is, in fact, throwing away the greatest gift that God has bestowed upon India, and substituting for it that which can only be obtained at a cost entirely ruinous.

I am not surprised at these minutes. They only partake of the almost universal misapprehension under which not only Indian statesmen, from the late Governor General downwards, laboured, but even the mercantile community, who, it might be supposed, would have more readily perceived the necessity of cheap production and cheap transit.

There are happily strong indications that this misapprehension is now considerably weakened; and now that actual results of the railways can be referred to it seems to be a suitable time to make an effort to call attention to this great question, and to try to obtain for it a real investigation, of which there has not hitherto been a shadow. Everything, as in these minutes, has been taken for granted.

Among many such indications I may mention three which seem to me calculated to lead men to entertain the question whether they are right in thus taking for granted that railways are the remedy for India's material evils.

The first is, that when I had the honour of meeting the commercial community of Calcutta on the subject of the Rajmahal canal, rather to my surprise, I was not met by a single objection such as railway men usually make. I cannot

cannot but gather from this that the mercantile community generally have now great doubts about the railways answering the main purposes of the country.

Again, many of the witnesses before the late Colonization Committee strongly advocate irrigation and navigation. Mr. Balston, for instance, says, " A canal, even if it were to cost 50,000 *l.* a mile, would be much more profitable in India than a railway that cost 10,000 *l.*" He was a railway contractor.

Having thus called in commercial men, I trust I may be excused taking so great a liberty as to produce the testimony of a leading statesman also, viz., the Right Honourable the Secretary of State for India.

The following is a passage from a printed report of that nobleman's speech, at a meeting of the Manchester Cotton Supply Association, last year:

" It seemed to him one of the most practicable functions the association could perform to give information upon these points, and carefully avoiding being mixed up with Indian politics they should keep to the two great things, roads and irrigation. As to roads, he feared we were in danger of being misled by the precedent and example of England. It seemed to be thought that because costly lines of railway for high speed were suitable for this country (before a line was constructed we had a complete canal system, adequate to our heavy traffic), they were equally suitable for India. He believed and so did more competent judges, that that system of proceeding was a complete mistake. What was wanted in India was not costly lines for rapid travelling laid down in a few parts, but a comparative inexpensive though slow means of communication extending over the whole face of the country. In that matter we should follow the precedent of the United States rather than of England. * * * It (the Association) aims at no victory but the victory of English knowledge, and energy and intelligence over apathy, and ignorance and sloth. We do not ask of the State to conquer fresh territories for us, we simply ask it to make use of those it already possesses. We do not desire the political subjection and humiliation of the native population of India; we do desire to compensate so far as is in our power the people of that country for the loss which we have caused of their political freedom, by enabling them to share in the material prosperity of the race that has conquered theirs."

I cannot but think that these indications of a different view being taken of the railway question from the almost universal one four years ago, are calculated to have a great effect in causing many others to pause before they proceed further in that direction.

I might add this Government's very decided testimony about hydraulic works, in their Despatch of the 15th May 1858, where among many other things they say: " Further the Government question whether, considering that the returns from irrigation works are always considerable and often immense, &c." Again, " The Government express their strong, unanimous and earnest advocacy, that all irrigation works, which on a comprehensive view of the wants of the country, may be deemed necessary to develope its undoubtedly great resources, be commenced at once, boldly and on a large scale, be pressed forward throughout all times and under all circumstances, and be looked on and practically treated, as in fact they are, the most economical because the most profitable in which the Government could possibly engage. It is needless now again to bring forward the innumerable instances in which money has in this Presidency been most advantageously invested in irrigation works. The proceedings of Government have only been too desultory and too vacillating, and it is confidently asserted that India could be placed in a position to pay all her own expenses and gradually discharge the debt, far more readily and speedily by a judicious expenditure than by any scheme of retrenchment and reduction." For the information of those who are unacquainted with this Presidency it is necessary for me to mention, that this was written just after a most searching discussion of the effects of these works of irrigation and navigation, in which everything conceivable was brought forward to prove that they produced no results; and this therefore is in fact the deliberate decision of this Government upon that controversy.

What I must insist upon is that this is not a light question. It lies at the very foundation; it is really the fundamental point in the whole question of the management of India. Everything without exception of course depends upon this one, the supply of funds. The denudation of India as respects European troops, which invited and gave the temporary success to the mutiny,

was solely owing to the want of funds, and to nothing else. And at this moment the most peremptory orders are received to put a stop to these things (which are absolutely essential to the well-being of India), for instance public works, education, &c., and so it must be till this only means of providing funds is resorted to.

Tanjore, the most lightly assessed district in Madras, where the land is all saleable at a high price, yields 55 lacs a year, solely because its irrigation and communications have been attended to from its coming into our possession, while all other districts in India yield only from 7 to 30 lacs; and Rajahmundry by the same means has been raised in a few years so as to yield 40 per cent. more revenue than it did before, with at the same time a complete relief to the inhabitants.

The revenue this year will be about ten lacs above the former average, and the works are far from finished. The increase already obtained, not nearly half of the ultimate increase, if obtained from all the other districts of India, would add thirteen millions sterling to the revenue, and the means used there are of universal application. These works will probably cost half a million sterling; the thirty millions guaranteed for the railways would have improved in the same way 60 districts, yielding even at the rate only of the increase this year in Rajahmundry, six millions sterling. Expended as they are being, there is now a certainty that they will add not much less than a million a year to the burthen of India.

The Madras Government alone has had decisive experience on this point, and their testimony is of the highest importance at this moment, and must have the greatest weight with that of Bombay.

Surely we have now had proof enough of the dreadful effects of this unhappy railway mistake. Take for instance the fruits that have been reaped from it in Bengal. Mr. Bourne, though sent out by the railway company, saw at once that water, not iron, was India's remedy. That to neglect its magnificent rivers, and send millions to England for iron, was a "complete mistake." He therefore proposed to put powerful steam trains on the rivers. This was referred to the late Governor General, and under the influence of that fatal ignorance of the fundamental principles of the science of transit which was so general, it was rejected by him. Instead of it, 150 lacs were spent on the Raneegunge railway. When the revolt came to try these two schemes, what was the result? Did the railway prevent the Cawnpore and numberless other massacres? did it reinforce our garrisons, pick up our hunted women and children on the banks of the rivers, &c.? The whole revolt went on just the same as if this 150 lacs had never been spent.

Now had a small part of this money been spent on a large flotilla of river steamers, and even a small portion of the remainder in improving the rivers, 2,000 miles of river might have been covered by these most powerful projections, garrisons might have been rescued or strengthened, the refugees might everywhere have been picked up, the Cawnpore and many other massacres could not have taken place, small detachments might have been landed in an unexpected moment, in the very heart of the enemies' haunts, quite fresh, and taken on board again at any moment; every steamer would have been a moveable and at the same time an impregnable fortress, and the whole character of the contest would have been totally altered. Millions of money, and how many lives of men, women and children, would have been saved.

After these terrible sufferings, from the most grievous neglect of incomparably the most powerful instrument in the hands of our Government, surely we may at least make this use of them, to consider the mistakes we have made and let it warn us to consider a little before we commence upon another great expenditure upon similar works.

Nothing can be more probable than that if this scheme is undertaken, when a similar sum of 150 lacs has been spent upon it, a famine may take place and hundreds of thousands perish, without the slightest relief from that expenditure, while the same sum spent on hydraulic works would probably entirely prevent a famine.

I would venture to suggest that committees composed of one engineer and one mercantile man should be appointed at each of the Presidencies to investigate this important point, at what cost such railways as these will be able to carry goods in India. I think it essential that a non-professional man, but a good

good man of business, should help in this inquiry. These three reports might then be remarked upon by the chief engineers of the railways, and the whole of the papers published. It seems to me that there are now tolerable data for examining this point, and that it is of very great importance that something like a definite conclusion should be arrived at about it, if possible. At present all these schemes seem to be decided upon an "if," of the value of which "if" there is no knowledge whatever. Of course the important items of depreciation and repairs must be estimated for in making this calculation.

There are in this paper many things repeated which I have said in former ones, but it is necessary to make the paper in a sense complete in itself, as it may come into the hands of those who have not seen the others.

To show the effect of irrigation and navigation, I append to this paper a statistical statement of the Rajahmundry district, showing its progress in revenue, exports, internal traffic, &c., since the commencement of the works there. Certainly no other district in India ever made such progress in the same time.

APPENDIX.

Commissioner's Office, Burdwan Division,
Hoogly, 14 April 1858.

No.

To the SECRETARY to the BOARD of REVENUE, Lower Provinces.

Sir

Fort William.

Revenue.

Report on the effects of the railway, or other means of conveyance.

IN reply to your letter of the 8th January last, No. 6, I beg to submit the following "remarks on the effect of the railway or other means of conveyance in the districts through which it passes," and I greatly regret that the utter absence of any legal power to call for such statistical information, as may be easily obtained in more civilised countries, renders me unable to submit a complete report.

Line of rail.

The railway, commencing from Howrah, runs first through five miles of that district, then through about 45 miles of Hoogly, and finally through 71 of Burdwan, altogether 121 miles to Raneegunge, close to which terminus are the great collieries of Bengal.

Decrease of coal-boats on the River Damoodah.

3. The number of coal-boats employed by the Bengal and other coal companies in 1844 was 2,252, which could be used only during the height of the rains, when the Damoodah river was full. That number has been now reduced (by about 30 per cent.) to 1,594, and the quantity of coal conveyed by their means from 23,36,582 to 16,22,363 maunds, or from 77,886 to 54,312 tons. But the railway alone in 1857 carried 90,754 tons; far more than the larger number of boats used to transport.

4. I have recently been informed that the very high price of provisions has led the boatmen to make an attempt to raise their demands for the conveyance of coals, which has hitherto been (3) three annas per maund; while the railway charge has been reduced from 3½ annas to 2 annas 10 pie per maund. This will of course yet further decrease the quantity of river-borne coal, unless the river freight charge be speedily and considerably reduced.

5. At Howrah, some rich chowdhries, each of whom could command several hundred carts, almost monopolised the Calcutta trade with the Upper Provinces, as to transport by land. The marginal statement shows what a remarkable effect the railway has had in diminishing the demands at Howrah for carts, reducing it in three years to less than one-third of what it was the year before the railway was opened.

Year.	Number of Carts.	Decrease.	Goods conveyed (Maunds).	Decrease.	Remarks.
1854 -	3,847	- -	76,943	—	—
1855 -	3,341	406	68,820	8,120	—
1856 -	2,725	716	54,500	14,320	—
1857 -	1,208	1,517	24,160	30,340	—

6. On the other hand, the number of carts starting from Burdwan, to which place merchandise is brought by rail from Calcutta, is greatly and daily increasing. During last month I had them counted for several nights, in one halting place only, and found the number to be from 163 to 185 each night. The Burdwan carters refuse to go down to Howrah for the goods, and at Raneegunge terminus no carts are to be had. Thus the strange practice of taking their goods off the railway at its centrical station, has, in many cases, been forced upon the merchants.

Salt.

7. It is remarkable that, during 1857, no less than 220,000 maunds about (70,000) tons of salt have been carried by rail from Howrah, and I regret that I cannot ascertain its destination, as it could hardly have been consumed in the chowkees on the line of rail, and I fancy it still goes up the country in boats.

8. [illegible]nd within easy reach of the line of rail, the goods traffic has increased greatly. I [illegible] close of the first year of the railway working (1855), I myself have seen 1,000 [illegible]e started from the Burdwan station in a day, whereas before the opening of the [illegible]ve 1,000 never left Burdwan in a month.

9. The

9. The annexed statement showing the goods and passenger traffic of five half-years is most remarkable. The second-class passengers were more numerous in the first half-year than they have ever been since, though the number is steadily increasing again; and the total carried on the fifth was a trifle less than that in the fourth half-year, but still nearly double of that quantity carried in the corresponding half of the preceding year. With those two exceptions, every entry shows a great and steady increase, and the shareholders must look with no small gratification to the fact that the outlay has not, in any one period, run ahead of a half of the incomings.

10. The enormous number of third-class passengers proves the wisdom of the resolve to reduce their rate of fare to the lowest possible limit. Our English Parliamentary rate is a penny a mile, while here a poor man is conveyed 121 miles for 45 pence, or nearly three miles for one penny.

11. I was surprised to hear a few weeks ago, from a most intelligent native gentleman, that the railway has done great harm to the poor people in its neighbourhood! On asking for an explanation of his meaning, I was told that the mania for travelling by railway has become such, that thousands of poor people deny themselves common necessaries, and pawn their petty jewels, or pots and pans, for the pleasure of being able to say that they, whose ancestors never knew any conveyance but their own legs or a bullock cart, and that within a circle of half a dozen miles round their homes, have visited Calcutta in a fire-ship, as the train is still very commonly called.

12. Again expressing my regret for the scantiness of my information, I must sum up my report thus:

13. There are parts of the three districts above named, such as the southern portion of Howrah, between the Hooghly and Roop Narayan rivers, and the north-eastern portions of Burdwan on the Hooghly, which are so well provided with water carriage, and so far from the rail; and other parts of all three districts in which the want of roads makes approach to the rail so difficult, that they have been little, if at all, affected by the rail.

14. There are parts of all three districts so favourably situated, close to, or easily accessible by road from the rail, that they have been greatly affected as to goods; but perhaps most of all as to third-class passengers' traffic.

15. The transport of goods by carts, and yet more of goods and of passengers by water, along the first 30 miles of rail (Howrah to Mugrah) is so very cheap, the trouble and expense of shifting goods from the rail to carts, and *vice versâ*, tells so seriously in short distances, and the natives are yet so incapable of appreciating our English idea, that "time is money," that the railway has not affected other means of conveyance hitherto, nor drawn goods traffic to itself so exclusively as it doubtless would have done but for the aforesaid previously existing cheap means of transit, and as it will no where those means do not exist; and when the Company may be prevailed upon, as I hope they soon will be, to adopt the same enlightened policy, with regard to their rates of carrying goods, as they have done with regard to the third-class passengers.

16. I have above stated that the low rates of conveyance by carts and boats have prevented so much use of the railway for goods traffic as might have been expected had those means been less cheap and accessible, or had the rail distances been greater and the charges for transit lower. It is also evident that on any short line, the trouble and expense of putting goods from a warehouse in Calcutta to the river side, of there unloading them, crossing them over the river, again moving them on cart or coolies to the Howrah goods station, forwarding them, say three miles by rail, and lastly conveying them four or five miles on a cart to their destination, will not be undertaken by any one who can load them on a cart at his own office-door, cross them on that cart over the ferry, and deliver them at the consignee without one change of conveyance, at less cost, and in not much more time, perhaps, indeed, in less time; for a cargo may be delayed 12 or 24 hours, or even more, at the railway station.

17. But another cause seriously affects the rail at present. Those merchants who might avail themselves of it to send their goods for 121 miles, *en route* to stations 500 or 900 miles distant, do so at present to an extent scarcely noticeable, I believe because at Ranneegunge it is next to impossible for them to procure carts. There has been during the last year a pressure on carriage for military purposes, which may now be disappearing; but the country around Ranneegunge yields nothing but the miserable cart called a *sugor* (a very small cart with wheels formed of a circular plank), and it is far better to engage carts in Calcutta for the whole journey, or even in Burdwan, as shown in para. 5, than to use the rail for a small portion of it, and then to fall into difficulty from a want of carts at Ranneegunge.

18. I feel confident that even the great past success of the railway will be eclipsed when it shall have been extended so far as to reach the great marts of the North Western Provinces and to absorb the vast traffic still carried on by carts along the grand trunk road, and by boats on the river, which it cannot yet be said to have touched.

19. I have from my youth up strenuously advocated road-making, and I think the importance of multiplying roads as feeders to the railway, and as promoting generally the political and moral advancement of the people, cannot be too much impressed on the Government and the community.

I have, &c.
(signed) *W. Elliot.*
Commissioner.

MEMORANDUM on Mr. *Elliot*'s Letter on the effect of the Railway or other means of Conveyance.

Para. 3. Coal traffic. The distance from Raneegunge by rail is 120 miles; by the Damoodah and Hooghly, 160.

The water charge of three annas per maund is equal to 6¼ pies (⅜*d.*) per ton per mile; that by rail was 3½ annas, or about 10 pies (1¼*d.*); the reduced rate, 2 annas 10 pies, is 8 pies (1*d.*) per ton; and Mr. Elliot states that the charge of 6¼ pies by water has become insufficient in consequence of the altered value of money of late. The quantity carried by water was 78,000 tons; it is now 54,000; by rail it is now 90,000 tons. The cost of carriage per ton for the whole distance was therefore 6 rupees a ton by rail, and is now 4¾ rupees, and by water about 5¾ rupees.

REMARKS.—1st. The water charge is increased by the short portion of the year that it is opened, by the increased distance, 40 miles, or one-third more than the railway, but doubtless most by the boats having to go down to the broad part of the Hooghly, which prevents their being loaded as they could be in smooth water, and causes great risk. This charge of 6¼ pies per ton per mile is enormously high for water carriage; in a thoroughly good water line it should certainly be under one pie, with such a length of carriage; that is, if the Damoodah were kept open nearly or quite the whole year, and connected with the Hooghly at Calcutta by a canal, making the line direct, the charge per ton of coal should certainly not exceed 10 annas, unless the present low value of money continues, when it might be one rupee. Taking the present quantity at 1,44,000 tons, the community are put to a needless expense of 5½ lacs of rupees per annum, and the consumption of coal will of course continue to increase; this is the difference between 4¾ rupees and 10 annas. It is certain that a very moderate expenditure, perhaps 2,000 rupees a mile on the water line, or 2½ lacs, would make it a good navigation direct to Calcutta, just $\frac{1}{60}$th part of the cost of the railway. In Rajahmundry the cost of carriage per mile in the canals is about one pie for short distances.

2. There cannot be a greater mistake than thus to expend an enormous sum in improving land transit, by which, after all, the cost of carriage must be ruinous while the water carriage is left in such a state from want of a mere trifle of expenditure, and when by no other means can the great traffic be carried cheaply.

Para. 5. The road traffic is so insignificant, that it is matter of little consequence how those goods are carried. It was under 3,000 tons a year, and is now under 1,000.

Para. 7. The statement of salt, 70,000 tons, does not seem to agree with the total quantity of goods mentioned in the Table as being only 49,000 tons for the same year. This requires explanation.

Para. 8. Increase of Goods Traffic. The whole of it is a small amount; the total number of tons is stated at 49,000 tons; but it is not stated what is the average distance it is carried, probably not 50 miles, in which case the average quantity carried along the whole length of rail does not exceed 20,000 tons, quite an insignificant quantity in such a locality, about $\frac{1}{100}$th part of the river traffic, and one-seventh of the traffic last year on one of the Rajahmundry canals, which only connects towns of 15,000 to 17,000 inhabitants.

Para. 9. Passenger Traffic. The total number of passengers for the year is above a million. The sum paid by each second class passenger is one rupee three annas, and by each of the third class half a rupee; showing that the average distance travelled is about 30 miles, or one-fourth of the whole length; so that the average number of passengers on the whole line is one-fourth of the total number, or 250,000 per annum, equal to 800 a day. To judge of this we must, as in other points, compare it with known passenger traffic by other means. On the southern road out of Madras, at 11 miles from the fort, the numbers were found to be 3,000 a day; on a high road in Tanjore, far from a city, 1,200 men; on a bridge, four miles from Trichinopoly, a city of 100,000 inhabitants, 20,000 a day; by the transit boat on the Rajahmundry canal to

Coonaudo, 100 per day, a canal leading to a town of 17,000 inhabitants. The number corresponding to this for Calcutta, allowing 300,000 inhabitants, should be 3,500 a day. It is evident from these that the railway only receives a small portion of the travellers, just as it is in the Madras Railway, which does not convey 5% of the travellers on that line. Thus it is certain that even as respects passengers, these expensive works do not suit the country. The charge of 3 pice, or 4 annas, or 3d., for the lowest class, completely shuts out three of those who require conveyance. On the Rajahmundry canals the charge is one pie, and the manager states that even that charge is sufficient to keep away by far the greater part of the travellers. These boats are now yielding 25 per cent., and it is under consideration to reduce the rates to three-fourth pie as likely to be more profitable. The profits were increased much since they were reduced from two to one pie. Were these boats worked with steam instead of men, they would afford to carry very well at half a pie per mile; and no higher rate than that would bring the principal part of the travellers.

Of course, just at the entrance of a large and wealthy city like Calcutta, there is a large number who can afford to go backwards and forwards frequently a very few miles, but the numbers diminish rapidly as the distance increases. Probably, the average number on this railway being 800 per day, the numbers at each end are something like 1,400 at the Calcutta end, and 200 at the other.

But the most important point to be observed on this subject is, that the total receipts are 7½ lacs for a half year, out of which the first class passengers pay 25,000, or $\frac{1}{30}$th part; showing that those for whom this enormous expense is incurred, in order to provide them with high speed, are so far from paying their share of the expenses, that the profits from them, if any, are hardly perceptible. There cannot possibly be any mistake in concluding from this, that high speed is not what the country wants; the fact is, that the poor are paying for the rapid conveyance of a very few rich: they also travel quick themselves, but most assuredly they would much rather travel slower and pay less, but they have no option.

What the average passenger traffic will be as the railway extends further we have no data to judge, excepting that we know that in England, with all its wealth, there are few travellers of long distances, the average for all England being only 13 miles for each traveller.

Probably, as the railway extends, it will carry at these prices few besides that class who, in this Return, appear as first and second class passengers, excepting for a few miles out of the great cities. The proportion of people who can afford to pay eight rupees for a journey of 500 miles will be very small.

Para. 10. The charge of three-eighth of a penny here is far higher than one in England; even near Calcutta the proportional value of money is probably four to one, and in the interior it is at least six to one, compared with England. The price corresponding to that in England should not be more than three-quarters pie, merely allowing for difference in value of money; but the proportion of people at all well off in India is far less than in England.

Para. 13. The greater part of the country will be totally unaffected by the railway. It is the greatest delusion to call making a single line of railway through a vast breadth of country "opening the country." Not a fiftieth part of the country is benefited by it. To open the country there must be a close network of communications. Tanjore with its 1,000 miles of just practicable roads on an area of 3,000 square miles, is incomparably more benefited than Burdwan with its 71 miles of grand railway, and the Deltas of the Godavery and Kistnah, with their 2,000 miles of water communication at half to one pie per head or per ton a mile, are really opened up. The southern part of Burdwan, and the other districts with their wretchedly imperfect neglected water lines are immensely better off than the northern part with its one line of rail—and the cost of one or two miles of railway expended in improving the water lines would have had 100 times more effect than the whole line of railway. A comparatively most trifling sum would have given a first class steam boat communication at 15 or 20 miles an hour to Ranegunge, and at rates both for goods and passengers one-fourth of those paid on the railway, and ten times the number of people would have made use of it. The vast

natural advantages of this country are thus thrown away, because in England they had not what we have. The 150 lacs that have been spent on one single line of 120 miles worked at 10 pice a ton, and three pice a head would have completely pervaded almost all Bengal with a network of first-class water-carriage to be worked at 15 miles an hour or more if wanted, and at from half to one pie per ton and per head. Probably 5,000 miles of such communication would have been obtained, besides that in doing it, an immense area would have been secured as far as possible from both drought and flood.

It is indeed most grievous to see so monstrous a perversion of means, entirely through a want of consideration of the circumstances of the country. If we saw the Egyptians busily employed in carrying the earth from the Delta to make land on the sands of the desert, because they had heard that in some barren country the poor people were compelled to fetch earth from a distance, we should clearly comprehend their mistake, bu this is exactly what we are doing. People suppose that because they have spent a great deal of money, they have necessarily accomplished a great object, but the amount of money expended may be simply the measure of the magnitude of the mistake they have made.

It is certainly no exaggeration to say that 5,000 miles of water communication carrying at rates that the poorest travellers, and the poorest goods could bear, would have conferred 1,000 times more benefit on the country than 120 miles of railway, carrying at prices only a hair's breadth below the old rates. For instance, 2 As. 10 h. for coals against 3 As. by the boats. Even were the whole traffic transferred to the railway it would be no proof of great benefit; if the diminution of charge is insignificant, the benefits are insignificant. With respect to coals also, the railway has after all to discharge them into boats to be conveyed to the other side of the Hooghly, and the various points where they are wanted.

Para. 15. The natives are at least as capable of appreciating "our English idea that 'time is money' as we are;" but they are too quick to think it is, when it is not. The Manchester people send $\frac{11}{12}$ths of their valuable manufactured goods at two miles an hour to Liverpool, by the canal with a railway running close to it, because they know that even in such goods 15 hours of time is not money; and the natives know well that a week in the conveyance of grain worth 3 lb. a ton, is not money, at least it is only 1 A. or one-eighth pie per ton per mile if it is carried 100 miles, allowing interest at 10 per cent., so that a difference of one pie per mile in cost of carriage, would be eight times the loss in interest if a week of time were saved. The Americans are in this respect on a par with the Indians.* While the Hudson and Lake Erie canal is closed by frost for five months together, 10,000 tons a month are carried by the railway, and as soon as the canal is opened again 300,000 tons a month are conveyed along it, so that there it is thought that five months of time is not money, for $\frac{29}{30}$ths of the traffic is stopped in the winter, although it is at that time that all the common roads leading to the railway are in the finest working order.

With respect to the enlightened policy "of carrying cheap," the question is at how low rate the railways can carry. It is most certain that the bare expense of carrying by rail, where high speed trains run, is eight or 10 times that by good water lines.*

Para. 16. Almost all the causes mentioned in this para. accounting for the small traffic by the railway, which would be greatly increased, if they were removed, are the irremediable objections to such a mode of conveyance inherent in the country. If goods could not be carried cheaper by water even with human power, than by land with steam power; if there were no water carriage; if Calcutta and Howrah and all the great towns and cities were not at the water's edge; if the nature of the country did not offer the greatest facilities for improving and extending water carriage; if the same circumstances did not offer essential obstacles to railway, (as for instance, neither goods nor passengers being able to enter Calcutta at all by this railway, &c. &c.,) if all these "ifs" were away, it

* On the Madras line, the Consulting Engineer showed that there had been positive loss on the carriage of goods at 10 pie a ton, on the last half year of 1857.

it might have been wise, under such unhappy circumstances, to spend 1½ lacs on a mile of railway, but these "ifs" are unrealities and impossibilities, and the question with wise men always is, not "what should we do, if, &c." but *rebus sic stantibus*, what is best to be done?

Para. 18. "When the railway absorbs the vast traffic carried on by carts along the grand trunk road and by boats on the river." With respect to the former, it is stated, para. 6, to be from 165 to 185 carts per night, supposing 100 of them loaded with half a ton each, it would give 18,000 tons a year, a small item for a railway. The water traffic is carried at about one-fourth of the charge on the railway, how much of that will be transferred, anybody can judge, even supposing the unaccountable neglect of water carriage is continued, but it cannot be imagined that under the new regime at least the immeasurable natural advantages of the country will continue to be entirely thrown away, as they have been under the old one. A mere trifle expended on even the present water lines, will reduce the cost of carriage to half of what it now is, and a thorough system of water communications would reduce it to one-fourth of what it now is, or to $\frac{1}{8}$th of the railway charge.

Para. 19. "Common roads." All that is here said in the comparison of water and rail, is also in a measure true of water and road. The natural circumstances which are all in favour of water are against the roads. In Rajahmundry and Guntoor, if 80 lacs are ultimately spent, and 2,000 miles of navigable canal are obtained, the canals will have cost only 4,000 rupees a mile, supposing that the whole were charged to navigation, but at least three-fourths should be charged to irrigation, leaving only 1,000 rupees a mile of communication at half or one pie a ton a mile. Whether in a similar country it is preferable to spend 1,20,000 rupees a mile on roads, to carry at two or three annas a ton, can easily be decided.

It is nothing less than a vital question to India, what kind of communications are suitable to it. If a first-class passenger could step into a steamer on the Calcutta side of the Hooghly and go direct to Raneegunge at 15 or 20 miles an hour, he would accomplish his journey at one-third the cost, far more comfortably and conveniently, and as quickly as by rail, while the capital expended in completing a first-class steam-boat communication would have been so ridiculously small compared with that which has been spent on the railway, that the shareholders might be receiving 50 or 100 per cent., and instead of 800 passengers a day, 8,000 would probably have had the benefit of conveyance. In no one single respect has even a first-class passenger an advantage in travelling by the rail, that he would not have in going by water, while all parties concerned, the travellers, and especially the poor ones, the producers, and consumers of goods, the shareholders, the Government, the whole community, would have had enormous advantages which the present line does not afford. What has been gained? the grand sight of a locomotive with its train of carriages. But was the object of this expenditure to produce something to look at? The object was to carry goods and passengers, 1st, cheaply, 2d, at a suitable speed, not to have something grand to look at. Where the latter is the object, let the money be expended accordingly. But don't let us leave Calcutta with the object of going to Delhi, and travel on without observing in what direction we are going till we arrive at Madras.

It makes no difference to either the merchant, or the tea-drinker, or the sugar grower, whether the sugar was carried in a grand procession, or in a poor looking canal boat, but it does concern them all whether it was carried cheaply or dearly.

And what is the difference to the poor, $\frac{99}{100}$ths of the community. Suppose that in Rajahmundry, instead of protecting a million of people from losing their lives and their property by floods or by drought, irrigating 12,00,000 acres, conveying fresh water and cheap transit, throughout the year to every village, at a cost of 50 lacs, suppose instead of this, 50 miles of railway had been made, conveying two or three first class passengers luxuriously, but leaving almost the whole population in every respect just where it was, liable to death by famine or flood, without communications, and in some places miles from drinking water in the hot weather. Would it have been a wise proceeding? What is applicable

to one district is equally appplicable to all India. How awful it would be if we were to see 100,000 people in Burdwan die of famine next year, with its grand railway passing through it. It might help to bring grain to a small portion of the district, but it could not make the people able to purchase it. In general, the people of India do not die of famine for want of grain, but for want of money to purchase it. How poor a compensation it would be that the dying people saw daily a grand sight in the railway train, and knew that half a dozen gentlemen were travelling at a high speed. In Madras the number of first class passengers on the first 80 miles out of the capital is three a day, and on this line it is on an average 15 a day on the first 120 miles out of such a city as Calcutta.

With respect to the profits to the shareholders, the present statement does not show what they are. The balance, after deducting the stated expenses, is 7,000 rupees a mile, or 6 per cent. on 1¼ lac. But nothing is allowed for the two great items of repairs and depreciation. All the works being comparatively new, the present cost of the former is of course trifling, and nothing is allowed for the latter. I suppose these two items would considerably reduce the apparent profit.* As the railway extends, the traffic on the present part will of course increase, but it by no means follows that the average of the whole will be greater than the average of the first 120 miles out of Calcutta, for the number of passengers going to and returning from the capital a few miles is enormous, compared with what it will be at a distance from any great city.

But we have now abundant data for this conclusion, that the returns, whether direct to the shareholders, or indirect to the community, will be utterly insignificant from a lac of rupees expended on a mile of railway, compared with that from the same sum expended on 25 miles of irrigating and navigable canal. And it is equally certain that the amount of these returns direct and indirect is the true measure of the value of any works for the material improvement of the country. "But why not do both?" Surely reason requires that we should rather ask, "why should we do both?" If we know how to spend any amount of money, so as to yield directly and indirectly 200 per cent., "why should we" waste any part of it on schemes which would not yield 20.

If a merchant discover a way of employing his capital so as to return 20 per cent. does he say, "why should I not" employ part of it in another scheme which he knows will only yield 2 per cent.

2dly. But the case of the railways is far worse than this, because it keeps all parties under the delusion that they are "opening India," and this prevents their doing anything else. But for this unhappy delusion, something would certainly have been done during the last 10 years towards "opening India." For instance, most assuredly we should have had large steam flotillas on the rivers, which would have prevented $\frac{99}{100}$ths of the horrors and consequences of the late revolt.

Undoubtedly so far as the material welfare of India is concerned, no question can compare with this in importance, what is to be done in future? will the home authorities continue to guarantee interest on any number of millions to be employed in making railways, while they continue to refuse the same to capital employed in navigation and irrigation?

The question is now before the home authorities in several ways, and they have so far given way as to grant an annual sum for the navigation of the Indus, which was refused by them on the decision of the late Governor General 10 years ago. The question indeed is now becoming so urgent that it will no longer be possible to defer a decision upon it.

A new case has now arisen. Which should be done; should a million be expended on a hundred miles of railway in the direction of Midnapoor, or should the same sum be expended on a canal from Calcutta by Midnapore to Cuttack and the Chilka, with the irrigation of 2¼ millions of acres lying between that line and the sea; rescuing the magnificent Deltas of the Mahanuddee, Braminy, &c., with their two millions of inhabitants from their present shameful state of exposure to drought and flood, and giving them 2,500 miles of water transit?

Upon

* On the whole of the Railways in the State of Massachusetts in America, the repairs of roadway alone is in a series of years 2¼ per cent., to which must be added that of keeping up the rolling stock.

Upon the Delta of the Godavery 30 lacs have been expended, the revenue this year is about 10 lacs above the average of years before the works, and more than 60 lacs of excess of revenue have been received since the works were begun, or 30 more than the whole sum expended; and only about one-fifth of the land watered yet pays any water rate, and the benefits to the people are of the value of a far larger sum. Compare this with the results of the railways. What is the next excess of actual receipts over expenditure in their case? While 1½ millions have been expended on the part of the Calcutta line finished have three millions been received? The statement shows a total excess of receipts over current expenditure of 16 lacs up to the end of 1857, or $\frac{1}{20}$th part of that sum, and certainly the proportion of benefits to the community are in a still smaller proportion. On the Madras line the results are far worse, and on the Bombay certainly not better than in this. And in all these cases, it is the first piece out of a capital city on which all the traffic of various main lines of country is concentrated. What will be the result in some of the distant and thinly populated parts of the country? Most certainly they won't pay the expenses of stations.

It is surely high time fairly to consider this vital question. It cannot possibly be deferred much longer.

Goods		2 „
Coals		3½ „
Number of places for receiving and discharging	20	Every point.
Terminus	One on the Howrah side	Every point on the Hooghly, the Canals, &c.

The estimated cost of construction and of working the water-line is taken from the known cost of canals in similar situations, and the estimate of numbers of passengers and tons, is made from the reduction of charge. The cost of the Banka Canal was 1,500 rupees per mile; the sum here allowed is 10,000 rupees. The tons of goods passing down the Rajahmundry canal to a town of 17,000 inhabitants is 1,50,000, and it increased by 60,000 tons last year; the quantity here estimated to a city of 6,00,000 inhabtants is only 200,000 tons.

1856-57	268,000	- -	4 8	236,000	- -	32,000	- -	- -	10,000		75,000
1857-58	2,750,000	- (n) -	4 7	- -	- -	- -	- -	- -	- -	- -	51,000
									First Five Months of 1858-59		-

(a) Some trifling repairs began this year.

(b) The great works began this year.

(c) These sums show the amount of bullion paid out of the treasury within the district on account of—1st. Government establishments; 2d. Public works; 3d. Private drafts granted for money paid into the treasury at Madras.

(d) The balance of bullion sent out of the district.

(e) The import of food is now insignificant.

(f) The imports, exclusive of grain, were about 10,000 *l.* a year; they are now about 60,000 *l.*, showing that as the district has more to sell, it buys foreign articles more extensively.

(h) The cloth trade has declined through the competition of England, and is not much affected by the state of the district.

(i) The exports, excepting cloth, are almost exclusively agricultural produce of the district; the increase was last year 244,000 *l.* above the former average of 36,000 *l.*, or nearly eight fold. It is a *bonâ fide* increase of income to that amount, and 160,000 *l.* more than the increase of revenue paid to government. This is beside exports by land.

(k) The sums from this date are those expended on new works only; they amount to 352,000 *l.*, which includes all new works in the upper talooks as well as the Delta, and also in half of Masulipatam.

(l) This is the number of boats. The average tonnage of the boats is probably more than doubled, and there were besides 2,230 rafts of timber and bamboos; estimated tons carried, 150,000, in 1856-57.

(m) This canal was closed for three months.

(n) The increase of revenue in Rajahmundry alone has been 80,000 *l.*, and probably more than 10,000 *l.* in Masulipatam, about 40 per cent. upon the old revenue, and 25 per cent. upon the outlay. But by far the greater portion of the lands watered have yet paid no water rate, and only two rupees an acre for one crop where it is levied. At the same rate, fully 100,000 *l.* more revenue would be paid if the rate was lowered on all the lands. And the water carriage is all free, about 1,000 miles of connected canal and river.

of Irrigation and Navigation, to 1857–58, taken from the Returns furnished by the Collector and Civil Engineer.

	Increase or	75	203,000	
	per Cent.		260	

That is, in similar unfavoura[illegible]asons, before and after the works, the revenue now is 37½ per cent. [illegible]er, and the exports 260 per cent. greater than in the former period.

Comparison of the Years 1841–42 and 1855–56.

Years.	Price of Rice per Ton.	Revenue.	Exports of Produce.	Collector's Remarks on the Seasons.
	£. s. d.	£.	£.	
1841–42	3 3 -	210,000	29,000	Seasonable weather. Abundant crops.
1855–56	4 12 -	279,000	170,000	Rains moderate; singular failure of freshes in the Godavery.
	Increase or	49,000	141,000	
	per Cent.	23	490	

That is, in similar good seasons (when such works are least required). The revenue lately was 23 per cent. higher, and the exports 490 per cent. higher than before the works.

Comparison of the Years 1841–42 and 1857–58.

Years.	Price of Rice per Ton.	Revenue.	Exports of Produce.	Collector's Remarks on the Seasons.
	£. s. d.	£.	£.	
1841–42	3 3 -	210,000	29,000	Seasonable weather. Abundant crops, but large Imports of grain from Arracan.
1857–58	4 7 -	275,000	280,000	
	Increase or	65,000	251,000	Scanty rains.
	per Cent.	32	870	

That is, in a year of scanty rain; the revenue is now 32 per cent. higher, and the exports of produce 870 fold greater than in an abundant season before the works.

LETTER from Colonel *A. Cotton*, Commandant of Engineers, to *T. Pycroft*, Esq. Chief Secretary to Government, dated Jaulna, 8 December 1858.

Sir,

I HAVE the honour to transmit an addition to my memorandum on the proposed Southern Mahratta Railway, and to request that the former part may not be transmitted anywhere without this.

Addition to a Memorandum on the proposed Hyderabad and Sedshegur Railway, by Colonel *A. Cotton*.

At the half-yearly general meeting of the East India Railway (Calcutta) Company of the 28th October 1858, the Chairman, Mr. Crawford, stated that he calculated the cost of the 120 miles from Calcutta to Runugunj was about 1,200,000*l.*, or 120 lacs, and that the net revenue for the half year was at the rate of 7½ per cent. per annum. This, as in all the other statements of this sort, omits the two great items of railway expenses, depreciation and repairs, the actual expenditure on the latter being, as before stated, of course, insignificant while everything is new. This 7½ would give a sum of 90,000*l.*, or nine lacs, as the annual profit on the 120 lacs. The Chairman also stated that they had determined to build steamboats to carry their railway material by the river. A shareholder inquired what the cost of the steamboats would be; to which the Chairman replied, "that 80,000*l.* (eight lacs,) would cover the whole expense, and they hoped to save that sum in the first year." (Overland Mail.)

It seems to me impossible that no stronger testimony to the principles I insist upon as to communications in India, could be afforded than this striking fact affords. This is not the "theory" of an advocate for water carriage, but the sober and sure judgment of the head of the principal railway undertaking in India. It is his deliberate judgment, openly declared in the presence of a large assembly of railway shareholders, that while, after several years from the commencement of the expenditure, on by far the most important line of railway in India, the first 120 miles of the line of greatest traffic, the north-west approach to the capital of all India, the profit is 7½ per cent., he expects, that in the first year, the profit on capital expended on river navigation will be 100 per cent. If there is one person above all others who would be liable to a bias in his judgment against the views I have taken on this great question of suitable communications for India, it would certainly be the Chairman of the principal Railway Company of India, and it is therefore with peculiar satisfaction that I am thus enabled to add his testimony to those of the Secretary of State for India, the Madras Government, and Mr. Balston, a railway contractor, as entirely concurring with me, that capital would be incomparably better expended in working even our present unimproved natural waterways than in making land communications at a cost of 10,000*l.* a mile.

If the Chairman's judgment in this case is correct, the following would be the returns upon the East India Railway Company's expenditure when the steamers are at work:

CAPITAL.

120 miles of Railway - - - - - -	£.1,200,000
Steamers - - - - - - -	80,000
TOTAL - -	£. 1,280,000

PROFITS.

7½ per cent. on 1,200,000*l.* - - - -	£. 90,000
100 per cent. on 80,000*l.* - - - - -	80,000
TOTAL - - -	£. 170,000

The profits upon the combined expenditure would thus be more than 13 per cent. of which seven would be obtained from 1,200,000*l.* spent on the railway, and six from the 80,000*l.* spent on river navigation. I have not the least doubt that this is substantially a true estimate of the comparative effects of capital spent on the two different kinds of transit, water and land, though the cost of the

the railway is probably considerably under-estimated, and the profits certainly much over estimated, inasmuch as no allowance is made for depreciation and only a trifle for repairs.

If the Company thus employ only a small portion of their capital on water communications, I have no doubt that the profits upon the whole will be very fair.

Thus we see that now at length after so many years, and after so many millions have been wasted, the leaders of the railway system in India have come to the very conclusion that Mr. Bourne arrived at 10 years ago, immediately on his seeing the actual state of things in the country.

But does it not appear wonderful that neither the Chairman himself should be startled at his own figures, nor any one of the shareholders present; that they should not put these two things together, and say, "But if we can only get 7½ per cent. for our capital expended on railways, after losing the interest for several years, even on by far the most important piece of communication in India, while we can get 100 per cent. on capital invested in river navigation, the first year, what in the world are we doing, to spend our money on such comparatively unremunerative works? Nobody can oblige us to waste our capital in this way; we ought certainly, without further waste of time or money, to employ all our capital in future in such enormously profitable undertakings as water transit."

It seems to me highly probable that the end of this company will be similar to that of the Scinde Company who are preparing to navigate the Indus, and that thus these great railway companies will become in reality river navigation companies, for the heavy pressure of large profits on the capital so expended, will overcome all scruples about their being accused of being thus forced by their acts to acknowledge their opponents to have been right. If by a judicious expenditure of one lac on navigation for every 16 lacs spent on the railway they can double their profits upon their whole capital, no doubt they will follow up that plan.

I will only add, that surely it will be acknowledged by all that the amount of profits that can be obtained by capital expended on different public works, is the best and indeed only true test of the suitableness of those works to the state of the country. If working the rivers will yield 100 per cent. and working railways will only yield 7½ per cent. it is most certain that what the country wants is water carriage and not land carriage. If the head of the principal company of India is so satisfied that river navigation will yield returns 13 times as great as the most productive 120 miles of railway in India, I think we may safely conclude that such views are no longer "theories." If the facts which support them are so strong as entirely to overpower all the natural bias of the leading railway man against them and to lead him to make such an open and unqualified avowal of his adoption of those views even before a large meeting exclusively composed of railway men, and to act upon them to such an extent as to spend eight lacs of rupees upon operations totally different from and indeed directly antagonistic to those for which the company was ostensibly formed, I think the question may be considered as decided in favour of water carriage.

If in future this is to be called a "theory," let it, at all events, be called "Mr. Crawford's theory," "the theory of the Chairman of the Calcutta Railway."

Secretary, Public Works Department.

—No. 3.—

REPORTS on the HARBOUR of BEITKUL in Sedashighur Bay, by Colonel *A. T. Cotton*, Madras Engineers, and Lieutenant *A. D. Taylor*, I. N.

(No. 1932.)

From the Chief Engineer in the Department of Public Works, to the Secretary to the Marine Board, Madras.

Central Office of Public Works, Fort St. George,
18th October 1855.

Sir,

Marine. 9

2 Original Plans with 2 Copies.
2 Enclosures.

I HAVE the honour to forward herewith, copy of a letter from the Collector of Canara, transmitting a very able and interesting Report drawn up by Lieutenant Taylor of the I. N., upon the proposed establishment of a Harbour of Refuge in the Beitkul Cove, adjoining the port of Sedashighur on the western coast; and shall feel greatly obliged by your submitting the same for the early consideration and report of the Marine Board, for the information of Government. It is to be apprehended that if the Government, guided by the opinion of your Board, should direct the prosecution of the project, and the investigation of the Civil Engineer into the feasibility of the proposed canal to connect the harbour with the port on which the convenience of the trade is obviously so greatly dependent, it cannot at this advanced period of the year, be practicable to have the estimate of the probable expense prepared in time for entry in the Budget for 1856-7; and no actual outlay can be expected to take place therefore, before the 1st May 1857. Of course the advisability of constructing the several works required for the completion of the Harbour of Refuge on that dangerous and exposed coast, will rest in a great measure, upon the expenditure at which the sea walls and possibly the wharves, can be established; but I am fully under the impression, that the information already afforded in Lieutenant Taylor's report, is sufficient to enable the Marine Board to arrive at a decisive opinion respecting the general merits of the project.

2. I also transmit the two original charts prepared by Lieutenant Taylor, and as I have already transferred them to the stone, as by a specimen now forwarded for record in your office you will observe (the originals being obligingly returned), I have to request that you will do me the favour to state, to what extent these charts will be of value to the navigator on the western coast. I shall be thankful to have this information as soon as convenient, in order to regulate the number of impressions; and for which purpose it is further desirable, that the relative value of the smaller and larger scale for general use, should be made known to me.

3. I will have the charts mounted on cloth for better preservation, and should wish to learn what number might be supplied with advantage to your office, to the Collector of Canara, and to the Government of Bombay; and also whether these should be supplied to the public gratuitously, or at a cost, to cover the expenses of preparation, of say one rupee each.

I have, &c.

(signed) *C. E. Faber*, Lieut. Col. of Engineers,
Chief Engineer in the D. P. Works.

(A true copy.)

(signed) H. Thomson,
Acting Secretary.

(No. 5.)

From *W. Fisher*, Esq., Acting Collector of Canara, to the Chief Engineer, Madras

Collector's Cutcherry, Mangalore,
Sir, 27th September 1855.

I HAVE the honour to forward for the information of Government, copy of a report (accompanied by two original plans) from Lieutenant Taylor, I. N., giving the result of his examination of Sedashighur Bay and Beitkul cove, and proposing that a shipping port and Harbour of Refuge be constructed behind Carvar Head.

2. Few spots on any coast would present equal facilities for the construction of a port commanding a valuable and extensive trade, and at the same time possessing so many qualities which admirably adapt it for a Harbour of Refuge, the great want on this long and dangerous line of coast.

3. Lieutenant Taylor's report illustrated by his plans, leaves me little to do but to recommend his project to the attention of Government. This I do most earnestly as regards the larger work proposed, but it seems to me imprudent to risk certain and great advantages for the sake of obtaining early possession of a small portion of them. This I think we should do, in erecting the proposed elbow to protect a communication with the river from the wash of the sea, whilst the construction of the main breakwater is in progress.

4. I should rather hope that Government in undertaking this great and useful work, would so employ the resources at their command, as to leave the Bombay trade and that of the western coast generally but a short period to wait for a complete and excellent refuge; when such a harbour has not only been a long admitted want, but one which Government has been anxious to supply.

5. I will only add, that Beitkul cove affords fresh water of good quality and in abundance; points of great importance in estimating the value of the locality.

I have, &c.,
(signed) *W. Fisher*,
Acting Collector.

(True copy.)
(signed) C. E. Faber, Lieut. Col. of Engineers.
Chief Engineer D. P. W.

(True copy.)
(signed) H. Thomson,
Acting Secretary.

From Lieutenant *A. D. Taylor*, Commanding H. C. Surveying Vessel "Pownah," to *W. Fisher* Esq., Collector of Canara.

Sir,

I HAVE the honour to forward for the information of the Madras Government, the accompanying plans and report upon the Sedashigur bay and Beitkul cove.

1. We have visited the cove frequently in the worst of weather, and found it remarkably smooth and well adapted for a harbour, and I would here state what, on mature consideration, I deem the best measures to render it a safe and convenient one.

2. For easy reference the plans are lettered; No. 1, is a chart of the entire Sedashigur bay and river mouth, and on it have been detailed all facts of importance to the navigator, in case Government should wish to have copies of it lithographed at Madras or Calcutta.

No. 2. Is on twice the scale of the other, and is intended to show the Beitkul cove, more distinctly with reference to my propositions for a harbour.

3. The blue curved lines are meant to represent the monsoon swell as it rolls into the bay; they show how the force of that ocean swell must be broken, by the high, rocky, west cape of Beitkul, called by navigators Carwar Head.

4. As the river entrance is unapproachable in the south west monsoon for cargo boats, it becomes necessary to consider how far this excellent river could be made available for carrying goods from Mallapore to Beitkul harbour (20 miles), so as to supersede land carriage altogether.

5. This, to my mind, could be effected by a canal from Sinkerry creek to the south extreme of the sandy bay (A. on the plan in red), a distance of about three statute miles; already there are creeks which fill at high-water over half this distance.

6. From A., where the canal could not *débouche* into the open sea of the south-west monsoon (nor even when the north-west winds occur in force), I would propose to throw out a breakwater in a westerly direction for about 1,200 yards to B., this would afford protection to boats from the canal, and would form the north-east side of the harbour.

7. A breakwater about 200 yards in length from the point C. would form the north-west opposition to the swell that rolls round the point.

8. Thus we should have a harbour of great extent, with 21 feet water at its entrance, at the very lowest spring tides (26 to 28 at high water) and with an area of five or six acres, having 19 and 20 feet sufficient for several large vessels; the bottom being soft mud they would suffer no injury from grounding. The general area of that part of the harbour, which has a depth of from 15 to 21 feet at low water, would be upwards of 20 acres, and the bottom nothing but soft mud.

9. On the western side of the bay, on the space within the red line G., a wharf on piles filled up at the back with earth and stones could be constructed to allow vessels to be alongside, with warehouses in the back ground.

10. But if the breakwater A. B. were built substantially enough for a wharf (its inner side on piles) it would make an excellent one, as the warehouses could then be on the sand A., where any amount of ground is available.

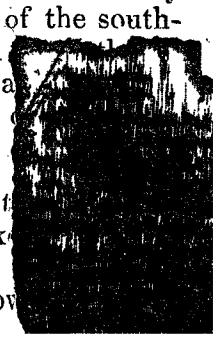
11. And alongside this wharf we should have a space of 300 to 400 yards in length, where six or eightvessels of 500 to 1,000 tons could load with facility, at all times of tide and in all weather.

12. Indeed, although I have marked the site for a wharf on the west side, A. B. claims superior attention, as the merchants' warehouses could be erected at once at A., and at no expense, compared to the scheme of construction on piles.

13. The natives say that Beitkul cove has not diminished in depth within their recollection, nor would there be in the above plan for a harbour, any forces brought into play that would tend to fill it up.

14. In the above proposal for rendering Beitkul a convenient harbour, the great consideration has been to maintain an uninterrupted line of water communication from Malapore to it; thus I hope to have shown it to be a perfectly practicable, and I think not very costly undertaking, when the advantages gained are considered.

15. The breakwater A. B. would be necessary to keep off the swell caused by the north-west winds which prevail from March to the setting in of the south-west monsoon, and which are annoying to the native craft, though by a large ship. But to ensure the permanency of such a work, a it of use as a wharf, it must be substantially built, and thus would time in erection.



16. I am well aware of the importance attached by Government t ment of a harbour of refuge on this coast (such a one as I have sk might have saved the unfortunate steam-frigate "Cleopatra," in and this has led me to the proposition of such extensive works, kno

anxiety of the merchants to settle here at once. I shall towards the conclusion of this report, state what minor works I would recommend so as to enable the trade to be developed earlier, and to be even carried on if need be, during the monsoon of next year.

17. It was my opinion at first that the bay marked S., in blue, would have formed the best harbour, as deep water with muddy bottom occurs there so close to the shore, and there is shelter for two vessels already in four fathoms at low water, were moorings laid down for them as represented by the two red circles, where the sea is remarkably smooth.

18. This plan would have rendered it necessary to build a breakwater at T. to protect the wharf on piles that would have to be erected at the rocks marked V.; and a road along the water's edge would be needed to Beitkul bay.

19. This would involve considerable expense, and the bay would be open to the north-west winds if other works of a like nature to those at the other bay were not constructed.

20. Nevertheless, this bay will be useful in connexion with Beitkul harbour as a point of departure and arrival of vessels there; they would pick up a pilot to conduct them into the harbour, and thence they would make sail to fetch out of the bay, having previously warped there by means of the mooring buoys I have marked with red circles, from the entrance of our harbour. This latter course is rendered unavoidable from the cove being so far to leeward, and though a disadvantage, is but a trifling one compared to those attendant upon some of our finest harbours: Calcutta, where there are many miles of intricate river navigation to be got over; Bombay, where the great difficulty in boisterous weather is to get a sufficient offing in one ebb tide, to enable a vessel to clear the coast, which there lies south from the lighthouse.

21. A vessel leaving the westernmost mooring in that little bay would fetch out clear of Deoghur Island, tack so as to pass the leeward of the Oyster Rocks and to windward of the Elephant Island, when she has a clear south-east by south course before her down the coast.

22. The ebb tide would assist her out, and yet another powerful influence is there in her favour, which is that during the south-west monsoon, when the current sets down the Malabar coast at the rate of two or three miles an hour, sometimes it runs into Sedashigur bay, as represented by the red arrows in No. 1 chart, and escapes along the Beitkul or Carwar Cliffs as therein shown; high-water being chosen as the starting time, there will be one fathom more water than shown in the chart.

23. As a proof of how the swell and force of the wind is broken by the intervention of the lofty Carwar Head, I may here state that my assistant, Lieutenant Sweny, went out to the bay S. on July 17th, as boisterous a day as we have had this monsoon, in a small canoe with no outrigger, when the wash of the sea was found to be not more than 1½ feet in the little sandy spot shown in plan No. 2, and a landing could have been easily effected.

24. Were a breakwater of 100 yards length constructed from the west point of that bay, mooring ground for five or six large vessels could be obtained, but this might be left as an ulterior measure, should the port become of sufficient importance to warrant such additional expense.

25. Sedashigur bay seems by nature designed for a harbour. We have high land (Goodhully) peak (1,800 feet above the sea) less than three miles to the eastward of Beitkul; Carwar Head is 640 feet high, and admirably adapted for the site of a lighthouse (marked L. in the plan) which would be needed. The Oyster Rocks, an excellent breakwater behind which vessels may anchor on their first arrival; these rocks or islands in their highest part are 160 feet above the sea, and being so far out, form excellent landmarks.

26. It were needless to say how great an advantage our proposed harbour would be to the native coasting vessels as a port of refuge in the gales that are periodically experienced along this coast.

27. The lighthouse need be of very little height, say 20 feet, and if of the same breadth at base, and kept white, would be a fine conspicuous object in the day time.

28. Vessels bound to Sedashigur should in the south-west monsoon endeavour to make the coast by Cape Ramos, for if they get to the southward of the port, much difficulty will be experienced in getting to the northward against the strong current which in this season of the year sets down the coast.

29. As every project for diminishing the cost of such an undertaking as I have proposed cannot but be acceptable to Government, I suggest that the old guns of the fort (totally useless any longer as such) some twenty in number, be used for the moorings recommended above, as guns are used in Bombay. Along the coasts of Concan and Canara there must be nearly three hundred which could be most advantageously employed in the manner mentioned, and as posts along the wharf.

30. Now to the measures which could be presently adopted to ensure the early opening of our port for vessels of 500 to 600 tons. The black circle denotes the position for them to anchor at, in 3¼ fathoms at low water spring; the bottom soft mud, where it will be found much smoother than Bombay harbour, and there is no tidal current to disturb them.

31. The erection of warehouses could be proceeded with by the fishing village, A., advantage being taken of the river to bring goods from Mallapore to the present ferry, opposite Sedashigur port, whence they could be taken on carts or bullocks to A.

32. By throwing out a breakwater, M. N. O. and clearing out the channel between it and the cliffs to gain a depth of 5 or 6 feet at high water, (in fact making the commencement of the breakwater A. B. as far as N. where it would be necessary to turn it to the south-west for a short distance to prevent the sea breaking into its mouth), boats could start with their cargoes from N. and carry them alongside the vessel, with much more safety and less trouble than is experienced at Bombay. The little bay, p. q. is where we always embarked during this monsoon in a canoe, to prosecute our investigations on the locality of the harbour, and is remarkably smooth.

33. This breakwater channel is all that is requisite to facilitate the conveyance of merchandise to ships in Beitkul until the completion of the harbour, when the more expeditious method of loading from a wharf will supersede it.

34. Referring to para 20, it seems to me, that if one of the small steamers of Bombay, which are idle during the south-west monsoon, were here employed to tow vessels out to Carwar Head, the saving of time and trouble would be great.

35. The entrance of Sedashigur river has this year moved a little more northward, and now is close to the large black rock marked K. on the chart, and, owing to scanty rains and to the Madhully stream having this year broken out to the southward of the rock, as shown by the blue tinted lines which represent its present limits, the bar has diminished in depth. At present the sea is too rough for us to examine it afresh, but I shall not fail to do so when practicable, and to show on the plan the amount of alteration.

36. It is my opinion that the construction of any works to bring the stream permanently into its former channel of 50 years ago, so strong in its monsoon fresh, would cost half as much as the proposed breakwaters in Beitkul cove, and there can be little doubt that the native vessels would prefer Beitkul, were the water communication with it and the river kept open by means of the canal.

37. During the months of November, December, January, and February, when the land winds prevail, the sea is calm, and the traffic likely to be greatest, the river mouth can be taken advantage of, in carrying goods to and from Beitkul.

38. In conclusion, I have the honour to state, that I have already commenced the survey of this river towards Mallapore, but the late heavy rain has been a great

great drawback to the completion of this duty. I shall proceed to examine the Tuddree as you have requested. The means at my command are very limited at present, having only my tender with me; but I have requested the Commander in Chief of the Indian Navy, to send me the "Pownah" again as early as possible, and I have just learnt that she is being made ready, and will be here in a month.

I have, &c.

Sedashigur,
13 September 1855.

From Lieutenant *A. D. Taylor*, I. N., commanding H. C. S. Vessel "Pownah,"
to *Henry Forbes*, Esq., Acting Secretary to Government.

Sir,

In forwarding the following report on the harbours and rivers of Canara, called for by Government in Extract No. 1279, of Minutes of Consultation, dated 1st July 1857, I have the honour to state that, since the monsoon of 1855, I have, by order of the Commander in Chief of the Indian Navy, been engaged on the survey of the Canara and Malabar coasts, which duty, owing to my almost constant ill-health from March to November 1856, was only completed in April last.

2. I need not repeat my former report on Sedashigur Bay and the harbour of Beitkul; but I would mention that the plan for a harbour proposed by me was considered by Colonel Arthur Cotton to be of too limited a nature to meet the growing wants of the country. It was therefore proposed to take the whole bay between Coormagur Island and Carwar Head for a large harbour.

Sedashigur Harbour.

3. This was to be effected by a sea breakwater of loose stone, from Carwar Head towards the islands, about 1,000 yards long, with an opening 400 feet wide at a distance of 400 yards from the Head. Another breakwater from the point of Deoghur Island, and about 500 yards long, would protect the harbour against any swell from the north-west, whilst the Oyster Rocks would nullify the effect of any westerly swell. There cannot be a doubt that this more comprehensive scheme would be of greater ultimate benefit. Beitkul Cove now offers shelter for small vessels, and the construction of the above works extending over several years, the harbour would get gradually better year by year as the produce from the interior increased.

The present wants of Bombay Harbour.

4. But I am reminded that harbours can be too large as well as too small by the late discussion regarding that of Bombay, where, in November 1854, so many vessels were wrecked by a gale from the eastward. A similar warning occurred in 1837 that was neglected, but now the attention of Government and the merchants is steadily directed to the grand object of giving more shelter to vessels whilst loading or unloading cargo. Wet docks were proposed by Government engineers, but such works are so liable to silt up, especially in the muddy harbour of Bombay, that it seems to me that scheme will never be adopted. Wharf walls (running parallel, I suppose, to the ebb and flow of tide) are proposed by a civil engineer, to cost the enormous sum of 89 ¾ lacs. Some modification of the latter

project will, I think, be accepted, but will doubtless be undertaken by a joint-stock company, and not by the Indian Government. Bombay Harbour is entirely open on its south side; the ocean swell from S. S. W. rolls almost unimpeded over the space in which the merchant shipping lie; to the S. S. E. there is an expanse of water eight miles in length; a gale blowing over this causes a heavy swell.

Advantages of Beitkul Harbour.

5. Now the main desideratum of a harbour of refuge on the west coast is that its south side should be a natural defence against the south-west swell of our rainy season gales and periodical hurricanes. Carwar Head is pre-eminently such. Our north-west winds from March to May are but trifles to a large ship, and when the wind in a cyclone has got round to north-west, the only point on which our bay is open, the centre of the revolving storm will have passed to the northward, nor is the storm-wave likely to recoil upon our works from the north-west.

6. I mention these things merely to point out that there is as much chance of our falling into error in forming a harbour of too great an extent as there is of our limiting one to too small an area. I have reconsidered the subject in all its bearings, and am now of opinion that my former views were too circumscribed, and that any works to be undertaken at Beitkul should be on a large scale.

Tuddree, a fine-season Harbour.

7. We have a harbour in Tuddree (as I shall presently explain) upon which three ghauts converge, and though making it a south-west monsoon port is out of the question, yet there needs very little to make it the centre of the export trade of North Canara temporarily, whilst the grander port and harbour of refuge of Beitkul is being prepared.

Objections to many small ports, on one coast.

8. There is this to be said with regard to the advisableness of establishing small ports in anticipation of the development of one great harbour, viz., where once a beginning has been made, when shall we cease to add improvement to improvement upon the little ports, and when cease to cherish a rising place. Take Madras itself as an instance in point. Had the fort been built abreast of the Armegom or Pulicat Shoals, we should not now be clamouring for works to nullify the effect of the surf, and to render landing easy, for at both those places we should have so fine a nucleus for a sea breakwater that three-fourths of the labour and expense now required to render Madras a safe port would have been saved, and the project would come within the easy means of either Government or a private company. Now that so much has been expended by merchants on warehouses and other buildings, and Madras is become a great commercial port, it is clear that a harbour some few miles distant will never answer, but that one will have to be made here at whatever cost.

9. With these preliminary remarks on the first essentials for a good refuge harbour I shall proceed to state what is needed at Sedashigur. The Marine Board, in their report upon my project for making Beitkul a harbour of refuge, objected to the light being placed on Carwar Head, their preference being given to the Oyster Rocks as the site. In a letter to the Collector of Canara, dated 26 November 1855, in continuation of my first report, I stated my reasons for selecting the Head as the place where the light should be. The Collector's reply was to the effect that the advantages of the proposed harbour had been so clearly pointed out by me, he thought nothing more need be said on the subject. At that time I was ordered by Sir Henry Leeke to continue the coast survey, and until the arrival of the Right Honourable the Governor on the western coast, I had been incapacitated by sickness from giving such attention to the subject as I could have wished.

Lighthouse of first class for Carwar Head, and not on the Oyster Rocks.

10. The following remarks are, for the most part, what I wrote in the letter above alluded to; as I can at this distance of time improve upon and add to them, I propose doing so.

Arguments in favour of taking Carwar Head, as the site for a Lighthouse.

11. In selecting Carwar Head as the site for a lighthouse, I took into consideration its commanding height above the sea. It is a known fact, which probably the captains of the P. and O. Company's steamers have noticed while passing along this coast, that during the south-west monsoon a vapoury salt spray, rising to a height of some 100 feet, veils the seaboard of Western India, rendering a recognition of the features of the low land no easy task. The Oyster Rocks,

Rocks, which I at first thought of as the place for a lighthouse, come, in a measure, under the influence of this mist; that is to say, the rocks which project from them on their southern and western sides cause the spray to rise high into the air; and I contend that a light of so little height as these islands would afford, will be less distinguishable at five miles and a half distance than the lofty Carwar light at eight miles; the greater height of the latter, 650 feet, placing it above the limits of this ocean mist.

12. The Oyster Rocks afford no landing-place during south-west gales; their margin is rock-bound, possessing no patch of sand on which a boat might be beached. Some, at no little expense and trouble, would connect the two high islands, which are about 50 yards apart, the interval filled by impassable rocks above and below water; this barrier must be some 30 feet broad and raised at least 10 feet above the water to give any shelter to leeward, but even then we may expect the ocean swell to roll round to the landing-place; the cost of such a barrier would be great.

Arguments against Oyster Rocks.

13. Fresh water is to be found on them during and after the rains, but the scouring of the jungle would not be conducive to health; the transit of supplies would be difficult, and in the event of injury to the lantern or house, no native artificer could be found to brave the passage by sea. It would not suffice that the communication with the main land should be confined only to intervals of fine weather; sickness or accidents to the people in charge, would render it imperative that a large boat should be always at hand.

14. These are some and the most weighty of my reasons, for giving the preference to Carwar Head as the site for a first-class light, whose brilliancy would enable it to be seen 30 miles off from a vessel's deck.

15. Our harbour is the nearest seaport to the great Dharwar cotton fields; that town itself is but 75 miles, as the crow flies, from Sedashigur; when in my former report I wrote of developing the trade during the ensuing year (1856), I was under the impression that the road to Malapore from the Dharwar district was finished. Mr. Brice, a merchant resident at the latter place, has since undeceived me, The Kyga Ghaut line is opened merely to a bridlepath, and the nullahs are unbridged; he pointed out the immense advantages a rail to Beitkul would ensure, in keeping the goods dry in transit, a point which he looks upon as an essential, as so much loss is now suffered from deterioration of goods by the rain; but, surely, provision against damp could be managed in the boats we would build expressly for the purpose; the rail would cost an enormous sum, and could not possibly compete with water carriage.

Beitkul is the nearest port to Dharwar cotton country.

16. The ordinary traffic roads are now nearly impassable during four and a half months of the year, June to middle of October, and with any increase to that traffic, such as we may expect on the opening of our port, the wretched state of these roads during the rains will be a serious drawback. There are no works commenced at Sedashigur that would render it of importance in a pecuniary point of view, to prevent their supersession by others, however more feasible; on the contrary, the harbour and its approaches are as nature formed them, there is nothing to alter; before us lies an entirely new field of greatest promise, all that is requisite is to look before we leap, to see that the most advantageous scheme be selected. If the trade of the interior is to be brought to the sea, a harbour on this coast, of easy access, sheltered from all winds, capable of receiving very large vessels, and at one tithe of the distance from the internal resources of the country that the Madras or east coast is, where there are no safe harbours, would surely be preferred.

17. The above is what I wrote before to show that I had not overlooked the Oyster Rocks, when considering where to place my principal light. It is a grievous mistake to place a first-class light on a low hill, when not far off there is one four times the height. Besides, there is this to be said in favour of high lights, that they are visible so much further from the deck of a ship, by aid of a telescope, which is a difficult instrument to handle at the mast head, where the motion is of course so much more violent, and footing insecure.

The great advantage of a high light.

18. I agree so far with the Marine Board, that the Oyster Rocks should have some landmark on them, and I would recommend that a small white house (to

serve also as a column for a small light), be built on them, where a few fishermen could live in the south-west monsoon, keeping provisions enough for their maintenance: breaks in the weather, afford occasional though not frequent opportunities, of communicating with Beitkul Cove. It should be the duty of these men to burn blue lights either at stated times (as at the outer light-vessels in Bombay), on observing lights at sea, or hearing guns. A signal gun should be placed there. The Oyster Rocks, though 160 feet high, have loose granite boulders on their summit; levelling these, and making a place for signal guns, would reduce the height considerably, so that a column of 40 feet would give the light a height of 160 feet still.

Small light and a Signal Gun on Oyster Rocks.

Light on Carwar, visible 30 miles, Oyster light only 18 miles.

19. The small light on those islets would not interfere with that on Carwar Head, which is so lofty as to be visible from the deck of any vessel at 30 miles distance; whereas the light on the Oysters, if 160 feet above the sea, would be only seen in fine weather 18 miles; the distance between the two is two miles and a quarter, so that the greater light would be visible for some time before the other, and when both are visible, that on the Head would appear so much more exalted and brilliant. I would wish to explain more fully what I said about the salt spray of the ocean; it hangs like vapour above the sea, and so dims distant objects, that land 200 feet high, which can be seen in clear weather 15 miles off, is scarcely discernible during the south-west monsoon on the west coast, (even when rain is not falling,) at half that distance.

20. I need say no more regarding the lighthouse on Carwar Head, but that breadth is what is wanted, not height in the building. We have the necessary altitude in the hill itself.

Proposed works for Beitkul Harbour.

21. Adverting to my former report, I would now reject the two piers at the mouth of the cove, but would increase that proposed at the point T. (*vide* plans Nos. 3 and 2) to a length of 400 yards in a line due north, leaving an opening of 400 feet wide at the water's edge. I would continue the breakwater in a line N.N.E. as shown on the plans Nos. 2 and 3. The stone for these works could easily be quarried from the hill, and they would give at once great security to Beitkul by increasing the anchoring ground for large vessels; and with the canal from the Kalee Nuddy, which I would have as shown by the blue line in Chart No. 2, (and not as formerly suggested by the Sinkerry Creek) the produce of the country above the ghauts, could be brought from the present head of navigation, about two miles above Malapore, to the shipping in Beitkul by the same boat.

Canal, to join the River to the Harbour.

22. A subsequent examination of the Sinkerry Creek, and of the shoals in its neighbourhood, led me to alter the proposed line of canal; my new line commences from the deep water of the south bank, nearly opposite Sedashigur old Fort, and marked blue on plan No. 2, pursuing a nearly due south course to the fishing village near Beitkul; this is 4,400 yards, or two and a half statute miles long, with a rough stone breakwater running along the rocky cliff by the fishing village, and turning down to the south-west so as to protect the canal mouth; the water communication all the way from above Malapore to Beitkul will be perfected.

Present roads, bad in rainy season.

23. With the present means of communication between the coast and the interior, and until by covered boats on the rivers, and by covered carriages (on perhaps lines of light rail) above and below ghaut, the goods can be carried dry to any part, it is needless to expect merchants to avail themselves of any but the five months, viz., October to May, for shipping goods at any port. The rain is now our greatest drawback on the western coast. With a canal system it will facilitate progress.

Lines of Canal, wanted for North Canara.

24. The proximate lines of canal to connect all our present roads from the ghauts with our harbour are shown on the accompanying plan, No. 1, in blue tint; these are all that are required to connect all the rivers north of Honore with Beitkul; that there is comparatively but little work in this undertaking will be evident at a glance. In such a tract of country as that between the west ghauts and the sea, where for two or three months of the year the freshes come down with great violence, overflowing the banks in many places for hundreds of yards, and sometimes bearing on the surface of the water enormous trees, which threaten destruction to any bridge of boats, where stone or strong wood bridges requiring great span would be most costly; in such a country canals are clearly the proper highways.

Canals, and not roads, suited to the wants of Canara.

highways. A journey from north to south of Canara is now a tedious business; a constant shifting from palankeen or horse to boat and back again; canals with suitable boats will remedy all this, and enable passengers and goods to travel at one tithe of the present cost, and certainly as quick. I cannot resist the temptation to state the fact, that horses do not thrive in Canara during the season of the cutting land winds, neither do bullocks thrive, there being great difficulty in getting grass for one-fourth of the year.

How far Kalee Nuddy is, or may be open.

25. My survey of Sadashigur River, or the Kalee Nuddy, is herewith forwarded. It shows the river to be navigable 20 or 22 miles up, or to about two miles above Malapore, at which place my survey ended, but will be resumed when the rainy season is over; if it can be made navigable for 15 miles more (as is most likely from all accounts), a great advantage will be gained, the importance of which I shall not overlook.

Effects of a groin, at the Kalee Nuddy entrance.

Another object gained by the groin.

26. The entrance of the river has improved since my first examination in January 1855, having moved northward until stopped by the black rock, which, forming a natural groin, deflects the stream, and will doubtless keep it in one channel henceforth; already has this groin operated to advantage; the entrance channel has now 15 feet at low water, and 21 feet at high water, and this will admit vessels of 500 tons in the fine season; they will be able to lie off the steep south bank, near the entrance of my proposed canal, where a pier, 100 yards long, would give 20 feet water at its head. Another advantage is gained by the entrance of the Kalee Nuddy being kept so far north, which is, that the alluvium brought down by the river freshes, is, on its exit to the ocean, encountered by the south-west swell, and deposited to the eastward of those rocks, situated about a mile to the north-west of the Groin Rock (*vide* plan, No. 2), which rocks are now joined to the mainland by a sand spit, dry at low water; thus is the deposit prevented from entering the sorthern portion of Sedashigur Bay, where our harbour is to be.

Singawady

Roads that come down upon the Kalee Nuddy.

27. There are no impediments to boat navigation up to Malapore; nearly opposite that place the Singawady Ghaut comes down to the river on the right or north bank; on the south bank is the Kyga Ghaut; these two roads, when completed, should bring the whole of the Southern Mahratta Country cotton and other produce to Beitkul. The rains, which commence in April by the western ghauts, make the roads very heavy, and do much damage to the cotton, so that very little arrives on the coast from the interior before the south-west monsoon sets in, the greater part being kept above ghaut until the rains are over; until then a harbour be obtained, it is of little use having the roads kept in good repair during the rainy season, when there is no traffic.

Devimunny Ghaut.

Arbyle Ghaut line of road.

How it may be improved.

28. At present the cotton goes down by principally the Devimunny Ghaut to Cutgal, on the north bank of the Tuddree River; thence, instead of going by boat to Tuddree, it is carried in carts up a hill again, and then down to the Munky Ferry, about two miles and a half from Coomta town; the carts, bullocks, and cotton are then carried across the stream, a breadth of 300 yards, when the carts, being reloaded, proceed onwards to Coomta. Some carts come down the Arbyle Ghaut, but the ferry on the Gungavelly River between Sooksaul and Goondabaly, which is fordable for only six or seven months of the year, is a great drawback. The Gungavelly River from this ferry to its mouth is navigable all the year round, clearly then it should be used, and connected to the Tuddree by a canal, as represented in the Coast Chart, No. 1; the details of this arrangement will be found under the head of Tuddree. An estimate was made by the late Civil Engineer of Canara for bridging the river by the above-mentioned ferry; this bridge was to cost half or three-fourths of a lac of rupees; now I am certain the small piece of canal which I recommend cannot cost more than a quarter of a lac.

Tuddree a fine-season Port.

Arbyle Ghaut.

Devimunny Ghaut.

29. But we have a fine season port in Tuddree, which is far superior to Coomta, from which most of the up-country produce is now exported, with a small canal of less than one mile and a half in length (*vide* letter A. on No. 1, Canal Chart); the Gungavelly River can be connected with the Tuddree, and so the Arbyle Ghaut be made of use during the whole year, instead of only being an indifferent road for two-thirds of the year, as it is at present. Then, again, the produce that is brought down the Devimunny Ghaut should go no farther by land than

Cutgal, where it could be put on boats, and sent to Tuddree at far less cost than by the present system, which carries it up a hill 200 feet high along its top, and down again to Munky Ferry, a distance of six miles; then over the ferry, which involves the operation of unloading on one side and reloading on the other, and then a three-mile drive to Coomta. The Neelcoond Ghaut comes down upon the Tuddree River some miles above Oopenputnum; the river could either be improved, or the road made along its right or north-east bank to the highest point where it is now navigable above Oopenputnum, and thus the Neelcoond Ghaut be brought down to Tuddree at but little expense.

Neelcoond Ghaut.

30. With these three ghauts (excellent during the fine season) coming down upon Tuddree, that port ought to be the most frequented, as it is the most excellent on the coast. It is sealed for 2½ months in the year, or from middle of May to beginning of August, after which large vessels might lie outside of the river, and others of less than 400 tons could run in and load. There is now 11 feet at low water, and 18 at highest on the bar, and I have no doubt we could get upwards of 21 feet by preventing the first of the ebb-tide from running out over the sands on the west side of entrance. This I propose doing by a groin of loose stone, thrown down as marked in red on the plan of Tuddree, No. 5, accompanying this report. This work would cost some 10,000 rupees, which will be recovered by the additional duty that would be levied on grain and other produce embarked in square-rigged vessels from Tuddree direct; at present all this goes to Bombay in native crafts, and there the duty is collected instead of in Canara. Before the harbour of Beitkul can possibly be ready to receive vessels, this work at Tuddree will have paid for itself over and over again.

Tuddree Harbour.

Vessels of 400 tons can enter.

The Bar may be deepened.

Export duty can be levied.

31. Tuddree is the haven for which many native vessels steer in our periodical cyclones and southerly gales; it is the next port north of Cochin, and, with a light-house, would be a nice harbour of refuge for the native craft. It is 25 miles more to windward than Sedashigur in the above-mentioned breezes, and a small port-light here could never be mistaken for the lofty one which it is proposed to place on Carwar Head, which, as I have said before, should be a first-class light, like that of Madras. With the interests of Canara fully at heart, I deem it my duty here to record my opinion that a lighthouse and flagstaff on the high land west of Tuddree would be of far greater general advantage than the present column of Coomta, which is situated far back from the sea, on a receding part of the coast, whereas Tuddree Point is so prominent. My long experience of this coast shows me that a light is not cared for, except in bad weather, on this particular part of a coast so mountainous. I have felt my way by night in fine weather, as the tindals of pattimars do, by knowledge of the form and features of the land. Only in squally weather is a light an immediate necessity, and then Coomta is too far back to be of use; for in bad weather vessels must not keep in shore, but an offing must be maintained, whence the light would be scarcely visible.

Tuddree.

Present refuge harbour for the native vessels.

Light at Tuddree instead of at Coomta.

At what times the light is wanted.

32. The Gungavelly is the river down which most of the teak timber for Bombay Dockyard is floated; it has a very poor entrance, and consequently pattimars have mostly to be loaded outside in the open sea, the timber being rafted out. These rafts frequently break adrift, and away goes the timber. If the small piece of canal to connect Gungavelly and Tuddree rivers be first executed, this timber could be taken on board in the quiet river of Tuddree, and much expense thus saved to the Government of Bombay; the Arbyle Ghaut would then be brought down, as it were, to an excellent seaport, and it would then relieve the Devamunny of a great deal of that superfluous traffic which, now incessantly plying upon it during October, November, and December, so severely cuts it up.

Canara teak for Bombay Dockyard.

Canal between Gungavelly and Tuddree.

33. To my mind, then, the works of primary importance for North Canara are:—

Works of primary importance.

1st. The Gungavelly and Tuddree Canal.

2dly. A wharf wall and a few small improvements at Cutgal.

3dly. Bringing the Neelcoond road on to the river above Oopenputnum, where also should be a wharf.

4thly. A wharf at the spot where the Arbyle Ghaut comes down upon the Gungavelly.

5thly. A small

5thly. A small lighthouse on Tuddree Hill.

6thly. Two buoys to mark Tuddree Bar.

7thly. The groin at the entrance of Tuddree River.

34. I have long been impressed with the utter inferiority of Coomta to Tuddree in every way, and have not failed to express my conviction of the same to the authorities of Canara.

The natives say that the god or goddess of riches (I forget which) has taken up an abode at Coomta, but I think the first year's saving to them by adopting Tuddree would prove that their deity has also a country seat there; indeed, the famous temples of Gokurn are within half an hour's walk of Tuddree. A little was done for Coomta at first, trade gradually increased, and the cry was, "What more shall we do for the place's benefit?" Now people say, "It is getting on so well, we cannot neglect it even in favour of a better, something more must be done for Coomta;" and thus is the original mistake perpetuated, instead of the inferior port being at an early stage of its existence superseded by the better one of Tuddree. I have not the least doubt that Tuddree Bar may be much improved by the means I have above recommended in para. 30, and at a very small sacrifice of money, at, indeed, one tithe of what is intended to be spent on the Coomta Canal, which work the very inhabitants of that place (for whose benefit the canal is said to be contemplated) deprecate as a waste of money without commensurate advantages.

Tuddree Harbour, better than the Coomta Roadstead.

35. This canal between Coomta and Tuddree has been, I understand, sanctioned, but it seems the general opinion of the natives that if any toll be levied on it, the old way of conveying goods to Coomta, as explained in para. 29, will be maintained. That Coomta (a wretched little port from which the native craft fly on the approach of a gale to Tuddree) should ever have been allowed to supersede the latter fine port is greatly to be deprecated. A lighthouse has been built at Coomta, but not being on the proper site is not of any use in making the port from the north. The Devamunny and Neelcoond Ghauts are both interrupted by the Tuddree River, which seems to invite the traffic on to its stream to Tuddree; will then the native merchants, who are so knowing in money matters, carry their merchandise to Coomta to ship it in an open roadstead, when they can take it with less trouble, and no tolls to pay, to Tuddree, and there ship it from the pier that is about to be built at that place? The canal must be free to boats passing, otherwise it will not be used. For one-fourth the sum it is estimated to cost, we could make a lighthouse on Tuddree Point, and the Tuddree River accessible for nine months of the year to vessels of 600 tons. Doubtless, at some remoter period, when the Gairsipa Ghaut is opened, the canal may, in connexion with others connecting the Honore and Coomta rivers, be an adjunct to that ghaut, and form a part of the canal system of North Canara. That the system of canals along this northern Canara sea-board, cannot be extended lower than Honore without a great outlay, is shown by the fact that a range of hills 200 to 300 feet high, and in the lowest part not under 100 feet, projects into the sea, three miles south of Honore Ferry. Byndoor Head and several little capes intervening between it and Honore, projecting into the sea, throw obstacles also in the way.

Canal between Tuddree and Coomta not yet wanted.

Obstacle to canal system south of Honore.

36. The object of deepening Tuddree River entrance is to enable vessels to get inside to load by a pier, which process is a great saving to merchants, but is not an absolute necessity; for Bombay, that much-vaunted harbour, has not yet that accommodation, although that they appreciate the advantage of a wharf is patent from the fact that Government have had estimates laid before them for the construction of wet docks, the least sum being 12¾ lacs, whilst one civil engineer proposes wharf walls in preference to wet docks, and states that 89¾ lacs of rupees would be required. The deepening of Tuddree River then may be looked upon as a work of secondary importance, more demanded by the interests of merchants than by those of Government, although, of course, every incentive to trade cannot but benefit the Government. I must not, however, omit to mention, that the groin proposed will prevent the ocean swell from cutting away the point outside of Mr. Brice's screwhouse, as it now does at the first burst of the south-west monsoon, which comes up well from the south but does not last many days, late in May or early in June. Thus will be gained that piece of ground (tinted yellow

Object of deepening Tuddree entrance is to admit larger vessels to load by a pier.

Valuable land will be gained from the sea by the groin.

yellow on No. 5 plan) most valuable for a merchant's storehouse, as it has deep water close to its east side, where a pier can be made.

Advantages of Tuddree.

37. I have in my hand a list of 24 vessels which were in Bombay harbour between May and October of last year, any one of which when loaded could have left Tuddree River as it now is. There are, besides, many that could load inside to a draught of 16 feet, and fill up with cargo outside. Any one of the vessels that frequent Cochin River could, with greater ease, enter and depart from Tuddree, where the bar is quite smooth during the fine season: the west point of land (on which I propose to place a light marked on the charts Nos. 1 and 5), so completely breaks the swell of the north-west winds, which are the only breezes that during the fine season last long enough to produce any swell that is troublesome to vessels on this coast. In these north-west winds Coomta is an open and exposed roadstead, and I have heard many complaints of the cotton and other goods getting wet alongside native crafts. I believe the merchants allow about two per cent. for the deterioration and loss of cotton in shipping and transit to Bombay from the coast.

Disadvantages of Coomta.

Tuddree not open throughout the year, but made use of by native vessels in gales of wind.

38. Tuddree is the port to which the attention of merchants is now turned; two or three screws are now ready to press the cotton bales, and vessels of 300 or 400 tons will be able to load from a pier, and sail direct to England. Tuddree is, however, as I said before, merely a fair-season port; it is sealed from the middle of May till beginning of August, but for nine months of the year can be made the centre of a great trade, and is the next port north of Cochin wherein native craft seek shelter during gales of wind. In the cyclone which committed such havoc in Bombay on 1st November 1854, and which was felt all along the Malabar and Canara coasts, nearly 30 pattimars put into Tuddree for shelter; and at the early setting in of the monsoon of 1856 many took advantage of it likewise. It is well known that loading vessels from a wharf or jetty is far cheaper and more expeditious than the method pursued at Coomta, of loading by means of many small boats. The jetty constructed by Mr. Brice at Tuddree had, I am assured, in half a year, paid its cost by saving boat-hire. In the face of this fact, can it be expected that Coomta will continue to hold up its head before the rising importance of Tuddree, an open roadstead from which vessels have to fly on the appearance of a gale, before a safe and commodious harbour? Cotton will have to be landed at Tuddree, as it has to be pressed; but linseed and other seeds can be packed and weighed at Cutgal, placed in a boat, and sent directly alongside the merchant vessels, either in Tuddree River or outside: here, then, is another source of saving to the merchants.

Saving in loading from a pier or jetty.

Gain in shipping direct from the Coast.

39. I am assured that the value of seeds exported from Coomta and Tuddree, in the official years of 1855 and 1856, was 40,000 rupees; whilst in 1856 to 1857 it was 80,000, and still increasing. I append a Memorandum given me by the firm of Brice & Co., to show what saving is effected by shipping cotton and seeds from Tuddree direct in English bottoms, instead of transporting it, as is now the custom, to Bombay, where it is shipped and the duty levied.

		Rs.	*a.*	*p.*
Cotton (American) value 100 rupees per Bombay candy of 7 cwt.	Freight to Bombay	1	8	–
	Marine insurance	–	12	–
	Extra landing in Bombay	–	12	–
	Bombay agent's commission	1	–	–
	Interest of money for one month, at per cent.	–	12	–
		4	12	– p' candy.

(Nearly 5 per cent.) saving.

Linseed,

Linseed, at 4 rupees per cwt. - - -	Freight to Bombay - - -	50 reas.
	Insurance - - - - -	4 „
	Landing and shipping in Bombay -	50 „
	Interest, one month - - -	4 „
		108 reas.

(About 6 per cent.) saving.

40. This is the saving to the merchants, and it is independent of loss by deterioration and pilfering which cargo has to undergo on its passage to Bombay in native vessels, and on being landed there. This is sufficient inducement indeed to attract many to these parts. In the latter end of last year, Messrs. Brice & Co. wanted to charter a vessel to load at Tuddree, but the demand for tonnage which the Persian war created made freight too high; however, the principal objections to going there made by masters of merchant vessels were, that there was no magistrate at Tuddree, and that they had no correct charts of the coast. If, as above suggested by me, Tuddree be made the head-quarters of the timber agency, the first of these difficulties would vanish; the second one will soon be removed by the publication of the coast charts, copies of which, from Cape Ramas, in the Goa territory, to Mount Dilly, in Malabar, I have now the honour to forward, together with one of Tuddree river entrance.

Charts of Tuddree wanted.

41. There is another argument so much in favour of water communication in Canara; it is this: the native cart-men are so loath to go a few miles beyond their own villages, that they look upon it as a great favour being discharged as soon as possible; thus frequently have goods to be shifted from cart to cart during their progress; so at the Munkey Ferry each cart has to be unloaded, and a reloading takes place on the other side of the river. All this is avoided by the cheaper and quicker method of transport by boats. The Arbyle ghaut comes down upon the Gungavelly, or Baidlee river, about two miles below the village of Arbyle; and if the river were navigable from this place to the canal which is proposed to join it with Tuddree, a great point would be gained; there would be so much less (some 20 miles) roadway to keep in repair. If the Kalee Nuddy were made navigable from Taree Malapore, or Barhull, 15 miles above Malapore, to its mouth, there seems every probability that a line of road could be made from either of those places to Gurrus, between Iddagoonjee and Yellapore. If so, there would be so many miles less of road (some 15) to make and keep in repair. These are important points, and I propose examining these two rivers as soon as the season permits me to resume work.

Canals suited to the wants of Canara.

Gungavelly river to be made navigable.

The Kalee Nuddy to be made navigable higher up.

42. I have already surveyed the Kalee Nuddy as high up as Malapore, as will be seen by the accompanying Chart, No. 4, which demonstrates that the navigation so far is excellent. There is said to be a small barrier some two or three miles above Malapore, but I fully expect it will fade into insignificance on a careful inspection. I shall endeavour to get through the survey of this river from Malapore to Barhull as quickly as possible; for I understand that the Kyga ghaut is to be proceeded with at once. Now, if the river be navigable, or may without difficulty be made navigable higher up than Kyga, it will clearly be a mistake to carry that ghaut so low down the river. The hurrying on of the Kyga ghaut will not accelerate the development of Sedashighur, for, until the harbour is formed, we cannot expect ships to go there. They may at once go to Tuddree in the fine season; indeed, I fully expect several will load there before the close of this year.

A better line than the Kyga ghaut may perhaps be found.

Kyga ghaut.

43. I learn from Messrs. Brice & Co. that it would be absolutely necessary, in case of half the transit of goods from above ghaut to the coast being by land, and half by water, that merchants should have an office and warehouse at the place of shipment, goods having to be weighed and taken care of in shipping from carts to boats. Here, then, is another point we must not neglect, viz., that the locality for such offices be healthy. I shall bear this in mind during my examination of the rivers. Cutgal, on the Tuddree river, already adopted as a half-way house by

Halfway house between ghauts and the coast.

Road from Neelcoond to Tuddree.

the above enterprising firm, is decidedly well chosen. I have visited the river above the last-named place, a little higher than Oopenputnum, and found no impediment to regular water communication so far. The maps of the Great Indian Atlas represent a road running along the right bank of this river to the Neelcoond road It is evident then that we shall not need an entirely new line of road to connect that ghaut with Tuddree river, as proposed in para. 29, but only a few repairs to an old road.

Charts of Canara.

44. I cannot think of any point that has been omitted in demonstrating the great value, some years hence, of a grand refuge harbour and commercial port at Sedashigur, and the present advantages possessed by the little port of Tuddree. As charts of the whole Canara coast may be useful to Government, I have the honour to forward them; they are in three sheets, marked respectively Northern, Central, and Southern Canara.

Honore river.

45. Honore river is navigable by small boats for 20 miles from its mouth, or up to the old town of Gairsipa, whence there is a good ghaut road passing by the falls of Gairsipa to the Mysore country. I cannot see that any improvement is needed on this river. The entrance is indifferent, but nothing need be done to that, as canal communication will subsequently connect the river with the great harbour to the north, shown in the Canal Chart, No. 1. I have before stated, in para. 35, that difficulties (not insuperable, however, but to be overcome by engineering skill) exist in the way of continuing a coast canal southward. The space of seaboard from Honore to Byndoor abounds with little capes projecting into the sea; there may be low level ground at the back of these, but it has not been examined by me. Below Byndoor again, and as far south as I have surveyed, every facility for a continuous coast canal exists.

Coast canal below Honore.

Coondapoor.

46. Coondapoor, a place of very considerable trade, is situated just to the south of all that rocky foul ground on the south of Hog and Pigeon Islands, where rocks a few feet above water, and in some places just under water, lie so far as three to three and a half nautical miles from the mainland in seven fathoms of water. I have not yet examined the Coondapoor river inside, but it is said to be navigable for small boats for some distance from its entrance, both towards the Coolloor and the Agoombee ghauts, where the two ghauts come down upon the river. Here, again, therefore, we have water communication, and no roads are needed, entailing unnecessary expense upon the country. A small port light at Coondapoor would be very useful to the native shipping; no part of the whole coast of Canara is so dangerous at night as that between Hog Island and Moolky rocks, on account of the many rocks at so great a distance from the shore.

A small Port-light for Coondapoor.

Coast Canal already half made by nature.

47. Between Coondapoor and Mangalore, and to the south of the latter port to Malabar, there is every facility for a coast canal, the backwaters running in numerous instances parallel to the coast for several miles; few and short cuttings are all that are needed to perfect the system of water communication for hundreds of miles. The charts of Canara will give a tolerably good general idea of what is wanted for the country.

Mangalore River entrance.

48. I now proceed to lay before you a few remarks on Mangalore, showing what has been done and what suggested by others, and finally what is my own proposal for the improvement of that port at the least possible outlay; so that the river entrance may be permanently kept at one spot, and consequently be rendered deeper and more accessible. My first examination of the river entrance took place in April 1855. Copy of this was furnished to the civil engineer of Canara, who, during the monsoon of that year was engaged in operations contemplated to prevent the river mouth from moving up northward; these operations were unsuccessful. A second survey taken after that rainy season showed, that notwithstanding the impediment to the cutting action of the ocean swell and ebb tides when augmented by the freshes, that the laterite battery on the north side of the entrance was expected to afford, a strip of nearly 100 yards in breadth and 300 in length, including about two-thirds of the battery itself, was swept away. On the south side of the entrance, what was in April of that year a projecting point always above water, was, after the rains, a spit, which scarcely dried at low water; the main body of the point was removed from 200 to 300 yards to the south-west.

How the North Point has been cut away since the year 1855.

49. My

49. My latest survey, in November 1856, is represented on the Plan No. 7 in lake, whilst in black is shown the contour of the sand in January of the same year. Much of the north point was cut away in the rainy season of 1856, and with it went the last remains of the battery. In November of last year I found a depth of 25 feet water over the site of that battery; a startling proof of what a scouring current we have to deal with. I feel confident that if left to itself the river will find its way out by the Goorpoor mouth in ten (10) years; much of the Buntwal stream goes out of the Goorpoor mouth, and this year my officers report that this has occurred more than formerly. To prevent the river mouth from thus moving northwards year by year, is an important consideration. It was my opinion that such a result could be attained, though not without a heavy outlay, by a substantial revetment from the vicinity of the custom-house in a right line or in a gentle curve to the north sand until where it bends round to the seashore; but a work of this sort would be very costly, as it must, of course, have a deep foundation to withstand the scouring action of the current upon the stones, which, unless protected by a facing of piles and wales, would be picked out in detail and swept away by the stream.

The river mouth is moving up Northward.

How to prevent that, and to keep it in one spot.

50. The ocean swell is the most active agent in cutting away the north point; the sand is broken up by it, the trees shaken in their foundations, and the ebb tides carry them away; sheet piling of cocoanut trees deeply sunk, and backed up by stones, would protect the seashore of this north point, and when the sand is no longer removed year by year from that locality, we may expect the southerly current to carry with it much of what is now deposited near the bar. By such a revetment, as above described, we should gain a long wharf facing, where pattimars may load and discharge cargoes under cranes, an immense advantage for the native shipping. The whole space before the Custom-house is fast filling up, and the groin, if allowed to remain, will accelerate that process; the little bank to the north-west of the groin was formed in the rains of 1855, and is a type of what may be expected in a series of years. Close to the extremity of the groin the present survey shows 11 feet at low water, where, prior to its construction, were only six feet; this exemplifies the scouring power of the stream even on a small scale, and convinces me that had the attempt to open a mouth by means of that groin and by cutting away the sand succeeded, the groin itself would in process of time be undermined, and its materials swept away piecemeal by the ebb, when the river mouth would again move northward year after year.

Mischief done by the groin where it now is.

51. I would recommend that the Goorpoor stream be kept as it is, and that no attempt be made, by stopping the present outlet, to bring it down as a counterbalance to that of Buntwal, in anticipation of an increase of scouring power; for if so brought down it will inevitably bring with it all that mass of sand banks, which now dries at low tide in the backwater between the two streams; these banks have been deposited by the dead water where the two freshes meet. Unless a groin be built off the Custom-house towards the west some 200 yards, the greater force of the Buntwal stream will overpower that of Goorpoor, and render it a difficult task to prevent the latter from taking to its old outlet, the attempt to close which will of itself be a difficult job. Abreast of this groin, if one be built, will be the river mouth, into which such a swell will roll that no boat could round the groin to pass from the Buntwal to the Goorpoor stream, without risk of being swamped, or carried out by the freshes and wrecked on the north shore. A glance at the plan will show how the sand of the river mouth is deposited in patches (thus forming so many blind channels) when only one stream has its outlet there. If that of Goorpoor be led to the same mouth, I fear these banks will be even more spread about, and the result will be that we shall have no single deep channel, but the bar will be extended over an immense area. One of the agents (and by no means an inactive one) in the formation of the bar, must be the current that runs to the south along the coast in the south-west monsoon, and much of the peculiar direction the sand banks take must depend upon this, whether its action, that of the ebb, and of the south-west swell be synchronous or not.

Argument against closing up the Goorpoor mouth.

52. I had, during the rains of 1855, an excellent opportunity of witnessing the effect of the monsoon swell at Sedashighur, and am convinced it is the latter rains only that we must depend on for scouring the bar; these happening in October,

Rains in the latter part of the monsoon scour the bar most, their effect witnessed on the bar of Sedashighur.

when the sea is comparatively calm, the freshes are met by no antagonistic forces. Before the middle of October the bar was one continuous breaker right across, and the fishermen said there was actually no deep water channel, but my soundings in the beginning of November, showed the channel was then better than in the season before.

Probable effect of closing the Goorpoor outlet, and if works on a small scale be tried, the freshes will soon re-open it.

53. Shutting up Goorpoor outlet, will, I fear, cause the flooding of both the Buntwal and Goorpoor lands, and I cannot agree in the propriety of such a measure. I said in para. 51, that to close Goorpoor mouth would be a difficult job; the late attempt in May 1856, failed, though it was said to have been very nearly successful; I still hold to an opinion formed at that time, that even if it had succeeded, then such success would only have been temporary, for early in June, when the freshes came down, they would, by impinging against the battery rocks, and by meeting with the opposing current of the Buntwal stream (as mentioned in para. 49) being at such periods higher by several feet than the usual high-water level, soon force themselves out at their original outlet. This is supposing that only works on a small scale be tried, for I by no means intend to say that if that outlet be effectually shut up, the stream will not in a measure, by counterbalancing that of Buntwal, maintain the river mouth in one place (as is the case at Moolky for instance); but the combined freshes of the two rivers will bring out so much more sand, and I fear we shall, as I said before, have no longer a good deep entrance; a result more to be deprecated than the mere shifting of the opening in the sand. When the Goorpoor stream joined that of Buntwal (previous to an opening of its own being made to the north) the Buntwal entrance was some two miles south of where it now is, and then, doubtless their co-operation tended to do good. Now that the Buntwal mouth has moved up so far north, the case is widely different, the one stream running exactly opposite to the other, whereas formerly the one met the other at right angles.

Argument against shutting up the mouth of Goorpoor river;

54. Another disadvantage resulting from the closing of Goorpoor is, that boats wishing to communicate with large vessels which anchor so far off shore during the prevalence of the heavy north-west winds of March, April, and May, will not as now, be able to avail themselves of the backwater and Goorpoor mouth to get to windward, and drop down upon the vessel, and will be compelled to pull directly in the face of a heavy breeze. The water communication, which now exists between Buntwal and Goorpoor town by their two streams, will be stopped during the monsoon months if the latter mouth be closed, for the two streams will deposit their silt in the eddy water abreast their common mouth, far out from the line of custom house shore, and no small boat will be able to pass round the projecting point from one stream to the other without encountering the force of the monsoon swell and wind. This will be a serious impediment to canal communication along the coast, such boats as we require for canals must not venture out near the sea; if they get into deep water, they will be carried out by the strong ebbs and swamped.

As it will cause an interruption in the communication between the two streams in the south-west monsoon.

The little Fort by Goorpoor entrance called "Sultan's Battery," forms a natural groin.

55. A reference to my plan of Mangalore and Goorpoor river entrances show what an extent of rock there is off Sultan's Battery. That little fort is built on a solid granite foundation, which is some 10 feet above the level of high water, the parapet of the battery is 25 feet higher. I have coloured the rocky parts a green tint to show them more clearly, and I would recommend to have the backwater south of the battery examined by boring, to ascertain if more rock exists there. I think it would be the best policy to let the mouth go on moving northwards year by year, until the rocks off Sultan's Battery prevent it; then will the two mouths be kept in their proper positions by a solid natural groin at no expense at all. The lands of Goorpoor and Buntwal will not be flooded, as to a certainty they will be, if the former mouth be artificially closed. The sandy islet now intervening between the two mouths is 2,600 yards, or 1½ miles in length, and in places very narrow; there is but little cultivation upon it, and it would not be much loss to Government, whilst the removal of all trees from it would purify Mangalore town by allowing the sea breeze to blow unimpeded along the line of wharf.

Proposal to allow Buntwal river, to have its exit at the south side of Sultan's Battery.

Effect of a natural groin at the Kalee Nuddy.

56. Since my survey of Sedashighur river in January 1855, its mouth has moved, as I stated before, northward to the black rock fronting Madhully stream, which rock, forming a natural groin, has prevented the entrance from moving further

further north, and has given a greater depth of water there, viz. 15 feet at low water, or 21 feet at high tide; we may expect the same advantageous operation at Mangalore if, as I suggest, the mouth be allowed to work itself up till it reaches Sultan's Battery rocks, which acting as a groin, will deflect the stream out to sea, and the Goorpoor river in the north side acting as a cheque upon it, we shall have the entrance kept permanently in one place. I do not recommend an attempt to keep the Mangalore river mouth from moving up north by any small works, such as were tried in 1855, and again early in 1856, and only ended in total failure; the money (and no small sum either) being literally sunk in the stream. If it be deemed essentially necessary to save that small piece of cultivated ground between the two mouths (and I cannot myself see what is to be gained by it), works on a large scale must be undertaken; nothing under half a lac of rupees will do any good.

Similar effect expected at the Goorpoor Battery.

57. I am of opinion, moreover, that the addition of the little battery to the entrance of Mangalore will be a great point gained. It is built of very large blocks of granite fitted well into each other. The trade of Mangalore, in common with that of all the west coast ports, is fast on the increase, and if the river mouth be kept where it is by any works, there will be no increase of anchorage room obtained; there is scarcely enough now for the few small vessels that come inside. But if, as I have above advised, the mouth be allowed to go up to Sultan's Battery, we shall gain the whole of that strait reaching from the groin to the battery, a length of more than two miles, and the channel may be kept near either side, as most needed, by little groins on either bank; the present lighthouse is now too far north with respect to the river entrance. It is better situated as a land mark for an entrance near the battery. I think it may be objected that this project will cause the same impediment to continuous canal communication as that suggested in para. 54; but I am prepared with a remedy in this case which could not be so feasible in the other, because, off the present custom house there is now so much (and in the event of bringing down the Goorpoor stream there would be so much more) sand deposit. My remedy is to carry a small canal, as is shown in blue, round the back of the battery rocks; a stream now exists for half the required distance, which drains the town in the rainy season. The suggestion I have now made as to the best method of improving Mangalore river, and keeping its mouth permanently at one point did not occur to me whilst Colonel Arthur Cotton was with me on the west coast, and I cannot but think it will meet with his approval.

Means of keeping up the Coast Canal communication.

58. There is such a vast quantity of water brought down in the rainy season by the Buntwal river, and so swift is its stream, that in the month of June just passed, after a heavy fall of rain, the velocity of the stream was measured by Massey's patent log from the "Pownah," (moored in the river) and found to be in 24 hours no less than 77 knots or 88 statute miles. Here, then, is a scouring power for any works to stand against. Assuming the breadth of the stream of 88 miles at only 200 yards (and it is more) and its mean depth at four yards, we find that 124 million cubic yards of water found their exit in one day, or upwards of five millions of cubic yards per hour. Sand is fast accumulating in front of the custom-house, through the baneful influence of the elongated groin, and landing is getting more and more inconvenient; if the outer part of that groin (say a length of 500 feet) be removed and thrown down on the sand opposite it, on the spot marked G. in the Plan, so as to turn the stream over towards the custom house wharf, we should gain deeper water there, and thus enable boats to come alongside the wharf wall at all times of tide, an advantage which was intended to be obtained when the piece of ground now constituting the custom house wharf, was gained from the river by building that wall.

Swiftness and great scouring power of the Mangalore freshes.

Proposal to remove part of present Mangalore groin to opposite bank and thereby deepen the stream of the wharf.

59. If, then, the Government deem my proposal to let the river mouth go up north to Sultan's Battery to be worthy of consideration, I shall be happy to examine the locality of the battery to ascertain more thoroughly what amount of rock foundation there is; I anticipate that we shall find it much more extensive than what I have shown on the plan in green tint, and if so, so much the better; I shall not enter more into the details of this scheme until a more thorough examination has taken place.

60. In conclusion, I beg to state the number and titles of the different Charts and Plans sent with this Report.

No. 1. Canal Chart, comprising the Coast from Cape Ramas, to Honore.
„ 2. Sedashighur Bay and Beitkul Cove, showing the proposed harbour works.
„ 3. Beitkul Cove, showing the same on a larger scale.
„ 4. Sedashighur river, or Kali Nuddy, including part of the Bay.
„ 5. Tuddree river entrance, on a large scale, to show the proposed works of improvement.
„ 6. Tuddree Bay, on a smaller scale, (to be lithographed if required).
„ 7. Mangalore river entrance, with that of Goorpoor.
„ 8. North Canara,
„ 9. Central Canara,
„ 10. South Canara,
} On a scale of about 4½ inches to 10 statute miles.
„ 11. Beypore river entrance (to be lithographed if required.)
„ 12. Ponany river entrance.

I have, &c.,

(signed) *A. D. Taylor*, Lieutenant I. N.
Commanding H. C. S. Vessel "Pownah."

Madras,
27 July 1857.

(1664.)

ORDERED that the foregoing report be forwarded to Colonel A. T. Cotton for any remarks that he may wish to offer.

(signed) *H. Forbes*,
Acting Secretary to Government.

Fort St. George,
1st September 1857.

No. 53.

From Colonel *A. T. Cotton*, Commandant of Engineers, to *H. Forbes*, Esq., Acting Secretary to Government in the Department of Public Works, Fort St. George.

Sir, Commandant of Engineers' Office.

I HAVE the honour to transmit a Memorandum on the Harbour of Beitkul (Sedashighur), and the internal communications which I would propose in connexion with it.

I am still receiving further information on the various points referred to in this paper, but I send it up now, in the assurance that my information is so far complete, that nothing further that can be learnt will essentially vitiate the projected system of works. That the whole area of the basin of the Kistna, from Poonah to near Mangalore, can thus be completely laid open to foreign markets, besides being secured from famine while the monsoons continue, at a cost not exceeding one year's benefits, I have not the least doubt.

I must repeat here one of my fundamental principles, viz., that water-carriage, and that alone, can carry the mass of produce at a remunerative rate of charge from the interior to the coast. The charge by the Madras Railway is now 10 pice (1¼ *d.*) per ton per mile, at which rate a ton of goods would cost 20 rupees to convey it from the centre of Bellary to the coast, a cost which would prevent a railway from touching the great traffic of the country. It might convey 20,000 or 30,000 tons of cotton, indigo, &c., but the 500,000 or million of tons of grain, timber, stone, lime, fuel, &c., that ought to be moved, would, as now, be immovable; but a charge of 1 pie (⅛ *d.*) per ton would reduce the cost to two rupees, at which almost any thing could be conveyed.

The charge per ton on the Bombay Railway to cover the interest of the Bhore Ghaut Railway (80 lacs) would alone be two rupees, supposing that half the interest were paid by passengers, and that 100,000 tons per annum were carried (besides the cost of conveyance); a charge which would convey a ton at least 400 miles by water.

I beg to call particular attention to the coloured map which accompanies this. I think it calculated to be of use in showing at a glance the comparative importance of the different ports, and answer many questions, such, for instance, as why should a certain sum of money be spent upon a certain port rather than upon another, &c. &c.

The main question with respect to every port is, of what extent of country is it the natural outlet? Because upon the answer to this entirely depends the sum of money which it would be wise to spend upon it. In the case of Madras the question is indeed settled, by its being the capital and the seat of government, as to what particular point of that coast should be improved as a port, but naturally a very large tract of country would be drained either to it or to some other point at no great distance.

I have, &c.
(signed) *A. Cotton*,
Fort St. George, 4 March 1858. Commandant of Engineers.

MEMORANDUM on the Harbour of *Beitkul* or *Sedashighur*, and the general Improvement of *Canara*, &c. by Public Works.

THE Right Honourable the Governor having sent orders to me at Bombay to meet him at Sedashighur, I proceeded there accordingly.

I may mention that when at Bombay I had the pleasure of meeting Mr. Bryce, a mercantile gentleman of remarkable energy and intelligence, who was engaged in trade in cotton and various articles, purchasing them over a great extent of country above the Western Ghauts, in the districts of Darwar, Canara, &c., and shipping them at the new port of Tuddree, where he has an establishment and is putting up cotton-screws. From this gentleman I received most valuable information respecting the produce, communications, &c., of those

countries, which was a most opportune occurrence, as preparatory to the duty to which I was now called.

I should first point out that the question about the improvement of the harbour of Beitkul is necessarily so intimately connected with the state, produce, communications, &c., of the country surrounding it, that it is impossible to form any correct decision upon the former, without carefully inquiring into the latter.

What it may be advisable to do for any harbour must, of course, depend mainly upon the following points:—

1st. What is the extent of country of which it will naturally be the outlet, or of which, by artificial means, it may be made the outlet?

2d. What are the population, present productions, capabilities, &c., of those countries?

3d. What means of communication have they with the port, and what facilities for improving those communications?

Thus, the whole internal state of those countries and the system of public works required for their full development, is involved in the question of the port.

It is evident that whether that port is to be the outlet of a country occupied by half a million or by ten millions of inhabitants, whether that country is capable of producing valuable articles of export, and of consequently consuming extensively foreign articles, whether their present state is little short of what may be soon expected from them in the way of production, or whether by an extensive system of public works, their capacity for exporting and importing may be increased a hundred-fold, upon such points as these must depend, to what extent it may be advisable to incur expense in the improvement of the port; whether, in fact, it is to become a first-class or a minor port.

The naval points in the question are of course also essential, such as its accessibility, whether it can be used throughout the year, its advantages or disadvantages in comparison with other ports, &c.

As the engineer is so dependent upon the merchant for help with respect to the internal points, so he is upon the naval man with respect to these external ones; and just as I had the great advantage of very superior mercantile information, so I had also help in the naval points from a remarkably superior naval man, most intimately acquainted by long experience with the coast and the Arabian sea; this was Captain Taylor, of the Indian Navy, now employed on the Western Coast Survey.

As respects revenue questions, &c., I had also the equally great advantage of the society of Mr. Bourdillon, Secretary to Government, so that I had certainly the help of three of the most intelligent men in India, in their own lines.

I may also mention that, by a remarkable coincidence, I had been of late turning my attention to the countries lying east of the Ghauts in that latitude, and had actually on paper a sketch of a project for a system of communication with irrigation in those very districts, the consideration of which had led me to look for the natural outlet of them.

Starting under these favourable circumstances, although I had never before been in those parts, I am in hopes that this paper may help in some degree towards a correct view of the subject.

Let us first take a glance at the particular nature of the western coast of the peninsula, as respects its capabilities for exporting and importing.

The peculiar points seem to be these:—

1st. Its being cut off from the interior, throughout its whole length from Cape Comorin to the Nerbudda by the Western Ghauts, distant only from 10 to 40 miles, and varying in height from 2,000 to 8,000 feet.

It is clear that, in consequence of this feature, the natural outlets of the peninsula must in general be on the east coast.

2d. But there are three points where there are decided breaches in this barrier. The northernmost is where the rivers Nerbudda and Taptee, flowing from a considerable distance to the eastward, enter the sea near together. The centre at Sedashighur and near it, where three considerable rivers, the Kala Nuddee, Beidtee, and Gairsappa, break through; which rivers, though much shorter

shorter than the two former, yet flow from far eastward of the line of the Ghauts; and the southernmost, which is by far the most evident and complete breach, where the Poonany, which rises about 100 miles from the coast, breaks through.

3d. Almost throughout the whole of the remainder of the Ghauts they are a wall forming an effectual natural barrier to traffic; which, though it can be in a measure removed by artificial works, yet clearly shuts us up to these three points, as those on which only our labours can be wisely expended. Of course, natural obstacles can be to some extent overcome, but to attempt to work against nature, when we can have her help, is simply folly.

It is particularly to be observed that from the Taptee to Beitkul, the Ghauts are, especially near the coast, an unbroken wall, and Beitkul is the first place where there is any possibility of forming a really good communication with the interior.

4th. In this respect Bombay is most unhappily situated, having quite close behind it a perfect wall 1,800 feet high, the disadvantage of which no work can ever counteract, except in a very partial manner. This is demonstrated by the fact that 800,000 *l.* is now being spent in conveying a railway up them, and if we add to this ten lacs of interest during the five years that it is under construction, and 30 lacs paid for 30 miles that the railway is carried out of a direct line to get to the Ghaut, we have 120 lacs, the mere interest of which, on so large a traffic as 100,000 tons, and 100,000 passengers, would be per head and per ton three rupees, the cost of conveying a ton of goods 1,400 miles by sea, and probably 1,000 by good internal water communication; besides the cost of working the Ghaut and the other 30 miles. This enormous sum of money being sunk, the interest of it must be paid, and thus must remain an irremediable and serious check to trade on that line, and it will be more and more felt as the interior is opened out by lines of navigation. Such is a specimen of what we must lose when we attempt to work against nature instead of with her.

5th. The level of the country which belongs to this coast is a very material point. So much depends upon the introduction of European energy and knowledge, and of bringing it to bear upon the native population, that whether the country has a temperature and climate which Europeans can enjoy or not, makes a very great difference.

The country at the back of the Ghauts has this great advantage. Up the Nerbudda and the Taptee you must go some hundreds of miles from the coast to get on a high level; at Poonany, by going inland about 100 miles, you get upon the table land of Coimbatore, 1,300 feet above the sea, and where, consequently, for most of the year, there is a very fine temperature for Europeans; but from Sedashighur you soon get into a country from two to 3,000 feet above the sea, which in that latitude forms a climate for Europeans far superior to that of England, and where, consequently, there will undoubtedly be an extensive settlement of Europeans, if the country is thrown open to private undertakings by communication and irrigation.

In this respect the situation of Sedashighur is quite singular.

The Southern Mahratta Country and other districts offer a delightful abode for Europeans, and a field for European enterprise, if only produce can be conveyed to a port and shipped cheaply.

6th. The whole of these countries are highly fertile and well supplied with rain, and most of them are now occupied by a considerable population, so that labour is abundant.

7th. For produce. These countries are fitted to produce abundance of exportable articles; among them excellent cotton, coffee, oil-seeds, teak, &c.

8th. The peculiar point in respect of the accessibility of the coast to vessels, is, that during three months of the year the stormy south-west monsoon makes it difficult for a vessel to proceed on her voyage, thus giving an advantage to ports in proportion as they are further south, and so more windward, at least as far south as the 9° channel.

This is a material point, Poonany has an advantage over Beitkul, and Beitkul over Bombay in this way, and Cochin over them all. But there is nothing to

prevent vessels coming into any of these ports or going out all the year round, though, of course, during the monsoon, the comparative easy accessibility of any one of them, and its freedom from neighbouring dangers, is a great advantage.

9th. This coast has the advantage in being the nearest to Aden, and the mails for Madras and Calcutta ought undoubtedly to be landed at the end of the railway at Poonany, as soon as a good harbour is provided for vessels.

10th. For shipments for China and the Eastern Islands, of course this coast is inferior to the east coast of the peninsula.

11th. It most materially affects this question that most of the rivers of the Kistna basin, the Toombuddra, the Kistna, the Beema, the Seena, &c., have a very moderate fall, from one to two feet per mile almost up to their sources, that is, to very near the Ghauts, so that the whole of them can easily be made effective navigations. This is a most important fact, and is indeed one of the great leading features of this tract of country.

Probably 2,000 miles of internal navigation may thus be obtained at an insignificant price. Whenever a river has not a greater fall than two feet, it can certainly be made navigable at a small cost, and if it is not a very large river the expense will be quite insignificant.

Of the value of such a gift we may judge, when it is considered worth while to make railways to carry goods at ten times the cost of water transit, at 80,000 or 100,000 rupees a mile, so that 2,000 miles would cost from 16 to 20 millions sterling.

There is thus a vast amount of work done to our hands, and this system of internal communication requires only to have its defects corrected, and to be connected to a port by an artificial work, to throw open the whole country to foreign trade.

12th. So also with respect to the strip of country between the Ghauts and the sea. The whole way from Cape Comorin to Beitkul, there are great facilities for a canal along the coast, and I have ascertained that it can be carried into the harbour of Beitkul. It has already been cut in an imperfect way in some places, and in Travancore the whole traffic, both of goods and passengers, is carried along it, and a very moderate cost will make an excellent navigation the whole distance of 550 miles. This canal will thus connect the innumerable rivers which can all be navigated nearly to the Ghauts, so that the whole of these below Ghaut districts, will be completely supplied with a system of navigation connecting every village with the ports, and with each other. This is also a fundamental point, because it so affects all our treatment of the minor ports. Of course such a complete and cheap internal communication will tend greatly to concentrate the trade at the great ports, and thus save us from wasting our means upon a great number of petty places. North of Beitkul, all the way to Bombay, I am informed that the country is impracticable for a coast canal, but a late chief engineer of Bombay assured me that it was quite practicable to connect the Taptee and Nerbudda with Bombay Harbour by a canal, and thus give Bombay unbroken internal water communication with the basins of those rivers.

13th. With respect to the actual means of connexion of the ports with the interior, I have ascertained that there is no difficulty whatever in improving the navigation of the Poonany river, and carrying on a canal from it quite through the country to the east coast. At Beitkul the breaches in the Ghauts are not so complete as this. But I have ascertained that the Kala Nuddee is navigable, or easily improvable to 20 miles within the line of the Ghauts, overlapping the country practicable for a canal east of them, so that it will be only necessary to connect them by inclined planes capable of transferring loaded boats. I have no doubt that this can be accomplished at a cost in interest and working expenses, which will form a very small charge in the traffic, so small as not materially to affect it.

14th. Since the very imperfect means of communication with the interior, of unmetalled, and in some cases unbridged Ghauts, or passes, have been opened, a vast and most rapidly increasing trade has sprung up at the imperfect ports of Tuddree and Coompta, in spite of an enormous cost of transit and the great expense

expense of sending produce by sea to Bombay to be re-shipped there for foreign ports. The saving of these two items of expense would alone form an enormous profit on the trade in such produce. I would call particular attention to the very remarkable fact of all the three rivers, the Kala Nuddee, Beidtee, and Gairsappa, which here break through the Ghauts, falling nearly to the level of the sea, about 20 miles within the western line of the Ghauts. As I have said, they all flow for that distance through a deep and wide ravine, with the country on each side of them rising to one or 2,000 feet. This is one of those innumerable cases in which difficulties vanish when they are looked for. No person looking at the Ghauts from the coast could imagine that these rivers have not a fall of perhaps 50 feet a mile down to the point where they clear the line of the Ghauts. Instead of which the fall is so small, about two or three feet, that the rivers may easily be made available for 40 miles from the coast, and having given us access to that point it then becomes comparatively easy to connect their navigation with a canal in the upper country. I examined the Kala Nuddee for some miles within the Ghauts and found that there was every circumstance that an engineer could desire to facilitate the completion of the navigation.

I cannot think of any other points that in a material degree will affect our conclusion on this subject.

They seem to be quite conclusive as to the following points; viz.

1st. That there is a most remarkable concurrence of circumstances pointing to the position of Beitkul, as that where a first-rate port is eminently required.

It is, indeed, the only point between the Taptee and Poonany, where there are natural facilities for communication with the interior.

2d. It will have great advantages over Bombay, as being 250 miles to windward in the monsoon.

3d. If it were a thorougly safe and convenient port, and the communication with and in the interior, were improved, it must eventually become a first-class seat of trade.

4th. We should, therefore, be prepared to carry out its improvement on a proportional scale, if it is in itself worthy of it.

To show clearly my ideas respecting these ports, I append to this paper a map of the peninsula, showing by different colours the tract of country of which each port in the peninsula seems to be the natural outlet, which will show their comparative importance. I also mark on another map the proposed lines of communication, the blue being the navigable rivers and the red the lines of canal. The black lines show the railways now under execution, so far as my information goes.

I now proceed to speak particularly of the natural advantages of Beitkul as a harbour, its capability of improvement, &c.

Captain Taylor has furnished me with the accompanying most complete survey of this port, a single glance at which is sufficient to show its admirable fitness for being formed into a first-rate harbour.

It in fact affords, even in its present state, a most accessible and perfectly safe shelter for vessels, and the wonder is how such a place could have been so long treated with utter neglect. Much as I had heard of the neighbouring ports of Goa, Tuddree, Coompta, &c., I had never even heard that there was such a harbour as Beitkul.

I must, of course, leave the proper nautical account of the harbour to nautical men, but I may venture to mention the leading points in it, after having had all my queries on nautical points answered by Captain Taylor on the spot.

1st. There is a large space with ample depth for ordinary merchant vessels now sheltered from the south-west monsoon.

2d. There is an inner cove with 15 feet and under, almost completely land-locked.

3d. There is partial shelter from the north-west gales (which are very heavy sometimes),

sometimes), by the two small islands lying off the mouth of the river. These islands must greatly break the sea that rolls into the harbour during those gales.

4th. The anchoring-ground is good.

5th. There is a cluster of islets outside, nearly enclosing an anchorage with seven fathoms, which might easily be made into a perfect shelter by a small extent of breakwater, if such an addition to the accommodations of the port should afterwards be considered necessary.

6th. A cut of two or three miles through flat ground will bring boats from the Sedashighur river (the Kala Nuddee) into the harbour, without their being exposed to the sea.

7th. A canal can also be cut through the low bund that closes the bottom of the cove and carried on along the coast, thus terminating the coast canal also in the harbour. This must, indeed, be effected by carrying a loose stone breakwater outside two headlands, for a length of about 1½ miles, but the water is not deep, material is at hand, and the expense will not be excessive.

8th. Carwar Head, which forms the harbour, is a fine lofty headland and a good sea-mark, and will allow of a lighthouse being placed at a great height above the sea.

9th. Ample materials are on the spot for any extent of breakwater at, I should think, a rupee a ton at the utmost.

10th. There is both flat and elevated ground for building to any extent.

11th. The cove has not filled up at all in the memory of man.

12th. This place is remarkable for being the coolest on the coast, owing, perhaps, to its being opposite to the opening in the ghauts.

13th. There is a hill 1,800 feet high, up to which a road with a slope of 1 in 12 might be made, making the distance four miles. This is a very important addition to the advantages of the place, opening the way for the residence of the families of the Europeans connected with the port, in a temperate climate, and affording an immediate relief to invalids.

14th. The place is most free of access in all weathers.

15th. The only danger is, the cluster of islets above-mentioned, the outermost of which is about 2¼ miles off Carwar Head, but this is not a serious drawback, as they are high rocks, and a lighthouse may be placed on them.

16th. The harbour is capable of improvement literally to any extent, at a moderate cost. By carrying out a breakwater from Carwar Head, as shown in the plan, a most extensive anchorage may be sheltered, a great part of which will be just like a dock. If carried out 1,000 yards in 4½ fathoms, it will contain about half a million tons of stone, costing five lacs, but this may be done by degrees, as an increased extent of shelter is required. It would be quite sufficient to carry it on at the rate of a quarter of a lac of rupees a year. This shelter may be further improved by connecting the two islands off the mouth of the river, where the depth is at most 24 feet; this, as it might be very low, would take only about 40,000 tons, and cost 40,000 rupees, and a further addition might be made by carrying out a short breakwater almost south-west from the point of the outer island, at an expense of one lac. It is evident, then, that the harbour may be completely land-locked at a comparatively unimportant expense.

17th. By blasting the rock, and throwing it over into the sea from the inner end of the Carwar Head breakwater to the cove, and along the sides of the cove, a fine extent of wharf may be formed, on which warehouses may be built and alongside of which vessels may lie.

18th. One of the most remarkable things connected with this harbour is, that no river falls into it, so that it will have an advantage that scarcely any other harbour has, connexion with the interior by water without any of the evils arising from currents, silt, &c.; upon the whole I think we may safely say there

is

is scarcely a harbour in the world that has a more remarkable collection of advantages than this would have considering—

1st. Its position both with respect to the sea and the country.
2d. Its security.
3d. Its accessibility by sea.
4th. Its improvability.
5th. Its climate.
6th. Its connexion with extensive internal water-communication.
7th. Its sanitarium on the neighbouring hill.
8th. Its freedom, so far as I can see, from any one drawback.

That such a harbour should be placed opposite such an opening in the ghauts, leading to such a country, and with such facilities for internal communication, is most remarkable, and it would seem to be madness to neglect so great advantages.

The works that I would propose to put in hand at first, in connexion with this harbour, are these:—

1st. The construction of a first-class lighthouse on Carwar Head. A small one has been ordered, but I would urge that it would be a great pity to spend time and money on anything now that would not be in accordance with the other improvements, and which would consequently soon have to be altered.

2d. The cutting of the canal from the river to the harbour.

3d. The forming the canal from the harbour to the southward as far as the Tuddree river.

4th. The commencement of the breakwater from Carwar Head.

5th. The connexion of the two islands by a breakwater.

6th. Blasting the rock to form a roadway, wharf, &c., along the face of Carwar Head, near the cove.

7th. The improvement of the navigation of the river up to 40 miles from the coast, and the connexion of the head of the navigation with the upper country by a temporary ghaut, which latter can be done at a very small expense, as the height is not great; I believe about 1,200 feet.

These seem to be the only works which should be at once commenced upon; a rough estimate of them is as follows:—

	Rs.
Canal from the Kala Nuddee - - -	20,000
Ditto „ Tuddree - - - -	2,00,000
Carwar Head Breakwater (commencement) -	50,000
Connexion of Islands - - - - -	20,000
Forming road, &c., on Carwar Head - -	50,000
Improvement of the Kala Nuddee Ghaut -	20,000
Total - - - -	5,10,000

I think if this sum were sanctioned in the first instance it would be sufficient; ultimately I would expend 4½ lacs more on the Carwar Head breakwater, and of course the further improvement of the harbour itself by the construction of wharves, &c., might be carried to any extent, and would depend upon the progress of the trade of the port.

I would next give a sketch of the system of internal public works that I would propose in connexion with this port.

First, in the upper country. I have remarked that the distinguishing feature of this tract is the moderate fall of most of the rivers, making them available for navigation. The grand object, therefore, is to form these several streams into a system of navigation by connecting them with each other, and with the two coasts by artificial water-lines.

It is from the confluence of the Kristnah with the Toombadra upstream that the former river and its branches have so moderate a fall. At the confluence the level is about 850 feet; and at Poona, the Mootamoola (a branch of the Beema) is on the level of 1,750 feet, a rise of 900 feet in 600 miles by the rivers, giving an average of only 1½ foot a mile, almost up to the Ghauts. The Kristnah also itself has a similar fall, but not so far to the westward. The fall

of the Toombadra does not become moderate so far to the eastward, but from the confluence of the Wurdah with it (30 miles below Hurryhur), which is about 1,800 feet above the sea, so far as my information goes, there is a very moderate rise up to close to its source, but I am not certain on this point. The works, therefore, that seem to be required to complete this system of water-communication in this table-land, and to connect it with the ports, are these :—

Further information fully confirms this.

1st. A canal from the Toombadra, near the mouth of the Wurdah, leading through the Bellary district to the Kristnah, near the mouth of the Toombadra.

2nd. A canal from the above near Kurnool, carried over the open water-shed of the Kristnah and Koondaur (a level of about 1,200 feet above the sea), and down the open valley of the Koondaur to the Pennaar near Cuddapah; thence the Pennaar to be improved to the frontier of the Nellore district, and from that a canal to join the east coast canal at Kristnapatam. The whole of this line has been examined by Captain Collyer, Lieutenant Fisher, &c., and its practicability seems to be established, but there will be considerable difficulty in the Pennaar. These canals to irrigate a great extent of country.

3rd. A canal from the opposite bank of the Toombadra, to be carried north and west to meet a canal from the water-shed of the Beidtee Nullah. These canals will also irrigate extensively. They will pass through the centre of the best cotton country in the Kristnah basin.

4th. Extensive tanks to supply the irrigation from these canals when the river is low, and to keep up the navigation of the rivers in the dry season. These tanks are also absolutely necessary to preserve the great works in the Kristnah Delta from dangerous floods, and to supply that tract with summer-water.

I also find that a canal can easily be carried from Bangalore, to meet the main line at Bellary.

5th. Numerous small branch canals (or light railways) to feed the various main lines above-mentioned, especially one from the Kristnah to the city of Hyderabad, a very important point to reach.

Thus the whole of this extensive table-land, forming western and southern Hyderabad, Bellary, Kurnool, the Southern Mahratta country, North Mysore, and Upper Canara, will be connected together, and with both coasts; and with extensive tracts of irrigation, and such a climate, it may surely be expected to become a very thriving country by God's blessing.

With respect to lower Canara I have already mentioned the coast canal to connect all the different rivers and ghauts. It is a most remarkable mistake that has been made on this coast, that with every possible facility for water-communications, and almost every possible hindrance to land ones, the attempt to form the latter should have been so long persisted in, in spite of complete failure, and in spite of the prodigious superiority of water-carriage actually proved in Travancore. To make a good land-communication along this coast, with its innumerable broad tidal rivers, is literally impossible, but to connect those rivers by canals is the simplest thing in the world. It is curious to observe how vain are the efforts of one mind when all others are obstinately wedded to a mistaken system. Mr. Conolly laboured for years to cut a few miles of one of these canals to connect the back-waters, and only effected it on a small scale, and by endless labour and innumerable manœuvres. But he did not effect any change of system. Latterly various efforts have been made to get one or two other cuts made, but nothing of any consequence has yet been effected, while probably the sums that have been wasted for 50 years in vain attempts to make a land-communication, would have made a complete steamboat-line the whole length of the coast, and have connected together hundreds of miles of river navigation. Now let us compare these two modes of dealing with this coast.

A COMMON ROAD.

1st. The cost of bridging such numbers of broad tidal rivers would make that out of the question.

2d. There are all the circumstances that make bridging difficult here; bad ground for foundation, deep water, ebb and flow of tide, severe floods from the interior, and heavy drift timber.

3d. Numberless

3d. Numberless broad ferries, however well managed, would render the communication always a very slow, inconvenient, and expensive one.

4th. In the monsoon these rivers have strong currents, making the ferries particularly inconvenient.

5th. A great part of the distance the road passes along low, and swampy, or sandy tracts.

6th. All the goods are brought from the interior of the low country by the rivers, so that they must be transferred from boat to land-carriages, in order to go on by the road.

7th. At the least, the cost of transit by the road, in consequence of the endless interruptions, would be 20 times that by water.

8th. It would be much slower.

9th. The loss from injury by the water would be much greater.

10th. The road must be formed the whole length of the coast.

Thus, everything is against the road.

For the Canal.

1st. About two-thirds of it is done to hand, many of the back-waters running for miles parallel to the coast.

2d. The first cost would be much less.

3d. There would be no transfers.

4th. There would be no interruptions.

5th. By steamers, any speed could be used for passengers.

6th. Goods and passengers would be embarked at any point up the rivers, conveyed by them and the canal, and up other rivers, and be landed at any point without transfer.

7th. Produce of any kind could be transferred from any part of the low country, or from any of the ghauts leading to the interior to any other part of the coast, which they could not be at all by the best road, as it would be too expensive.

8th. During the monsoon, the coast being shut up, all traffic up and down the coast is effectually stopped, but by the canal it would be carried on in the monsoon, as well as in other weather.

I call attention to this, because it is one of those things that shows how inveterate the prejudice has been against water-communications. Men here were not blinded by the established prejudices which a complete ignorance of the principles of transit has allowed to grow up in favour of railways, and yet in the face of utter failure in the attempt to establish a road, and of complete success in the canal where it has been tried, as in Travancore, the former has been persisted in for years. When an engineer urged the cutting of one of the links of this line, he was told to attend to his proper duties; and even when a collector attempted to cut one, he had to use his own personal influence in all sorts of ways, and it was only after years of labour that he got one short line executed, and that very imperfectly. And yet every day men were experiencing the difference between the attempted land-communication and the canal. They made their way down through Malabar, meeting with incessant interruptions, difficulties, and delays, and at a great expense, but on reaching Travancore they jumped into a boat with delight, feeling that all their trouble was over, performing the rest of their journey south, with fair speed, with perfect convenience, and at an insignificant cost.

This case puts in a strong light the difficulties which have to be encountered, in introducing water-communications in the face of such determined prejudice.

If a man proposes to lay out 5,000 rupees on a mile of common road to convey goods at 1 *d.* or 2 *d.* a ton, or 100,000 rupees on a mile of railway to convey goods at from 1 *d.* to 4 *d.*, and passengers at from $\frac{1}{2}$ *d.* to 2 $\frac{1}{4}$ *d.*, he is a sensible, judicious man, but if he proposes to establish a water-communication

at from 500 to 5,000 rupees a mile, to carry both goods and passengers at $\frac{1}{8}$ *d.* per ton and per head, he is a wild theorist, and told to attend to his proper duties. I should say, has been, for certainly a beginning has been made of a complete change in public opinion on this point. There is, however, abundance of prejudice to be encountered still, and a great deal of what remains is unhappily of the most inveterate kind of all, that is, the prejudice which is based upon men's own acts, who have committed themselves to the wrong course, and who consequently, in mere desperation, try to shut their eyes to the truth to the last possible moment.

In Wales, goods are taken from the side of the railway at the Menai Straits and carried 750 miles round, doubling the Land's End, and encountering all the risks and delays of a coasting voyage in those stormy latitudes, and the expenses of the port of London, where they might go by the rail, a distance of only 250 miles, one-third of that by sea, because they can be carried cheaper; and nothing but an opportunity of seeing a similar case in India will fully open the eyes of the public to the real facts of this question.

With respect to the connexion of the southern ports of Canara with the interior I would say:

1st. Of course if a perfect main line of communication is made in the upper country, terminating in the Kala Nuddee, the plan should be to connect as much of that tract as possible with such main line, and then the question of the minor ghauts, like that of the minor ports, becomes one of much less consequence.

2d. When on the coast I went up one of the ghauts and down another, that I might see what the the nature of the difficulties is, and my conclusion is clearly that what is wanted for these minor passes, is light rails following the windings of an ordinary road.

Such a work could be executed much cheaper than a wide common ghaut, and as by far the greatest traffic is downwards, they could be worked very cheaply, only requiring one or two men to each train, with powerful breaks to let them down, and cattle to take back the nearly empty waggons.

I have lately made an experiment with $\frac{3}{4}$ inch bars welded together throughout, so as to have no joints, and worked with waggons with double flanches, and with the tires of the wheels sloped so as to allow of the waggon running round a very sharp curve freely.

These bars welded into one piece were merely laid on rubble work, without any fastenings whatever, and appeared to answer perfectly for slow traffic.

Such lines, with a gauge of two feet, which is sufficient for one ton loads, would require the most insignificant cutting, and with the timber which abounds there for longitudinal sleepers, and for bridges, would probably not cost more than 3,000 rupees a mile, so that to ascend 2,000 feet at one in 25 would take 10 miles, and cost 30,000 rupees. A few such ghauts just for the conveyance of the produce of the small tract of country near them, that would not be carried to the main line, would be of use, but the traffic on them would not be great.

About four such passes would be sufficient for Canara.

Thus my conclusions on this subject are these:

1st. That everything coincides to point out Beitkul as the site of a first class port, and that both with reference to lower Canara and the whole upper part of the basin of the Kistnah, our main attention, labour, and money should be given to the establishment of that harbour.

2d. That a first class water-communication should be made in the upper country, terminating in the same.

3d. That a coast canal should be carried along the whole length of Canara and Malabar, also terminating in it.

4th. That about four minor ghauts should be laid with rails in Canara.

5th. That the system of water transit in the upper country should also be connected with the east coast.

By these means, I have no doubt that produce may be conveyed to either coast from the whole of this tract at from 1 to 3 rupees a ton, that is, at 1 pie

1 pie ($\frac{1}{16}$ *d.*) a mile, and passengers at from 1 to 6 rupees, that is at from 1 pie ($\frac{1}{8}$ *d.*) to 6 pice ($\frac{3}{4}$ *d.*) per mile. And if Beitkul is fully improved, I believe it will be as cheap a place of shipment as any in the world, and certainly much cheaper than any port in India at present, so that it will have the advantage over Bombay as it is now, and as it will be with its railway, for shipment of the produce of the upper country, by from 5 to 10 rupees a ton, much more than would constitute a good profit. If only 100,000 tons were shipped here per annum it would thus yield a profit, above what it would if shipped at Bombay, of about 7 lacs a year.

I give a rough estimate of the supposed cost of the works that I would propose in connexion with this port.

	Lacs.
Improvement of 2,000 miles of river navigation at 1,000 rupees a mile	20
Canal from the Kala Nuddee to the Toombuddra, 120 miles at 30,000 rupees	36
Canara Coast Canal, 180 miles at 6,000 rupees	11
Four ghauts	1
Detail works connected with irrigation of half million acres at 6 rupees per acre	30
Works at Beitkul before enumerated	5
TOTAL	103
Or, £. 1,000,000	

This is besides the canal and irrigation to the eastward of the Toombuddra.

I merely give this to show in a general way the scale upon which I think these improvements should be carried out.

That in this way in five or ten years, with God's blessing, this whole tract of country inhabited by about ten millions of people, would be brought into an entirely new state, I am fully assured.

As respects the people, the change would be just the same as we see in this district of Rajahmundry, where there is now full employment for all at about 50 per cent. higher wages than there was before, so that the relief to the mass of the people is really complete, and the change here is as great in all other respects. This year about 27 lacs of revenue were collected with perfect ease, 40 per cent. more than the average before the works, paid with great difficulty. The traffic on the main canals in the past year was 13,000 boats, averaging about ten tons each, besides rafts, in all about 160,000 tons, against 1,000 boats averaging about five tons, or with rafts, perhaps in all a traffic of 10,000 tons six years ago.

Exports and imports to the value of 25* lacs against an average of 10 lacs, of which 2 ½ lacs was imported grain, the latter showing not the wealth but the poverty of the district at that time. Lastly, a large import of bullion instead of a constant export.

The land to which water is now led, is about seven lacs of acres, and as a water-rate is now being levied of from two to four rupees per acre, and they are allowed the water free for two years, in the third year from this time, about 20 lacs of direct additional revenue will be levied in this one delta, one-fifth of the whole deficiency in the finances of India. This is, besides increase of cultivation, which is very extensive, an increase of extra revenue from the improved condition of the people.

The extension of this irrigation is going on rapidly, and the same in the delta of the Kistnah, so that we have ample grounds for concluding that these two deltas will within a few years yield an increase of revenue equal to the whole present deficiency in the finances, of one million. Again, by many different sources of information, we find that the increase of produce in these irrigated lands is certainly above 15 rupees an acre over the former produce in one-crop land,

* Now (1858) increased to 35 lacs.

land, so that in these seven lacs of acres there will be an increased value of produce of 100 lacs, or one million sterling, besides a second crop on 200,000 or 300,000 acres.

Does it not seem strange that the question should still be asked, in a despairing tone, what can be done to correct the finances? If it is asked, but if there is so much land watered in Rajahmundry now, how is it that the revenue has not increased still more rapidly (the works having been begun in 1845)? The answer is simply, because the revenue officers would not collect it. There are literally thousands of acres of land that have yet paid no water rate, that have had the water for 11 years, and several hundred thousands that have had it from one to five years.

It is only now, that in consequence of peremptory orders from Government, the water rate is being regularly levied, but in the meantime at least half a million pounds sterling of revenue has been lost through the grievous neglect or obstinacy of those whose duty it was to collect it. But still, notwithstanding this extraordinary hindrance, there has been collected since the works were commenced in 1845, about 60 lacs in this delta, more than there would have been in the average of former years, and that, not only without any increased burthen to the people, but with a relief equal in amount to much more than the whole former revenue.

The total cost of these improvements, up to the end of last working season, was about 30 lacs.

It is highly important that these results should be mentioned in every paper, recommending improvements of a similar nature for other parts of India, to show that we are not now dealing in theory, but have unmistakable grounds for concluding that these are really the public works that India wants.

It must be observed that this delta has a secure port.

(Public Works Department.)

EXTRACT from the Minutes of Consultation, under date the 28th May 1858.

READ the following letter from Colonel A. T. Cotton, Commandant of Engineers.

Transmitting a memorandum on the Harbour of Beitkul (Sedashighur) and the internal communications in connexion with it.

(Here enter 4th March 1858, No. 53.)

Para. 1. With this letter, Colonel A. T. Cotton lays before Government a memorandum on the harbour of Beitkul in Sedashighur bay, and the internal communications connected with it.

Consultation, 18th August 1857, Nos. 16-17.

2. This paper has been drawn up in reference to the order of the 14th August 1857, in which the Government desired Colonel Cotton to take the whole subject of the Sedashighur harbour works into his deliberate consideration, and to place his opinion upon all points connected with it before them. Since then the matter has engaged attention in England, as it is seen that an association, formed expressly for the object of promoting measures for facilitating the importation of Indian cotton, has adverted to the formation of Sedashighur harbour, and the opening of roads into the interior, as one of the means by which that object would be attained. Colonel Cotton's report therefore is opportune, and its importance cannot be over estimated. The Government are anxious that the matter should be well deliberated upon, and for this purpose they resolve to order that Colonel Cotton's report, together with those which preceded it from Lieutenant Taylor, of the Indian Navy, be printed, and that 300 copies be struck off, and distributed to the engineer officers; and further, that the chief engineer be requested to prepare plans and estimates for the works required at Beitkul, and submit them to Government.

Consultation 12th March 1858, Nos. 128, 129.

From Lieutenant A. D. Taylor, I. N. 13th September 1855.
From Lieutenant A. D. Taylor, I. N. 27th July 1857.
From Colonel A. T. Cotton, 4th March 1858.

3. As

3. As the map forwarded by Colonel Cotton should be attached to the printed report, the Government resolve to transmit it to the Chief Engineer, in order that copies may be prepared for that purpose.

4. Copies of the compilation now ordered will be forwarded to the Honourable Court of Directors and the Government of India, in continuation of the letters noted in the margin.

To Honourable Court of Directors, 16th April 1858, No. 9.
To Government of India, 11th March 1858, No. 435.

— No. 4. —

REPORTS on the Direct and Indirect Effects of the GODAVERY and KISTNAH ANNICUTS, in *Rajahmundry*, *Masulipatam*, *Guntoor*, &c., and the COLEROON ANNICUTS, in *Tanjore* and *South Arcot*.

(No. 493.)

(Revenue Department.)

EXTRACT Minutes Consultation, dated 29 May 1852.

Resolved, THAT the Board in the Revenue Department be requested to call upon the Collector of Rajahmundry for a statement, affording information upon the following points connected with the lands irrigated by the Godavery:

1. Extent of irrigated land watered by the Godavery for the five years prior to the construction of the annicut, the annual revenue derived therefrom, and the cost of channels or works for maintaining this irrigation.

2. The maximum extent of land in the most favourable years, irrigated during the last 20 years by the waters of the Godavery, prior to the construction of the annicut, and the revenue derived therefrom. (An estimate, where the land was zemindary and the collector has not the accounts, will suffice.)

3. The whole extent of land now irrigable (in 1851) by the Godavery with its annicut or otherwise, the amount of revenue derived therefrom, the annual increased extent of land irrigated each year since the annicut was brought into use, with the increase of annual revenue therefrom.

4. The quantity of the newly irrigated land under cane or other not ordinary produce, and the quantity of the same land under paddy or ordinary grains,

5. The prices of rice, cholum, &c., during the five years prior to the construction of the annicut, and the prices of the same articles during the subsequent years.

EXTRACT from the Proceedings of the Board of Revenue, dated 23 October 1854.

In Consultation, 11th September 1854.

READ again letter from the Sub-Collector in charge of Rajahmundry, dated 29th July 1854, transmitting a statement relative to the lands irrigated by the Godavery.

(Here enter No. 52.)

In Consultation, 23 October 1854.

Read also letter from the Sub-Collector in charge of Rajahmundry, dated 23d September 1854, furnishing reports on the effects of the Godavery annicut upon the general circumstances of the district.

(Here enter No. 90.)

Para. 1. Resolved that the above letters, with their enclosures, be submitted for the information of Government, with reference to Extract Minutes Consultation dated 29th May 1852.

2. In

2. In pursuance of the instructions of Government, the Board called upon the Sub-Collector in charge of Rajahmundry to furnish the information required upon certain points connected with the lands irrigated by the Godavery annicut.

3. In the first of the above letters that officer submitted a statement showing the irrigated extent of the whole district both above and below the annicut, the revenue derived from and the area of the lands under cultivation in the irrigated villages of the Bicavole and Caupavaram talooks only, both before and after the construction of the Tooliabaga and Samulcottah channels.

4. The Board, considering the information contained in this statement to be insufficient, requested the Sub-Collector to furnish a more detailed report on the subject.

5. Upon this requisition the Sub-Collector, in the second of the above letters, submits two elaborate reports on the effects of the several works of the annicut upon the revenues of the Talooks of the subdivision and the principal division, the former being a copy of a communication to the Civil Engineer whilst Mr. Taylor was Sub-Collector, and the latter a statement drawn up whilst Acting Collector.

EXTRACT from the Minutes of Consultation under date the 7th December 1854.

READ the following Extract from the Proceedings of the Board of Revenue.

(Here enter 23d October 1854, No. 498.)

The report of the effects of the Godavery works upon the district of Rajahmundry accompanying the foregoing letter, has been laid before Government without any opinion from the Board of Revenue. The Right Honourable the Governor in Council is desirous that the statements submitted by the Sub-Collector of Rajahmundry should be carefully tested by the Board, and that from them abstract statements should be prepared exhibiting the results in a clear and concise form. The Government take this opportunity of forwarding to the Board statements which have been received from the Collector of Tanjore, as also a memorandum with statement from Mr. Stokes, Collector of Guntoor, on the subject of the advantages derived from the annicuts in those districts. The Governor in Council proposes to publish all these reports for general information, and is therefore very desirous that they should exhibit, with the strictest accuracy possible, the utmost impartiality in the results of the outlay on the important works under notice. The Board are aware that the correctness of the accounts given by Colonel Cotton in his publication have been impugned, and other writers have argued that the large returns anticipated from the outlay on these works, have not been or cannot be realised. It is with a view of clearing up all doubts on this subject, so far as it is possible, that the Government have called for these reports, and it is therefore of the utmost importance that their accuracy should be rigidly tested by the Board both in the Revenue and Public Works Departments. The Board will give their earnest and early attention to the subject, and lay before Government their opinion.

2. Referring to the views which have been advanced in a recent printed pamphlet entitled "Modern Hydraulic Works in Tanjore and Rajahmundry Examined," the Government would further wish that before submitting their report, the Board will communicate to the author of those remarks, their views

and the result of their examination, for any further observations he may have to offer.

3. The Board should also obtain from the Collector of Masulipatam a statement of the effects of the Kistnah annicut on that district, as it will be observed that Mr. Stokes' memorandum and statements refer solely to Guntoor.

(A true extract.)

Chief Secretary.

(No. 822.)

(Revenue Department.)

EXTRACT from the Proceedings of the Board of Revenue, dated 2 April 1855.

READ Extract from Minutes of Consultation, dated 7 December 1854.

(Here enter No. 1592.

The Board are anxious to give the subject here brought before them the attention and close scrutiny which its great importance demands, but Government are aware that the districts benefited by the Godavery and Kistnah annicuts have been, for the last five years, under the separate control of the Commissioner for the Northern Circars; although, therefore, the Board can show from the records of their office the general revenues of those districts from the commencement of our rule to the present time, they find that they do not possess that detailed and connected information as to the progress and condition of the districts during the past five years, which is requisite for the full consideration of the subject under review.

2. The subsidiary works connected with these annicuts are still incomplete, and arrangements have yet to be made for remodelling the land assessment, or introducing a water-tax on, the lands newly brought under irrigation. Returns of the revenue hitherto collected would not, therefore, be a fair standard by which alone to judge these annicuts, and Lieutenant Colonel Cotton evidently includes in his estimation of their value the additional revenue which they may be expected to bring to Government, when the irrigating channels are completed and the assessment has been revised upon the lands which are converted by them from dry to wet cultivation.

3. The Board, therefore, think, that besides an account of the revenue previous to and after the construction of these works, information should be laid before Government, showing the time when their full benefit is likely to be felt, and the amount of the additional revenue which may hereafter be expected from them. The Board have necessarily only imperfect information regarding the circumstances which have delayed the remodelment of the assessment, and the taxation which it is expedient to place upon the newly irrigated lands; they have also no opportunity of testing by personal inquiries the opinions of the local officers on this point, or of observing the effects which the annicuts already show upon the people, by brightening their prospects and stimulating their commercial and manufacturing as well as agricultural industry.

4. They therefore request permission to transfer the papers regarding these two annicuts to the Commissioner for the Northern Circars, whose means of collecting accurate local information on all branches of the subject are so much superior. As the Commissioner is a member of the Board, this step might perhaps have been taken without requesting special permission, but the importance of the subject has led the Board to explain the grounds on which the proposal is made, and request the authority of Government for its adoption.

5. The Board are engaged in scrutinising the details of the Coleroon annicuts, and hope to submit their report on them at an early period.

EXTRACT from the Minutes of Consultation, under date 14 April 1855.

READ the following Extract from the Proceedings of the Board of Revenue.

(Here enter 2 April 1855, No. 822.)

In forwarding to the Board of Revenue, in view to their accuracy being tested, the statements and memorandums received from the Collectors of Tanjore and Guntoor regarding the advantages derived from the annicuts in those districts, the Government commended them to the Board's "earnest and early attention," and they are now disappointed to find that as regards the districts in the Northern Circars at least, the consideration of those statements has yet to begin. The Board are requested to return the papers connected with the Godavery and Kistnah works to Government, and to submit their reply on the Coleroon annicuts at their earliest convenience.

Revenue Board Office, Fort St. George,
19 April 1855.

Sir,

WITH reference to Extract from Minutes of Consultation dated 14 April 1855, I am directed by the Board of Revenue to return herewith the papers connected with the Godavery and Kistnah works, called for therein.

From Rajahmun dry, 29th July, in consultation, 11th September 1854.
From ditto, 23d September, in consultation 23d October 1854. Memo. from Mr. Stokes, with one accompaniment on the Guntoor and Kistnah annicuts.

2. The Board regret that delay should have occurred in furnishing the information called for regarding these works, but Government are aware how the Board have been lately situated, and the subject sent for their scrutiny and opinion is of an extensive and difficult nature, and they found that the records of their office did not contain materials for its full investigation.

I have, &c.
(signed) *B. Cunliffe*,
Secretary.

Revenue Board Office, Fort St. George,
19 April 1855.

(No. 52.)

From *G. N. Taylor*, Esq., Sub-Collector in charge of Rajahmundry, to *W. H. Bayley*, Esq., Secretary to the Board of Revenue, Fort St. George.

Sir,

Rajahmundry District, Cocanada, 29 July 1854.

Para. 1. I HAVE the honour to forward a statement exhibiting the information called for in the Extract from the Minutes of Consultation dated 29 May 1852, No. 493, received with the Board's proceedings of the 10th June following, relative to the lands irrigated by the Godavery.

2. The lands under the Tooliabaga and Samulcottah channels alone are included in this statement. The other channels were incomplete, and their influence was not felt till Fusly 1261. Previously to that year, no lands underwent the change from dry to wet or from wet to garden cultivation.

3. There are no accounts exhibiting the extent of irrigated land, the statement therefore contains the whole area of the cultivated lands of the irrigated villages for the five years preceding the commencement of the construction of the annicut, with the revenue derived therefrom and the cost of the channels.

4. It is impossible to estimate the extent of land formerly irrigated, because no accounts are in existence; but the Bickavole mootah properly so called, consisting of 30 villages, which now yield an assessment of *Rs.* 88,345. 7. 10. appears to have formerly paid to the zemindar, *Rs.* 64,949. 6. 8.

	C. Rs. a. p.
Demand of Fusly 1251 (A. D. 1841-42.)	64,949 6 8
Collection	45,444 7 0

5. The statement now forwarded, and the foregoing paragraphs in explanation of its contents, were prepared and drafted by Mr. Prendergast before his departure from the district. I understand that it was his intention that the statement should be transmitted in its present form, but I fear that it conveys very little information which will be useful at the present time to enable the Board to judge of the value of the annicut.

6. The account does not profess to give the whole returns from the Thooliabaga and Samulcottah channels. It exhibits merely the revenue derived from the wet lands in a few villages of the talooks of Bickavole and Capaveram before and after the construction of the annicut; and this information, it appears to me, can be more simply exhibited in the following abstract Table :—

STATEMENT showing the Extent and Shist of Wet Land in the *Bickavole* and *Capaveram* Talooks, both before and after the Construction of the Annicut.

A. D.	Fuslies.	Irrigated Land.		Comparison with preceding Fusly.				Cost of Maramut Works.	Price per Madras Garce.	Remarks.

7. It will be seen, therefore, from the above statement, that both the extent and shist of the land irrigated in fusly 1263, are double the extent and shist of the whole cultivated land of those villages in fusly 1256, the year prior to the commencement of the annicut. The net increase of revenue for the whole period of 12 years is about 70,000 rupees, which at the rate of five per cent. per annum, is equivalent to the interest on 175,000 for eight years. The capital expended on the two channels, from which these lands are irrigated having been 203,590. But how much of this expenditure ought fairly to be debited to those talooks, I have no means of knowing, and as an account of profit and loss, this return is therefore of little value.

I have, &c.
(signed) *G. N. Taylor*,
Sub-Collector in Charge.

STATEMENT showing the LANDS under the THOOLIABAGA and SAMULCOTTAH CHANNELS and their CIST, as well as other Particulars called for in the Extract from the Minutes of Consultation, dated 29th May, received with the Board's Proceedings of the 10th June 1852.

Rajahmundry District, Cocanada,
29 July 1854,

(E. E.) *G. N. Taylor,*
Sub-Collector in Charge.

No. 90.

FROM *G. N. Taylor*, Esq., Sub-Collector in charge, to *B. Cunliffe*, Esq., Sub-Secretary in charge Board of Revenue, Fort St. George.

Rajahmundry District, Dowlaiswarum,
Sir, 23 September 1854.

1. WITH reference to the extract from the proceedings of the Board of Revenue dated 11th instant, desiring me to furnish a more detailed report than has yet been drawn out on the effects of the annicut upon the general circumstances of this district, I have now the honour to submit for their consideration, transcript of a letter I addressed to the late chief engineer in May 1853, together with tables and statements regarding the subdivision; and a paper which I have drawn up from materials collected since I have had charge of the district, showing the improvement produced by the annicut on the talooks of the Collector's division.

2. The former paper was written at a time when considerable fear was entertained lest the estimates then before the Government should not receive their sanction, and that a portion of the project would in consequence be suspended—fears which were happily not realised. In the course of the remarks recorded in the paper more recently written, and which completes the subject as far as the whole district is concerned, enough has perhaps been said, in explanation of the reasons why I am unable to furnish the information in the exact form required by Government, with respect to the increase of wet cultivation, and in regard to the precise amount of benefit, direct and indirect, which has resulted from the annicut project, both to Government and to the population.

3. With my letter to the Board, in the Department of Public Works, I have forwarded statements of the entire expenditure on the annicut project, which with interest calculated at the rate of 5 per cent. per annum on all monies expended, is found to amount to *Rs.* 31,89,729. Interest ought not properly to have been charged on the cost of those works which are in full operation and bring a large profit to Government; but, as I am desirous of avoiding the least appearance of under-valuing the expenditure, I have included the whole.

Pl. -	27,56,832
Int. -	4,32,897
	31,89,729

Marked Z.

4. It will be seen from the large, comprehensive statement which accompanies this letter, and copy of which has already been forwarded to one of the members of the Board by the head sheristadar, that the net aggregate increase to the revenue of the whole district since the commencement of the annicut, has been eight lacs; and it will also be observed from the table annexed to paragraph 4 of the report on the Collector's talooks, and to paragraph 2 of the letter to Colonel Cotton, that the excess revenue actually realised during the seven years from 1257 to 1263, in the Delta talooks alone, is six lacs. The Government are able to judge, whether or not I have fairly attributed this increase to the operation of the annicut and its subsidiary works, and whether at the very lowest computation, the State has not been amply repaid for the entire outlay on the project, both in direct profit by increase of revenue, and by the incalculable and lasting benefit which has resulted to the people, and to the general circumstances of the district.

I have, &c.
(signed) *G. N. Taylor*,
Sub-Collector in charge.

No.

To Colonel *A. Cotton*, Chief Engineer, Madras.

Sir, Samuldini, 4 May 1853.

1. I HAVE the honour to acknowledge your letter of the 4th April desiring information, which will enable you to judge of the effects of the annicut works, upon the several talooks of the subdivision. The statements and tables which I have now the pleasure to send you, have been prepared in my office, and will be forwarded officially to the Collector of Rajahmundry, in order to show in what manner the talooks under my charge have benefited by the annicut project generally, and I trust that the following remarks will afford a clear explanation of my own views, upon all the subjects regarding which you require information.

2. It

2. It is necessary to premise, that it has not yet been possible to impose on the land of the talooks of my division, teervajasty properly so called, because none of the cultivated lands have hitherto changed their class from dry to wet, or from wet to garden, in consequence of improved irrigation. In order therefore to show how the subdivision has benefited by the annicut project, it seemed to me necessary to frame such a return as should exhibit at one view a comparison between the revenue of these talooks, for the fusly 1256, year immediately preceding the commencement of the annicut, and that for the present year, fusly 1262; showing at the same time, the depressed state of this part of the district for 12 or 20 years anterior to fusly 1256, the gradual improvement of the revenue during the progress of the construction of the annicut, and the increase in every year since its completion. To make this table more comprehensive, I have also endeavoured to show in what manner the entire amount of this increase may fairly be attributed to the direct and indirect effects of the Government works, as distinguished from the amount to which the demand upon the ryots must have been restricted, if no such improvements had been undertaken for their benefit. The separate return forwarded with this letter, will be found to comprise complete information upon all the above points in regard to every village of the three talooks of Mogultoor, Woondy, and Tankoo.

3. A statement which should exhibit the extent and kist of those lands only which have been actually watered by the new annicut channels, would be comparatively of little use, because as I said before, there has been no change of crop, nor has an acre of land been reclaimed from waste; but the entire extent of these three talooks having been exposed more or less in former years to both the good and bad effects of the Godavery water, the whole of the land has benefited by the execution of these works, either by improved and certain irrigation, by protection from floods, or relief by drainage.

4. Before proceeding to notice individual villages, which I propose doing by-and-by, choosing for that purpose for the sake of example, a few villages from each talook, it will perhaps put the matter in a clearer light, if I show in the first place, what has been the increase of revenue derived from those lands which are under the influence of the Godavery, as distinguished from those which, from their high level, the water of the river will probably never reach.

5. It is possible that the above figures are not perfectly accurate, for, in order to save time, the calculations have been made from accounts in my cutcherry, and from my general knowledge of the particulars of each talook, but they cannot be materially incorrect. The land which is not affected by the Godavery, is chiefly in the Thademulla talook, the kist of high land in the other three talooks which the river has never yet reached, amounts to the insignificant sum of 12,000 or 14,000 rupees.

6. The following statement giving the actual collections of the three talooks of Mogultoor, Woondy, and Tankoo for the last 12 years, will show the aggregate results of the six years from the first commencement of the annicut, as compared with those of the corresponding period immediately preceding:—

			Aggregate Increase - - - Rs.			

7. Hence it appears that, although the revenue of fusly 1256 was upwards of 30,000 rupees beyond that of fusly 1251, the net decrease for the period embraced by those two fuslies is *Rs.* 6,174. 12. 10, or, in other words, the Government would have been a gainer to that amount, if the revenue had remained stationary throughout that period; since the year 1256, the revenue, on the contrary, has been steadily increasing, and, while the collections of fusly

fusly 1262 are 64,000 rupees in excess of those of fusly 1256, the aggregate increase for this last period amounts to *Rs.* 200,308; that is to say, the Government are richer by two lacs of rupees than they would have been had the revenue made no advance after the commencement of the annicut.

8. This comparison, however, would not of itself be sufficient to show the value of these works, because the commencement of the annicut was not the turning point in the revenue. It had increased very considerably in fusly 1254–55, and 1256, although not sufficiently to compensate for the large diminution in fusly 1253. The cause of this latter decrease will enable us to appreciate the improvements which have been made since.

9. The loss in that fusly was occasioned by a heavy flood of the Godavery, when the entire face of the country was exposed to the unchecked ravages of the inundation; but in fusly 1259 there was a still higher flood, and the country being partially protected, although the annicut was not finished, the loss was considerably less.

It is proper to remark, however, that although the figures 4,31,927 represent the collections belonging to fusly 1259, *Rs.* 35,000 of that amount were postponed and actually collected in fusly 1260.

In fusly 1262, when the river rose higher than on either of the previous occasions, and the flood continued at its height for a most unusual period, the loss was so trifling that it has not been found necessary, except in a very few cases, to grant remissions. I have put down the collections of the three talooks for the current fusly at *Rs.* 4,77,921. 5. 10, which is *Rs.*6,800 less than the demand, and is the amount which I consider will be collected without any difficulty.

10. It is impossible to estimate with any approach to accuracy the amount of loss which those talooks would have suffered in the present fusly, had there been no embankments to protect the lands, no drainage to relieve them, and no irrigation channels to supply the after-crops when the first had perished. With the effects of previous floods before us, it is not too much to say that the inundation of the past year, which exceeded both the previous ones in volume, if not in duration, would have reduced the revenue 10 or 15 per cent., and caused an amount of damage which would have completely dispirited the people, and from the effects of which it would have taken them long years to recover.

11. It seems to me that the foregoing figures speak for themselves; it requires no argument to show, that, with two such visitations as the floods of 1849 and 1852, a clear return of 200,000 on those six years could not have been obtained by unaided revenue management, however able and vigorous. Knowing the result of the previous period, we may presume, on the contrary, that, without any improvement in the public works, there would have been a deficiency instead of a surplus. I think, therefore, that I am justified in ascribing the entire increase and security of the revenue during the last six years to the operation of the annicut works.

12. To put the matter in a yet stronger light, I here enter the following statement of the collections for the same two periods in the Todemulla talook, which is above the annicut, and not directly affected by it:—

STATEMENT showing the Annual LAND REVENUE of *Todemulla*, from Fusly 1251 to 1262 inclusive.

		25,346 7 11	—

These figures exhibit a lamentable contrast to the results in the other three talooks of the division, and the remarkable fluctuation requires some explanation. The first material advance was made in fusly 1254, the year after Sir Henry Montgomery visited this district as Commissioner, and the first year of the subdivision, fusly 1255, was a year of dearth. Fusly 1256, a year of plenty; many of the villages were then settled under the sharing system, and the produce of the Assara land in the former year was only three candies, while in the latter it amounted to 400 candies. In fusly 1257 it fell again to 116, and in fusly 1258 to 48 candies. The same causes, viz. scanty, unseasonable, or excessive rains, produced similar results in the rented villages of the talook, and the revenue gradually declined until fusly 1259; since that year the village renting system has been established throughout the talook, and the revenue has steadily increased; but the Beriz even now is lower than it was six years ago, not from the total neglect of public works, but because it could not share to any extent in those grand improvements which have secured the other talooks from similar loss.

Direct and indirect effects of the annicut works.

13. I will now proceed to show more particularly in what manner I consider that the villages in the talooks under my charge, have profited by the annicut project. The benefits have been both direct and indirect, and vary of course according to different localities. The direct benefits are three-fold, and are defined in the first question of your letter: 1st. The preservation of the lands from floods by the new system of embankments; 2d. Their relief by the cutting of drainage channels; 3d. The supply of the lands with water throughout the year.

14. But I do not consider that any one of these three causes had begun to operate upon the revenue to any great extent, until the completion of the annicut in fusly 1260. It is true that the Godavery embankments were stronger and in better order than they had ever been before, but this improvement had not been found sufficient to avert the calamitous effects of the floods of fusly 1259. The increase which occurred previous to that year, fusly 1260, must be attributed almost entirely to the indirect effect produced by the large expenditure of money on the public works.

15. The employment of many thousands of people at seasons when they could not have found work elsewhere, opened out to the labouring class a new and profitable means of livelihood, and secured to the ryot, the tradesman, and the merchant, a large and certain market for agricultural products and merchandise of all kinds. No proof is wanting of the improved condition of the labouring class; many of them have risen from a state approaching to slavery, to be independent cultivators, that is to say, that instead of working as before for an inadequate daily hire, some of them now possess small holdings of their own, paying kist to Government, while others are content to sell their labour to Government for the ample pay they receive at the public works. It must be admitted that the change bears very hard upon individuals among the better and more wealthy class of ryots, accustomed and entitled by long prescriptive right to the services of their serfs or under labourers, who in return have enjoyed certain rights and immunities, and even the site upon which they live, at the will of their lord: those proprietors now find themselves deserted in favour of the Government works, and are frequently in want of hands for the tillage

tillage of their fields at the proper seasons. The natural effect has been a rise in the wages of labour, but, as compulsory attendance at the Government works is no longer enforced, the better class of ryot has no real grievance on that score. He admits that, after a temporary absence, his under-labourer returns to the village with a bag of money, but because the latter surrenders no portion of his gains, he finds it difficult to realise the principle, that the money does find its way to him in some shape or other, and that the servant's prosperity is undoubtedly conducive to the benefit of the master. It will take some little time, perhaps, to impress this truth upon the natives generally, but in some villages they are already beginning to understand it.

16. You are aware that the subsidiary works for the irrigation of that portion of the delta which lies to the west of the Vasista Godavery, were only commenced in the spring of 1851 (fusly 1261), but in fusly 1260, a considerable sum was expended in repairing and strengthening the river embankments; the two large mouths of the Boopyah and Jeggaraz Kalvas were effectually bunded, and various other improvements executed to prevent a repetition of the disastrous effects of the inundation of fusly 1259. But it was not until fuslies 1261 and 1262 that the country was relieved by the commencement of the drainage channels, or the people benefited by the certain supply of water, first in the Gosta Nuddee and Wyairoo, and afterwards in the other channels that are now in course of completion. In determining therefore what portion of this increase of revenue is owing to the several direct and indirect effects of the annicut works, I have been guided by those circumstances, and have attributed the profit of the three years from fusly 1257 to 1259 inclusive, to the general expenditure; that of fusly 1260 and 1261, to the effect of improved embankments and drainage; and the increase of fusly 1262, to the actual supply of water in all seasons.

Dates of the accomplishment of various works on the Godavery, western bank:—

May 1851. Wyair project commenced.

August 1851. Chettypetta Calingalah finished. Head of Gosta Nadee opened.

September 1851. First dhony passes through Vizzaseavram lock.

February 1852. Nundamoor lock opened.

April 1852. Kakarapurroo channel opened.

August 1852. Yellamunchally channel opened.

January 1853. Palacole channel finished. Parimella lock opened.*

February 1853. No. 1. Asunta irrigation channel opened.

March 1853. No. Assunta irrigation channel opened.

April 1853. Mookkamoolla lock opened.

17. The following is a statement, exhibiting the advantage derived from the Government works in a few villages selected from each delta talook of the subdivision; they will serve as an exemplification of the whole, for the separate table which accompanies this letter, is prepared in the same form, and contains the particulars of every village in the three talooks:—

STATEMENT showing the Effect of the several Works of the ANNICUT Project upon the Revenue of a few Villages of each of the three Delta Talooks in the Subdivision of *Rajahmundry*.

* 755 rupees of this amount is the increase in fusly 1262, but as no water has yet been conducted to the village of Vamavarum, it is entered in Column 13.

18. The first village is Asunta, in the Mogultoor talook, which is now watered by a cut from the Yellamunchelly channel. In fusly 1257, 1258, and 59 during the construction of the annicut, the ryots profited largely by the increased demand for products of all descriptions occasioned by the wages received on the Government works by large masses of the people; the amount under this head is *Rs.* 2,110. 13., as entered in Column 12. The chief products are those of the most valuable kinds, requiring careful culture, and a considerable amount of artificial irrigation. Until fusly 1260, these lands had been exposed to the ravages of floods, and a large portion of the crop was annually destroyed; but by the repairs of bunds, and chiefly by the raising of an embankment across the mouth of the Jaggarazoo Codue, the crops in that and the following year were preserved, and the profit was very large. The increase of revenue for those two years, as entered in Column 13, was *Rs.* 3,389. 14.

19. In the current fusly (1262), not only was there one of the largest floods on record, but the whole of the dry crops, the principal produce in this part of the district, were almost completely destroyed by the excessive and unseasonable rain which fell in December; considerable doubts were entertained whether it would have been possible to collect the large kists of that and the following months, but fortunately for the ryots and for Government, in consequence of the constant supply of water from the two channels branching from the Nuckkala Calva, the pyra, or after-crops, were excellent; the ryots were indemnified for their previous loss, and the Government demand has been realised in full. I have no hesitation in saying, that but for this timely aid, the loss in this village alone would have amounted to 4,000 rupees.

20. The other villages in this talook were similarly watered by the Palacole, Yellamunchely and Nuckkala channels, and the above remarks apply generally to them all.

21. In Tankoo, the improvement is not less conspicuous. In the villages selected, the crops of Bengal gram, oil seeds, &c., have been brought forward or revived by water from the Gosta Nadee and Palacole channels.

22. The effect of these works upon the Woondy talook, has been still more remarkable. The almost constant supply of water in this and in last year, in the

the numerous old branch channels from the Gosta Nadee, has enabled the ryots to forestall by many weeks, the usual season for sowing, and afterwards transplanting their first paddy crop, a circumstance which ensures them a rich harvest. In many parts of the talook, they are now certain of water for the irrigation of the Dalwa crop, which being before dependent on precarious rains, they seldom or never reaped; and in many villages, grain, cotton, &c., have been grown upon land which was never known to produce a dry crop before.

23. Nor is this all; the relief of the lands by what has been already effected in the way of drainage is very striking. The value of the crops already grown on land so relieved, and which would have been nearly unproductive without drainage, is perhaps small, but when the large drain from Gollala Codaroo, following the old course of the Gosta Nadee, is completed, a very large extent of land will, I hope, be reclaimed for cultivation.

24. Where the improvement has been so general, and the increase in the revenue is owing to various direct and indirect causes, it is perhaps difficult to determine precisely, the proportion which is properly attributable to each particular part of the work. The division is necessarily arbitrary, but the arrangement which I have adopted in the separate return that accompanies this letter is borne out, as explained in the few instances selected, by the circumstances of each particular village. If it has been satisfactorily shown that those several effects have combined to produce this increase of revenue, it matters little that we have over-rated the benefit derived from any one part of the project.

25. I ought not to close this part of the subject without alluding to the very material effect which the annicut has produced upon the revenue derived from the sales of salt. The salt swamps in the Mogultoor talook may be calculated to contain at least 5,000 acres. The names of the villages with the extent of land entered under this head in the accounts of each village, is given in the margin. Ten years ago, the Government incurred considerable expense for the protection of the salt produced upon these plains, and in fusly 1251, realised *Rs.* 28,249. 13., by the sale of that portion which the vigilance of its officers had secured from illegal removal. The value of spontaneous salt formerly removed clandestinely, and consumed by the people, may be estimated at 40 or 50,000 rupees. Since the month of March 1852, the flow of fresh water from the Gosta Nuddee has entirely stopped the production of such salt except in one or two villages, and the sales at the Mogultoor depôt, from July 1852 up to April last, have already exceeded those of the previous fusly by 8,000 rupees, and the sales to the end of the fusly will probably amount to 20,000 rupees more. When the soil of these plains becomes thoroughly sweetened by the continued washing of Godavery water, not only will the salt revenue continue to increase, but a considerable tract will also be fit for cultivation.

26. With respect to the question, whether with this increase in the assessment, the ryots have improved in their circumstances, I think there can be but one opinion. There are, of course, individual exceptions, cases where taxation has pressed too heavily, and villages which it has been found necessary to relieve of part of their burden; but I can confidently point to those villages which have borne the highest increase of assessment, as being the richest and the most thriving of the subdivision. While, on the other hand, those villages that have not yet shared in the improvements, have become impoverished and partially depopulated, through continual neglect or exposure to hopeless inundations, from which there appeared no relief. I am happy to say that the inhabitants of these villages are no longer desponding; they have not been unmoved spectators of what has been doing around them, and they look forward with hope to a share of those benefits which others have already secured.

Have the circumstances of the ryots improved with the increase of revenue?

27. I trust that I have succeeded in showing clearly, that the extraordinary increase of revenue in these talooks is due mainly, if not entirely, to the annicut works; that this improvement has been gradual, and annually progressive in proportion as the project proceeded; and that the pressure of this enhanced assessment has not been too severely felt by the ryots in general, who, on the contrary,

If there be no delay in the prosecution of the works, will the revenue continue to increase for some time to come, but only to such an

amount as will admit of the steady increase of private property?

contrary, have improved in their circumstances. The benefit which has already been secured, is an earnest of what may yet be done; to stop short at the point when the real fruit of our labour is about to be gathered, when the whole mass of the people are eagerly anticipating the completion of the project, seems to me to be the very worst policy. The results which have followed the partial relief in the Woondy talook, testify to the importance of the immediate completion of the drainage of that part of the country; while the effects of the limited supply of water which has already reached the villages of Mogultoor, point to the expediency of extending the benefit to every other part of that and the Tankoo talook.

28. The ryots are not now, as heretofore, regardless of improvement; they are deeply interested in the progress of the works, and every village desires its own watercourse. It is no longer necessary to compel them to the adoption of measures for their own benefit, for they are not slow to recognise a personal advantage when it costs them nothing, and hence it may be confidently argued that there will be an extensive use of these irrigation channels when once they are completed. Some villages are, of course, more backward than others, and whether it arises from difference of soil or from other causes which have influenced the cultivation, it is remarkable that both in Mogultoor and Tankoo the ryots have been satisfied with using the water, to ensure good returns of their usual crops, rather than attempt the culture of rice or other more valuable products. It is partly a want of confidence in their own resources, and an uncertainty of what is to befal them, that, I am persuaded, prevents them in many instances from attempting improvements. It is not surprising that many are found to hesitate and hold back, when they know full well that the revenue officers of Government are on the watch to increase their assessment. Let them first understand that it is really for their benefit that these works are undertaken, that the Government are not anxious to tax them beyond their resources, its first object being the prosperity of the people, and there need be no apprehension regarding the increase of revenue. This, it appears to me, will prove the surest means of creating and confirming private property, and it must have a beneficial effect upon the revenues of Government.

29. I think that the assessment in some parts of the division is already too high, in others that it has been raised to a point which ought not to be exceeded, and that in general we ought to be satisfied with the improvement that has already taken place, without pressing the ryots at a period when all their spirit and energy requires support and encouragement. If we are in too great a hurry to claim extra payment for every drop of water which is carried to their fields, we shall but drain their resources and destroy that hope of the future which now pervades all classes, and ultimately fail to reap those benefits which a more liberal course would have undoubtedly secured.

30. In support of the truth of these remarks, I subjoin a table of the extent of cultivated, fallow, and waste land in each talook of the division:—

TABLE of the entire Extent of CULTIVATED and UNCULTURABLE LAND of all Descriptions in Three Talooks of the Subdivision.

No.	Talooks.	Jeroytee Land, included in Amarkum.			Immemorial Waste.	Enam.			Grand Total.	
		Cultivated.	Fallow.	Total.		Kattoobady.	Doombala.	Total.	Pooties, Columns 4, 5, and 8.	Acres.
	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.
		Pooties.								
1	Mogultoor	4,571 0 0	744 14 13	5,315 14 13	190 18 8	659 8 5	1,609 12 4	2,269 0 9	7,775 13 14	62,205
2	Woondy	4,334 9 5	1,569 17 8	5,904 6 13	27 4 5	464 5 13	1,544 11 9	2,008 17 6	7,940 8 8	63,524
3	Tankoo	4,374 2 9	849 2 1	5,223 5 8	6 8 6	916 19 9	1,999 13 11	2,916 13 4	8,146 7 2	65,171
		13,279 11 14	3,163 15 4	16,443 7 2	224 11 3	2,040 13 11	5,153 17 8	7,194 11 3	23,862 9 8	1,90,900

31. It

31. It is seen from the above table, that the whole area of assessed jeroytee, or Government land in the three talooks, is, 16,443. 7. 2. pootties, or 1,31,547 acres; the assessment amounts to 4,71,957. 1. 10., and the average rent therefore paid to Government is, *Rs.* 3. 9. 5. per acre.

The following figures will be found to give the average in each talook:—

TALOOKS.	Area of Cultivated Land in Acres.			Kist.			Average per Acre.		
	Acres.	*r.*	*p.*						
Mogultoor - - - - - - -	42,526	0	0	1,56,432	6	3	3	10	10
Woondy - - - - - - - -	47,235	0	0	1,45,519	4	5	3	1	3½
Tankoo - - - - - - - -	41,786	0	0	1,70,005	7	2	4	1	1
TOTAL - - -	1,31,547	0	0	4,71,957	1	10	3	9	5

I am not at this moment aware of the rates which obtain in other districts of this Presidency, but the average of the talooks of Amalapoor and Nagarum on the other side of the river is also about four rupees. In an able and interesting article upon the land revenue of Madras, in the Calcutta Review for June 1852, I find it stated that the average rent paid to Government in the North West Provinces, on the acres actually cultivated, is, *Rs.* 1. 12. per acre; and that in the Salem district the average is *Rs.* 1. 14. 10. per acre. If, therefore, the above table can be depended upon, you will not be surprised at my doubting the possibility of materially increasing the land revenue for the next few years, without bearing too heavily upon the ryots. But the fact is, that the above figures do not represent the entire extent of cultivated and cultivable land in the subdivision, if they did, the villages could not have borne their present burden without a decline of prosperity. In the foregoing calculation, I have allowed eight acres to the pooty as being the general measurement of the country; but in many parts of the district the pooty is much larger. Dotiputtah, for instance, and other Lunka villages, where the puggum of 96 cubits is used, the pooty contains 11 acres; and then, again, no faith can be placed in a mode of measurement which varies in almost every village, so that I have little doubt we shall be under the mark, if we allow at least 50,000 acres in excess of the number entered as actually cultivated; but even with this increase the tax would still be very high.

32. The revenue payable on the Cuttoobady enam lands, the area of which is 16,320 acres, amounts to *Rs.* 22,016. 10. 4. If this sum be added to the assessment on jeroytee land, the taxation per head will be found to amount to *Rs.* 2. 12. 8. for the year. Continuing the comparison afforded by the paper above referred to, the taxation per head in the North-West is stated to be *Rs.* 1. 14., and in the Salem District, *Rs.* 2. 1. 2½.; and in those calculations, the revenue derived from the abkary and stamps has been taken into account, whereas in mine, every item but the land tax is excluded.

Rs.	*a.*	*p.*
4,74,957	1	10
22,016	10	4
49,673	12	2

The population of the three talooks by the census of 1851, was 2,01,504.

33. I have already alluded to the reluctance of the ryots to attempt a change of crop from dry to wet; it will not be uninteresting to compare the estimated return of five consecutive years, from dry crops, with a similar return from wet crops, both grown upon irrigated fallow land of the first class:—

Years.	CROP.	Dry Land. Nature of Cultivation.	Expenses.	Return.	Profit.	—
			R. *a.* *p.*	*R.* *a.* *p.*	*R.* *a.* *p.*	*R.* *a.* *p.*
1st	Poonasa, black paddy, red grain, cotton.	Turning with crowbar, ploughing.	32 – –	80 – –	—	—
	Pyra, cholum, lamp-oil seeds, Bengal and horse-gram, cotton, &c.	Labourers' hire for sowing, cutting, weeding, &c.	23 8 –	60 – –	—	—
			55 8 –	140 – –	84 8 –	—
2d	– – – – –	– – – –	20 – –	140 – –	120 – –	—
3d, 4th, and 5th years, at the same rate as the 2d			60 – –	420 – –	360 – –	—
				TOTAL – – *Rs.*		564 8 –
	Wet Land:					
1st	White paddy	Ploughing, seeds, labourers' hire for planting, watering, cutting, &c.	25 – –	90 – –	65 – –	—
2d	White small crop of gingily oil-seed.	– – – –	25 – –	120 8 –	95 8 –	—
3d	– – – –	– – – –	25 – –	169 – –	144 – –	—
4th and 5th years at the same rate as 3d – –			50 – –	338 – –	288 – –	—
				TOTAL – – *Rs.*		592 8 –

Note.—It may be thought that this comparison tells too favourably for dry cultivation, and it is proper to mention that in support of my argument, I have chosen the best light soil of Tankoo and Mogultoor, and have taken the highest return they have been known to yield in the very best seasons. Had the comparison extended to 10 years, the dry produce would probably have diminished one-half. It must be borne in mind, too, that the certain supply of water ensures a good crop of black paddy and of oil-seeds. An average of 10 rupees the pooty has been taken as the price of the poonasa crop, and 15 rupees for the pyra. The ordinary rates for black paddy is between 7 and 8 rupees, cotton 12, doll 15; and the average selling price of jomia is 12, of oil seeds above 30, and Bengal gram, 20 rupees the pooty.

In regard to the second statement, it is to be observed that the price of a pair of bullocks is included in the cost of production of the first year, and that the expenses of the second and following years on irrigated land, are larger than those in the former statement, because in the case of converting dry land into wet, the soil, which has been exhausted by the production of dry grains, requires to be well manured to strengthen it for the rice crop.

34. The above results have been obtained from various sources within my reach, and I have no reason to believe that they are materially incorrect. It will be observed that for the first two years the return from dry crops is higher than from wet; that the advantage of white paddy cultivation shows itself in the third year; and that after the lapse of five years, the profit in favour of the wet over the dry crop is less than 30 rupees. The above returns, however, presuppose good seasons, and it must be remembered that if one dry crop is abundant, another is scanty, and that the dry cultivation generally is subject to adverse influences of the weather, from which the wet is secure, and the returns are consequently more precarious.

35. The statement underneath will show the advantage of converting a pooty of unirrigated land into a rice field. Returns are given as above, for five years:—

COMPARATIVE STATEMENT of Expenses and Returns from a Pooty of IRRIGATED and UNIRRIGATED LAND of the First Sort.

Years.	Unirrigated Land.			Remainder or Profit.	The same Land when Irrigated.				Comparison of Columns 4 and 8.	
	Pooties of Grain on a Pooty of Land.	Value.	Deduct Cost of Production.		Produce of White Paddy per Pooty.	Value at Nine Rupees.	Deduct Cost of Production.	Remainder or Profit.	Increase.	Decrease.
	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.
1	10	80	44	36	8	72	44	28	–	8
2	12	110	7	103	10	90	30	60	–	47
3	12	110	7	103	16	144	30	114	11	—
4	10	90	10	80	20	180	30	150	70	—
5	8	72	10	62	20	180	30	150	88	—
									169	55

It will be seen from the above results that although the dry cultivation deteriorates while the wet improves, the ryot loses by the change for the first two years. If it be admitted that the foregoing estimates approach the truth, it is evident that a too sudden rise in the assessment will press very heavily upon the ryots.

36. The following table shows the average assessment per acre of each description of land in the three talooks :—

TALOOKS.	AVERAGE, &c.			
	Dry.	Wet.	Garden.	Lunka.
Mogultoor - - - - - -	3 14 5	2 10 –	7 11 5	9 5 7
Woondy - - - - - - -	2 13 3	3 3 1	—	—
Tankoo - - - - - - -	3 14 –	5 1 8	- - -	10 10 7
	3 11 2	3 1 6	7 11 5	9 15 1

It will be observed that the average rent of the dry land in Mogultoor and Tankoo is higher than the average of wet land in Mogultoor and Woondy. This is explained by the fact that garden produce, chillies, turmeric, sugar-cane, &c., is grown upon what is entered in the accounts as dry land; cocoa-nuts, mangoes, and betel only being entered as gardens.

37. I wish it were in my power to frame accurate returns of the gross value of crops grown on the lands of each talook, or even of a few villages, but so long as it continues to be the interest of the cultivator to conceal the truth, and of the native Government officials to connive at the deception, so long will the estimates furnished to us be deficient, and our returns fictitious. Hence arises the difficulty of determining the true value of an acre of land, and until a new survey and assessment is set on foot, this inconvenience will continue.

38. It does seem to me that no better time than the present could be chosen for the commencement of this long-deferred survey. The country is in a state of transition, the lands require classification, re-arrangement, and fair

distribution; rights have to be confirmed and inequalities removed, and the people are eagerly looking forward to an improvement in the existing state of things; my own opinion is, that if the revenue from jeroyte land were allowed to remain stationary, or nearly so, for two or three years, the people would be stimulated to industry, and induced to attempt every sort of improvement to their lands by manuring and irrigation, which, at the close of that period, would be in a condition to bear a reasonable increase of assessment. On enam lands tirvajasty can be levied forthwith, for they have already participated in, and will continue to receive, the several benefits produced by these Government works. The assessment already fixed by the Collector is one rupee the pooty, and even at this moderate rate, there will be a considerable increase to the revenue from this item alone.

39. 'Meanwhile, let the survey proceed, let it commence with those villages which have been the first to benefit by the new supply of water, and be thus carried gradually throughout each talook. On the completion of the survey, the lands having been properly classified and their capabilities clearly ascertained, a just and moderate assessment might be imposed which should not be liable to fluctuation, and the ryots being no longer disheartened by the uncertainty of the Government demand, will regard their individual holdings as private property, and the Government revenue will increase as they advance in prosperity.

40. I cannot however, undertake to say that the revenue of the division can increase in the same ratio as heretofore, until the whole of the annicut project be carried through, but that the return will then be amply remunerative, I have not the smallest doubt. The Godavery water has but just reached the lands of Tankoo and Mogultoor, and yet the assessment has increased within the last six years at the rate of half a rupee an acre throughout the three delta talooks of the division.

Fusly.	Price per Madras Garce.					
	White Paddy.			Black Paddy.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
1251	93	5	–	54	9	–
1252	57	9	3	46	13	5
1253	53	10	8	45	10	3
1254	58	1	4	52	1	5
1255	55	3	2	73	8	8
1256	53	1	10	74	11	8
1257	76	4	–	67	2	–
1258	72	4	–	63	8	–
1259	75	14	–	64	–	–
1260	72	6	–	65	2	–
1261	59	4	8	52	9	4
1262	48	–	–	42	–	–

41. There is one point which I have not yet noticed, but which in all calculations affecting the revenue must be taken into account, and that is, the price of agricultural produce. You will see by the marginal statement, that the prices of paddy have very materially declined, and you will understand that this has been very severely felt, particularly in the talook of Woondy, where, until the last year or two, no other crop could be produced. As the ryot pays the same tax whether the selling price is 10 or 6 rupees, his difficulties are very severe when grain is cheap. This gradual decline of prices therefore must not be overlooked, when we are considering the probability of an increase in the revenue. Cheap food is no doubt a great blessing to the people, and the larger the quantity of rice grown, the cheaper it will be; but to the cultivator who has to meet the Government demand, it is absolutely necessary that the best market should be open to him, and that he should be put in a position to compete with farmers in other parts of the country; and this brings me to the consideration of the fourth question in your letter.

Navigation.

42. I have been favoured by the Collector with the perusal of your memorandum, dated 23d February 1853, referring to an extract from the Minutes of Consultation, dated 13th September 1852. On the subject of the Thooliabaga, the arguments you have used in favour of the completion of the navigation of that canal, are equally applicable to all the channels of the subdivision. I have not the means of showing by actual returns, the amount of traffic which has already sprung up on the incompleted canals on this side of the river, but there cannot be a question of the immense advantage to all classes of the community, from cheap and easy transport which will be afforded by these channels. The importance of the navigation is attested by the eagerness with which the people already avail themselves of the water carriage within their reach, and by the disappointment which they express at the obstacles they necessarily meet with in the present incomplete state of the channels. Many instances have come under my own observation, of the efforts made by the ryots,

ryots to carry their produce to the coast, and on several occasions they have applied to me for assistance which I heartily wish it had been in my power to give. That facility of communication creates traffic, is a principle which is universally recognised in civilised countries. Before any project of the kind is undertaken, it seems to me only necessary to inquire, whether the circumstances of a province, and the wants of the population, demand improved communications; and if a reply can be given in the affirmative, an abundant traffic will certainly follow the construction of roads or canals. If again the agricultural products, or the manufactures of any two places be considerably in excess of the demand for home consumption, it is manifestly of the highest importance to the welfare of those two communities, to secure the cheapest and readiest means of an interchange of commodities. To deny them all communication, would be to interpose an effectual barrier to their progress, to repress all enterprise and energy, and to withhold from them a most powerful stimulus to industry.

43. Now the majority of the towns and villages in the sub-division are precisely in this condition; they have long groaned, apathetically it may be, under the want of good communications, for there is scarcely a single road throughout the three Delta talooks that deserves the name, and which is not impassable for bandies for more than half the year; and when we add that the population is now rapidly increasing, that there is a large augmentation in the quantity of produce, the cost of which, as you have remarked, diminishes every year, and more than all that the agricultural community are fully alive to the value of improved communications, and are already making every effort to transport their produce to the best market; I think we have a very powerful argument in favour of the speedy completion of these channels, and at the same time, a guarantee that the traffic will exceed any estimate we could now form of its extent.

44. From a paper just furnished to me by Lieutenant Chambers, the executive engineer officer superintending the works on this side of the river, I find that the number of boats which passed through the Vizasevarum Lock in last month (March 1853) was 204, and that the value of rice, oilseeds, and other produce exported during the month, was about 9,000 rupees. Even at this rate the export would amount to 1,08,000 rupees annually, were the channels to remain in their present state, but, when every village is supplied with water carriage for the interchange of traffic, and the navigation is open throughout the district, it may reasonably be expected that these exports will increase to many times that amount.

Since writing this I have learnt that the value of the exports from the western Delta talooks for the month of April 1853, amounted to 40,000 rupees, of which 14,000 was the value of the grain, and 21,000 the value of the jaggery. In May, the value of exports was 56,000 rupees.

45. Cocanada must continue to offer the best market for rice, oilseeds, grain, &c., as from the demand by English merchants and the facility it offers to the shipping, there is no other port to compete with it; much of the produce of the sub-division, however, will find its way to Masulipatam, to Elloor and to Nursapoor, where the decline of trade may be greatly attributed to the want of proper communications. I cannot consider that Nursapoor has been fairly treated in this matter. Deprived by the construction of the annicut of the direct river communication to Rajahmundry, which was formerly open (at any rate) a great part of the year, this town has not yet been indemnified for so great a loss and inconvenience to its trade by the completion of a single navigation channel for the conveyance of exports and imports. The Nuckkala channel is now open, it is true, but the navigation is uncertain and imperfect, and I cannot too strongly urge the early completion of this and the Gosta Nuddee line.

46. The following is a statement showing in a clear point of view the advantages of water carriage from different parts of the sub-division.

COMPARATIVE STATEMENT of the Expense of LAND and WATER CARRIAGE for Short and Long Distances in the Sub-Division of Rajahmundry.

Number.	To and from what Place. VILLAGES. 1.	Distance in Miles. 2.	ARTICLES. 3.	Land. Hire Paid for Bullocks, &c. per Pooty. 4.	Water. Hire for Dhoonies at Present. 5.	Water. Probable Price when Channels are Full. 6.	Rate per Mile, Water. Land. 7.	Cost at Present. 8.	Probable Cost in Future. 9.	REMARKS.
1	From Woondy to Cocanada on Gosta Nuddee.	70	Paddy - - -	8 - -	3 - -	- 14 -	- 1 10	- - 8	- - 2⅖	
2	From Woondy to Elloor on Colair.	40	Ditto - - -	4 - -	1 - -	- 6 -	- 1 5	- - 4	- - 1½	
3	From Palaveram to Woondy on Gosta Nuddee.	60	1,000 bamboos, including the water carriage on the Godavery.	19 - -	9 - -	2 - -	- 5 1	- 2 5	- - 6½	The price of 1,000 bamboos at Palaveram is six rupees, the former selling price at Woondy was 25 rupees; and is now 15 rupees. The difference between the cost and selling price is put down as the hire for carriage.
4	From Samulcottah to Rajahmundry.	55	Per candy of 20 mds.	2 - -	1 - -	- 8 -	- - 7	- - 3½	- - 1¾	The great market for this article is Vizasevarum, where the price fluctuates from 40 to 50 rupees the candy; none but the richest ryots can afford the land carriage from Rajahmundry. Local purchases are made from the poorer class at from 15 to 20 rupees the candy, and the profit to the soucar is at least 50 per cent.
5	From Tankoo to Nursapoor on Palacole Channel.	25	Bengal and horse gram oil seeds, &c.	2 8 -	- -	- 8 -	- 1 7	- -	- - 4	Too high.
6	From Woondy to Nursapoor.	20	Paddy - - -	2 - -	- -	- 4 -	- 1 7	- -	- - 2½	
7	From Palacole to Nursapoor.	6	Bengal and horse gram oil seeds, &c.	- 12 -	- 4 -	- 2 -	- - 8	- -	- - 4	This estimate is probably too high.
8	From Nursapoor to Rajahmundry.	45	Bearers for two native palakees, 10; cavademen, two.	12 - -	3 - -	- -	- 4 3	- 1 1	- -	Small dingies, capable of holding six or eight persons, have been hired at this rate, to convey court-suitors, traders and their attendants, from Nursapoor to Rajy, on the Palacole Channel. This communication being now closed, the unkkala is used instead. The comparison includes two palakees only for the heads of the two families, and the expense by water is one-fourth. Large quantities of jaggery are sent to the Rajahmundry sugar works, and the demand for this article will probably increase very considerably. The superintendent of Messrs. Arbuthnot & Co.'s factory is so sensible of the value of water carriage, that he has already constructed a number of boats for the conveyance of the supply of this article to Rajahmundry, and of sugar, &c. to the coast.
9	From Nursapoor to Chettypett.	36	Jaggery - - -	- 12 -	- 3 -	- 3 -	- - 4	- -	- - 1	

47. I repeat with confidence that the people are all prepared to take immediate advantage of these improvements for their benefit, that they ask nothing better than that the means be afforded them of making their own terms with the purchasers of their produce, and many of them will build their own boats, as soon as they know that the navigation is certain. In many parts of the Woondy talook, when the price at Cocanada was 10, and at Bunder 11 rupees, the ryots were obliged to give their paddy to the soucar for six and seven rupees the pooty, to enable them to meet their heaviest kists, solely because there was no local demand, and they could not afford to send it to a distance; the same might be said of almost every description of produce; the ryot parts with it at a ruinous sacrifice, and the soucar is enriched at his expense.

48. It is in this way that prices affect the revenue; when the ryot can himself transport his produce at a trifling expense to the best market and feel himself independent of the soucar, his returns will be increased 50 per cent., and his kists paid with ease. It does appear to me to be very hard, that, after all other restrictions upon commerce have been removed, the ryot should be still compelled to deal with the local merchant, because we virtually deprive him of access to the best market, and of the means of obtaining the full price of the produce of his industry.

49. I have not yet alluded to the new and abundant supply of river water for men and cattle, which is now conveyed to villages where the want of it was before severely felt, and which has contributed so largely to the comfort and happiness of thousands of the people. This blessing can only be properly estimated by those who have benefited by the change, and I can testify that by them, at all events, it is fully and gratefully appreciated.

50. But the interest and importance of the whole subject have carried me on, and this letter has already far exceeded the limits I intended. I will, therefore, now close my remarks with the expression of a hope; that no further delay may occur in the prosecution of any of the works which form a part of your noble project.

I have, &c.

Sub-Collector.

Samuldive, 4 May 1853.

(True copy.)

(signed) G. N. Taylor,
Sub-Collector in Charge.

REPORT on the Direct and Indirect Effects of the Godavery Annicut, in the Talooks of the Collector's Division, in the District of Rajahmundry.

Para. 1. IN a former paper it was attempted to show that the increase of revenue in the sub-division was due mainly, if not entirely, to the Annicut works. It was not meant to be affirmed that no other causes whatever had contributed to produce the enhanced and still growing prosperity of the province. The introduction of a more healthy system of revenue management, the striking off of heavy balances of former years, hopeless of realisation, while they pressed a sore burden on the people; larger and more certain protection to life and property, by improvement in the police; all these measures have, without doubt, powerfully affected the happiness of the people; and while fostering the steady increase of private property, have enabled the whole population to pursue their ordinary occupations, whether of agriculture or of trade, with a

feeling of greater confidence, and with a surer knowledge that they will reap the fruits of their labour, than they ever possessed before. It was not contended that the labours of the revenue officers, the activity and vigilance of the magistrate, combining fiscal and police improvements, had accomplished nothing; it was simply stated, that, under the operation of certain natural causes, the most vigorous administrator of the most perfect revenue system could not have extracted from the soil the amount of produce, nor realised from the ryot the aggregate collections of the last six years, without the aid of the scientific public works projected by the engineers.

2. It was argued that if the floods of 1843 had caused a certain amount of damage to produce and property, and a consequent loss of revenue to Government, the probability was, that the higher floods of the subsequent years of 1849 and 1853, would have occasioned much greater loss, had no human means been employed to check or mitigate their ravages. The ability of the Collector, and his improved revenue management, were not called in question; the security of the revenue was attributed to the natural operation of cause and effect. It was shown that the annicut and its subsidiary works had averted destruction which could not otherwise have been prevented, and credit was fairly given to it for the gain to the Government exchequer. It was not pretended that the same results would have been obtained under inefficient management, nor even that the land revenue would have declined, if no public improvements had been effected; but it was argued that the successful efforts of the Collector for a series of years to raise the revenue and to further the prosperity of the country might have been rendered fertile, as they had been before, by disasters which were beyond his power to control, but which have been averted by the Godavery works.

3. This argument I now propose to apply to the talooks of the principal division, which are under the immediate management of the Collector. It must be observed, however, at starting, that in the Collector's division, there is a much larger proportion of Government territory above the influence of the Godavery annicut than in the sub-division; that the soil of those talooks is perhaps the richest in the district, and that a very considerable portion is irrigated by the unfailing water of the Yalairoo, and other hill streams, which in ordinary seasons copiously supply the tanks and natural reservoirs, so that the comparison will not tell so favourably for the tract irrigated by the annicut. For the sake of uniformity, I propose to take the same years and the same periods as were used for the purpose of comparison, in the paper regarding the effect of the annicut on the talooks of the sub-division.

4. The following statement shows the increase of kist in fusly 1262 over fusly 1256 in the lower talooks of the Collector's division, distinguishing the assessment of the lands within the influence of the annicut, and of those which are beyond its reach.

7. The aggregate increase in the former is nearly 6 lacs, and in the latter a little more than 2 lacs of rupees; the per centage to the revenue of the two parts of the district being very nearly equal. From this it might be argued that as the increase in the one case is as conspicuous as in the other no credit can be taken for the annicut, similar results having been obtained without its influence. In order to a proper understanding of the subject, it will be better to give a brief explanation of the peculiar circumstances of each talook in support of the remark which was made in para. 3.

8. The talook of Cottapilly is lightly assessed, possesses a peculiarly rich soil, and in ordinary years the tanks are well supplied with water for irrigation. It came under Government management in fusly 1251; the revenue advanced only 3,000 rupees during the first period, but is now nearly 18,000 rupees higher than it was in fusly 1256. Formerly subject to the incursions and depredations of marauders and freebooters, its present prosperity may fairly be ascribed to the improved management and the successful efforts of the late Collector and Magistrate, by whom the successive outbreaks of the rebels were quelled, and the Revenue system put upon a better footing.

9. The same may be said of the adjoining talook of Lingumpunoo, which borders the hill country of Vizagapatam. It fell to Government in fusly 1256, and the collections of that year fell short of the peishcush by 3,000 rupees. The revenue has gradually advanced, as might have been expected after its lapse to our rule, and it now exceeds the permanent assessment by about the same amount. The most important villages in this talook are watered by the only large tank in the district, which is fed by streams from the hills.

10. Peddapoor, in like manner, came under Government management in fusly 1256, and the collections exceeded the peishcush in the first year by

8,000 rupees; and in the course of a further period of six years the annual revenue has increased from 37 to 44,000 rupees. This talook is irrigated from the Yalairoo, whose waters are distributed by various natural and artificial channels, and by means of dams and calingulas, and are made to fertilise the largest extent of sugar cultivation in the district. Under these circumstances the increase of revenue is not very remarkable.

11. The talook of Rajahmundry is very differently situated; without irrigation of any sort its produce is chiefly cholum and other dry grains. Its revenue, which in fusly 1252 was 35,000 rupees, and had amounted in fusly 1256 to 39,000 rupees, is now, in 1262, reduced to 31,000 rupees.

12. Capaveram is the only remaining talook requiring notice. A portion of this talook is irrigated from the Godavery, but the increase in the villages not irrigated amounts to nearly 20,000 rupees. This is without doubt one of the finest talooks in the district, but is comparatively lightly assessed, and the enhanced collections are in no small degree owing to the expenditure of public money, for, being conveniently situated, many thousands of its population were constantly employed.

13. It is seen, therefore, that the average collections from the talooks composing the tract beyond the reach of the annicut, which during the first period comprised in these statements amounted to 1,83,098, had increased during the second period to 2,35,000. It is admitted that this gradually progressive increase, though no doubt assisted by the life and energy infused into the people by public expenditure, and by the circulation of money produced by the large sugar works at Rajahmundry, is mainly and justly due to improved management, and better protection to life and property. It will be observed that, as each estate or talook lapsed to Government, the revenue recovered itself after the first year, and except in the case of Rajahmundry, progressively rose to the last year of the series, without break or check of any kind, until in almost every instance it far exceeds the permanent peishcush. This ought to be the natural result of an improved system of management in any portion of a province, favoured as this has been with a succession of propitious seasons, and exposed to no calamitous visitations impossible to control, or to the miseries of drought and famine.

14. Turning now to the statement of collections in the Delta talooks we shall be able to note the comparative progress of the revenue in that part of the district which is exposed to the inundations of the Godavery. In para. 6 of the foregoing paper, on the effects of the annicut in the subdivision, mention is made of the disastrous floods of fuslies 1253 and 1259; the losses occasioned by those inundations are no less conspicuous in the statement now before us. In the talooks of Ramachendrapoor, Bickavole, and Capavarem no check is discernible, because the peishcush was collected whatever the loss to the then proprietors may have been; but in Amlapoor, Nagarem, and Rally, it will be observed that the loss of revenue was considerable; and we find by the abstract statement following, that the collections fell short of fusly 1251 by 25,000 rupees. The talook of Nagarem, which suffered most from the uncontrolled floods of the river, did not retrieve its losses till the second year, and in fusly 1256 we find that its revenue is barely 4,000 rupees in advance of what it was in fusly 1251. The reaction upon two of the talooks which paid their full peishcush in 1253 is also worthy of remark. Cotaramachendrapoor did not recover itself for several years; although under Government management, even the peishcush was not realised in fusly 1254; the collections barely reached that amount in fusly 1255, and the estate escheated to Government in fusly 1256. In Biccavole, the revenue of fusly 1256 was 2,000 rupees below the peishcush in fusly 1251, and in 1255 the collections of 27 villages of Kapaveram (now watered) were 2,000 rupees below the same standard.

Fusly 1251	82,650
„ 1256	86,368
	3,718

15. Glancing through the above statement to fusly 1259, the same check and loss to the revenue is again remarkable. Instead of the progressive advance hitherto made it recedes nearly 30,000 rupees, as compared with the previous year; the diminution in the first four talooks being more than 33,000 rupees; while

Fusly 1258	6,44,377
„ 1259	6,16,282
	28,095

while Biccavole and the Delta portion of Kapaveram exhibit a small increase in consequence of direct irrigation derived from the annicut.

16. Looking further on, to the column of figures representing the collections for fusly 1262, we find the progress of the revenue arrested indeed, but to a comparatively trifling extent; the actual collections were only 8,000 rupees less than in the preceding fusly. Although the figures in the present instance do not present so strong a contrast as in the case of the talooks of the subdivision, which suffered more from inundation, still they are sufficiently significant, and the result is similar. It seems almost unnecessary to argue that if, out of a revenue of little more than 2¼* lacs, a deficit of 25,000 or ⅛th is caused by river floods, some credit is due to the works, which, in their incomplete state, enabled the realisation of more than 6 lacs, with a loss of only 30,000 (1/20th), and which, when nearer to completion, secured the collection of more than 6 ¾ lacs, with a loss of 8,500 (1/80th); notwithstanding that in the two latter years the inundations were as high, and if entirely uncontrolled would probably have been more destructive in their effects than they ever had been before.

17. It is not fair there to compare two parts of the same district which are so totally different, both in their natural position and with respect to the peculiar influences which are brought to bear upon them, and to say that the prosperity of the people and the security of the revenue are as little due to the annicut in the one case as in the other. It seems to me, on the contrary, that we ought in all honesty to confess that without the relief and assistance afforded by these works, in the way of circulation of money, protection from floods, and improved irrigation, we should have been utterly unable to realise the enhanced demand of the last six years in the lower talooks of the district, and to show an aggregate surplus of nearly 4 lacs of rupees within that period; to compare with 62,000, the increase of the six years preceding the commencement of the annicut, and most of which is due to the last year of the series, fusly 1256, in which the annicut was commenced.

18. It is of course quite impossible to say how much of this 4 lacs can be directly attributed to the effect of the annicut, because the value of produce saved, the loss and suffering averted from the population, could not be calculated, nor can I hazard a guess as to the amount which might have been realised if these works had not been executed. One assertion, however, can be made without the smallest reserve or hesitation, and that is, if no public works had been undertaken for the improvement of the Delta talooks of this district, the revenue officers would have had greater difficulty in realising during the last six years the average collections of the former series of years (5,38,000) than they have actually experienced in collecting an average revenue of 6 ½ lacs.

19. As in the case of the subdivision, therefore, I assume the whole of this increase as due to the annicut, and make the distribution of the amount as shown in the subjoined table, which is an abstract of a separate statement, containing the particulars of each village of every talook:—

Explanatory figures and remarks might here be added similar to those contained in para. 6 of the former paper on the subdivision; but it is unnecessary to exemplify by further facts what is already sufficiently palpable.

20. It will now be proper to show what has been the increase of revenue in that part of the district where extra assessment has actually been imposed, in consequence of improved irrigation from the annicut. This had only been the case, in fusly 1262, in 30 villages of Biccavole, and seven villages of Kapaveram, watered

watered by the Samulcotta and Thooliabhaga channels. Hitherto we have been considering the general effects produced upon the district by the annicut works. The revenue has been secured by the combined assistance of river embankments, drainage, expenditure of money, abundant and certain, instead of a precarious supply of water to rice crops (as in Woondy), and the timely irrigation of valuable dry grains; but now we have before us the effect of a change from dry to wet cultivation, in a part of the district which has benefited by annicut channels for several years.

STATEMENT showing the LAND REVENUE Collections, from Fusly 1251 to 1262, of the Villages in *Kapaveram* and *Biccavole*, which have been irrigated by the Annicut since 1257.

22. In the former case a capital of 72,000 rupees* has been so improved, as to produce in the course of six years an accumulated interest or profit of 1,80,000; but in the latter, a capital of 7,12,000 has gained no more than 4 lacs; whereas put out to the same advantage it ought to have realised 18 lacs. Again, this 72,000 rupees, in the lapse of six years, has become 1,15,000; whereas the 7,12,000 of the second statement, has reached only 8 lacs, though, improved in the same proportion, it ought to have become 11¼ lacs. Once more: the capital in the one case has increased in a ratio more than four times greater than in the other; for, as 72,000 : 42,000 : : 7,12,000 : 4,15,000; but instead of being 4,15,000, the increase in the latter case is only 95,000. This

This argument need not be carried further in order to prove the value of improved and certain irrigation.

23. It must not be expected that the assessment of every acre of land in the Delta will eventually rise in the same proportion as the revenue derived from the lands already irrigated by the Samulcotta and Tholiabhaga channels. The Delta has not been accurately surveyed and levelled in every part, so that nothing more would be required than to conduct the water to the land, in order to ascertain at once the degree of benefit which has accrued to the ryots, and the profit which ought to be returned to the State. Our information with respect to produce, area, and difference of soil is admitted to be still imperfect; and nothing has yet been done towards fixing a uniform higher rate of assessment upon lands which have benefited by annicut water. Therefore it is that we find it impossible to calculate, with any approach to accuracy, the money value of the improvements which have been effected. The benefits which have resulted to the population are, in point of fact, incalculable; while at the same time their hitherto uncertain and precarious nature has rendered it impossible to demand a direct return to Government in the shape of increased assessment. The Government right to a share of the profits obtained by the people has never been lost sight of, however, while the policy of moderation and liberality has been upheld; and the subject of the imposition of Teerwajasthi on all lands watered by annicut channels, has engaged the attention of the local revenue officers, and of the Commissioner for the Northern Circars. An extract from a letter, addressed by me to the late Collector in May last, will best explain my view of the matter:—

"In my letter to Colonel Cotton, late chief engineer, dated 4th May 1853, I endeavoured to show that the utmost caution would be necessary in raising the assessment in the talooks of the subdivision, in consequence of the improved means of irrigation; and I stated my opinion that, in order to stimulate the industry of the people, and induce them to attempt every sort of improvement to their land, it would be advisable to confirm the existing rates for a period of two or three years; to give them, in short, for the present at any rate, a permanent demand, sufficiently favourable to tempt them to take advantage of the water within their reach, and such a certainty of our moderation as would enable them to undertake the expense of superior culture, with immediate benefit to themselves and without apprehension for the future.

"Subsequent observation has not induced me to alter this opinion. It will cost the Government positively nothing to be generous at a time like this; on the contrary, it will be clear gain. The more we give up to the ryots now, the more we shall eventually receive. The State can well afford to forego for a time a direct return, in the shape of increased land tax, for expenditure in improving the resources of the soil. The interest for capital expended in the construction of the annicut and the distribution of water throughout the Delta, is amply realised in an increase of the indirect sources of taxation. Large exports, well-stocked markets, circulation of money, brisk trade, and a greater consumption of home products and foreign manufactures; these are indications of prosperity which may already be discerned, and which will be more striking as the means of easy transit are improved and extended; but we look in vain for that general, unmistakeable improvement in the condition of the ryots, which such a state of things might have been expected to produce. The Commissioner has truly described the causes which have hitherto operated to check the extensive use by the ryots of the means of irrigation placed within their reach. It is impossible to overrate the feeling of uncertainty which prevails throughout the district. In many parts they are already depressed by an assessment, which, compared with the average* rates obtaining in other provinces, is very high; and the necessity of continuing advances for cultivation would seem to indicate that, with a large body of the ryots at any rate, there can be nothing approaching to wealth or easy circumstances.

* *Vide* para. 31 of the previous paper on Subdivision.

"It should also be borne in mind that the operations of the engineer department have not been productive of unmixed good, event in the most improved villages. In carrying out a complete system of irrigation for the entire Delta, the

the interests of individual villages are sometimes unavoidably sacrificed to the general good. The arrangements are still incomplete and imperfect, and the benefits uncertain and precarious. Bunds, which have hitherto served to confine the water required by individual villages, are removed, because they intercept the natural drainage of the country; and a great portion of the Delta land is now deprived of the rich alluvial deposit brought by the floods of the Godavery, whose waters are confined within the high embankments which run along its sides. To many of the villages so situated it has not been possible to conduct the water of the annicut by newly-formed channels. The interference, too, with the ordinary habits and pursuits of the people, the various innovations to which they are not easily reconciled, the mere presence of an engineer encampment in every part of each talook; the various wants, wishes, and requirements which have to be met and satisfied, and the secret exactions by the tribe of native goomastahs and peons employed in all directions, to which, notwithstanding the vigilance of the European officers, the ryots are necessarily exposed; all these circumstances have contributed to cause the people to regard a change in their prospects with a feeling of distrust, and the proceedings of the engineer department often with fear and distaste. Happily for them, the efforts of the civil engineer, who has the general control of the works, have been constantly directed to ensure the kind and considerate treatment, by his subordinates, of the native inhabitants of all grades; but there is naturally a want of sympathy on the one hand, and an absence of that confidence on the other, which long and intimate intercourse can alone remove.

"I have wished to put these matters in the strongest possible light, because it appears to me that it is only with a most careful consideration of all the influences which have been brought to bear upon the ryots, that the subject of Teerwajasthi ought to be approached. Having had these difficulties to contend with, it seems to me that we ought most carefully to abstain from still further disheartening them by any measure calculated to increase those difficulties."

24. The arrangements recommended by myself have been approved, and active measures are now in operation for assessing with Teerwajasthi, at the ensuing jummabundy, lands of every description which have enjoyed annicut water for two years. A notification, issued to every village in the Delta, tells the people what they have to expect; and proprietors and enamdars will be called upon to pay for the benefits which they have received at the sole cost of Government.

25. The following statement will be found to contain some information of a useful nature, as explaining the inequalities which prevail in the assessment in different parts of the district, and showing that the remarks in the paper, regarding the subdivision, are equally applicable to the talooks of the Collector's division :— Para. 26.

26. Admitting that averages are most uncertain data to argue from, they are the only available criterion for comparison with other districts; and in contrasting the assessment of different classes of land in the same district, the average on the whole area is a fair exponent of their relative value and fertility. It will be observed how frequently the assessment upon the dry land is higher than that of the wet, and it will at once be understood how great will be the effect produced on the Delta talooks, when, protected from inundations, and the drainage completely under control, certain irrigation is supplied to the dry lands from which already the greatest returns are derived; and to the wet lands, which though sometimes producing, as in Woondy, a most luxuriant rice crop, are lowly assessed, because of the uncertainty to which they have hitherto been exposed.

Extract Minutes of Consultation, 10th July 1854, Revenue Board proceeding regarding a revenue survey, dated 26th May 1853.

27. Another observation will probably suggest itself on a perusal of the tables and papers now submitted, viz., the immediate necessity which seems to exist for a full and accurate survey of that part of the district which is directly under the influence of the annicut. The accompanying small outline map of the district will be of assistance in forming an opinion on this subject, and will be found useful for reference. Although, as observed by Government in a communication lately received, an accurate knowledge of the area may not be absolutely necessary in order to readjust the assessment, or to lower it where manifestly too high, I would respectfully urge that a scientific revenue and topographical survey of the Delta of the Godavery, which would have been of incalculable value if accomplished before the commencement of the excavation of the channels, will even now most materially assist the operations of the engineers, and simplify the proceedings of the revenue officers.

28. The Board will not have failed to remark in the several survey plans submitted to them, that the village boundaries in this district are invariably well defined, by broad cattle roads or poontas, distinctly separating the lands of adjacent villages. In the altered circumstances of the Delta, this large proportion of waste land will be no longer necessary; much of it will come under the plough, to compensate for the loss of cultivated land occupied by channels and banks; the boundary at the same time being preserved in its integrity. This could not be satisfactorily effected, it seems to me, without a survey. I am not disposed to think that the numerous channels already existing, and in course of excavation, will increase the difficulty of the survey operations; the two might proceed hand in hand together, and with a competent staff for the purpose, the latter might be speedily completed, and at a comparatively moderate cost. I will not, however, pursue this subject further, feeling certain that it will receive all the attention it merits. I forward a survey plan of a partially watered village, to exemplify what is said above. Taking only 10 acres as the average extent of the boundary poontas of each village, the land of this description which might eventually be brought into cultivation in the Delta, would not be less than from 4,000 to 5,000 acres in Tossipoody; it will be seen it amounts to more than 20.

29. The last column of the statement which follows para. 25, calls for particular remark. The tables and observations recorded in this paper do not refer to fusly 1263; they are brought up to fusly 1262 only; but in the year which has lately closed, the value of the annicut works has been most eminently conspicuous. In the letter above referred to, I wrote as follows:—

"Some of the villages in the Delta talooks of my division have now been watered for the last two or three years; others have been partially relieved by drainage, and in the present disastrous year there are very few which have not in some way or other benefited by the Godavery works. The produce has been abundant both on dry and wet lands; the dry lands hitherto dependent on the falling rain and periodical inundations of the Godavery, have produced abundantly wherever the channel water has reached them; and the wet lands, particularly in some villages of the Woondy talook, have yielded a crop which I believe has rarely been equalled, and never exceeded; while in other parts of the division, where the early crops were damaged and the seed beds destroyed by the unusual inundation of the Kristna, the ryots have retrieved their losses by realising a fine dalva crop, in consequence of the unfailing supply of Godavery water. In the present year, therefore, the channels have been of the greatest service

service both to wet and dry lands; the ryots have in general reaped the full benefit of the prevailing high prices; they have been saved from the distress to which others in this year of scarcity have been exposed, and their prospects are most cheering."

"But I regard this as the first dawn of hope; I look upon it as a matter for deep thankfulness and congratulation, not as a reason for increasing a tax which they have hitherto paid with difficulty. Anxious as I am to give all credit to the noble works which will yet be the means of regenerating this district, I am not the less desirous that the people should reap the whole benefit which these channels are calculated to confer upon them. I feel sure that we cannot err on the side of moderation."

30. These remarks are of general application to the whole district, and I would fain hope that the Government concur in their propriety, satisfied that the circumstances of the district are gradually and surely improving; we are willing to acknowledge that there are difficulties and drawbacks which time only can remove, and are content to forego for a season our claim to a direct and large enhancement of the revenue.

31. The Commissioner for the Northern Circars has drawn up a memorandum of the probable value of the produce saved in the passed year, showing by figured statements and arguments, the general result of the annicut project, both in fusly 1263, and in the previous years; and it seems almost a waste of words to add anything to what is therein advanced in support of the benefits this district has received from Godavery irrigation. He estimated the value of produce saved, at about 28 lacs; the actual increase of the revenue he put down at 3,70,806; and the advance of 16,32,978 in the export trade he likewise attributed to the annicut. The estimate of produce saved in this district alone, prepared by myself from the returns furnished by the tahsildars, of the extent of land watered from the Godavery, whether by channels, by natural inundation, or by timely breaching of banks, &c., amounted to about 36 lacs. These are admitted to be nothing more than simple guesses, though framed upon legitimate data. But facts, which are palpable to all, witness to the effects of the works in this disastrous year, and scarcely call for comment. A revenue realised very little short of the amount collected in the previous year, and higher than the average of any former period; exports valued at 18 lacs of rupees; imports at 2,64,546, man and beast supplied, throughout a scorching season of drought, with abundance of river water, the ryots saved from the depression caused by a complete failure of the harvest, as was the case in other less favoured districts; we may indeed say that if the annicut had done nothing more, it has in this one year realised one of the brightest predictions of its projector.

32. In page 80 of Colonel Cotton's report, written in April 1845, the following sentences occur: "Take the case of one single year of famine, and consider the dreadful amount of suffering which it involves, to say nothing of the lasting injury to the revenue, which is the certain consequence of it, and the incalculable blessing that an annicut would be to the district may be well imagined. That such a thing as a famine in any of the districts near the Godavery should ever take place is indeed the deepest reproach to us. The consideration that such a time has been, and that it will inevitably occur again within a few years, if an annicut is not built, ought alone to be sufficient to induce us to build one, even if there were no returns in ordinary years." No servant of Government, who, like myself, has witnessed the effect of the annicut in the past year, but will rejoice that he has lived to see the day when this reproach has been taken from us.

33. But we will examine more particularly the operations of trade, as revealed by the returns of exports and imports during the past, in comparison with former years. A separate statement in the Appendix gives the export and import trade for the last ten years. The following is a statement of the value of exports by sea for the last 19 years:—

34. The gradual decline in piece goods is fully compensated for by the increased exports of sugar, rice, and gingely seeds. The prices of the different articles of produce taken in connexion with the amount exported, is an indication of the character of the season. Although the value of rice exported in the past year is only one lac of rupees below the preceding year, the price being nearly double the quantity exported, was little more than two-thirds of that which left the district in 1852–53. Besides maintaining its own population, the delta had to supply food for the upper talooks of the district, where scarcely a wet crop reached maturity. But the increase in the more valuable products of gingely oil-seed and Bengal gram is very striking, and testifies to the value of the crop which was saved from perishing in Fusly 1263.

A large portion of this amount too was exported in May and June, before the drought was apprehended, and before prices rose.

35. The stimulus imparted to the industry and productive resources of the province, by large establishments like the Rajahmundry sugar factory, must not be overlooked. I understand that Messrs. Arbuthnot & Co 's average expenditure is not less than three lacs of rupees per annum, and the value of sugar exported by them annually is very little below two lacs. It is impossible to overrate the importance or value of the water communication commanded by the annicut to establishments of this character, and their success is in no slight degree attributable to the facility of communication, and the cheap transport of goods thus put within their reach; and I have no doubt that the managers of this, and of similar establishments, would be the first to admit that but for the main canals they must either have abandoned their undertakings or continued them at a disheartening loss. We may safely leave then to the mercantile community the calculation of the value in money of the benefits derived from the navigable canals dependent on the annicut.

Separate statement (F.) shows the extent and progressive increase of cane cultivation.

The statement of traffic (G.) on the main navigation lines during the last and the present year, will illustrate this part of the subject.

36. It has been tritely said, figures can be made to prove anything. Statements of the demand and collection of the revenue from land, and from extra items, may be framed, all too from authentic sources; but so put together, here taken and there left, as to suit the views of every writer who uses them. It has therefore occurred to me to compile a comprehensive table of the revenues of this district for the last 34 years,* containing, as it were, an abstract history of the province, which will be always useful for reference, and from which information can be derived in support of every argument it is desired to advance.

* Statement marked (K.) in Appendix.

37. The progressive increase of the Government estates, and the decline of the zemindaries, the steady enhancement and security of the current revenue in the last decade, compared with any previous corresponding term of years; the diminution of the annual collection of arrears, which in former fuslies reached two, three, and even four lacs of rupees; the steady collection of the extra sources of revenue, notwithstanding the abolition of the Sayer in 1843, and the subsequent reduction of the Sea Custom duties; the rise in the price of salt; all these points, and many more, will be noted, and may be attributed, as reason or fancy suggest, to efficiency or laxity of management, to propitious or adverse seasons, to fluctuations of price, to a liberal or limited expenditure in the district of public and private money, and lastly, to improvement in the public works, and a general and efficient system of irrigation. One thing, however, these figures cannot be made to reveal, namely, the improvement in the actual condition of the people. Much of the truth may doubtless be detected by an observant eye, but personal inquiry among those who have passed from one state to the other is necessary to a full understanding of the matter.

With this statement I close the present remarks.

(signed) *G. N. Taylor*,
Sub-Collector in Charge.

G. N. Taylor, Sub-Collector in Charge.

MEMORANDUM on GUNTOOR and the KRISHNA WATER WORKS, by Mr. *Stokes*.

Design of this paper.

1. THE important hydraulic works recently undertaken on the Godavery and Krishna rivers, have attracted a considerable share of public attention. In a pamphlet by a member of the civil service of high standing, professing a full acquaintance with the subject, the value of these works has been disputed, and the wisdom of Government in sanctioning them impugned. It has, therefore, been thought well to draw up some account of them, from authentic sources, for the information of those who have not access to official records.

2. It is scarcely necessary to explain, that on both rivers the works consist of a solid masonry dam or wear, called in these parts, Annicut, thrown across the stream to turn its waters over the subjacent country, for agricultural purposes and navigable canals.

To give information about Guntoor and the Krishna works.

3. The design of the following paper is to supply this information, so far as relates to the district of Guntoor.

Too late to stop the outlay.

4. True it is, that if Government have been misled, it is too late now to retrieve the error. The money has been spent, and the works so far completed, that in the Godavery Delta their incipient results are patent to public observation, and in that of the Krishna they are beginning to take effect.

Objections.

5. The objections raised to the Krishna works may be thus stated:

That the project was hastily adopted; that the over-sanguine recommendations of the engineers, especially Colonel Cotton, were too implicitly accepted; that the calculations by which it was supported were loose and fallacious, the preliminary inquiries not having been duly substantiated on the spot by revenue officers of local experience; that the Delta consists of black soil, unsuited to irrigation, to which the people are consequently believed to be indifferent; and that the proved failure of certain such works in that locality forbids the anticipation of more favourable results from these costlier schemes; while another line of argument proceeds upon the position that, without these works, the rental of the Guntoor district, at no distant period, exceeded its present average by a sum at least equal to their probable net profits, and that, as its depression has resulted mainly from bad management, a vigorous executive will suffice for its restoration without this vast and hazardous outlay, which, under such circumstances, is a gratuitous waste of the public funds. This assumption is represented to be borne out by the financial improvement which did actually follow the reforms introduced in Guntoor by the Commissioner in 1845, before these works were commenced. The objector indeed seems to say, further, that no profit is to be claimed from the works until the rental shall exceed its former standard.

Topography, history, works.

6. To furnish the means of testing these objections, and at the same time to throw light on some important questions connected with the author's argument, and with our Madras revenue administration, of late so much canvassed, it may be found convenient to notice in their order, first, the local features of the province, more especially as they influence the revenue; second, the history of its more recent administration; and, lastly, the works themselves. For the purpose of illustration, there are appended a sketch map of Guntoor, showing its revenue divisions, with the position of the new channels, a drawing of the wear, and tables of such available statistics of the district as serve to show its annual condition for a series of years, with explanatory remarks and deductions.

Topography. North-western tracts.

7. The topographical features of Guntoor may be traced as follows: in the north-western tracts, which include the Palnad, and what are called the Payacutta, on the highlands of Kurapad, Nursarowpett, and Innaconda, a large space is occupied by rugged hills, from which extend rocky or gravelly slopes, rarely fit for the plough, yet affording fine pasture for flocks, while the woody hills, with the dates that intersect them, serve as a valuable retreat for cattle during several months in the year, when they cannot be kept in the Delta. About a fifth of the

the revenue is derived from grass-rents, and an equal proportion from irrigated lands under small tanks. The average rate of assessment on dry land is very moderate. The population, except in the Palnad, is thin. The crops sown in the early rains in May or June are early millet and spiked millet (*holcus spicatum*), Indian hemp, sesamum, and cucumbers; and with the later rain cotton, pulse, a kind of dwarf millet, called verega, and oil-seeds, but only a small proportion of land bears two crops on the same season. The Palnad cotton is in great repute among native weavers, and it is the staple export from that quarter.

Central tracts.

8. Between the hill districts and the Delta the country is of an intermediate character, interspersed with several chains of hills, yet containing fine tracts of rich arable plains, flat, but not exposed to floods. The irrigation tanks are few and inconsiderable.

Productions.

9. In the plains nearest the Delta in Pretepaud and Martur, tobacco and chillies are grown extensively, and, being in demand for export, prove very remunerating. The soil here is also favourable for wheat and linseed, but the cultivation of both is far more limited than might be expected for products so much in request. These plants are easily killed by unseasonable rain, and hence probably are disliked by the poorer ryots, who shrink from risk.

Pasture.

10. In the central talooks and the upper Delta are several patches of low, moist ground, which yields grass of the finest quality, and Guntoor, like Nellore, has been long celebrated for its fine short-horned cattle. In the Delta itself the pasture is superior, and whenever land is kept from the plough, the tumma-tree (*acacia Arabica*) of spontaneous growth, quickly springs up, and supplies by its pods nourishing aliment for the cattle, while its gum and wood are in great request for various purposes. Fallow land thus kept for pasture and tumma wood is currently looked upon among the natives as equally remunerative with land under crop, and under the zemindars was paid for on the same terms.

Delta.

11. The Delta itself may be seen on the map as lying between the high level channel, the Krishna and the sea. From the river bank on one side, and the Condaveed Hills on the other, the land falls towards the south east. The Tungabhadra brook, which first shows itself not far from Mangalagerry, winds through the lowest level of the plain to Nizampatam, supplying a natural drain to the lands intersected by it; and between Chinnaganjam and Bapetta there is a basin, little if at all above the mean sea-level. The inland streams, of which several cross the northern road between Guntoor and Incole, where that road enters the district from the south after filling the Delta tanks, empty themselves into this basin, converting it into a large lake till it is drained by evaporation. In the central Delta all the land may be said to be under occupation.

Production.

12. The favourite crops here are great millet on the higher levels, and coarse or red paddy on the flats; and as a second crop, pulse of all varieties and oil-seeds, chiefly the dwarf castor-plant, ricinus. But besides these staples, a variety of valuable products are grown in smaller quantities, as Indian corn, coriander, fencegreek, chillies, garlic, mustard, turmeric and tobacco. In the tract between the river and the Tungabhadra the water lies near the surface, and being raised by bullocks for garden cultivation, shows what can be effected by irrigation in the dry season. The yield of the land thus cultivated with betel, plantains, turmeric, ginger, yams, Indian corn, and raggy, is enormous.

Coast.

13. Lastly, a belt of sand, from three to 10 miles in breadth, separates the alluvial soil of the Delta from the sea, and confines the drainage of the plain to the two small outlets at Nizampatam and Chinnaganjam. In this section of the Delta, the water lies a few feet from the surface, and by its unfailing abundance more than compensates for the poverty of the soil. Near Nizampatam and Bapetta are extensive tracts covered with palmyras, and everywhere valuable crops of rice, raggy, cheyroot, or tobacco are cultivated in little patches of garden, watered by the hand from small ponds. Indeed this is among the most populous and least fluctuating parts of the district. It contains many large villages of weavers, and the proportion of the non-agricultural to the agricultural classes is greater on these talooks than in others, except Guntoor itself. The drawback unhappily is that the teeming population, chiefly of the lower

Productions.

For the relative value of land in each section, *see* Appendix, No.

lower castes, shepherds, fishermen, toddydrawers and pariahs, are inveterately addicted to the use of toddy and arrack.

Exposure to floods.

14. From its conformation as now described, it has resulted that the Delta is peculiarly exposed to floods. Whether from the Krishna or the more southern streams, these inundations are of frequent occurrence in August or October, sweeping the whole flat country, and leaving the roads impassable for weeks.

Also to drought.

15. At the same time the country has been no less exposed to the opposite extreme, from the absence of irrigation. The whole district has contained less irrigated land than any other in the Presidency. The chief reservoirs in the Delta lie towards the coast. They are shallow, and the banks, formed of the loose alluvial soil, unprotected by stone, which has to be brought from a distance, are easily breached or melted away by the floods.

Uncertain crops.

16. But in addition to these causes, there is another less inherent. Until of late years the ryots have tenaciously clung to jorma, great millet, as their favourite crop. This plant is most uncertain. If healthy to the last, its yield is enormous; but it is so liable to blights of various kinds, and so easily injured by too much or too little rain, or by any rain at all when in blossom, that failures may be looked for in four seasons out of five. Indeed the climate, soil, and landed tenures, have concurred to encourage indolent and timid farming. Attention has only been directed to raising the almost spontaneous growth of the soil from year to year at the least cost or trouble.

Liability to famine.

17. Whether the causes explained be sufficient or not to account for the fact, certain it is that the famines which at times have visited all South India, except the western coast, have had their focus of severity in Guntoor.

Need of public works.

18. On the whole, it may be assumed that, notwithstanding the great advantage of its rich alluvial plain, none of our districts has stood more in need than Guntoor of the artificial appliances of reservoirs, channels, embankments, drainage and roads; yet none has been left so destitute of them.

Later history of Guntoor.

19. A cursory review of the later history of the province which has now to be given will partly account for this neglect of improvements.

The Circar and Palnad.

20. The Guntoor collectorate consists of the circar so called, and the district of Palnad, which was acquired in 1800, and has since been managed under ryotwar tenure.

Nature of Palnad ryotwary.

21. The term ryotwary, however familiarly it has of late been used, is still frequently misunderstood. It may be safe therefore to explain its essential characteristics as it prevails in the Palnad. The land has been classified, and rates of assessment fixed for each class; the fields measured and numbered. No distinctions of rate are recognised with reference to the crop grown, or the caste of the cultivator. Every ryot has the liberty of taking up or relinquishing any field he chooses at the proper season. He cannot be ousted of land so long as he pays for it, nor is any property recognised in land not occupied and paid for. Land that has been five or more years fallow, is allowed on reduced terms. Shepherds pay for their cattle at so much a head. All other farmers are exempt.

Farm tax on cattle.

Zemindary estates.

22. The circar comprised several estates which came under British rule in 1778, but continued to be managed, as previously, by zemindars. In 1802, by the Permanent Settlement, they were consolidated into two large and three smaller zemindaries, as noted in the margin. These zemindars, though all calling themselves rajahs, were not the hereditary chiefs or rulers of the country, but descendants of local officers under the Mahomedan government, by whom they had been allowed to farm the revenues, while administering the affairs of the province.

Zemindaries..	Families.	Peshcush.
1. Vassereddy -	Vassereddy	5,40,737
2. Malraz - -	Malraz -	3,38,792
3. Chilkalurpaud	Manoor -	1,26,700
4. Satanpully -	Ditto -	1,26,700
5. Reypilly -	Maniccarom	92,528

Origin of zemindary divisions.

23. It may be well here to explain that this allocation was made with no regard to territorial limits, or convenience of management. The Malraz family had acquired the Rachoor division of the Reypilly estates, and had parted with a portion of the Innaconda district to the Vassereddywar, while the latter had purchased the Colloor villages, and Nizampatam. The Manoor family had obtained

obtained as official endowment the richest villages picked out of the Condaveed country, and these had been equally partitioned between two brothers forming the Chilkaloorpaud and Satanpully estates. Under this arrangement not only were villages of different estates intermingled, but many were split into halves belonging to different zemindars, and one village was actually shared by four different proprietors.

Powers of zemindars.

24. Practically, they exercised absolute power, with the exception of police and judicial functions. By the Permanent Settlement, the sum to be annually paid to Government was fixed in perpetuity, under the term of "Peishcush;" default of payment rendering the estates liable to sequestration, and eventually, if necessary, to sale.

Mode of settling with their ryots.

25. The zemindars varied their terms with the ryots. On wet lands everywhere their rent was taken in kind, and on some dry lands also, where local circumstances made the produce uncertain. The most usual practice was a progressively increasing village lease for a term of three or five years. Balances were never cancelled, but were allowed in bad years to lie over. The great check against abuse of their power was the liberty of the ryot to move off with his stock to another zemindary; on the other hand, the policy of the zemindar was to keep a claim for arrears against him, and to threaten him, should he quit, with its legal enforcement.

Thirty years' prosperity.

26. For nearly 30 years after the settlement things went on smoothly. The first zemindars were men of ability and energy. The peishcush was punctually paid, and the Collector had little to do but look after the palnad, which continued to thrive. Mr. Oakes and Mr. Whish were each of them about 10 years in charge, and even after the death of the first zemindars no difficulty was found in managing their property when, under orders of the Court, it became necessary to do so.

Consequent inattention to works.

27. Under such circumstances it is no wonder that the importance of public works was lost sight of. The advantage of banking the Krishna was indeed forced upon Mr. Whish by a destructive inundation of that river, and he at once had a bank constructed from Bezwada nearly to the sea. He also paid some attention to roads, and the planting of groves and avenues.

Incipient decline.

28. In 1831, however, the elements of weakness began to appear; the Vassereddy family were engrossed in an endless litigation; the rental began to decline, and in 1832 came the failure of rain, followed by the famine of 1833, and the fever of 1834. The ravages of these fearful visitations are described at length, from authentic sources, in the Report of the Public Works Commissioners. (Para. 289, &c.)

Results of famine.

29. As the statistics given in the Appendix contain all the recorded information on the subject, the Commissioners' remarks need not be transcribed here. Suffice it to say, that they show the population to have diminished in two years by more than one half (2,56,000), of which they suppose 20,000 must have actually perished.

30. By an elaborate calculation, through which it is unnecessary here to follow them, they compute the whole loss, as far as it can be expressed in monetary value, at 2 crores and 27 lacs of rupees, or two and a quarter millions sterling.

Decrease of rental.

31. With the aid of the rental of the district, which the Commissioners had not before them, the loss may be calculated by a simpler process.

	Rs.
The average for the five years preceding the famine was	19,09,897
The average of the next 18 years - - - -	12,38,873
Difference - - - - - - - - - -	6,71,024
which, being multiplied by 18, gives - - -	1,20,78,432
Taking this as representing half the gross produce, the total loss of produce on the 18 years will be - -	2,41,56,864

Loss of produce indicated.

Other losses.

32. The Commissioners set down the loss to Government on other branches of revenue as 15 lacks and 37,000, and the value of agricultural live stock that perished as 18 lacks.

[illegible]orks still neglected.

33. After such a calamitous experience, it might have been expected that no measures within the compass of human skill, and our financial capabilities would have been spared to guard against its recurrence. Yet though the value of artificial irrigation, as a precaution against famine, had been demonstrated 40 years before, eight more passed away before attention was again directed to it.

From constant change of Collectors.

34. So great indeed was the dread of the district after the reported horrors of which it had been the scene, that whoever was sent there seems to have made it his first care to get away. From the 21st July 1831, when Mr. Whish's management ceased, till 20th July 1837, when Mr. Goldingham's began, the district changed hands no less than 17 times. With such a transitory executive, any well-considered remedial measures must have been impossible.

Insolvent proprietors, management of their estates.

35. The only important measure of this period, though conceived in a liberal and benevolent spirit, utterly failed of its object. The insolvent estates had, as a matter of course, been attached and placed under the Collector's management. On his recommendation, the zemindars, with the exception of the Malraz proprietrix, a widow, and the Reypilly zemindar, a minor, were replaced in charge as managing proprietors on behalf of Government, to account professedly for all the revenues after charging their establishments and their own maintenance.

Abuse of their trust.

36. The zemindars, however, losing sight of their reversionary interests, deemed it their policy to make the most of present opportunities. For private considerations they granted villages on favourable leases, and allowed partial and arbitrary reduction of rates. Division of the crop came to be the tenure of most of the best dry lands, as it had always been of the wet. They furnished imperfect or falsified accounts, and so greatly did they abuse their trust, that the Commissioner, Mr. W. Elliot, considered, from information collected by him in his inquiries in 1845, that they must have misappropriated about one-third of the revenues.

Universal corruption.

37. The universal corruption fostered under such a state of things, and the expertness acquired by the head ryots and revenue servants at combination and intrigues, to enrich themselves at the cost of Government, have ever since presented a formidable obstacle to the Collector's authority.

Gradual recovery of revenues.

38. Notwithstanding these disadvantages, however, the district, from its inherent fertility and returning population, slowly yet steadily improved during this period.

Mr. Goldingham's management.

39. With Mr. Goldingham's appointment a new era commenced.

40. His attention was quickly turned to public works, and, with the aid of Captain Buckle, the Vellatoor channel was opened to admit the Krishna freshes to a line of tanks lying near the seaward limits of the Delta. Tanks were repaired, the Moonaugy Channel planned and commenced, the Emany Tank constructed. The Tungabhadra Channel planned, and an extensive improvement of the Madras Road, with several bridges, undertaken. Meantime he was actively engaged in revising the rates and measurements of the Malraz villages; lastly, and as opening the door for all the subsequent improvement, he fully exposed the vices of the zemindary management, pointed to the Palnad system as the only remedy, and suggested as the legitimate and safest mode of attaining this object, the sale of the estates for the arrears due to Government.

Sale of estates to facilitate works.

41. And this recommendation was based not simply on the fiscal abuses inseparable from zemindary tenure, but also on the impracticability of any comprehensive scheme for irrigation, so long as the Delta lands were parcelled out among so many proprietors, whose conflicting claims and liabilities it seemed impossible to adjust. This consideration, as will afterwards be noticed, led Captain Buckle in 1839, while recalling attention to the annicut, to despair of its execution under existing circumstances.

1840–42, resumption of two zemindaries.

42. The Malraz estate had, as noticed above, remained under the Collector's management. To this was added Chilkaloorpaud, on the death of the zeminda[illegible] in 1840, and in the beginning of 1842 Mr. Goldingham was so satisfied of t[illegible] malversation of Vassreddy Ramnatha Baboo, that he then resumed this est[illegible] also. The crops were abundant, and there was a prospect of a large increa[illegible]

ons from the newly resumed estate, while the rest of the district ng and in good order.

his crisis the district was suddenly taken aback. Mr. Goldingham ted to another charge; and during the short interregnum, and a few re the arrival of the new Collector nearly all his establishment were . This change took place in the month of April, when the crops of ereddy estate, on which the Government dues for the most part had to in kind, were still in the field and unmeasured. At this time they had nsferred from one set of temporary servants employed for the season to r. The Collector was fully occupied in trying the principal servants who been suspended under charges of malversation, and his difficulties were eatly complicated by the extensive and well organised combination among he establishment to maintain their own position, secure their illicit spoils, and prevent, as long as they could, the success of every measure which would facilitate justice, check corruption, or transfer power from their own hands to those where it ought to reside.

Mr. Goldingham's removal, check to the district.

44. Upon these disadvantages supervened a depression of prices of grain extending through three years, 1842 to 1844, such as has never been on record in that province before or since.

Effect of low prices.

45. In the close of 1842, the decision of the Court of Directors was received upon Mr. Goldingham's recommendations. Instead of alienating the estates in perpetuity by selling them for arrears, they desired that the proprietors should be asked to surrender them on the understanding of receiving them back again when all requisite reforms had been introduced. The zemindars evaded these orders in every possible way, and months had elapsed before they were all in the hands of the Collector. So soon as this was effected, the necessity was felt of re-mapping the district in compact portions called talooks, each capable of management by a single tahsildar. The project was recommended to the Board, but was deferred. In May, 1843, occurred a disastrous hurricane, which swept away much of the harvest, and supplied the servants and ryots with a pretext for misappropriating much of what was left. The management dragged heavily along, until, in 1844, the Collector's health broke down, and he had to proceed to sea. The decrease of the settlement, the large balances, and the slow progress of the ordered reforms at this juncture, led to the appointment of a Member of the Board of Revenue to investigate the state of the district.

Court's orders.

Estates to be surrendered.

Note.—A subordinate with revenue and police power.

Gale of May 1843.

46. The result of his inquiries was to charge the depression of the revenue chiefly upon the corruption of the establishment. Nearly all the principal servants were dismissed, and the way was made plain for the introduction of the measures previously recommended by Mr. Goldingham, which were now ordered to be vigorously carried out. It had been considered that a field-survey, conducted by a special establishment entertained for that purpose, was an indispensable preliminary in all such reform; consequently the Commissioner sketched out a plan for this operation, and commenced work by way of a normal experiment. But owing, as is supposed, to the great difference of opinion on the subject of surveys giving rise to discussions which have only now come to a close, no orders were passed to go on with it. Meantime the Collector, acting on his own judgment, ventured to try what could be done with the means at his disposal. How far he succeeded will be seen in the sequel.

Mr. Elliot's inquiry.

47. The year 1845–46 was marked by one of the most sudden and striking augmentations of revenue recorded in any of our provinces. The increase in the collections of land revenue alone amounted to four lacs of rupees upon 9,67,000 rupees, while the revenue from all sources collectively rose from 12,82,000 to 17,83,000, or one-third more. The causes of this startling improvement are thus explained in the Settlement Report for that year.

1845–46, sudden rise of revenue.

48. "It will thus be seen that in the year under review, all those influences which tended to produce the depression of the revenue in the three preceding years were simultaneously replaced by others of an exactly opposite tendency. Instead of a combination for purposes of peculation under an unprincipled and unfit Head Serishtadar, there has been an active, able, and experienced servant,

Collector's explanation.

Concurrence of heavy crops and scarcity prices.

trained in a good school at the head of the native establishme[illegible] ameens, whose hands were tied by corruption, several very effi[illegible] have been obtained unconnected with the district; and while th[illegible] unusually good, the ryots participated in the profits of scarcity pr[illegible] consequence has been that the rise of the revenue was even more st[illegible] its fall. "The increase," it was remarked, extended to every part o[illegible] trict, comprehending both current and arrears. It would be as unre[illegible] to ascribe the increase entirely to alterations in the establishment or[illegible] stration as it would be to limit to those causes the previous depressi[illegible] revenue; for though combinations of the kind which are found to hav[illegible] may succeed in concealing the true extent of cultivation and the true a[illegible] of collections, I do not see how they could tamper with the market. I[illegible] price currents are true, and there is as great disproportion between the pri[illegible] of Fusly 1253 (1843-44) and 1255 (1845-46) as these indicate, to deny the[illegible] corresponding influences on the revenue in both years, would seem to be alike contrary to reason and experience. As an instance of the fluctuations in the revenue, depending on prices, the account of three villages were adduced, for which *see* Appendix, No. 7.

Guntoor assimilated to Palnad.

49. From the beginning of 1846, the several changes necessary to assimilate the Guntoor Circar to the Palnad in its revenue practice were carried out, for the most part, in the following order:

Zemindaries purchased.

50. The five zemindaries were put up to auction, and bought in on account of Government.

Re-division of Guntoor.

51. The territorial division shown in the map, which included an exchange of villages with Nellore, as they lay within or without the boundary, and the transfer of the village of Kytapilly on the right bank of the Krishna, from Masulipatam to Guntoor, with a corresponding re-arrangement of the establishment, was sanctioned and took effect from the 1st September 1846.

Advantages thus secured.

52. Under this arrangement, the villages of the five zemindaries which had before, with great difficulty, been managed by 14 revenue officers (called ameens), some of them having to look after villages 80 miles apart, fell conveniently into 12 talooks, the central office in each being only an easy walk from most of the villages, and in scarcely any instance 20 miles from the remotest point.

Later collections.

53. The commencement of the collections in each year, in accordance with a previous recommendation, was fixed later, so as not to fall till the crops were available, and all restrictions on the crops, whether cut or standing, removed, unless where payments had still to be taken in kind, a practice which by the end of 1849, had ceased through the district.

Improved village accounts.

54. Village accounts of an improved form, substituting books for loose papers, and providing additional checks against exaction or misappropriation of the ryots' payments, with receipt books for the latter, were adopted in 1845, and brought into general operation.

Revision of Palnad assessment.

55. The revision of the Palnad field-measurements was completed, and the wet lands for the first time classed and brought under a field assessment. All fields were defined by boundary stones, and the registered number was proposed to have been cut on one stone for each field. In about a third of the Palnad this was done, and the whole might have been finished for the trifling cost of 400 rupees, but the suggestion was not approved by the Board, and the attempt was dropped.

Field registers.

56. Field registers were commenced, numbering each field consecutively in the order of its site. All lands under share, first the dry and then the irrigated of Guntoor, were brought under field assessment. With the abolition of the division of the crop, were for ever swept away hosts of petty extortioners, who, under the name of temporary establishment, entertained yearly to watch, appraise, measure, and sell the grain, had been in the habit of fattening on the ryots.

Adoption of acre standard.

57. The English acre was adopted as the recognised land measure in all public accounts for Guntoor, as it had long been for Palnad. In many villages, the assessment was revised and simplified, and the lands measured.

It

supposed that these measurements or registers lay claim to ofessional nicety, but they answered effectually the great end arbitrary alterations by the village accountants. Each ryot has to pay for his field, and that unless he encroaches the demand eased. Moreover, it may be assumed that the falsity where it e ryot's favour.

r was any technical exactness attempted in the classification and rating land. It was chiefly done under the inspection of the tahsildars by the villagers themselves. The existing arrangements everywhere supplied a safe and satisfactory basis. The relative value of land has already practically found its level.

Lands rated by villagers themselves.

59. Distinctions of rate founded on the nature of the crop or on the caste of the cultivator, were abrogated, except the abatement of 25 per cent. on lands held by Brahmans,* and this was restricted within the narrowest possible limits and withheld on all land newly acquired. The coast villages of the Nizampatam circar were brought under an improved system. The village establishments were completed; and a scheme was drawn up for their remuneration. But it was only carried out so far as regards the village mohtauds or lowest grade of paid revenue servant. Pains were taken to restore the heads of villages to their proper place, and use them for their proper duties.

Distinction varying with crop or caste, abolished.

* *Note.*—This is called "Vundra." The exemption from tax on cattle enjoyed by farmers in the Palnad, was recommended for Guntoor more recently. It is under consideration.

60. These various measures except the Guntoor wet land assessment which was not completed till 1850, were prosecuted to completion in the course of the three years 1846, 1847 and 1848, with scarcely any extra establishment or additional cost. It is remarkable that though no special selection of agency had been made for the occasion, all seemed to be ready to the Collector's hands. The head assistant, Mr. Newill, was indefatigable not only in managing his own charge, but in relieving the Collector of all details connected with the public works, and other able and zealous young officers had each a full share of the current duties of revenue and police. The native servants were found able and ready for every part of the work to be done. Indeed without the assistance of the two Serishtadars, the reforms could not have been effected.

Reforms effected by ordinary establishment.

61. Side by side with reforms of management, the extension of public works had proceeded. For the first time, an officer of the line but qualified in surveying, was under the civil engineer of the division, Captain Lake, employed exclusively for Guntoor. No permission could be procured to do anything for the roads, but every tank, channel, or public building that stood in need of attention, received it.

Revised attention to works.

62. But in the close of 1848, a reaction began to appear. The harvest in the Delta and Krishna lands was a failure, and several of the tahsildars had apparently ceased to sweep like new brooms. Wistful reminiscences were indulged after the laxity of the sharing tenure, and both ryots and servants manifested a feeling of discontent.

Re-action in 1848.

63. In Mangalagery, Tenally and Reypilly, a determined combination not to pay, rendered it necessary to issue stringent orders for enforcing the collections. These orders were not carried out in good faith, and made to appear of no avail, except to harass the ryots by process of distraint, which were not carried out to the extent of sale of property.

Combination.

64. In 1849 and 1850, the Krishna again overflowed its banks, and a determined effort was made on the approach of the Commissioner to represent the management as oppressive and make a golden harvest of remission, and this was successful.

65. Still it is found that the Palnad and inland talooks continued steadily to advance, while the two nearest the coast did not retrograde. The depression indeed seemed limited to the villages exposed to floods in the centre of the district or skirts of the Delta.

Inland talooks advancing.

66. Additional and more detailed information as to the internal condition of Guntoor, and the working of the various modes in which it has been managed, will be found in the figured statements and notes given in the Appendix.

Appendix tables.

History of works.

67. Having brought down the revenue history of Guntoor [illegible] now enter on that of the works.

Krishna works projected in 1792.

68. The advantages and feasibility of a wear at Bezwada, we[illegible] before the Government of Madras by Major Beatson in Decem[illegible] 18th January 1793. After pointing out the benefits to the counti[illegible] means for raising two crops of rice where only one was raised b[illegible] the production of several important articles such as sugar and ind[illegible] up by saying that the expense, whatever it be, must not be put in[illegible]petition with the great advantages that would accrue from the accomplishi[illegible]nt of such a work.

Advocacy of Mr. Topping's report in 1792.

69. The project was then submitted for examination to Mr. Topping, the Company's astronomer, who reported upon it in 1794. His view of its advantages seems to have in no wise fallen short of Major Beatson's.

Execution deferred.

70. It does not appear what prevented Government from acting on such favourable recommendations. Most likely their attention and resources were fully occupied in the wars which intervened between that time and the permanent settlement, after which, as already shown, the difficulties in the way of execution were greatly increased, and the inducement at the same time diminished.

In 1839 again recommended by Captain Buckle;

71. In 1839, the undertaking was again brought forward by Captain Buckle, who, for many years had been civil engineer in the division and was well acquainted with Guntoor. He recommended it strongly as Major Beatson, on the ground of humanity, no less than of revenue, at the same time pointing out the impediments that existed under the zemindary tenure in the way of its success. His report was submitted to Government with the Board's opinion, dated 30th May 1840. By the Bezwada Annicut, they observed, Masulipatam (and they might have added Guntoor also) might, like Tanjore, be converted into a garden or granary for adjacent districts, but, from certain causes, they

And by the Board of Revenue, Department of Public Works.

By Captain Shaw.

considered it at that time inpracticable. In 1845, Captain Shaw took up the subject again, and in consequence of his report, Colonel, then Major Cotton, was requested to investigate it further and report the result to the Board. From this time, until the estimate was finally sanctioned, the matter in all its bearings was under inquiry and discussion, both by the Revenue Authorities and the Public Works Department.

Colonel Cotton examines on the spot.

Captain Lake reports August 1847.

72. Colonel Cotton met the two Collectors on the spot in November 1846, with Captain Lake, and the latter officer with his subordinates continued the investigation until he forwarded his report upon the work on the 9th August 1847. In this report, he estimated the cost of the annicut at four, and of subsidiary works for both districts, including a bridge over the annicut, at thirteen,—total, 17 lacs of rupees. The annual increase of revenue was loosely estimated at 40 lacks of rupees. He had calculated that the Delta contained on both sides of the river about 1,000,000 acres which the annicut could command, and that most of this would eventually be watered. But as regarded such revenue details, Captain Lake suggested that his report should be submitted for examination to the two Collectors, both of whom fully concurred with him as to the general advantages of the works.

Guntoor 22,40,000. Masulipatam, 17,50,000.

73. This report with others, including voluminous statements from the revenue authorities, was referred by the Board, Department of Public Works, on the 7th August 1848, to Government,* who, in accordance with their recommendation, nominated a Committee to investigate the project on the spot, composed as follows:—

Captain E. Buckle, late Civil Engineer in the Division.
Captain J. H. Bell, Secretary to the Board of Revenue D. P. W.
Captain C. A. Orr, Civil Engineer of the Division.
H. Stokes, Esq., Collector of Guntoor.
H. Forbes, Esq., Sub-Collector of Rajahmundry.

74. The

* Submitted to Government August 1848. Report from Collector, Masulipatam, 5th February 1848. Report from Collector, Guntoor, 4th November 1847. Civil Engineer, 1st division, 14th March 1848. Committee of Examination, December 1848.

nmittee were engaged from the middle of December first at the n on the Krishna project, till they sent in their report on the 26th 9. They had prolonged personal conferences with the other cers, and the principal native servants of both districts. From the at had meantime been made in detailed field accounts, they had now more trustworthy data than had been afforded to Captain Lake. eir examination was directed to these three points, 1st. The probable turns,—2d. The selection of the site,—and 3d. The plan and cost of the ork itself.

Project recommended.

75. The estimate of returns appended to the Committee's report, shows for both sides of the river, an annual increase of revenue from irrigation, of seven lacks of rupees. How cautiously their calculations were framed will now be seen.

Estimate of returns reduced.

76. Keeping to round numbers and presenting the Committee's deductions in a simplified form, we find the estimate for Guntoor to stand thus:

The available area (Ayacut) classed as irrigated land in the talooks of Ponnoor, Bapetta and Reypilly, was returned as 36,000 acres.* This at the medium rate per acre in that locality of six rupees, gives - - - - - - - - - -	*Rs.* 2,16,000	*Rs.*
But the annual return under present sources of irrigation, cannot be taken at more than - -	80,000	
Difference, being profits expected, is -		1,36,000
Again in the talooks of Tenally, Pooncor and Pretepaud, there are computed to be 76,000 acres of flat land commanded by the annicut, usually cropped with coarse paddy depending on the rains, assessed at - - - - - -	1,25,000	
This being irrigated and assessed accordingly, will bear at least three times this amount (less than five rupees an acre) or - - - - - -	3,75,000	
Difference or profit - - - -		2,50,000
Lastly, there is in Reypilly a computed area of waste land, capable under irrigation, of yielding a revenue of - -		79,000
	Rs.	4,64,000†

From this aggregate, they reserved 64,000 rupees as doubtful.

Now, as regards the two first items, no doubt can be started as to suitability of soil, nor as to the willingness of ryots, to avail themselves of water. It is not a question of raising wet instead of dry crops, but of providing a full, instead of a partial, supply to lands where rice is already grown. The last item, is only uncertain as regards the extent of land that may be taken up, as the Reypilly ryots already use water for their crops wherever they can get it. All these items together, only contain about 1,25,000 acres, or a fourth of the area computed to be under the command of the new Guntoor channels.

77. In these estimates, no account is taken of the advantages of inland navigation, nor of the stimulus to industry and intelligence, which will assuredly be given by the works. These are benefits which cannot be expressed in money, yet it is scarcely too much to say that they would alone suffice to justify the undertaking.

Canal navigation not to be overlooked.

78. Bezwada had been preferred as a site by Major Cotton and Captain Lake, but as the river is here confined by two hills to a channel of only 1,300 yards wide, with a velocity of four miles an hour, with nothing but sand for a foundation, its suitableness had been questioned. The Committee decided however, in its favour.

Bezwada decided on as the site.

79. In

* *Note.*—This appears much in excess of the land actually laid out in beds as paddy fields, as subsequently returned in the Wet Land Assessment Report.

† So in original.

Increase of three lacks in estimates.

79. In the plan and estimates, the chief alteration made by th[illegible] was to raise the crown of the wear four feet higher than proposed Lake. They also allowed for higher rates under some items, raised the charge for the works on the river from a little more th[illegible] seven and a half lacks. With the details of subsidiary works, th[illegible] occupy themselves.

Specification of wear.

80. As finally settled, the annicut occupies 2,990 feet of the river chann[illegible] and the sluices and bridge-abutments the remaining 870 feet, which complet[illegible] the width of the river. The height above summer-level being 16 feet, the width of the crest 12 feet, and that of the slope 48 feet.

Committee's report adopted.

81. Government expressed their satisfaction with the Committee's report and adopted their recommendations. They allowed, however, eight instead of 13 lacks for the details of irrigation works, and calculating that this total of fifteen and half lacks would be distributed over seven years, recommended it for the sanction of the Government of India on the 20th July 1849, with an intimation that the execution would not be commenced, till the Godavery work had been completed, and stood the test of one year's freshes.

Sanction applied for July 1849.

Sanction announced 30th March 1851.

Preparation began in 1851.

Annicut began end of 1853.

82. But a further delay took place; by the Government of India the project was referred to the Home Government. Their sanction was given on the 5th January, and announced by the Government of Madras on the 30th March 1851. But from the want of executive officers, no preparations were made for another year. About the end of 1852, under the superintendence of Captain Orr, the sluices and locks were commenced, and finished by the middle of the year following. After the rains of 1853, the annicut was itself begun, and by the 25th of March last, it had spanned the river, being raised to the height of 10½ feet above the summer-level, or 15½ feet above the deep bed.

Channels, &c.

83. Meantime the outline of the other works had been planned. On the Guntoor side, the main channel being led round the Seetanagram hill by the head of the Tungabhadra for about four miles, branches out into three canals, all of which are to answer the double purpose of navigation and irrigation.

Three main channels.

84. The high level channel leads nearly due south towards Incole, and is intended to meet the coast canal from Madras. Another is carried along the river's bank, and a third takes the line to Nizampatam, which port it will thus connect with the river and the canals on its left bank.

Progress to end of September 1854.

85. The progress report of the undertaking to the end of September last, shows an expenditure as follows:

	Rs.
On the river works comprising wear, sluices, and locks	5,88,398
On works beyond the river on both sides	2,08,440
Total expended	7,96,838
To complete the wear, will probably take a further sum of	17,800
To complete other works, already sanctioned	46,000
Estimates now under submission	3,73,000
All which are expected to be finished in two years; and about 10 lacks more may eventually be required. Thus, the total cost may be stated as, river works	7,66,000
Channel and river works already estimated for	10,41,000
To be estimated	1,00,000
Rs.	28,07,000

7,96,838 expended.

Summary.

86. The result of the whole inquiry may be thus summed up:

That agriculture in Guntoor, with singular fertility of soil, has been specially obnoxious to damage, from either extreme of season; that being destitute of artificial protection, either from floods or from drought, and possessing less watered

watered land than any other in this Presidency, this district has suffered the most in the famines. That so far from being rashly adopted, sixty years passed between the first projection and the commencement of the Krishna Works, for the last 10 of which they were under the diligent scrutiny of both engineers and revenue officers on the spot and at head quarters, and at last came before Government with the suffrages of every officer in each department, who had given an opinion about them, the strongest advocates being those of the longest local experience; that the revised estimates of returns were most cautiously framed, the only assumption being that the ryots who now irrigate their lands partially, will, when they can, be glad to do so fully, and that they will not hesitate to pay a mean rate of five or six rupees an acre. That the Delta already contains 36,000 acres in different localities appropriated to the cultivation of fine, and 76,000 acres to that of coarse paddy, that the channels already dug have yielded ample profit, as shown in the margin; and the only irrigation works that failed, are a channel that never was finished, and a tank which, with two or three exceptions, was breached in every year that it was filled.

Sixty years passed after the project was mooted.

Delta already irrigated, where possible.

Annual per centage on the prime cost, deducting repairs.

Villatoor Channel, 88¾.
Tungabhadra Channel, 47⅝.
Coochinapoody Channel, 197¼.

87. The argument, that the prosperity of the revenue depends on the mode of collection, or the efficiency of the Collector, and that outlay on hydraulic works is supererogatory, is met by the simple fact that the first great element of the farmer's solvency, is produce, and the next, price; neither of which can be reached by the Collector's management strictly so called. But whatever improvement is attainable by good management instead of being displaced, will rather be promoted by the works, and it is obvious on a moment's reflection, that whatever additional sum is paid to Government in consideration of the use of water, is to be set down as irrigation returns, altogether independent of the yield from lands not irrigated. Past experience does not warrant the hope that management alone, can carry forward the district in a course of prosperity, but should it do so, the progress of half a century would be swallowed up by one such reverse as these works are intended to guard against, while after all, the end of Government is not the creation of revenue, but the good of the people.

See return appended to Public Works Commissioner's Report.

Management not sufficient.

88. Incalculable benefit may reasonably be expected from the new operations, especially the inland navigation. If Government have been justified in public opinion, in laying out the sum they have done for the electric telegraph, merely to accelerate the transmission of intelligence, how much more in a work of this kind, which might, were it only once in a century, avert the horrors of famine.

89. It is indeed much safer not to look at the question simply as a money speculation. For cautious as have been the calculations in this instance, we must not forget the many unforeseen adversities that may arise. In particular, the difficulty of draining the Delta, and protecting the works and the lands from the tremendous inundations which occasionally occur, will demand all the talent, skill, attention and perseverance the engineer department can supply. Yet with the Divine Blessing, success need not be despaired of. After allowing for every contingency, and a large annual outlay for superintendence, new works, and wear and tear, there need be no fear that a large interest in actual revenue will be realised on the capital sunk.

Not a question of mere money.

90. This review of the whole question, however, will be incomplete, without one cautionary reflection. Unless measures of moral amelioration proceed simultaneously with the development of material resources, wealth and population may be multiplied indefinitely, and yet no substantial addition be made to the sum of human happiness. After all now proposed shall have been done, our Deltas may still be behind those of China in artificial advantages, and the people as miserable as the Chinese.

Moral improvement also required.

APPENDIX.

CONTAINING Statistical Tables of the *Guntoor* Collectorate, illustrating its Topography, and Annual Condition as respects Population, Revenue and Finance, for Thirty Years ending 11 July 1852.

THE Guntoor collectorate under zemindary tenure, was distinguished into the Guntoor circar, and the district of Palnad. When its boundaries were revised in 1856, one village with its dependencies was transferred to Nellore, seven were acquired from Nellore, one from Masulipatam, and one village forming part of the Venkatagerry zemindary in Nellore, was placed under the police and jurisdiction of Guntoor. This brought an accession to the population of about 15,000 souls, and to the revenue, of 16,000 rupees. Three villages which belonged to the zemindaries, but were situated within the Palnad, were annexed to the talook of Datchapally. The statements which follow have reference to this revised division of the district. To follow the old arrangement on this occasion, would be inconvenient, and is not necessary to the end in view.

The Guntoor collectorate then, as at present defined, is divided for revenue and police purposes into fourteen talooks, each under a tahsildar. These are sub-divided into circuits of villages called muttas, each under the supervision of an inferior revenue servant in that district termed samatdar. Many villages again have their dependencies or hamlets attached, but those only are called villages which have distinct village establishment of accountant, &c., and have from former times been entered as such in the accounts. Many of the so-called hamlets are larger and more important than some villages. For instance, Bapetta and Pratepad are classed as single villages, though round each there is a wide circle of large and rich subordinate villages. Under the zemindars eleven villages were partitioned into two, and one into four shares, and each share was numbered as a separate village in the accounts. This arrangement has now been rectified.

Of the villages some have been granted to individuals or bodies, rent free. Others have been given, chiefly as Agraharams for the residence of Brahmins, or for other causes on a reduced quit rent. All others are called seri or Government villages.

The first three statements, No. 1 to 3, show the distribution of the land, population and stock, in a tabular form. Statement No. 1, shows only the whole agricultural area, and does not distinguish the alienated lands, nor include what is unfit for farming purposes.

In the printed review by the Commissioner for the Northern Circars of the settlement of the five districts for the year 1852-53, the following particulars are given of the area of Guntoor:—

	Acres.
Barren land, such as village-sites, hills, &c.	8,59,300
Fit for cultivation	17,76,895
Total Area	26,36,195

The Agricultural area again is divided into:

Dry	12,66,755
Garden	10,593
Wet	51,336
Total	13,28,684
Alienated on rent-free tenure	1,71,867
On quit-rent tenure	2,76,344
Total	4,48,211

* 17,76,895
17,40,544
36,351

This agricultural area differs from that given in Statement No. 1 by acres 36,351.* The area of barren land is of course only an approximation; only a small portion, if any, having been measured.

It is observable that the enams or alienated lands comprise one-fourth of the agricultural area. A large portion of them are held on invalid titles.

Note.—1. Columns 2, 4 to 10, are taken from the Settlement Return of the year.

2. Columns 12, 13, 15, 16, 18, 19, ditto, but being intended to show the relative rating of the land, and not the actual revenue of the year, deductions for various causes are not shown.

3. Columns 21, 22, and 23 are taken from a statement sent to the Commissioner N. C., dated 24th May 1858.

4. The area shown is only an approximation, and does not profess to include the barren land. In the Palnad all wet lands, and the dry lands of some villages, have been measured in acres; but of other land the old recorded native measures have been converted into acres.

No. 2.—Population as Returned in 1850-51.

The next statement, No. 4, shows the annual rental, omitting fractions, of the whole district for 30 years. By rental is meant the aggregate sum demandable from each village on account of land revenue, as annually settled. It is also known by the names of demand, or settlement, and by the native revenue terms of dowl, beriz or jummah, &c.; it is composed of quit-rent on favourably assessed villages; the same on enam lands; assessment on dry, garden, and wet lands occupied during the year, rent of fruit trees and pasture lands, under which last head is included the rent of wild chaya-root. Under village rents these various items were not brought separately to account. Until the accounts for Guntoor ceased to be kept as for a permanently settled district, the peishcush, or permanent demand on the zemindaries, was alone shown in the collector's account of the rental for the zemindary villages, unless they happened to be under sequestration. The account now shown was obtained by collecting the annual settlement accounts from the talook or village records and arranging them. In a few instances, the accounts of a village for some one year were missing, and the gap has been supplied by taking the memo. of the previous and following years in the series. It is however sufficiently accurate for the object intended.

In some districts, the term rental or beriz is applied, not to the land in occupation in any single year, but to the aggregate amount of the rent on all lands that have at any time been brought to account. No such account exists for Guntoor.

Prior to the year 1846, the particulars of the several descriptions of land-rent comprised in the rental, were not separately recorded. From that year the sum charged, though not the land, under each head is shown in Table No. 5.

The same Table shows the annual collections and balance remaining for those years.

Statement No. 6, shows the result of the assessment and measurement of the wet lands, so far as they have been laid out.

No. 4.—Rental of each Talook for 30 years, ending 11th July 1851–2.

For Palnad, *See* to Board of Revenue 25th April 1848.
For Guntoor, *See* to Commissioner, 13th March 1851.

The next statement, No. 7, will serve the threefold purpose of showing the effect of the famine, the influence of prices on the land revenue, and the operation of our management. It shows for each year the population, prices, rental, collection, and charges of every branch of revenue, and the total sum annually withdrawn, chiefly in specie, from the district in the shape of net revenue.

In this statement the following points chiefly deserve attention:—

1. The results of the famine. These having been enlarged on in paragraphs 29-33 of the Memo. need not be further noticed here.

2. The decline in the prices of grain; the average per garce in the first period having been 166 millet 155 paddy, and in the last 115 millet, paddy 99. The ratio of the assessment to the gross produce varies annually with the range of the market price during the season of collection of wet and dry produce respectively. Thus the ratio in any given year is expressedly a fraction, of which the denominator is the selling price of, say, a garce of grain, and the numerator, the assessment of the land, on which that quantity has been raised.

It is currently supposed by the ryots that an acre of dry land may yield five tooms, or one-sixteenth of a garce, nearly. Taking then the mean rate of dry land for the whole district per acre at rupee 1-11. This × 16=27 the sum payable per garce of produce, which is seen to have ranged from $\frac{27}{199}$ or 13$\frac{5}{6}$ per cent. in 1823 to $\frac{2}{46}$ or 58$\frac{5}{8}$ per cent. in 1844. By a similar calculation and assuming the medium produce of an acre of wet land to be one-fourth of a garce and the mean rate of assessment to be 6-8 rupees, the assessment on wet land has ranged from $\frac{26}{192}$ to $\frac{26}{81}$ or from 13$\frac{1}{2}$ to 32$\frac{1}{16}$ per cent. of the gross produce.

3. The next point is the large difference between the present and maximum rental.

4. Another, and a very important, point is the exhausting tendency of our present system, unless counteracted by public improvements. The difference between the land rental, plus the gross collections from all other sources, and the net revenue as shown in column 91, represents, it may be assumed, the maximum that can have been spent in the district. In the first ten years it stands thus:—

Rental land - - - - - - - - -	196,27,569
Gross collections from extra sources - - - -	49,13,655
TOTAL - - -	245,41,224
Deduct net revenue - - - - - - -	160,61,810
Difference retained in the district - - - -	84,79,414

In the last ten Years it is thus:—

Rental land - - - - - - - - -	133,31,496
Gross collections from extra sources - - - -	45,67,219
TOTAL - - -	178,98,715
Deduct net revenue - - - - - - - -	126,54,639
Difference retained in the district - - - -	52,44,076

The effect of this silent but steady drain must necessarily be the impoverishment of agriculture.

5. The small expenditure on roads is the fourth point. During 30 years it has amounted to 1,16,171 rupees.

6. The expenditure on tanks and watercourses by the zemindars for their villages, no where appears. The amount disbursed by Government is included in column 60, under charges of management. But in column 6 of the statement of expenditure on irrigation appended to the Report of the Commissioners on public works, it is given as 275,522 rupees during 30 years, of which 210,261 rupees has been since the middle of 1846.

7. The sum expended on public instruction, 1,316 rupees, during 30 years, suggests many regrets that the education despatch was not issued half a century ago.

On a general review of all that has been adduced in the foregoing memo. and statements, these three reflections suggest themselves:—

First, the great use of collecting and arranging all our available statistical information.

Second, that a vast amount of such information, quite accurate enough for practical purposes, can be obtained as in the case of Guntoor, without a professional survey. Indeed, every particular, except a mathematically exact measurement of land, can be supplied by our own agency.

Third, that the rates of assessment in Guntoor, both in wet and dry land, are exceedingly moderate, and that the district is now well peopled and stocked; yet that it has not progressed for some years. This is explained apparently by the absence of export traffic, and hence the need of canals and other communications.

REVENUE DEPARTMENT.

(No. 491.)

EXTRACT from the Minutes of Consultation, under date the 26th April 1855.

READ the following letter from the Secretary to the Board of Revenue:—

Returning, with reference to Extract Minutes Consultation, 14th April 1855, the papers connected with the Godavery and Krishna Works, and stating the reason why delay has occurred in furnishing the information called for regarding these works. } Here enter 19th April 1855, No. 914.

1. The Government resolve to transmit the papers received with the foregoing letter to the Commissioner for the Northern Circars, together with copy of Extract Minutes Consultation of 29th May 1852, No. 493, and paras. 1 and 3 of that of 7th December 1854, No. 1592, as well as of the Board's Proceedings of 2d April 1855, No. 822, with the request that he will supply at his early convenience the information required.

2. The Commissioner will perceive that it is the wish of the Government, for the complete avoidance of error on a subject of so much importance, and on which such different opinions are entertained, that the interesting and able reports by Mr. Taylor on the works in Rajahmundry should be carefully tested; and that, in order to complete the subject, information similar to that afforded by Mr. Stokes respecting the Guntoor district should be obtained from that of Masulipatam. The Governor in Council hopes that Mr. Goldingham will be able to give the subject his very early attention.

3. It is here only necessary to notice one subject treated of in Mr. Taylor's reports, viz., that of Teerwajasty, or addition of demand on account of the irrigation supplied by the new works. The Government are fully alive to the good policy of liberality in this matter, and wish the increased demand to be made, neither too soon nor at too high a rate. But there is a proper limit to this indulgence. The Government are obliged to consider alike the interests of all parts of its territories, and extraordinary moderation can only be shown in Rajahmundry, by continuing burdens admitted to be excessive in other districts. The fact noticed by Mr. Taylor,* that in many instances the assessment of Poonjah land is higher than that of Nunjah, does not appear of much consequence in the matter. It is certain that in peculiarly favourable localities, such as are to be found in parts of the Rajahmundry district, Poonjah land yields more than poor and precariously-irrigated Nunjah, such as much of that in this district has hitherto been.

* Report, without date, para. 26.

4. A good survey and a careful and skilful reassessment are, no doubt, necessary to adjust the old assessments to the new state of things; but meanwhile something may be done towards obtaining a moderate return to Government for its outlay. In Extract Minutes of Consultation, 5th January 1855, the Government passed orders on the late Commissioner's proposal for doing that, by levying a sum on each kind of crop raised by the aid of Government water, supposed to be equivalent to a certain proportion of the profits to the ryots from such crop.

Though objecting to the principle of making the rate vary with the crop, the Government sanctioned the proposed measure, pending the introduction of a survey. It would seem very desirable, however, that it should be considered whether, even retaining that principle, a certain rate for an acre or other given extent, for each of the kinds of crop, might not be fixed so as to lessen the large quantity of inquisitorial interference, apparently involved in the plan as it now stands. The present Commissioner may also consider whether a uniform rate per acre might not be adopted in place of varying the rate with the crop, only making a difference between those kinds of crop which need full irrigation, and those which consume a much smaller quantity of water. This would still further lessen interference, and would also abolish the premium on the cultivation of inferior crops held out by this opposite plan.

5. In submitting the information called for above in para. 2, Mr. Goldingham will be good enough to give attention also to this part of the subject, and to give both a statement of the extent of land now liable to Teerwajasty, and the amount, with as much accuracy as may be attainable, and also an estimate of the probable extent and amount still to be anticipated. Similar information should be given respecting the zemindaries.

(True extract.)
(signed) *J. D. Bourdillon*,
Secretary to Government.

REVENUE DEPARTMENT.

EXTRACT from the Proceedings of the Board of Revenue, dated 21st May 1855, No. 1325.

IN accordance with the instructions of Government conveyed in Extract Minutes of Consultation, dated 7th December and 14th April last, the Board proceeds to scrutinize the detailed statements furnished by the Collector of Tanjore regarding the revenues and maramut* expenditure of his district, and to offer remarks on the effect which the Coleroon annicuts have had upon the Government revenue and prosperity of that province. The subject to which the attention of the Board is thus directed includes some of the statements which were made by Colonel A. Cotton in his book on "Public Works in India," and are contradicted by P. B. Smollett, Esq., in his pamphlet, "Modern Hydraulic Works in Tanjore and Rajahmundry examined," as Government make special allusion to the discordant publications of those two gentlemen.

2. The Board will first offer remarks on the Collector's detailed statement of the revenues of Tanjore, which has been forwarded for their scrutiny. It exhibits the revenues of that province as realized "from all sources, from fusly 1210 to 1262, A.D. 1800 to 1852," and is accompanied by a memorandum explaining the manner in which, for the sake of clearness, it has been drawn out. Modifications, for example, have been made in the revenue entries on account of occasional alterations in the area of the district, such as the transference of the Karical villages to the French, and the incorporation of Tranquebar, which would otherwise have vitiated the comparison of one period with another; the collections have been carried to the account of the year for which they were due, although made in a subsequent one; and the provincial currency of chuckrums and fanams has been converted into Madras pagodas at one uniform rate, although there was a difference in rates of conversion employed previously to and after 1817. The Collector's statement thus differs from the detail of the revenues of the province in the Board's office; but, allowing for the causes which have led to this variance, the Board see no reason to question its substantial accuracy, and propose to make use of it in these proceedings. A comparison between the Board's accounts and the Collector's statement gives the following result:—

QUINQUENNIAL

---

* The term Maramut, so well known in this Presidency, includes all works of irrigation and communication, channels, tanks, bridges, roads, &c., and will be used in this sense in these proceedings for the sake of comprehensiveness and brevity.

QUINQUENNIAL AVERAGES of TANJORE REVENUES, according to actual Collections.

	From Collector's Statement.			From Board's Records.		
	Land Revenue.	Extra Revenue.	Total.	Land Revenue.	Extra Revenue.	Total.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Five years, $\frac{1210}{1800}$ to $\frac{1214}{1804}$	31,77,639	1,63,047	33,40,686	Incomplete in the Board's Office.		
Ditto 1215 to 1219	32,77,314	3,05,733	35,83,047	32,35,843	3,05,365	35,41,208
Ditto 1220 to 1224	32,47,593	5,77,064	38,24,657	33,58,266	5,81,147	39,39,413
Ditto 1225 to 1229	32,15,128	6,82,704	38,97,832	31,61,382	6,79,773	38,41,155
Ditto 1230 to 1234	37,58,763	8,82,975	46,42,738	38,65,535	8,93,194	47,58,729
Ditto 1235 to 1239	32,76,131	9,63,353	42,39,484	32,14,397	9,47,300	41,61,697
Ditto 1240 to 1244	36,34,147	9,37,012	45,71,159	36,88,654	9,47,109	46,35,763

Ditto 1260 to 1262	38,80,086	9,81,600	48,61,686	38,70,210	9,78,009	48,48,219

3. The Board now proceed to the next branch of the subject, and observe, that Colonel Cotton has estimated the effects of improvement in works of irrigation, bridges, and roads in Tanjore, in two forms. The first embraces the whole period that the district has been under British rule, and the second the period since the construction of the Coleroon annicuts in 1856. It is the latter of these periods that comes most directly under the Board's consideration, and they doubt whether they are required to report how far the general expenditure on public works during a period of 50 years has affected the revenue, a point which cannot be clearly ascertained, and must rest much on individual opinion; but as some observations are doubtlessly expected from them regarding Colonel Cotton's statements of the amount expended on public works, and the extent to which the revenues have increased, they beg to submit the following remarks.

4. In pages 19 and 62 of his book, Colonel Cotton observes, that an annual expenditure of 40,000 rupees, on works of irrigation and communication steadily pursued for 50 years, and amounting on the whole to 20 lacs (200,000 *l.*), has increased the public revenue to a similar extent, or 20 lacs per annum, an assertion which is contradicted by Mr. Smollett. (Pamphlet, page 3, *et seq.*) Colonel Cotton appears in this passage to omit expenditure on repairs, and allude to new works alone; for at page 13 of his book he speaks of the annual Maramut expenditure as 80,000 rupees, which would raise the total outlay for the period under discussion from 20 to 40 lacs, while in his report on the irrigation of the Rajahmundry district he mentions 32 lacs as having been expended on irrigation alone in Tanjore during the first 40 years of our rule; but the total expenditure of Government amounts to the larger sum of 52 lacs (*see* Appendix B.), of which 43 lacs were expended on works of irrigation and 9 lacs on works of communication, and as far, therefore, as the increase in Tanjore revenues is to be ascribed to public works, the Board consider that it must be attributed to an expenditure of 52, and not of 20 lacs.

Dated 12th August 1844; *see* quotation from it, *i.e.* 1st Report of the Public Works Commissioners, page 255.

5. Colonel Cotton's statement of the Tanjore revenues having increased 20 lacs, or from 30 to 50 lacs per annum, requires also some modification. It may be assumed that Colonel Cotton, in speaking of this supposed increase, alluded not only to the land revenue, but also to what are termed the extra sources of

revenue, such as salt, sea, and frontier customs, stamps, abkarry, moturpah, &c. The actual collections under all heads in every year from fusly 1210,* the first of our administration, to fusly 1262, are therefore exhibited in Appendix (A.), and the examination of them calls for the following observations. Omitting fusly 1210, when the land revenue was improperly increased one-fifth by the Collector raising the Government share of the produce, an error which was corrected in the subsequent fusly, the revenue collections of the first five years of our rule were as follows:—

Fusly.	Land Revenue.	Extra Sources.	Total.
	Rs.	*Rs.*	*Rs.*
1211 - - -	31,27,714	1,54,755	32,82,469
1212 - - -	26,63,257	1,14,045	27,77,302
1213 - - -	23,58,761	1,04,268	24,63,029
1214 - - -	33,31,028	1,83,540	35,14,568
1215 - - -	31,00,301	2,65,148	33,65,449
Average - *Rs.*	29,16,212	1,64,351	30,80,563

The average total revenue of this period may therefore be assumed at 31 lacs; and if the average of the last five years of Colonel Cotton's series is examined, it will be found to be rather above 48 lacs.

Fusly.	Land Revenue.	Extra Sources.	Total.
	Rs.	*Rs.*	*Rs.*
1257 - - -	39,11,819	9,12,594	48,24,413
1258 - - -	37,55,985	8,74,285	46,30,270
1259 - - -	38,64,907	9,31,366	47,96,273
1260 - - -	39,03,575	9,91,567	48,95,142
1261 - - -	39,07,644	10,11,859	49,19,503
Average - *Rs.*	38,68,786	9,44,334	48,13,120

The increase may therefore be taken at 17¼ lacs, of which 9½ lacs occurred in the land, and 7¾ lacs in the extra sources of revenue. There are only three years when the revenues have exceeded 50 lacs, one before and two after the construction of the Coleroon annicuts, viz.:

Fusly.	Land Revenue.	Extra Sources.	Total.
	Rs.	*Rs.*	*Rs.*
1234	49,63,433	9,19,716	58,83,149
1255	42,44,277	8,57,037	51,01,314
1256	42,23,812	9,21,593	51,45,405

6. But

* The fusly or revenue year commences in July; fusly 1210 commenced in July A. D. 1800, and ended in July 1801.

6. But although a comparison of the first and last quinquennial periods of Colonel Cotton's series gives an increase of 17¼ lacs, this by no means implies, nor do the Board suppose that Colonel Cotton intended to imply, that there has been an average increase to that extent per annum throughout the whole period. The fact simply presents a contrast between the extreme periods of a series of years when the revenues happened to be at their lowest and highest points, and the Board would submit that the correct mode of putting the case would be, to state that the revenue has risen from 31 to 48 lacs (and not 30 to 50) in the course of 50 years. A comparison of the revenue of the first quinquennial period (31 lacs) with the average of the next 48 years, or from fusly 1216 to 1262 inclusive, shows an annual average increase of 12½ lacs, of which as nearly as possible half occurred in the land and half in the extra sources of revenue. *See* Appendix (A.)

7. After thus ascertaining that in the course of 50 years, the revenue has risen from 31 to 48 lacs, the question arises how far the increase of 17 lacs is due to the expenditure which has been made upon public works. As this is a point upon which it is evident that accurate data cannot be obtained, and respecting which individual opinions may be expected to vary, the Board will not attempt to define with precision what part of the increase is due to maramut expenditure, and what portion is to be ascribed to a better revenue administration and other causes. They feel, however, called upon to offer some general remarks on the subject, and to state that a consideration of the question leads them to concur with Mr. Smollett, that the greater portion of the increase cannot be ascribed to the outlay which has been made upon public works.

8. It is first to be observed that 7¾ lacs of the increase have occurred in the extra revenues, and are clearly due in the main part to our mode of administration, under which new branches of taxation have been opened, such as the salt monopoly in 1805, and the stamps and abkarry in 1808, while the sea customs and other branches of revenue were placed on an enlarged and better defined footing. In support of this view, the average collections under the above specified branches of revenue at the commencement of our rule, and during the last quinquennial period in the Collector's statement are here given.

AVERAGE COLLECTIONS.

	Five Years $\frac{1210}{1800}$ to $\frac{1214}{1804}$.	Five Years $\frac{1255}{1845}$ to $\frac{1259}{1849}$.
	Rs.	*Rs.*
Salt - - - - - - -	4,622	4,81,298
Sea Customs - - - - - -	29,262	1,91,873
Abkarry - - - - - - -	13,994	92,100
Stamps - - - - - - -	- - - -	40,453
	47,878	8,05,724
Increase in last Period - - -	- - - -	7,57,846

Of this increase of revenue, the portion which could most confidently be attributed to maramut expenditure would be that in the sea customs, if the additional receipts had arisen from enlarged exports of produce; but on scrutinising the accounts at the earliest period for which they can be obtained, and comparing them with the present, it is found that $\frac{9}{10}$ of the increase is in the imports, and even as far as increased imports are a sign of enlarged wealth, this improvement of condition cannot be assigned to Tanjore alone, as articles required for the consumption of the adjacent inland districts

Note.—The exports by sea from Rajahmundry have increased six-fold since the Godavery works. *See* Captain Rundall's Report, dated 24th April 1855, No. 1303. Para. 242—Department Public Works.

Average collections of	*Exports.*	*Imports.*
fuslies 1235 to 1239	37,039	43,735
Ditto of 1260 to 1262	49,283	1,48,668
Increase in latter period	12,244	1,04,933

districts are landed at its ports. The Board will not pursue this subject further, since under any circumstances, it would apparently be impossible to define how far additional irrigation works and improved roads, have affected these sources of revenue, and the inquiry is complicated by the fiscal changes which have occurred, such as alterations in the prices of salt and in the stamp duties, and the abolition of the land customs in 1844, accompanied by an increase in the rates of the sea customs duties, and in the monopoly price of salt. It seems sufficient for the Board to repeat their opinion that the increased receipts derived from the extra sources of revenue are mainly ascribable to the opening of new heads of taxation, such as the salt and stamps, &c., the remodelment of other branches, and to observe that this view is supported by the result of our administration in other districts, where these revenues have also increased, although no large expenditure has been made on roads and irrigation improvements.

Note.—Trichinopoly, Salem and Coimbatore.

9. The increase of 9½ lacs which has taken place in the land revenue is next to be considered, and when we look back to the revenue administration of Tanjore during the first quinquennial period, with which the comparison is made, it seems reasonable to conclude that the increase is owing in a considerable degree, (not entirely, for since 1836 the annicuts have produced a direct effect, which will be noticed hereafter,) to a more efficient and better organised system of management. Late years present a far different example of administration and security to the people than do those of 1801, 1805. The Board would not wish to reflect on the character of Mr. Harris, who subsequently obtained such a high degree of confidence, but it is true that the records of the Board show that his management was worse than defective, and such as must have very greatly affected the just rights of Government. It may be sufficient to quote from a minute of Lord W. Bentinck, dated 21 September 1840, when, in consequence of the report of a special committee, he removed Mr. Harris from his situation as Collector of Tanjore. "The principal fact which we have now under our consideration, is the existence of a general combination between the Circar servants and the landholders to defraud the revenue. It appears that the conspiracy has not been confined to a remote part of the province, or to a few individuals, but has extended to every part, and has involved every person, that it has been in full effect during the last two years and a half, that 3,10,000 pagodas* is the amount of frauds upon the revenue, and of exaction upon individuals." It was not likely that Tanjore could soon recover itself, and in 1807, another commission was appointed, to introduce some regular system of revenue, since which time it has prospered. The Board, therefore, cannot think it fair to contrast the revenue of those days with the present, and attribute the entire difference to works of irrigation, bridges, and roads, especially when it is to be observed from the statement of maramut expenditure given in Appendix (B.), that the revenues do not show the greatest increase when the largest outlay was made. Although, therefore, the Board would be most unwilling to dispute that the expenditure on public works in this province has had a beneficial effect on the land and extra sources of revenue, and are, on the contrary, satisfied that it has been profitable both to the Government and the province, they cannot concur in the very high influence on the Government revenues which has been attributed to it by Colonel Cotton.

* 10,85,000 Rupees.

Note.—In the first 36 years, or up to the construction of the Coleroon annicuts, the expenditure amounted to 30 lacs, and the annual revenue rose 15 lacs, while in the next 17 years, the outlay has been 20 lacs, and the annual revenue has risen 2¼ lacs only, though the annual expenditure was considerably larger.

10. It has been explained in para. 5, why, in examining this part of the question, it appeared just to Colonel Cotton to leave fusly 1210 out of the comparison, on account of the height to which the mistaken zeal of the Collector raised the land revenue by an improper exercise of authority. It remains to add, that in a similar spirit of fairness, fusly 1263, has not been included in these proceedings. Fusly 1262 was itself an unfavourable year in Tanjore on account of the damages done by a hurricane; but although the remissions which were necessary† on this account, reduced the collections, the produce was not otherwise below the average, and this year has been included in the accounts. Fusly 1263, which followed it, was however a season of almost unparalleled drought, and of so disastrous and exceptional a character, that allegations might have been made against the justness of the results arrived at if this season had been brought into the accounts by the Board, especially as the closing year of the period under review.

† Government remitted Rupees 2,64,613.

11. The

11. The Board now proceed to the subject of the Coleroon annicuts, which has been more especially referred for their consideration, and as detailed descriptions of these works are already before Government in various reports, and are also to be found in the printed professional papers of the corps of Engineers, and in the first report of the Madras Public Works Commissioners, it is sufficient to make a brief allusion to the purposes for which they were constructed.

The irrigation of Tanjore depends almost exclusively on the Cauvery river, which divides into two branches a few miles to the west of Trichinopoly, one of which retains the same name, while the other is called the Coleroon. For many years the bed of the Cauvery was found to be silting up, while that of the Coleroon was deepening, so that most of the water which was required for the irrigation of Tanjore escaped uselessly to the sea by the latter river. Much expense was annually incurred in clearing the sand out of the Cauvery bed to remedy this evil, but this and other expedients produced only a temporary improvement, and at last a proposal made by Captain A. Cotton to throw an annicut across the head of the Coleroon was adopted. But as this measure was likely to diminish the irrigation supplied from the Coleroon to the Manargoody and Chellumbrum Talooks of South Arcot, a second annicut was at the same time thrown across the Coleroon just below the head of the Vadavaur, through which an increased supply of water is now poured into the Veeranum tank, while two new and important channels have been excavated, the South Rajah Voikal for the benefit of the Sheally Talook of Tanjore on the south side of the river, and the North Rajah Voikal for improving the general irrigation of Manargoody and Chellumbrum. These large masonry weirs were constructed in 1836, and are called respectively the upper and lower Coleroon annicuts. The first came into operation in fusly 1246 (1836), all the channels of the latter were not ready to supply irrigation till the following year 1247 (1837).

12. The Board propose to consider the questions connected with the annicuts in the following order.

1st. Have these works increased the public revenue 10 lacs per annum, raising it from 42 to 52 lacs, according to the assertion which is made by Colonel Cotton at page 208 of his book, and which forms one of the points on which he is contradicted by Mr. Smollett?

2nd. What is the actual addition which the annicuts can be shown to have made to the land revenue?

3rd. What has been the cost of these works and the net profit derived from them? After considering these points, the Board will conclude with offering a few remarks on the general subject.

13. It is here proper to allude to the question, "Which is to be considered the first year in which the effect of the upper or principal annicut was felt in Tanjore?" A discussion formerly took place on this point, and it was eventually ordered by the Board that fusly 1246 should be considered the first annicut year, a decision which seems correct, as the Principal Collector had observed * when reporting on that season. "But for the effects of the upper Coleroon annicut in throwing an unusual quantity of water into the Cauvery the failure of crops must have been immense." As the river freshes were so scanty in that year as to diminish the land under cultivation, the question is of some importance, since the great test for ascertaining the efficiency of the annicuts is to compare the extent of wet cultivation before and after they were built, and it is consequently unfavourable to the upper annicut, that a year in which the river supply was so deficient should have followed its construction. The Board observed, that Mr. Smollett in his pamphlet includes fusly 1246 in the series of years before the annicut, but that gentleman founds all his arguments on the amount of the land revenue settlement or demand, and in a revenue point of view fusly 1246 was not an unfavourable year, since, under the Oolungoo system, which will be hereafter alluded to, and which is explained in Appendix (C.), the high price of grain added more in that year to the revenue demand than was lost by a falling off in the extent of land under cultivation.

14. The Board now proceed to the consideration of the first of the three questions connected with the annicuts,—Colonel Cotton's estimate of their having added

* Principal Collector, Mr Kindersly, to Board, 27 October 1839, p. 2.

added annually 10 lacs, or 1,00,000 *l.* sterling to the Government revenues. It is presumed that Colonel Cotton alluded to the general revenues, and not to the land revenue only; but even regarding the subject in this extended view, the Board cannot find that any such annual increase as 10 lacs has followed the construction of the Coleroon weirs. The revenues of Tanjore, both before and after the construction of these annicuts, can be referred to in Appendix (A.), and the Board propose to elucidate the point under discussion by contrasting the two periods of ten years which immediately preceded and followed the construction of the upper annicut. They are not aware that any just exception can be taken to this comparison, as the first period includes some unfavourable seasons, and the time when the failing state of the Cauvery irrigation attracted most notice.

	Land Revenue.	Extra Sources.	Total.
	Rs.	*Rs.*	*Rs.*
Average Collections of 10 years before Annicut, 1236 to 1245 inclusive - -	3,438,144	958,630	4,396,774
Average Collections of 10 years after Annicut, 1246 to 1255 inclusive - -	3,745,241	961,439	4,706,680
Increase in latter Period - - -	307,097	2,809	309,906

Adding to the increase thus shown, 90,000 rupees on account of the improvement made to the revenue of the two Southern Talooks of South Arcot by the lower annicut, the total annual increase in the latter period is found to fall somewhat short of 4 lacs, and even therefore if all this additional revenue is admitted to be due to the annicuts, the Board would feel that Mr. Smollett had not impugned Colonel Cotton's assertion of an annual addition of 10 lacs without good grounds.

See Statement furnished by Collector of South Arcot attached to Appendix (D.)

15. The second question then comes under consideration, what is the actual addition which the annicuts can be proved to have made to the land revenue? and the Board propose to ascertain this point by examining the extent of wet land under cultivation before and after their construction and the revenue derived from it. Easy, however, as this course might be expected to prove, considerable difficulty is experienced in ascertaining the exact addition which the Coleroon annicuts have made to the revenues of the state, in consequence of the various modes of assessment which prevail in Tanjore, inclusive of grain and village rents, and the manner in which the revenue payable to Government by the landholders under the Oolungoo system is affected by the price of grain. This latter circumstance leads to the anomaly that a decrease of revenue accompanies occasionally an increase of cultivation or the converse, and it was with reference to this difficulty that Government recorded the following observations. "The price which the produce may realise cannot fairly enter into a comparison of the effects of the annicuts. Prices in Tanjore depend upon external circumstances, and the results of the season in other districts, and the only fair test of the effects of the annicuts is the extent to which they ensure and control the irrigation of the country."

See Appendix (C.)

Extract Minutes of Consultation, 26th April 1842, para. 6.

16. The effect which the annicuts have had in "ensuring the irrigation of the country" is to be regarded in two points of view; 1st, the increased extent to which cultivation has been carried on in the river irrigated lands; 2ndly, the additional productive power conferred on these lands, as shown in the produce returns, the diminished amount of remission granted for failure of crops, and the additional money value which land has acquired. As the immediate point under inquiry is the actual increase of revenue which Government has gained by the annicuts, the first of these two heads will now be considered, such additional revenue as appears to have arisen from the conversion of dry land into wet, and the extended cultivation of a second rice crop being at the same time adverted to.

17. Since

17. Since the construction of the upper annicut, its effect on the land revenue of Tanjore has been specially noticed, by order of the Board, in the annual Jummabundy reports, and has formed the subject of continual scrutiny and comment. Although, therefore, fluctuations of price have affected the annual settlements and the precise additions made to the revenue by dry land being converted into wet, or single crop into double crop land, cannot be ascertained in consequence of many villages being rented out, materials exist for showing with confidence the additional amount of revenue which is ascribable to the annicuts. For this purpose it is proposed in the first instance to ascertain the total area of the land under river irrigation, and to compare the portion of it which has been cultivated previously to and after the construction of the annicuts. The assessment actually levied on the additional area under cultivation will be then shown as well as the revenue which would have been collected upon it, if the price of grain had not fluctuated, but remained at the standard rate.

18. The river irrigated area of Tanjore comprises 97,006 valies, and on comparing the portion cultivated before and after the annicuts, the following result is obtained.

——	Average Cultivation.	Standard Beriz.	Settlement Beriz at Current Price.	Revenue actually realised, deducting subsequent Remissions.
	Valies.	*Rupees.*		
Before Annicut, from Fusly 1240 to 1245 both inclusive	83,581	28,67,437	28,31,404	28,06,554
After Annicut, from Fusly 1246 to 1262 inclusive	90,277	30,83,466	30,11,448	29,84,506
Increase - - -	6,696	2,16,029	1,80,008	1,77,952

Appendix (E.) contains details of this comparison, with explanation why the accounts have been made to commence with fusly 1240, and it will be observed that the cultivation of the river lands has increased by 6,696 valies, or 8 per cent., since the construction of the annicuts, and that the annual addition thus caused by them to the land revenue of the province consists of 1,77,952 rupees.

19. Inquiry has been made whether any sum is to be added to the above increase on account of the effects of the annicuts in converting dry land into wet, or enabling a second rice crop to be raised on single crop land. Information on this point was specially called for by the Board in 1838 with respect to the upper or most important annicut, but the principal Collector observed in reply, that the chief object of the annicut was to restore the deteriorated irrigation of the province, and that its beneficial results were then visible only in the more extensive and successful cultivation of the wet (nunjah) lands. On scrutinising the Jummahbundy accounts of the following years, the same result appears, and the increase of revenue from wet cultivation on dry land and the extension of a second crop is so insignificant, that it is proposed to omit these items altogether in considering the effects of the upper annicut. To account for this result it may be observed, that the land in the Tanjore Delta has been always rated as nunjah, that from the absence of tanks and reservoirs for storing up water, second crop cultivation has been always limited, and that from the nature of the revenue system in the Oolungoo and rented villages, additions on account of second crop cultivation, or the conversion of dry land into wet, are mixed up with the general increase of the revenue.

Principal Collector to Board, 11th August 1838.

Note.—The largest increase on account of dry land converted *into* wet is in the Jummahbundy accounts of 1262, and consists only of 1,189 rupees. The largest increase on account of increased second crop cultivation is in 1257, and deducting the decrease under the same head, is limited to 3,469 rupees.

20. According, therefore, to the comparison given in para. 11, the Board are of opinion that the actual increase of revenue directly ascribable to the two annicuts in Tanjore amounts to the annual sum of 1,77,952 rupees, and they consider that this is no imaginary or hypothetical gain to Government, but one that is clearly established by the annual accounts of the lands under cultivation for which assessment was paid, and by the amount of the collections received into

into the public treasury. The total annual increase of land revenue ascribable to the two annicuts is therefore as follows :

	Rupees.
Increase caused by the upper and lower annicuts in Tanjore	1,77,952
Do. by the lower annicut in South Arcot - - - -	90,000
Total Increase - - *Rs.*	2,67,952

This result corresponds closely with those * entered in the printed list of special works of irrigation prepared by the Board of Revenue, Department Public Works, under date 14th May 1852, and in the Report † of the Public Works Commissioners written in the same year. It also confirms generally the anticipations which were expressed when the construction of the annicuts was under consideration. The calculations then made were as follows :—

Report of Captain A. Cotton to Inspector General, 15th July 1834.
Ditto of Mr. Kindersley, Principal Collector of Tanjore, to do. 6th August 1834.
Do. of Mr. Dent, Principal Collector of South Arcot, to do. 12 December 1834.

	Rupees.
Upper Annicut.	
Expected immediate increase in Tanjore from the regular and secure cultivation of the lands dependent on the Cauvery river, exclusive of further after additions - - - - -	1,00,000
Lower Annicut.	
Expected increase chiefly in South Arcot, from waste land being cultivated and dry land converted into wet - - - - - -	1,30,000
Rs.	2,30,000

Having thus shown that an actual and *bonâ fide* increase of revenue to the amount of 2,67,952 rupees per annum is directly ascribable to the two annicuts, some brief observations will be made hereafter on the general advantages they have conferred on Tanjore by securing the land revenue, increasing the value of land, and adding to the general prosperity of the province.

21. The Board now approach the third branch of the subject, the cost of the two Coleroon annicuts, and the net amount of revenue which they have yielded to the state. The sums expended on these works, and the per-centage which the net profit yielded by them bears to the original outlay, underwent careful scrutiny by the Department of Public Works, and the Mahramut Commissioners, and the result ‡ at which they arrived after examining the bills and revenue statements was as follows :—

	Amount of First Expenditure.	Net Annual Profit.	Per-centage of Profit on Outlay.
	Rupees.	*Rupees.*	*Rupee*
Upper Annicut - - - - - -	83,401	1,20,702	144
Lower Annicut in South Arcot - - -	74,234	98,786	133
Lower Annicut in Tanjore - - - -	60,752	8,788	14
Rs.	2,18,389	2,28,276	104

	1,15,081
	2,67,453

‡ *See* printed list of special works, dated 14th May 1852. First Report of Public Works Commissioners, para. 273.

First obtaining the original cost of the annicuts and their dependent works from the sanctioned bills, the additional revenue derived from them was next ascertained, and the net profit was fixed by deducting the outlay incurred in repairs, making at the same time an allowance for the expenditure saved to Government by their construction. Previously to the upper annicut being built, the defective state of the Cauvery irrigation led to large sums being expended on its improvement, while its defences * and those of the Coleroon required constant care. Part of this outlay is no longer necessary, and it is manifestly just to contrast the former and the present cost of keeping up the river irrigation, and to charge against the annicuts the difference only, or the additional annual expense which has devolved upon the State in maintaining them, and their subsidiary works, in effective order. The subject has again undergone scrutiny and consideration, and the only change which appears necessary to be made in the former calculation is a reduction of the net profit yielded by the lower annicut in South Arcot from 98,726 to 90,000 rupees, an increase of revenue amounting to 10,000 rupees, which arose from the resumption of some cavil fees having been inadvertently included in the annicut gain, while some additional revenue in a few rented villages which was due to the annicut had been omitted; an explanatory memorandum drawn out on this part of the subject in the Board's Office, Department Public Works, forms Appendix (D.) to these proceedings.

22. But the Board have thought it advisable to make a new calculation of the profits of the annicuts, commencing with fusly 1240, A. D. 1830-31, and carrying it on to fusly 1263, or three years later than the period taken for comparison in the Board's printed memorandum. This course gives the result of the annicuts to the present time and as the revenue accounts entered in the printed memorandum commence with fusly 1240, when the river irrigated lands are first distinguished in the Tanjore accounts from the remaining Nunjah, it appears proper that the account of expenditure should commence from the same period. The printed memorandum takes the outlay on the river irrigation from fusly 1236, or for 10 years before the annicuts, and it will be found that the result of that course is less favourable to the annicuts than the present one.

23. The expenditure under the head of "repairs" on the irrigation of the lands affected by the two annicuts during the six years which preceded their construction, is as follows:

	Upper Annicut. *Rs.*	Lower Annicut. *Rs.*
1831	1,14,419	2,695
1832	1,12,134	20,769
1833	1,12,126	23,820
1834	1,20,698	13,402
1835	68,793	18,514
1836	79,719	17,065
Average	*Rs.* 1,01,327	*Rs.* 16,044

The expenditure on repairs in the subsequent years has been as follows:—

	Upper Annicut. *Rs.*	Lower Annicut. *Rs.*		Upper Annicut. *Rs.*	Lower Annicut. *Rs.*
1837	92,906	8,096	1846	95,309	11,923
1838	1,06,446	7,603	1847	70,103	9,131
1839	1,15,882	16,810	1848	95,710	23,567
1840	88,632	26,589	1849	65,317	21,532
1841	87,811	53,371	1850	1,42,298	24,658
1842	1,04,446	14,555	1851	1,44,974	23,494
1843	1,01,069	8,446	1852	1,64,275	32,674
1844	1,05,582	13,795	1853	1,17,552	26,633
1845	1,40,958	10,293			
Average				1,08,192	19,598
Deduct average of previous years				1,01,327	16,044
Difference			*Rs.*	6,865	*Rs.* 3,554

The

* The river embankments in Tanjore exceed 2,000 miles in length.

The whole account then stands thus:

TANJORE.

	Rs.	*Rs.*
Annual gross increase since the annicut - - -	1,77,952	
Deduct difference in cost of repairs - - - -	6,865	
		1,71,087

SOUTH ARCOT.

Annual gross increase since the annicut - - -	90,000	
Deduct difference in cost of repairs - - - -	3,554	
		86,446
Total net profit per annum -	*Rs.*	2,57,533

The original cost of these works was as follows:

	Rs.
Upper annicut - - - - - - - -	83,401
Lower annicut - - - - - - - -	99,420
South Rajah Voikal - - - - - - -	11,044
North Rajah Voikal - - - - - - -	23,524
Total - *Rs.*	2,17,389

So that for an outlay of 2,17,389 rupees the Government have received a clear gain of 41,20,528 rupees in 16 years, or a profit of 118 per cent. per annum.

24. Having thus considered the three separate heads of the subject, the Board will offer a few general observations. They have been unable to concur with Colonel Cotton that the Mahramut expenditure made in Tanjore during a period of 50 years has increased the public revenues 20 lacs per annum, or that the Coleroon Annicuts have brought an additional annual revenue of 10 lacs since their construction in 1836. But they are nevertheless of opinion that the sums expended by Government in improving the irrigation and communications of the province have returned into the public treasury with profit both to Government and the people, though the precise extent of the general gain cannot be fixed, while the Coleroon annicuts are shown to have yielded a return of not less than 118 per cent. on the money expended in their construction. But this result of the annicuts, great and gratifying as it is, does not comprise all the truth. Losses of revenue have been prevented, besides an actual addition being made to the resources of Government, and the people have benefited by the increased poductiveness and value of their lands. The advantages which have thus arisen from the upper annicut demand in particular some notice.

Letter to Revenue Board, 11 August 1838, para. 12.

25. The principal purpose of this work was less to create new revenue than to restore a deteriorated irrigation, and its value to Government is often greatest when the revenue returns show a decline of revenue arising from adversities of season which the annicut is unable wholly to overcome. A cursory inspection of the annual revenue statements may therefore cause the advantages of the annicut to be undervalued, but it has been fully appreciated by the officers in charge of the province. Thus the principal Collector, Mr. Kindersley, when alluding to the disastrous year 1246, observes: "Without the annicut the failure of the crops must have been incalculably greater than it was. Indeed, from the very nature of the work, its operation is much more advantageous in a bad than in a good year, and I have not the slightest doubt that the saving it effected in fusly 1246, when it gave a full river but for 68 days, was much greater than the profit derived from it in 1247,* when the river was full for 122 days, Mr. Kindersley's successor, Sir H. Montgomery, gave similar testimony that the greatest benefit which Government derived from the annicut was in mitigating the effects of disastrous years, though then no increase was apparent in the gross amount of the land revenue (Letter to Board, 11th December 1840, para. 5).

26. In Tanjore the cultivation of the rice lands commences in July and August, with the aid of the irrigation furnished by the Cauvery, which flows from the western

* In 1847, the cultivation of the river lands exceeded the average by 3,111 valies, of which the standard beriz was 1,06,730 rupees.

western coast, and is filled by the south-western monsoon; but there are no tanks or reservoirs to store up water in, and the crops have to depend for coming to maturity on the local rains of the north-east monsoon in October, November, and December. The annicut cannot, therefore, prevent the crops withering when the latter monsoon fails, nor can it furnish irrigation to Tanjore when the Cauvery (speaking here of the river before the Coleroon separates from it) has not its usual supply. But the annicut has furnished such valuable aid by enabling cultivation to be commenced early in the season, and by furnishing irrigation during low freshes in the river, when formerly great distress was felt, that the remissions granted for withered crops have much decreased. Omitting 1246 as an exceptional year,* unprecedented in its unfavourableness from the scantiness both of the river freshes and the north-east monsoon, the remissions granted for withered rice crops are as follows:

	Total Remissions.	Average per Annum.
	Rs.	*Rs.*
In the six years before annicut, 1240 to 1245 - - -	8,43,706	1,40,617
In six years after annicut, 1247 to 1252 - - - -	3,69,302	61,550

27. Another test of the benefit conferred by the upper annicut, to which allusion will be made, is the value of Nunjah land at different periods. In a letter addressed to the Board on 29th January 1853, the Collector, Mr. Bishop, observes:—"Vast improvements have been made in the irrigation and drainage of the wet lands during many years; and although the ryots will not allow that much increase in the quantity of produce has attended these improvements, there can be no reasonable doubt of the fact." The statement prepared by Mr. Forbes supports this fact by showing, that, according to sale deeds which passed through the collector's office, the average price of Nunjah land per valy was 82 rupees immediately before the construction of the annicuts, and that it has risen to 95, 107, 135, and 174 in the subsequent quinquennial periods. The numerous sales and mortgages which occurred in the three years 1250, 1251, and 1252 (amounting to 13,831 valies, mortgaged or sold for 2,766,197 rupees), attracted attention in the review of the settlement for 1253, and led to a consideration whether any decrease in price or produce had affected the welfare of the Meerassidars; but as the sales were most frequent in Oolungoo villages, where the assessment falls with the price of grain, and the value of land was found to have risen, in the 20 years between 1233 and 1254, from 98 to 166 rupees in the field-assessed villages, and from 73 to 161 rupees in the Oolungoo villages, the Board argued that land was evidently in increased request, and that these sales could not have arisen from land having been forced into the market by the distress of its proprietors. An increasing† population, a Government which encourages and protects industry, and a regular revenue administration, must have had some influence upon the value of land; but the Board attributed the rise in its price principally to the improved irrigation conferred by the upper annicut, and Government expressed its concurrence in this view. The advantages conferred on Tanjore by this work received the following emphatic testimony from the principal Collector, Mr. Kindersley, shortly after its construction, and subsequent experience appears to the Board to confirm its justice:—"I cannot conclude without observing, that whilst doubt appears to be entertained of the advantages of the annicut elsewhere, there is not an individual in the province who does not consider it the greatest blessing that has ever been conferred upon it; and I have not the smallest doubt that the name of its projector will in Tanjore survive those of all Europeans who have ever been connected with it."

Provincial Collector to Board, 11th August 1838.

28. While

* The loss on account of drought in its settlement is 4,78,637 rupees.

† The census returns gives the following result:—Population, A. D. 1813, 8,56,468; 1850, 16,76,086. And though the early account does not appear full and correct, there is no doubt that the population has greatly increased.

28. While, therefore, the benefits of this work appear so great, a question arises how its usefulness could be undervalued by Mr. Smollett, at page 9, and in other parts of his pamphlet to which Government have directed the Board's attention; but the solution of this point is not difficult. Mr. Smollett's figures are found on examination to be correct, but they show merely the total land revenue demand without any details as to the extent of Nunjah cultivation, and the manner in which the price of grain has affected the revenue under the Oolungoo system, as explained in Appendix (C.). The years also which he selected in the first edition of his pamphlet to illustrate the result of the annicuts were open to objection, as not giving a fair comparison. Thus, at page 6, he details the 23 years shown in the margin,* of which 11 are before the annicut and 12 after. But the former series begins with two years when the ordinary land revenue was increased to the extent of no less than 7,15,614 rupees in 1823, and 13,69,390 rupees in 1824, by the accidental and temporary circumstance of prices being unprecedentedly high. After which, the three following years, when the revenue declined, were not given, though the omission has been supplied by Mr. Smollett in a second edition. The land revenue of these years stands as follows:—

1825 - - - - - -	*Rs.* 35,59,253
1826 - - - - - -	30,06,241
1827 - - - - - -	28,09,316

29. Mr. Smollett afterwards selects groups of years for two comparisons, but on both occasions the effect of price on the annual settlements is unnoticed. The first of these comparisons contrasts 11 years before the annicut (1823 to 1836 inclusive) with the 12 following years; but in the first period the accident of price brought a net addition to the standard or ordinary revenue of 13,63,668 rupees, while in the latter there was a net decrease of 96,591 rupees from the same cause, thus giving an accidental advantage of 1¼ lac per annum to the first period. So, with the next comparison of the five years immediately before and after the annicut, in the one case there was an addition of 5,56,766 rupees from the state of prices, and in the other a decrease of 3,73,240 rupees, thus putting the annicuts under a disadvantage of 9,30,006 rupees, or nearly 2 lacs per annum in the comparison by this cause. In illustration of this subject, the following details are given of the Nunjah cultivation during this period, and they will be found to confirm what has been already written of the improvement which is visible in its extent since the construction of the annicuts:—

TOTAL NUNJAH CULTIVATION in *Tanjore*.

					67,211
Average - - *Rs.*	95,903	30,49,125	29,74,477	- - -	3,73,240

30. Although, therefore, Mr. Smollett has successfully shown that Colonel Cotton has over-estimated the profits of the general Maramut expenditure in Tanjore, as well as of the Coleroon Annicuts, there is nothing in his pamphlet to disprove the facts that the land revenue in Tanjore has shown considerable improvement under our rule, though subject to fluctuations from the effects of price on its peculiar system of taxation, and that the operation of the Coleroon Annicuts has given to Government an actual increase of revenue, amounting to 1,77,952 rupees per annum, exclusive of the gain in South Arcot through an extended Nunjah cultivation, besides making the irrigation of the province more secure, and thus adding to the value of its lands. If there had been no variation in the rates of assessment from the effects of price under the Oolungoo system, the land revenue of Tanjore, according to the cultivation returns, would have shown the result entered in the margin;* and it thus appears how the doubts which have arisen regarding the benefit of the annicuts and the general expenditure on irrigation improvements are mainly attributable to this cause. To illustrate the extensive fluctuations of revenue which occur under the Oolungoo system, the result of the two following years is contrasted :

——	Total Land Cultivated. Valies.	Beriz.
	Rs.	*Rs.*
1234 - - -	1,10,799	50,76,783
1237 - - -	1,15,366	28,09,313

Thus in the latter year the revenue fell off 22 lacs, although cultivation had increased 4 per cent. This enormous difference was chiefly owing to fluctuations of price, which, from a scarcity elsewhere, rose so high in 1234 as to add 13,62,390 rupees to the standard Beriz, while lowness of price in 1237 caused a decline of 4,30,582 rupees below the standard.

31. In the instructions of Government, dated 7th December last, which referred to the Godavery and Kistnah, as well as the Coleroon Annicuts, the Board were directed to communicate their views to Mr. Smollett "for any further observations he may have to offer," before submitting them to Government. But as the Board's investigation has been since limited to the Coleroon Annicuts, and their report has been called for at their "earliest possible convenience," they have doubted whether Government would now desire that delay should occur by sending the papers in the first instance to that gentleman, especially since in the case of the Coleroon Annicuts the question is limited to the effect which those works have actually had on the public revenue. The point at issue is this one fact, to be determined by the cultivation and revenue accounts of the province and its treasury receipts, while with respect to the Kistnah and Godavery Annicuts there are other unsettled points to investigate on which differences of opinion may prevail, such as the amount of the additional assessment, which might suitably be placed on the lands newly brought under irrigation, the total irrigable area, the future additional revenue which may be expected, and the amount which would have been hitherto realised if a charge had been made for the water already supplied. The Board have therefore deemed it proper to send these proceedings direct to Government, returning with them the Tanjore statements which accompanied Extract from Minutes of Consultation, dated 7th December last.

(A true extract.)

To T. Pycroft, Esq.,
Chief Secretary to Government.

B. Cunliffe, Secretary.

Appendix (A.)

Abstract Statement of the Land and Extra Revenues of *Tanjore*, from 1800 to 1852.

A. D.	Fusly.	Land Revenue.	Extra Sources.	Total.	Remarks.
		Rs.	*Rs.*	*Rs.*	
1800	1210	44,07,434	2,58,630	46,66,064	In 1200 the land revenue was increased one-fifth by an extra portion of the gross produce being taken.
1801	1211	31,27,714	1,54,755	32,82,469	
1802	1212	26,63,257	1,14,045	27,77,302

Appendix (C.)

1. The manner in which the Land Revenue in Tanjore fluctuates with the price of grain is alluded to in the first Report of the Public Works Commissioners, para. 254, and it seems proper here to give a brief explanation of the Oolungoo system.

2. In the villages settled on this principle a standard was fixed in fusly 1232, by ascertaining the extent of nunjah land cultivated, and its gross produce during a series of years. The Government portion of this produce (mailwarum) was converted into money at an ascertained average price, and the amount divided by the number of valies taken, as the standard cultivation of the village formed the rate of assessment per valy.

3. Thus (to suppose an imaginary instance) the standard cultivation of a village is 10 valies, and the standard produce 1,500 cullums. Deducting 176 for the fees of the village officers and other items (sotruntrums), the remaining produce, 1,324 cullums, is divided between the landholders and the Government. The share of the latter, 662 cullums, at the local standard price which was fixed on the average of several preceding years, becomes *Rs.* 317. 3. 4., and this divided by 10, the number of valies forming the standard cultivation of the village, gives *Rs.* 31. 11. 6.* per valy, which is accordingly the village rate of assessment, and the landholders are answerable for this amount of revenue in ordinary years, paying extra for any land which is cultivated in excess of the standard. But to secure the landowners from loss, two rules were established. 1st. If the price of grain falls below the standard, more than five per cent. remission is made for all such excess, while if price rises, the ryot is allowed the benefit as far as 10 per cent., after which a proportionate increase is made to the assessment. 2d. If the produce falls off to the extent of 30 per cent. and upwards, either from a limited cultivation or indifferent crops, the ryots can demand that they be reaped and sold by Government, and the proceeds be divided, instead of the ordinary assessment being levied.

4. The total number of ain or Government villages in Tanjore is 4,854, of which 2,847 are under Oolungoo settlement.

5. As Tanjore, from its advantages of irrigation, is a granary of supply when scarcity prevails elsewhere, great fluctuations of price have occurred in it, and their effect on its land revenue is enormous, as shown in the following instance:—

Fusly.	Wet Cultivation, Valies.	Dry ditto.	Total Cultivation.	Beriz Rs.
1234	81,845	28,954	1,10,799	50,76,783
1237	85,631	29,705	1,15,366	28,09,316

6. Thus, although in the latter years there was an increase of four per cent. in the cultivation, the Government revenue fell off to the extent of 22,67,467 rupees, or 44 per cent. The portion of the above great difference which is attributable to charges of price in the Oolungoo villages, is as follows:—

Gain to Government by price in fusly 1234	13,69,390
Loss to Government by price in fusly 1237	4,30,582
	17,99,972

According to the state of prices in these two years, the standard assessment of *Rs.* 31. 11. 6. per valy in the village alluded to in this draft, would have risen to *Rs.* 54. 0. 10. in fusly 1234. and sunk to *R.* 25. 13. 2. in fusly 1237.

(signed) *B. Cunliffe*,
Secretary.

Revenue Board Office, Fort St. George,
21 May 1855.

Appendix (D.)

Memorandum on the Returns from the Upper and Lower *Coleroon* Annicuts.

1. When the Public Works Commission was sitting, the Collectors forwarded to that body complete returns of the results of the special works of irrigation; and from these, together with other authentic documents already in the office of the Board of Revenue Department of Public Works, the printed statement, dated 14th May 1852, was compiled. As it is an extract from this statement that has drawn forth the doubts of the Court of Directors touching the reality of the alleged profits from the Upper Annicut, it is necessary now to justify the document.

See Despatch, dated 28th June 1854, para. 38, Copy of which was forwarded to Board of Revenue Department, Public Works, with Extract from Minutes Consultation, dated 10th October 1854.

2. The

* This is about the average of the nunjah assessment in Tanjore.

2. The Collector of Tanjore, in answer to a request from the Board for his opinion upon the statement, informs them that he has nothing to add to the reports of Mr. Bishop.

Letter dated 6th February 1855.

3. The Collector of South Arcot has sent in a fresh statement, and in his letter forwarding it, he observes, that the original cost of the Lower Annicut appears to be erroneously entered in the printed statement at 74,234 rupees, as it really cost 2,46,549 rupees. This sum, however, is the expenditure from 1836 to 1852 on "the Lower Annicut and its dependencies," while the amount entered in the printed statement is the moiety of the "original" cost of the annicut added to the full cost of the works in immediate dependence upon it in the South Arcot district; the other moiety, with its dependent works, being charged to Tanjore, under the head of South Rajah Voykal. The Collector's statement, consequently, does not show any error in the printed documents; but allowance, it appears, must be made for a sum of 10,000 rupees annually from fusly 1252 (1842-43) to 1262 (1852-53) incorrectly entered in the former returns from the collectorate as profit from the annicut, or to fusly 1260 (1850-51), which is the last included in the printed statement.

4. The following extract from the printed statement explains the principle upon which the returns are calculated:—

"The results of the annicut are thus ascertained:

"The prime cost is first entered in column 3.

"The average annual expenditure for the whole of the irrigation works in the district (exclusive of those under the Lower Annicut and inclusive of repairs rendered necessary by the annicut in Trichinopoly) for the period after, and the same for 10 years before the construction of the annicut being then ascertained, and the latter average being deducted from the former, the difference is multiplied by the number of years composing the period in question, that is, by 15 (from 1836 to 1850), and the product deducted from the aggregate increase of revenue during the same period; the remainder being the net profit, which is again divided by 15, and the quotient is the average annual profit on the prime cost.

"This is the only practicable way of showing the true value of the annicut; since, were the different improvements subsequent to that work considered as so many separate bases of calculation, the only effect would be extreme complication without any more satisfactory result. By the method actually followed, the entire expenditure is brought to account, but all as subsidiary (which it really was) to the Upper Annicut.

"The results in this case are shown at a less amount than the fair reality, owing to the comparison of expenditure having included 10 years before the construction of the annicut. But as the average revenue in column 5 is reckoned from fusly 1240 (1830-31), the first in which the nunjah cultivation and revenue under the rivers are separately shown, it would have been more proper, strictly speaking, to reckon the average expenditure before the construction of the annicut from that, and not, as it has been, from an earlier year; since the calculation of the revenue, had it been practicable, from the same earlier year would have altered the average in column 5. Had this course been followed, the gain from the annicut would, as above said, have appeared much greater; for the expenditure from 1240 (1830-31) to 1245 (1835-36), averaged 1,04,166 rupees, instead of 77,717, the average from 1236 (1826-27), to 1245 (1835-36) actually taken; the former average being in fact greater than that of the whole outlay for repairs and new works (including great improvements to the annicut, the Cauvery Dam, the Coiladdy Calingulah, the Cauvery and Vennar Dam (in part), and other considerable improvements, but excluding the Lower Annicut repairs charged under Nos. 18 and 23), subsequent to the construction of the annicut, which was 95,876.

"If, therefore, the six years average from 1240 (1830-31) to 1245 (1835-36), were taken as the basis, the difference between it and the average since the construction of the annicut, that is, 1,04,166 — 95,876 = 8,290, which × 15 = 1,24,350, should be added to the increase of revenue in column 10, and the total gain would then be 22,07,260, which, divided by 15 would give the annual gain at 1,47,151, or 176⅜ per cent. on the prime cost. If it were not added, the average annual gain would be 1,38,861, or 166½ per cent. on the prime cost.

"It is, indeed, a memorable truth, that the condition of things before the annicut required a greater annual expenditure in imperfect and mostly temporary expedients to preserve the cultivation and revenue, than what has since been incurred to bring under cultivation an additional area of 61,262 acres (exclusive of the increase under the South Rajah Voykal), besides greatly increasing the productiveness of the old lands.

"The whole of the Tanjore expenditure and revenue under the rivers is entered in Nos. 22 and 23, except a moiety of the repairs of the Lower Annicut entered in No. 18."

5. The accompanying Appendix further shows the particulars of the entries, and is explained as follows:—

TANJORE.—*Upper Annicut.*

6. Item No. 1,77,351 rupees, is the average outlay for irrigation works in Tanjore for 10 years before the construction of the annicuts.

No. 2, 1,248 rupees, is the proportion of this expenditure belonging to the lands under the Lower Annicut, which is separately treated of, and it is therefore deducted from No. 1, and the remainder is No. 3, 76,103 rupees.

7. No.

7. No. 4, 1,614 rupees, is composed of the average expenditure for the same period in the Trichinopoly district (in which the annicut is situated), on the river banks in the vicinity of the annicut, which exercises a material influence on such expenditure. Added to the foregoing remainder, this item makes No. 5, 77,717 rupees.

8. Nos. 6 and 10, 1,04,328 and 1,04,166 rupees, show the same particulars for the six last years only of the 10 years' period, are entered as explained in the extract, to correspond with the revenue returns which are given for six years, and not for 10 years.

9. The same particulars are then given in items Nos. 11 and 15, 99,595 and 99,578 rupees, for the period of 15 years after the construction of the annicut.

10. No. 5 being then deducted from No. 15, the remainder 21,861 rupees, No. 16, shows the average annual excess of expenditure during the 15 over the 10 years' period, and this then, multiplied by the 15 years, namely, 3,27,915 rupees, item, multiplied by 15, gives the whole excess for the Lower Annicut, which was included No. 17. From this amount the expenditure under the Lo[illegible] remainder, No. 19, namely, in the bills, namely, 55,534 rupees, No. 18, is deducted, and the [illegible] 2,72,381 rupees, appears in column 12 of the printed statement.

11. The next four items, 1,04,166 rupees, at 124,350 show a similar compar[illegible]ison of the six with the 15 years' period, and in this it appears that the average for the seco[illegible]nd is less than for the first period, and consequently that there has been a reduction of expenditure since the construction of the annicut. These items are not however tabulated in the printed statement.

Lower Annicut, or in Printed Statement, *South Rajah Vaykal.*

12. The entry in column 3 of the printed statement is the moiety of the original cost of the Lower Annicut proper, added to that of the dependent works on the right bank, or Tanjore side.

Moiety of annicut - - - - - - - -	49,710
Other works - - - - - - - - -	11,044
Entry in Statement - - - - - - - -	60,754

13. The items that follow in the Appendix to this Memo. are sufficiently explained by the foregoing remarks; but it should be added, that the amount, 3,722 rupees, appears to be an error for 3,702 rupees, and that the result should consequently be 66,044 rupees instead of 66,124; but this is not of the least importance to the general result.

SOUTH ARCOT.—*Lower Annicut.*

14. The bill for the Lower Annicut, sluices, lock, and North Rajah Voykal, amounts to 1,29,046 rupees, or deducting the Rajah Voykal and another trifling work, to 1,07,910 rupees. Deducting from this amount again items belonging to the sluices and lock, the remainder is 99,487 rupees. The moiety of this sum is 49,744, but the amount entered is 49,710 rupees, through some error, which for want of access to all the papers cannot now be explained, and is of not the least consequence to the result. To this the cost of the North Rajah Voykal, and of the sluices, but not of the lock, which has nothing to do with the irrigation, is added, and the total, 74,234 rupees, appears in column 3 of the printed statement.

15. The entries under this head in the Appendix are similar (*mutatis mutandis*) to those in Tanjore, and the last item, 39,972 rupees, appears in column 12 of the printed statement.

It only remains to deduct from the aggregate revenue of the 14 years in column 8, namely, 14,22,971 rupees, 90,000 rupees for the amount incorrectly credited as increase of revenue from fusly 1252 (1842-43), to 1260 (1850-51).

16. This will reduce the amount in column 13 to 12,92,999, the average annual increase in column 15 to 92,357, and the annual per-centage in column 17 to $124\frac{5}{8}$.

17. The large per-centages realised upon the capital invested in the Coleroon Annicuts appear to have excited surprise; but they are in fact by no means extraordinary in connexion with the circumstances of the Cauvery Delta at the time of the construction of these works. It must not be forgotten, that the delta had been for an unknown period of time the field of a most extensive system of irrigation, rendering it by far the richest territory, area for area, in South India. But its prosperity was placed in jeopardy by the difficulty of utilising the entire supply of water brought down by the river; and that difficulty was simply, effectually, and at trifling cost removed by the annicuts. The source of all the wealth of the delta is the river; the annicuts are only conditions essential to the transmission of the water to the lands; and as other conditions not less essential and of far greater magnitude were in active operation before the annicuts, it must never be supposed, that where such conditions are wanting, works similar to the annicuts would produce anything approaching to similar results for a length of time. In the Godavery Delta, for example, besides the annicuts, the entire system of irrigation had to be created; and the profits on the capital expenditure will necessarily be at first diminished in proportion to the extent

of the subsidiary works required for their realization. But these profits will evidently by degrees far surpass in actual amount those realised in Tanjore, on account of the far greater field for improvement afforded by the Godavery Delta.

18. It should be added that the falling off of the Tanjore revenue for three years of the 15 years' period, was owing to the low price of grain, which largely affects the revenue in that district. The increase in produce, the true criterion of the works of irrigation, was steady throughout the period.

(signed) *J. H. Bell,*
Secy. Board of Revenue, D. P. W.

From *Arthur Hall*, Esq, Collector of South Arcot, to Captain *J. H. Bell*, Secretary to the Board of Revenue, Department of Public Works, Fort St. George.

Sir,

WITH reference to Extract from the Proceedings of the Board of Revenue, Department of Public Works, dated 4th December 1854, relative to the effects of the Coleroon annicuts upon the revenues of Tanjore and South Arcot, I do myself the honour to submit a statement, showing what may, I think, be fairly considered as the result of constructing the lower one of the two, as far as the increase of revenue derived from it in this district, is concerned.

2. It appears to me that the original cost of this annicut and its dependencies is erroneously entered in the statement referred to by the Board as 74,234. It really cost 2,46,549, according to the bills submitted and passed at different times.

3. Ten thousand rupees should also have been deducted from the sum specified as the increase of revenue after fusly 1252, in the statement which was forwarded from this office to the Public Works Commissioners, as this amount of increase arose from another cause than the effect of the annicut. It proceeded from the resumption by Government of certain Cavilgar enams, which had been deducted from the beriz of the land irrigated by the annicut, and which had never, up to fusly 1252, been brought into our accounts.

4. The Board will thus observe, that after deducting the cost of the repairs, the net gain accruing from the construction of this annicut from 1836 to 1852 (inclusive), has been 13,74,051 rupees, being an average annual profit of 85,878 rupees, or a per-centage of $34\frac{13}{16}$ on the original outlay, viewing the building itself as the capital.

5. In my opinion, the foregoing is the increase of revenue which may be fairly attributed to the effect of the Lower Annicut in this district, and I do not consider that any other causes have contributed to make it.

I have, &c.
(signed) *A. Hall,*
Collector.

South Arcot,
Collector's Circuit Cutchery, Oolundoorpett,
6 February 1855.

STATEMENT showing the PROFIT which has resulted in the District of *South Arcot*, from the Lower *Coleroon* Annicut, for Sixteen Years subsequent to its Construction, as compared with the same Period previous to its being built.

Increase	–	6,696	2,16,029	1,80,008	1,77,952	

Note.—The preceding comparison commences with fusly 1240, as being the earliest year for which returns of the nunjah lands can be obtained, divided into classes according to their descriptions of irrigation. On referring to the total nunjah cultivation, exhibited in the detailed statement of the Tanjore revenues furnished by Mr. Forbes, it will be observed that the lands dependent on the annicut constitute about nine-tenths of the total nunjah cultivation, and that if returns of the river-irrigated portion could have been obtained for a period anterior to 1240, the comparison would have been still more favourable to the annicut, as the general nunjah cultivation in the six years immediately preceding the construction of the annicut which are taken for the comparison was unusually large. In proof of this point the following abstract is annexed :—

EAST INDIA (NATIVE PRINCES).

RETURN to an Address of the Honourable The House of Commons, dated 2 May 1861;—*for*,

"RETURNS of the Names and Designations of all NATIVE PRINCES of *India*, or their Families, in receipt of PENSIONS or ALLOWANCES from the BRITISH GOVERNMENT, from January 1850 up to the latest date on which Returns have been received at the India Office:"

"Of the Dates of the TREATIES or ENGAGEMENTS under which such PENSIONS have been paid:"

"Of the Yearly Amount paid to each PRINCE, or to their Families, respectively:"

"Whether the PENSION, &c., is Hereditary, for Life, or for any other period:"

"Whether the GRANT was originally made with or without the forfeiture of the Personal Property of the Grantee:"

"Whether any JAGHEER, RENT-FREE TENURE, or other LANDED PROPERTY, or INCOME derivable from LAND, has been reserved for the use of the Grantee:"

"Of the Circumstances under which the original GRANT was made:"

"Whether any such PENSION, &c., has been increased, altered, or has ceased to be paid, since January 1850; and, if so, the reason of such Increase, Alteration or Cessation:"

"And, whether a permanent SETTLEMENT with the Recipient has in any case been made; and, if so, on what Terms."

India Office,
23 February 1864.

J. W. KAYE,
Secretary, Political Department.

(*Mr. Adam.*)

Ordered, by The House of Commons, *to be Printed*,
25 *February* 1864.

RETURNS of the Names and Designations of all NATIVE PRINCES of *India*, or their Families, in receipt of PENSIONS or ALLOWANCES from the BRITISH GOVERNMENT, from January 1850 up to the latest date on which Returns have been received at the India Office.

POLITICAL DEPARTMENT.

The Secretary of State for India to the Governor General of India, dated 18 July (No. 6) 1863.

I ENCLOSE herewith copy of a Return ordered by the House of Commons in the Session of 1861, but which I have not hitherto been able to furnish owing to the deficiency of necessary information on the records of this office; and I have to request that your Excellency's Government will forward to me a detailed statement of the annual amounts paid to the several persons indicated by the Return, and of any changes which may have taken place in the pecuniary provision made for them since they first became stipendiaries of the British Government.

Your Lordship, however, may perhaps be doubtful as to the particular class of persons indicated by the term "Native Princes." I am myself somewhat uncertain with respect to the precise intent of the motion; but it would appear from the context that the words "Native Princes" are intended to describe only such persons as have had, or whose ancestors have had, treaty engagements with the British Government, and whose pensions or allowances are granted to them in consideration of territorial rights ceded to or assumed by that Government.

As I am anxious to lay this Return before Parliament at the commencement of next Session, I have to request that your Excellency will furnish me with the desired information with the least possible delay.

I have, &c.
(signed) *C. Wood.*

The Government of India to the Secretary of State for India, dated 8 January (No. 7) 1864.

IN compliance with the request contained in your Despatch (No. 6) dated 18 July last, we have the honour to transmit herewith copies of communications, of which a list is given in the accompanying Abstract of Contents, containing the Returns called for by Her Majesty's Government of the Annual Amounts paid to Native Princes of India, who are in receipt of pensions or allowances from the British Government, and of any changes which may have taken place in the pecuniary provision made for them since they first became stipendiaries.

2. On receipt of further Returns they will be transmitted hereafter.

W. T. Denison.
R. Napier.
H. B. Harington.
H. S. Maine.
C. E. Trevelyan.
W. Grey.

RETURNS showing the NAMES and DESIGNATIONS of NATIVE PRINCES, &c., who are in Receipt of PENSIONS from the Supreme Government of *India*.

HYDERABAD.

From *G. U. Yule*, Esq., C.B., Resident at Hyderabad, to the Officiating Secretary to Government of India, Foreign Department, Fort William.—
(No. 41, dated 22d August 1863.)

I HAVE the honour to acknowledge the receipt of Government Circular,* No. 350, of the 8th instant, with enclosures, and to report, for the information of the Honourable the President in Council, that there are no Native Princes of India or their families dependent on this Residency for payment of pensions or allowances from the British Government.

* Calling for Returns of the names and designations of all Native Princes of India, &c. in receipt of pension from the British Government from January 1850.

MYSORE.

From the Commissioner for the Government of the Territories of His Highness the Maharajah of Mysore, to the Officiating Secretary to Government of India, Foreign Department, Fort William.—(No. 105, dated Bangalore, the 27th August 1863.)

I HAVE the honour to forward, for submission to the Honourable the President in Council, the accompanying printed Returns duly filled up, with the information required from Mysore in Mr. Assistant Secretary Wheeler's Circular, No. 350, of the 8th instant.

The Return for Coorg will be submitted separately.

NAME and DESIGNATION.	Date of Treaty.	Yearly Amount.	Whether Pension is Hereditary, for Life, or for any other Period.	Whether Grant was originally made with or without Forfeiture of Personal Property.	Whether any Jagheer, Rent-free Tenure, or other Landed Property, or Income derivable from Land, has been reserved.	Circumstances of Original Grant.	Whether Pension has been increased, altered, or ceased to be Paid, since January 1850; if so, the Reason.	Whether Permanent Settlement has been made; if so, on what Terms.
		Rs. a. p.						
To 3 members of the family of the late Ibrahim Sahib, uncle of the late Hyder Ali.	- - -	540 - -						
To 4 ditto of ditto, of the late Turbeyet Ali Khan, son-in-law of Shabaz Sahib, elder brother of Hyder Ali.	- - -	525 - -						
To 6 ditto of ditto, of Meer Khuder Ali, son-in-law of the late Tippoo.	- - -	768 - -						
To 3 ditto of ditto of Meer Momood-deen, brother of the Sultana of Tippoo.	- - -	455 - -						
To 3 ditto of ditto of Syed Shabaz, son-in-law of Hyder Ali.	- - -	204 - -						
To 4 ditto of ditto of Syed Sahib, brother-in-law of Hyder Ali, and father-in-law of Tippoo Sultan.	- - -	915 - -						

To 5 ditto of ditto of Syed Muckdoom, a distant relation by marriage of Tippo Sultan.	- - -	252 - -	These pensions were originally granted by the Commissioners for the settlement of the late Tippoo Sultan's dominions after the capture of Seringapatam in May 1799: though there was no express provision to this effect, they were afterwards continued to the descendants of the original grantees until a few years ago, when the lapsed pensions reverted to Government in accordance with instructions from the late Court of Directors -	The property of Tippoo Sultan was declared to be forfeited; the grant made to the families was without the forfeiture of the personal property of the grantee	- none - -	Tippoo Sultan, the ruler of Mysore, was killed, on the 4th May 1799, during the assault on Seringapatam by the troops under the command of General Harris. Several members of Tippoo Sultan's family, of various degrees of affinity, are residing in Mysore, on the receipt of allowances or pensions from the British Government, chargeable to the Two Lakh Fund, owing to the downfall of the power of Tippoo Sultan, and the ruin of the principal Moosalman families connected with him; these stipends were granted under orders received from Lord Mornington - - - -	No increase of pension has ever been made in Mysore. The full amount of *Rs.* 43,594. 13. 4. continued to be paid up to 1850. After this year, alterations caused by lapses reduced the amount to *Rs.* 32,736. 9. 9., at which sum the stipend up to January 1863 stood. This reduction was in consequence of an order received from the Court of Directors, directing the discontinuance of the lapsed pensions to the heirs of the deceased pensioners. The sum paid in each year is shown below:—	Not in Mysore.
To 14 ditto of ditto of Meera Hoossain, son-in-law of Hyder's brother, Syed Shabauz.	- - -	1,008 - -							
To 7 ditto of ditto of Meer Kassim Ali Khan, nephew of Tippoo.	Treaty of Seringapatam, 22d June 1799. Separate Articles of Treaty between the British Company and His Highness the Nizam of Hyderabad, 13th July 1799 -	780 - -							
To 2 ditto of ditto of Mohomed Zahid, nephew of Tippoo Sultan.		840 - -							
To 4 ditto of ditto Ruza Sahib, otherwise called Benki Nabob, son of Ibrahim Sahib, uncle of Hyder Ali.		2,603 - -							
To 10 ditto of ditto of Meer Goolam Ali, brother-in-law of Tippoo Sultan.		1,198 - -							
To 26 ditto of ditto of Meer Mohomed Ali Khan, second son of Tippoo's maternal uncle, Meer Sahib.		1,639 5 -							
To 8 ditto of ditto of Mohomed Ruza Khan, son of Turbeyet Ali Khan, son-in-law of Hyder Ali's brother.	- - -	384 - -							
To 10 ditto of ditto of Syed Ibrahim, Commandant of Tanjore Cavalry, for unexampled fidelity and attachment to the British Government.	- - -	2,470 9 -*							
To 5 ditto of ditto of Abool Nubbee Khan, an officer of distinguished character in Tippoo's Government, &c., relation of the Nabob of Savanore.	- - -	1,800 - -*							
To 3 ditto of ditto of Budrool Zema Khan, one of the four chief Sirdars of Tippoo's Government.	- - -	720 - -*							
To 5 ditto of ditto of Meer Khumzood-deen Khan, eldest son of Tippoo's maternal uncle, Meer Sahib.	- - -	1,200 - -							
Allowance to the Mosque and Goombuz in the Island of Seringapatam.	- - -	14,434 11 9*							
TOTAL - - *Rs.*		32,736 9 9							

1850 - -	43,594	13 4
1851 - -	42,286	13 7
1852 - -	42,078	4 9
1853 - -	40,562	9 5
1854 - -	39,617	9 2
1855 - -	39,770	6 11
1856 - -	37,352	8 4
1857 - -	37,996	10 3
1858 - -	36,505	11 6
1859 - -	36,023	13 6
1860 - -	36,879	12 4
1861 - -	35,545	6 -
1862 - -	34,504	15 4
1863 - -	32,736	9 9

* Although these items are not payable to actual relations of Tippoo Sultan, it has been deemed expedient to show them here, as the amounts are charged against the Two Lakh Fund.

Note.—"It may be advisable to mention that a few stipends on account of the Two Lakh Fund are disbursed by the Paymaster at Vellore, who is in communication with the Accountant General at Madras. No control over these payments is exercised by the Commissioner of Mysore.

Mysore Commissioner's Office, Bangalore,
27 August 1863.

(signed) *L. Bowring*,
Commissioner.

MYSORE—*continued.*

From Captain *E. St. George*, Officiating Agent, Governor General, with the King of Oude, and Superintendent, Mysore Princes, to the Assistant Secretary to Government of India, Foreign Department.—(No. 29, dated Alipore, the 29th September 1863.).

With reference to your Circular, No. 350, dated the 8th August last, I have the honour to forward herewith the accompanying Tabular Statements of the Native Princes of India and their Families, with whom I am officially connected.

ABSTRACT STATEMENT of PENSIONS payable by the Superintendent of the Mysore Princes, *Calcutta*.

NAME and DESIGNATION.	Date of Treaty.	Yearly Amount.	Whether Pension is Hereditary, for Life, or for any other Period.	Whether Grant was originally made with or without Forfeiture of Personal Property.	Whether any Jagheer, Rent-free Tenure, or other Landed Property, or Income derivable from Land, has been reserved.	Circumstances of Original Grant.	Whether Pension has been increased, altered, or ceased to be Paid, since January 1850; if so, the Reason.	Whether Permanent Settlement has been made; if so, on what Terms.
		Rs. a. p.						
(1) Surviving son of the late Tippoo Sultan, as per Statement No. 1, herewith annexed.	- -	37,080 – –	*Vide* similar columns in the Statements annexed.					
(17) Grandsons of ditto, as per ditto No. 1, ditto.	- -	1,02,000 – –						
(29) Grand-daughters of ditto, as per ditto No. 2, ditto.	- -	93,705 – –						
(16) Fatherless great-grandsons of ditto, as per No. 3, ditto.	- -	19,800 – –						
(11) Ditto great grand-daughter of ditto, as per ditto No. 4 ditto.	- -	12,600 – –						
(60) Begums, Khowasses, and dependents, as per Statements Nos. 5 and 5 A. and 5 B., herewith annexed.	- -	26,491 11 –						
(20) Grown-up children of the grandsons on receipt of the one-third allowances, as per ditto No. 6, ditto.	- -	21,600 – –						
(16) Family of the late Nawab Kurrim Shah, brother of the Tippoo, as per ditto No. 7, ditto.	- -	18,690 – –				It was customary on the demise of sons and daughters of the late Tippoo, to assign a certain portion of their lapsed stipends for the performance of the religious ceremonies and the keeping of their tombs in good repair. It was subsequently thought proper, in consequence of the increase of the Mysore Family, to fix a limit to the disbursement, and the present amount was considered sufficient for the purpose -	For the purpose mentioned in the concluding portion of the last column, an increase of *Rs.* 51. 14. 5. per month was granted in 1857 -	
1 Futihah allowance - - -	- -	6,000 0 0	Permanent grant - - - - - - - -					*Vide* last two columns.
GRAND TOTAL - *Rs.*		3,37,966 11 –						

No. 1.

(1) Only surviving Son of the late Tippoo Sultan.

His Highness Prince Gholam Mohommed.		*Rs.* 37,080 – –	For life	*Vide* 2d column		On the removal of the family of the late Tippoo Sultan to Russapuglah in 1806 on political considerations, life stipends were granted for those members who were brought round	In 1855 an increase of 1,000 rupees was granted to the Prince, under orders of the Home Government, for his exemplary conduct	Not made.

(17) Grandsons of the late Tippoo Sultan.

Shahzadah Mohommed Shahab-ood-deen.	No treaty was made with the descendants of the late Tippoo Sultan; they benefit under the Partition Treaty of Mysore concluded with Asop Jah Bahadoor.	6,000 – –	Life stipend	*Vide* 2d column		Subsequently their family was also considered fit subjects for the exercise of the liberality of Government	In 1855 these stipends were raised to an uniform rate of 600 rupees. The assignments were life stipends, but the Government had powers, on the demise of each grandson, to grant suitable stipends to such relations and dependents of the deceased as were supported by him. Their children used to be separately provided for, *i. e.*, their sons, after their demise, were to receive 200 rupees per month each, and their daughters 100 rupees. The amount total of increase granted to the grandsons in the year aforesaid was *Rs.*7,593. 15. 4. per month.	Under the arrangements sanctioned by Sir C. Wood in his Despatch dated the 11th June 1860, the allowances of these grandsons have been raised to 1,000 rupees per month, out of which 500 rupees, as shown in this Statement, will be considered as personal stipends, terminable with the lives of the present recipients, and 500 rupees to be derived from interest of amount to be capitalised for them; Government Promissory Notes of 1,50,000 rupees of the 4 per cent. loan for each of the grandsons being invested in the names of three family trustees, nominated by Sir C. Wood, and enfaced in the name of the beneficial holder thereof. These stocks, after the demise of the grandsons, will form a permanent provision for their family, under arrangements to be made by the trustees without the intervention of the Government of India. Under the Despatch referred to the grandsons have received a grant of 15,000 rupees each for the liquidation of their debts, and it has been provided that they will further get a similar grant for the purchase of their permanent residences on removal from Russapuglah and its vicinity; the Government at the same time, if so desired, purchasing at the market value any property at Russapuglah they may feel disposed to sell. The stipend assigned for the grown-up children of the grandsons (*vide* Statement No. 6) has not been affected; but the grandsons will no longer get the funeral donation of 500 rupees, which they would have been entitled to under the old arrangements.

No. 2.

(16.) Fatherless Great-grandsons of the late Tippoo Sultan:

Sahibzadah Feroze Shah	*Vide* Column 2 of Statement No. 1.	1,200	*Vide* similar columns in Statement No. 1		In 1857, the stipends of these great-grandsons were raised to a uniform rate of 200 rupees per mensem; the total monthly increase granted for the purpose being *Rs.* 1,391. 6. 2.
Sahibzadah Mohommed Shekoh		1,200			
Sahibzadah Sufder Shekoh		1,200			
Sahibzadah Allah Innaith		1,200			
Sahibzadah Nosseer-ood-deen Hyder		1,200			These were life stipends, but on the demise of Sahibzadah Hyder Shekoh, the Government, on special considerations based on the helpless condition of his children, granted to them a charitable allowance of 100 rupees, being half the stipend enjoyed by their father.
Sahibzadah Feroze Bukht		1,200			
Sahibzadah Mohommed Koyseer		1,200			
Sahibzadah Shah Allum		1,200			
Sahibzadah Shums-ood-deen		600			In 1853, Sahibzadah Shums-ood-deen having commuted his monthly stipend of 50 rupees for a payment of 3,000 rupees to him, that amount was deducted from his allowance on its assignment in 1859; this deduction has been continued ever since.
Sahibzadah Fukr-ood-deen		1,200			
Sahibzadah Sekunder Shah		1,200			
Sahibzadah Wallah Gohur Shah		1,200			
Sahibzadah Aftab-ood-deen		1,200			
Nawab Noorool Huq		1,200			

Fatherless Great-grandsons by the Female Side:

Sahibzadah Shums-ood-deen	-	1,800	-	These two Sahibzadahs are the great-grandsons of the late Tippoo Sultan by the female side. In 1860 their cases having been referred to the favourable consideration of the Government of India by Sir C. Wood, the present life stipends were granted to them.	
Sahibzadah Rowshn Aukhtur	-	1,800	-		
TOTAL	*Rs.*	19,800	-		

B

No. 4.

(11.) Fatherless Great-grand-daughters of the late Tippo Sultan:

Chaund Begum, daughter of the late Shahzadah Warris-ood-deen.	*Vide* similar column in Statement No. 1.	1,200	Life stipend	*Vide* similar columns in Statement No. 1	These stipends were raised to the uniform rate of 100 rupees per month, as shown herein, in 1857, when an increase of *Rs.* 545. 1. 7. per mensem was granted for that purpose.
Sultanee Begum, ditto of ditto Nizam-ood-deen.		1,200			
Nunnee, *alias* Ameer-oon-nissa Begum, ditto of ditto Mohommed Sultan.		1,200			
Fukr-oon-nissa Begum, ditto of Sultan Hossain.		1,200			
Foyz-oon-nissa, *alias* Fuzl-oon-nissa Begum, ditto of ditto.		1,200			
Homeed-oon-nissa Begum, ditto of ditto Kerkabad.		1,200			
Noor-oon-nissa Begum, ditto of ditto		1,200			
Fuzl-oon-nissa, *alias* Khajah Begum, ditto of ditto Jafer-ood-deen.		1,200			
Sekunder Begum, ditto of Russud-ood-deen		1,200			
Hoosainee Begum, ditto		1,200			

By the Female Side.

Zeenut-oon-nissa Begum, sister of Sahibzadah Mohommed Shums-ood-deen.	-	600	-	This is a great grand-daughter of the late Tippoo Sultan; by the female side. This allowance was assigned in 1860, when her case was referred for the favourable consideration of the India Government by Sir Charles Wood.	
TOTAL	*Rs.*	12,600	-		

Under the Despatch of Sir C. Wood, dated 11th June 1860, the incomes of these great grandsons have been raised to 300 rupees per month, out of which 100 rupees, as shown in this statement, to be considered as a personal allowance terminable with the lives of the present recipients, and 200 rupees to be derived from interest of amount (60,000 rupees), to be capitalized for them, as in the case of the grandsons, the capital stocks after their demise forming a permanent provision for their family.

They have also received a grant of 5,000 rupees for the liquidation of their debts, and will get a further sum of 5,000 rupees on removal from Russapuglah, with provision as regards, the purchase of their property, similar to the grandsons.

The funeral donation of 200 rupees, which the great-grandsons would have been entitled to under the old scheme, will no longer be paid to them.

These are life stipends, which lapse absolutely and finally to the Government on the demise of the several recipients.

Both the above ladies are widows of Rughojee Bhonsla III., last Rajah of Nagpore.								

Chief Commissioner's Office, Central Provinces, Nagpore, 16 October 1863.

By order, &c.
(signed) *Hector Mackenzie*, Secretary.

BURMAH.

From Captain *H. Nelson Davies*, Secretary to Chief Commissioner of British Burmah, to *E. C. Bayley*, Esq., Officiating Secretary to Government of India, Foreign Department, Fort William.—(No. 287-4141, dated Rangoon, the 1st November 1863.)

I HAVE the honour, by direction of the Chief Commissioner, to acknowledge Mr. Assistant Secretary Wheeler's letter, No. 423, of 21st September last, forwarding a roll of state prisoners to be filled up; this has been only partially done, because the headings of the form are in some respects not applicable to the present position of the Delhi state prisoners at Rangoon; a brief state of the case of these prisoners seems therefore necessary.

After the defeat of the Mahratta Army at Putpan-Gunge, near Delhi, by the British Force under General Lake, in 1803, the Mahratta Army having evacuated Delhi, the blind Emperor Shah Alum, who had been a mere state prisoner in the hands of the Mahrattas, sought the protection of the British General. Lord Lake entered Delhi on the 14th September 1803, and from that time till the mutiny of the Bengal Army in 1857 the Titular Emperors of Delhi have been pensioned subjects of the British Government. Shah Alum died in 1806, and was succeeded by his son, Akbar Shah, who died in 1837, when Mahomed Bahadoor Shah, son of Akbar Shah, mounted the throne. He identified himself with the cause of the mutineers in 1857. On the 54th anniversary of Lord Lake entering Delhi and releasing his grandfather from the custody of the Mahrattas, Delhi was wrested from the hands of the rebels, and on 27th day of January 1858 Bahadoor Shah was brought to trial on the following charges:—

1st.—For aiding and abetting the mutiny of British Troops.

2d.—Encouraging and assisting divers persons in waging war against the British Government.

3d.—Assuming the sovereignty of India, and

4th.—Causing, and being accessory to, the murder of Christians.

He was found guilty in all the charges, and was removed to Rangoon, where he arrived on 10th December 1858, and died, and was buried there on the 7th December 1862.

The stipend allowed by the British Government for the support of the Titular Kings of Delhi from Shah Alum's time down to Bahadoor Shah's was 12 lakhs of rupees, or 120,000 *l.* per annum; but besides this Bahadoor Shah was in receipt of ground rents and tenements in the city of Delhi, which yielded probably 3 lakhs, or 30,000 *l.* a year in addition to his pension; his general income, after providing for his personal expenses, was portioned out among his wives, relatives, and retainers, according to his pleasure. Bahadoor Shah had no power whatever beyond the precincts of his own palace; he had the power of conferring titles and dresses of honour upon his own immediate retainers, but was prohibited from exercising that power on any others. He and the heir apparent were exempted from the jurisdiction of the Company's Local Courts, but were under the orders of the Supreme Government.

Together with Bahadoor Shah were conveyed to Rangoon the following prisoners, besides attendants:—

Name.	Relationship to Bahadoor Shah.	Remarks.
Juwan Bukt - - -	Son - - -	The wife of Juwan Bukt voluntarily accompanied her husband.
Shah Abbas - - -	Son - - -	The mother and grandmother of Shah Abbas accompanied him voluntarily.
Zenat Mahul - - -	Wife - -	Mother of Juwan Bukt.

Prior to the breaking out of the rebellion in 1857 the monthly stipend of Juwan Bukt was 350 rupees a month, while his mother's allowance was 5,500 rupees; the mother of Shah Abbas received 45 rupees a month, and his grandmother 35 rupees, while he himself received 100 rupees.

The mother of Shah Abbas is a Yunnah woman, named Mubaric Misser; the father of Zummanee (wife of Juwan Bukt) is one Mahomed Khan; his father's name was Ahmed Kuli Khan, whose father, "Abbas," for some service rendered to Government, received a pension of 400 rupees a month, but his son, Ahmed Kuli Khan, only received half that amount, and it appears to have ceased with him, for I understood Mahomed Khan (Zummanee's father) received no pension.

The mother of Zummanee is named Nawab Begum, whose father was one Nawab Bahadoor Khan; he appears to have been a wealthy man; his own income is stated to have been one lakh of rupees a year, besides a jagheer of 32 villages. On his death it is stated Government commuted the revenue derived from these villages, and allowed his son, Walli Dad Khan, a pension of 2,000 rupees a month. Zummanee has three children, one boy and two girls.

Shah Abbas has recently married one "Aiesha," daughter of a native Mahomedan trader, originally from Bombay, and settled in Rangoon, named Mahomed Tyre; the mother of Aiesha is a pure Burmese.

The present state of the remaining state prisoners is this:—They all live in one house, surrounded with a high palisade, situated close to the main guard; three Europeans sentries are constantly on guard inside the enclosure. The two Begums, Zenat Mahul and Zummanee, are allowed to take exercise in a gharrie, and the two sons of Bahadoor Shah take exercise on foot, attended by an European sentry.

There is no fixed allowance for the state prisoners' food, and clothes are supplied to them and their attendants at the discretion of the officer in charge; but they receive no money allowance. The total expenditure of the state prisoners and their attendants for 1862-63 was 6,831 rupees.

COPY of PAPERS and CORRESPONDENCE relating to the late REBELLION in *Upper Burma*, and to the Measures taken by the Indian Government for protecting the Interests of British Subjects.

(Foreign Department.—Political.—No. 142.)

The Governor General of India in Council to the Secretary of State for India; dated 17th August 1866.

WE have the honour to forward, for the information of Her Majesty's Government, copies of two telegrams received at Simla on the 11th instant, reporting the occurrence of an insurrectionary outbreak at Mandalay, in Burmah.

2. We had no reason to anticipate any such event, nor have we any further information on the subject than that contained in the enclosed papers. The detailed account expected from the Chief Commissioner of British Burmah will, on its receipt, be communicated to your Lordship.

SERVICE MESSAGE.

From Rangoon, dated the 8th August 1866.
From Colonel Phayre.
To Simla.
To Secretary to Government, Foreign Department.

Precedence.—On the 2nd instant an outbreak occurred at Mandalay. The King of Burmah's brother is killed. Several men of rank also; the King apparently helpless, but it may be in his interest. No fear for British subjects or interests, but if necessary, I will go to the frontier to be ready to do what circumstances may require.

SERVICE MESSAGE.

From Calcutta, dated the 11th August 1866.
From Mr. Wheeler.
To Simla.
To Honourable Mr. Muir.

Precedence.—I have just received the following telegram from Major Repley at Thayetmyo:—On 2nd August two sons of the King, named Mengbon Metha and Myenkhandyne-Mengtha, rose with a few followers and killed the War Prince, the Malong Mengtha, and his brother, the Tsagoo Mengtha. The King is confined in the palace: the rebels are in possession of all the principal towns on Irrawaddy. Captain Sladen and Europeans have not been interfered with.

(Foreign Department.—Political.—No. 154.)

The Governor General of India in Council to the Secretary of State for India, dated 31st August 1866.

In continuation of our Despatch, No. 142, dated 17th instant, we have the honour to forward, for the information of Her Majesty's Government, copy of a letter and of its enclosures from the Chief Commissioner of British Burmah, giving a detailed account of the insurrection at Mandalay, together with a copy of the instructions which we have consequently deemed it expedient to issue.

(No. 183.)

From Colonel *A. P. Phayre*, C.B., Chief Commissioner and Agent to the Governor General, British Burmah, to the Secretary to the Government of India, Foreign Department, with the Governor General; No. 142-30, dated Rangoon, the 14th August 1866.

I have the honour to submit, for the information of his Excellency the Viceroy and Governor General in Council, copies of letters to my address, as per margin, from Captain E. B. Sladen, Agent to Chief Commissioner at Mandalay. From these it appears that on the 2nd instant, about mid-day, a sudden outbreak occurred in the King's palace at Mandalay. The King's brother, the Crown Prince or declared successor of the King, was killed; two of the King's sons were killed, also one of the Woongyees or ministers of State, and one severely wounded.

1. From Captain Sladen, Agent to Chief Commissioner at Mandalay, dated 5th August 1866.
2. From Captain Sladen, Agent to Chief Commissioner at Mandalay, dated 7th August 1866.
3. From Captain Sladen, Agent to Chief Commissioner at Mandalay, dated 11th August 1866.

2. The leader or instigator of this outrage was a son of the King's by one of the Queens of inferior rank, having the title of the Myeengoon Prince, and his own younger brother, the Myeengoon-daing Prince. It has long been surmised that the King's sons, who are numerous by several mothers, were desirous of ridding themselves of their uncle, the Crown Prince. The most daring of them, the Myeengoon Prince, headed the present outbreak; he is about 20 years of age. It occurred in a temporary palace outside the city, two or three miles distant from the regular palace. It appears that the Crown Prince and the woongyees were seated in the usual hall of assembly, when a party of armed men rushed in and attacked them. The Crown Prince was at once killed, and also one of the Woongyees. Two of the King's sons, the Maloon Prince and his brother by the same mother, the Isagoo Prince, were also killed, but where does not appear; they are by a different mother to the leader in this insurrection. The King appears to have escaped on foot to his palace in the city. Captain Sladen and Dr. Williams were in the temporary palace at the time, and barely escaped with their lives from the infuriated wretches who perpetrated the massacres.

3. It seems that the Myeengoon Prince and his brother followed up the King to his palace, apparently to gain possession of his person. He, however, was safe therein, and was able to defend it; he still remained so up to the (7th) seventh instant.

4. The Myeengoon Prince and his brother took possession of one of the King's steamers and went down the river to the town of Magway, which is about 80 miles beyond our frontier; he there has raised a force with the intention of marching up to the capital. A very important person escaped the massacre, that is, the Padeng Prince, the eldest son of the murdered Crown Prince. He has gone to Mot-tsho-bo-myo, about 50 miles north-west of Mandalay, intending to raise a force there. Apparently the fight will be between him and his cousin, the Myeengoon Prince.

5. The position of the King as regards his late brother, the Crown Prince, was, that the King felt under obligations to him for the support he gave when the King himself ascended the throne; he then at once was declared heir apparent.

apparent. Since the King's sons came of age, they have been placed entirely under the Crown Prince, and have openly complained of his harsh treatment. It is understood that it is this grievance which the Myeengoon Prince now puts forth as an excuse for his conduct. He says he has no wish to injure his father or to seize the throne. It may be concluded, however, that the murder of the Maloon Prince was with reference to his being the favourite of his father, and his probable succession to the throne if anything happened to the Crown Prince.

6. On the 12th instant a confidential messenger arrived at Rangoon bearing a short note from the prince to my address; the contents were as noted in the margin. The messenger informed me that his master, the prince, had been driven into this outbreak by the tyranny of his uncle; that the murder of his two half-brothers, the Maloon and the Isagoo Princes, was the unauthorised act of subordinates during the confusion; that he had no intention of dethroning his father, but that he desired the two steamers belonging to the King which are now at Rangoon. I informed the messenger that I had no authority over the steamers, and that without a direct letter from his Majesty, I could give no order to those in charge of them. I also replied to the prince's note, and beg to submit a copy thereof. In the same cover I wrote to the King, merely stating why I had not given any instructions to the steamer. It is doubtful if this letter will be delivered.

"The Royal son of his Majesty the King of Burmah informs the Chief Commissioner that he herewith sends his Treasurer to speak on various subjects."

(True Translation.)

(signed) *A. P. P.*

7. I took the opportunity of referring to my intended visit to the capital, and announced my intention of proceeding to the frontier station of Thayetmyo to wait a reply to my letter. I thought it well to do this in case an opportunity should appear for my going, because at such a juncture any one who has succeeded to power will probably be desirous of coming to a good understanding with the British Government; but I will be very cautious as to who I negotiate with.

8. At the time that this outbreak occurred there was fortunately at Mandalay the steamer "Nerbudda," formerly belonging to Government, and now the property of Messrs. Todd, Findlay, & Co. From Captain Sladen's letter of the 7th instant it will be seen that the King had insisted on making use of the steamer "Nerbudda" against the rebel troops, and had taken possession of her. Captain Sladen determined, with the assistance of all the European residents, to retake possession of the steamer and come away. This plan was carried out, and notice having been given, nearly all the European, Armenian, and other foreign Christian inhabitants of Mandalay embarked on board; about six or seven Europeans have remained behind. The steamer reached Thayetmyo on the 11th instant; she is now on her way down the river to Rangoon. Captain Sladen's despatches were sent on by light boat, and reached me this morning.

9. I have nothing to add, except that I have taken precautions to guard the frontier against marauding parties, and I propose to proceed to Thayetmyo in a few days more in order to adopt such further measures as may appear necessary.

(No. 184.)

COPY of a MEMORANDUM from Colonel *A. P. Phayre*, C.B., Chief Commissioner; dated Rangoon, the 13th August 1866.

THE Chief Commissioner informs the Royal son of his Majesty the King of Burmah that he has received the letters sent by the hand of the Shivedaik-tso. The Chief Commissioner having a deep respect for his Majesty, and viewing the Treaty which exists between his Majesty and his Excellency the Viceroy of India, cannot give any instructions to his Majesty's steamers which are now at Rangoon without a direct letter or order from his Majesty. The Chief Commissioner is already under a promise to proceed to the Royal City, and will in a fews days go up to Thayetmyo (Iangyoung), and will there await a reply to this letter from the Royal son of his Majesty the King. The Chief Commissioner will come as a true friend, and he encloses a letter for his Majesty, which the Royal son is requested to forward.

INSURRECTION took place about Mid-day on Thursday, 2nd instant.

COPY of a LETTER from Captain *E. B. Sladen*, Agent to the Chief Commissioner at Mandalay, to Colonel *A. P. Phayre*, C.B., Chief Commissioner of British Burmah and Agent to the Governor General; dated the 5th August 1866. 8 p.m.

THERE is just a chance of my being able to send off a few lines. Thank God, we are all safe. There has been a fearful revolution. Crown Prince and three of King's sons murdered, together with several officials, including Myadoung Mengyee, Loung Shoay Mengyee (not dead yet), Kenwoon, &c. The King escaped from San-nan-dan on foot, with two or three principal Queens, to the city palace. I was in the palace talking to the King when the first burst was made into the palace by the rebels or revolutionists, headed by the two Princes Myeengoon Mentha and Myeengoon-daing Mentha (brothers). The Soopiah Queen rushed into where the King was talking to me and drew the King away. The noise and confusion became terribly perplexing. The King's men were taken entirely by surprise. The few near me managed to get a few arms; we shut the doors of the portion of the palace where we were, but after the lapse of about 10 minutes the rebels, with drawn swords, broke open the door and came rushing upon us. There was a general flight. Williams was with me; we followed in the flight, and after scaling, or almost vaulting over a high partition, we found ourselves amongst a host of drunken, frenzied devils, brandishing their dhaos and coming at us; we were entirely at their mercy, and our very helplessness and something which cannot be accounted for, stayed the attack; we were threatened, and dhaos held over us several times. One of the brutes, who more than once seemed to be on the point of despatching us, was carrying in his hand the Crown Prince's head. We were at the time in the Myanan, or front portion of the palace, which was occupied by about 50 of the rebels.

The rebel Menthas escaped the same night on board Captain Reilly's steamer, after looting all they could. The present state of affairs is most serious.

The King is in his palace, and exertions are being made to bring about order; all is pretty quiet, but it is only a lull before the storm. The Padyne Mentha (Prince's eldest son) has escaped with the Thouzay Mentha. The former has been offered the heir apparentship, but will not come in. The city gates are shut. I have seen the King to-day; he was calm and spoke well. Mandalay is deserted. The Amhoodans in numbers are reported to have fled with their arms. It is impossible to predict what will next take place, but there will be anarchy and disorganisation for a long time. No "Kullah"* has been hurt or robbed. My compound and home have been a rallying point and protection to many hundreds. I have detained the "Nerbudda," which had left this, but recalled from Saggrie. There is very little chance of this ever reaching; all boats will be stopped and searched. I will not trust my other correspondence; not a boat is to be had which will leave for Rangoon; most of the boats have cleared off and keep out of the way. A private boat is said to be going which will take, or try and take, this as far as Thayetmyo. I will not add more.

* Foreigner.

COPY of a LETTER from Captain *E. B. Sladen*, Agent to the Chief Commissioner at Mandalay, to Colonel *A. P. Phayre*, C.B., Chief Commissioner of British Burmah, and Agent to the Governor General; dated the 7th August 1866.

THE boat I am sending is about to start. I have given the man formal papers of my own; they are worth more at present than any one else's, I believe.

Yesterday the prince's palace was completely burnt down, and another fire took place in the south portion of the city; this is a bad sign. The Mengyee has sent me a guard of 20 men. All apply to come to me for protection, Burmese and Kullahs alike. Yesterday even the Myawon sent and asked me to allow his female kind to sleep here. It is reported that the Phoongyees and others sent by the King yesterday to the Padyne Mentha, have returned to say that the Prince will not come in. This is very likely I think. The King wants me to lend him the "Nerbudda" steamer. I shall see him to-day. I think I have got back one of my ponies, and shall probably find the others.

8th August.—I went to the King yesterday. Williams had been sent for before me, and asked for the "Nerbudda." He said that he had given her over to me. The King asked me to give her up. I replied that if he would guarantee the safety of European residents, I would willingly restore the steamer to the same source from which I had received it. The King would give no guarantee, but said the steamer was wanted for the good of his country generally, at a time of great need. He offered the same protection to foreigners as to all others of his subjects. He was so urgent that I could not refuse, but pointed out the special circumstances under which I had detained the vessel, and made it as clear to him as I could, that he would be responsible if he took the steamer; that those circumstances were kept in view. He assented generally, and I agreed to deliver back the steamer to the agent, Dr. Williams. We were then directed to settle matters with the Mengyees. No settlement could be come to. Williams held out on pecuniary grounds. The Pakhan Mengyee said that my preliminary condition with the King, viz., the protection and safety of the lives and property of foreigners, could not be guaranteed, so that after three hours' fruitless

fruitless negotiation, the steamer was not given up. But late the same afternoon, Mr. Camaratta, Mr. Gallisteen, and a Sayey Dangyee came to my house, and said the King had ordered that the steamer was to be taken possession of, whether I delivered it up or not. Men and guns were sent to be put on board in haste. I agreed to deliver over without resistance, but under compulsion, on receiving direct from the King a written aminedan, stating the reasons for the seizure. Late in the evening the King's men (about 20) went on board and took quiet possession; the captain and crew of the steamer remaining on board, but subject to the direction, for all purposes of navigation, of a Burmese official of the rank of Bo-men. This act of the King has rather complicated the position of foreigners in their relation to the Burmese government and the insurgent party. The King said that the steamer was merely wanted to cruise about and carry troops backwards and forwards, but I fear she may be used offensively, in which case, however much the facts may be to the contrary, shall appear to be in favour of the King's government. I am anxious on this account, as well as because matters are becoming more serious here daily. The Padyne Mentha is reported to be very strong, and is marching towards the capital from the Shoay Bo. Most of his father's men are with him, and will listen to no proposals short of an offer of the Crown. Two other Menthas are out still, and have collected separate forces. Incendiary fires are of frequent occurrence; I am warned on all sides to be prepared for the worst; not that either party would injure us under authority, but because the lawless bands which spring up on these insurrectionary occasions are in general uncontrollable. Almost every one that could has come to me for protection, or sent his property. The Myawon came himself after midnight last night, and said I ought at once to remove; he was sent, I think, for that purpose. The steamer is gone, and I am in a fix. I have acted throughout for the best. The confusion is general; I can hardly find a moment in which to write. The King's man, who always comes to me, thinks the King will abdicate, and tells me I ought to be out of the way till affairs have settled down; even if the Padyne Mentha succeeds, the Thouzay and Nyoung-yan Mentha will be troublesome for a time. No news as yet of the Myeengoon Mentha, who commenced the mischief. How long will it be before the Shans, too, come into the field? I have a pass from the Mengyees to send a boat; I hope it will go at once.

We are all well.

I will write again as soon as I can. No dâk from Rangoon.

COPY of a LETTER from Captain *E. B. Sladen*, Agent to the Chief Commissioner at Mandalay, to Colonel *A. P. Phayre*, C.B., Chief Commissioner of British Burmah, and Agent to the Governor General; dated, Steamer "Nerbudda," the 11th August 1866.

WE shall be at Thayetmyo this morning. I tried to despatch letters from Mandalay, but found it impossible. My letters already written give you information up to the day of my departure from Mandalay. The immediate cause which made me determine to leave was that the King, after seizing the "Nerbudda," had, contrary to promise, used her offensively against the Prince's troops, and killed a number of those who were crossing in boats a few miles north of Mandalay. On the steamer's return after this exploit, and after learning what had occurred, I consulted with most of the European residents, and it was unanimously agreed upon, as our only means of escape, to retake possession of the steamer as soon as possible. We effected this the same evening without any trouble; before going on board notice was given that the steamer would leave the same day, and I informed all within reach that they were at liberty to come on board, if so inclined. The consequence is, that most of the European and Armenian residents, with their families, are with me, including Father Abbona, Mrs. D'Avera, Dr. Williams, &c. &c. There are a few who remained behind, but who had the opportunity of coming had they availed themselves of it. But, apart from the fact of the King's having seized the steamer, there were many reasons which I consider justified my leaving Mandalay for a time; I was advised to do so even by Burmese officials. I was of no use there, and whichever party became finally ascendant, affairs must remain unsettled for many months. The Padyne Mentha was about to make an immediate attack. Four other Menthas were out, and were each collecting forces. The King's people were ready to desert him. The city had commenced to be fired, and looting was going on. The opportunity occurring of being able to get away with the families of the numerous residents who crowded my house and compound from the first day of the insurrection was one which I thought it well to avail myself of, as it was not likely to happen again for a long time. All along the river, as we came down, parties of armed men are to be seen moving about in various directions, and each, probably, espousing a separate cause. The prime insurrectionist, the Myeengoon Mentha, is in great force at Magway, and has got the steamer "Yaynan Sekia" there; he has taken Mentha, and holds the country from Magway to our frontier. When we passed Magway yesterday, he sent a boat towards us with only a Lascar crew. He would not allow Captain Reilly to accompany the boat; but Reilly was well, and apparently well treated. The Mentha had given out that he wished the English to join him, and go up and conquer the country; that if they would not join him, he would proceed himself single-handed: of course, he will not succeed, though he seems a plucky, determined fellow, with some idea of organization, but thoroughly unscrupulous. He got a quantity of treasure at Mentha. I give up the steamer as soon as

we reach Thayetmyo, and I do not know what Dr. Williams intends doing with her. I shall telegraph to you for orders, and be ready to go back, if you think it advisable, with my family. * * * * * The night we left Mandalay a large fire was burning there, and the next morning large heavy clouds of smoke, seen from a great distance, seemed to say that the work of destruction had commenced. I have not up to the present been able to write any official letter or reports, but they will be sent in due course. We are very crowded on board, and there is not any chance of getting a quiet moment for letter writing. I have left everything I possessed at Mandalay, with the exception of a few clothes and other articles, which could be saved at a moment's notice.

Thayetmyo, 10 a.m., 11th August.—We arrived here this morning. I have telegraphed to you for orders. This place is safe as regards the Myeengoon Prince, I think; he has written to you, I hear, and sent for the King's two remaining steamers. The Myeengoon Prince will probably expect all who pass up to swear themselves as his subjects; but he is very well inclined towards Kullahs, and has ordered that they, or their boats and property passing up and down, are not to be molested. I do not see what we can do beyond watching events. I am prepared to return, now that all the families are in safety, and report all that occurs, besides keeping open communication with the frontier. If this is decided upon, a steamer with a strong escort would be required; otherwise, it may be the most prudent course to await events, and see whether, and in what way, the country becomes settled, or still further disorganized.

I have given over the steamer to Williams, and am not sure when he intends despatching her to Rangoon.

Lonsdale has got a despatch-boat, and I am going to send this off at once. Camaratta sent all his valuables on board, but did not come himself. Major Halsted is left behind, and two Americans, though I gave them timely notice of my intended departure. I will not write more just now.

P.S.—I forgot to say that on the day of the insurrection the rebel Menthas, after looting the San-nan-dan, and killing all whom they came across, followed the King to the city palace, to which they laid siege. They were in the outer enclosure, and fired guns to break open the inner gate; they had possession of all the approaches to the palace, and only left after midnight, when driven out by the Prince's troops.

Captain Reilly came to me at about 2 a.m., and said that the rebel Mentha had sent a man to say that he intended coming on board. Captain Reilly asked my advice; I said that, unless under compulsion, or under immediate fear of his life, he would be wrong to take the Prince on board. The Prince, as far as I can learn, went on board with 200 or 300 armed men, and resistance on Captain Reilly's part would have been altogether ineffectual. The Mentha then wrote to me from the steamer, and ordered me to discharge the cargo from the "Nerbudda," and send her down to him!

(No. 185.)

From the Secretary to the Government of India, Foreign Department, with the Governor General, to the Chief Commissioner of British Burmah; No. 891, dated Simla, the 29th August 1866.

I AM directed to acknowledge the receipt of your letter No. 142-30, with enclosures, giving a detailed account of the insurrection at Mandalay.

2. The Right Honourable the Governor General in Council considers that, under the circumstances with which Captain Sladen had to deal, that officer acted rightly in retiring from his post at Mandalay, and bringing down with him into British territory as many of the European and Armenian residents of the city as chose to embark in the steamer "Nerbudda."

3. His Excellency in Council also approves of the manner in which you met the advances made to you by the Prince at the head of the insurgent faction in respect of the two steamers at Rangoon belonging to the King of Burmah. It is satisfactory that precautions have been taken to guard the British frontier against marauding parties, and your intention to proceed to Thayetmyo is undoubtedly judicious.

4. Whether from Thayetmyo you should go on to Mandalay is a question which the Governor General in Council leaves entirely to your own discretion. Probably it may be well that, until affairs have somewhat settled down in Burmah, you should wait at Thayetmyo and watch the progress of events. Should you, however,

however, be satisfied of the expediency of an advance to Mandalay, his Excellency in Council, having full reliance on your judgment and prudence, will approve of the step; and in that case you are authorised to hire a river steamer for the journey.

(Political Department.—No. 82.)

The Secretary of State for India to the Governor General of India in Council, dated 17th October 1866.

I HAVE perused with much regret the letters of your Excellency's Government noted in the margin,* informing me that there had been an attempted revolution of a sanguinary character at Mandalay, and that the brother (the Crown Prince) and two of the sons of the King of Burmah had been murdered by insurgents, said to have been instigated by the other sons of the King by a different mother.

* Foreign Letter, dated 17th August 1866 (No. 142.)
" " " 31st " " (No. 154.)

2. It appears that the representative of the British Government, Captain Sladen, was in the palace at the time of the outbreak, and narrowly escaped with his life.

3. As the result of this revolutionary movement is as yet unknown to me, I can express no other opinion in this Despatch than that I concur with your Excellency's Government in considering that in "the circumstances with which Captain Sladen had to deal, that officer acted rightly in retiring from his post at Mandalay, and bringing down with him into British territory as many of the European and Armenian residents of the city as chose to embark in the steamer "Nerbudda," and that the Chief Commissioner had exercised a sound discretion in not identifying himself with either of the contending factions, but in quietly watching the progress of events, and providing for the security of the British frontier.

4. This revolution is all the more to be deplored, as I observe from your letter of the 31st of July that Colonel Phayre was to have proceeded to Mandalay in September, with the object of maturing arrangements whereby fuller effect might be given to certain stipulations of our commercial treaty* with Burmah.

I have, &c.
(signed) *Cranborne.*

(Foreign Department.—Political.—No. 161.)

The Governor General of India in Council to the Secretary of State for India, dated 21st September 1866.

IN continuation of the correspondence forwarded with our Despatch, No. 154, dated 31st ult., regarding the insurrection at Mandalay, we have the honour to transmit, for the information of Her Majesty's Government, copies of further reports* from the Chief Commissioner of British Burmah, together with a transcript of our reply.†

* Dated 25th August 1866, No. 143-31.
Dated 27th August 1866, No. 150.
† Dated 14th September 1866, No. 936.

From Colonel *A. P. Phayre*, C.B., Chief Commissioner and Agent to the Governor General, British Burmah, to the Secretary to the Government of India, Foreign Department, with the Governor General, Simla; No. 143-31, dated Rangoon, the 25th August 1866.

I HAVE the honour to submit, for the information of his Excellency the Viceroy and Governor General in Council, copy of letter to my address, No. 30, dated the 22nd instant, from Captain Sladen, Agent to the Chief Commissioner at Mandalay, containing a complete Report of all the events which

* *See* Parliamentary Papers, No. 327, of Session 1863, and No. 300, of Session 1864.

which occurred on the occasion of the insurrection in that city on the 2nd instant.

2. It will not be necessary for me to recapitulate any of those events. Shortly before the outbreak occurred, the steamer "Nerbudda," belonging to the firm of Messrs. Todd, Findlay & Co., had left to proceed down the river to Rangoon. When the outbreak occurred, she was recalled on the requisition of Captain Sladen. This, I think, was a necessary measure with reference to the necessity of providing for the safety of British subjects and others, especially of women and children and their property.

3. After the vessel had been brought back to Mandalay, the King of Burmah in his extremity seized her, or rather she was given up to him by order of Captain Sladen. But as she was at once employed against those who were in rebellion, Captain Sladen considered it right to take possession of the steamer again, so that the British flag might not be seen engaged in the contest. At the same time it was determined that all the European and other Christian inhabitants, being Armenians and others, should leave. The steamer was taken possession of with much tact and good management, and all who chose to do so embarked in her. A few Europeans still remained behind. No opposition whatever was offered to the passage of the steamer down the river.

4. Captain Sladen, in the concluding paragraphs of his letter, recommends that he should at once proceed in a steamer to Mandalay to resume his post as Agent to the Chief Commissioner, to rescue the captain, a British subject, and others, of one of the King's steamers, and afford protection to those Europeans, or those of European extraction, left at Mandalay. Captain Sladen also asks for a personal escort.

5. I consider that the immediate return of the Agent after having once withdrawn, and before there has been a struggle and decisive issue between the contending parties, might possibly lead to some collision with one or other of them *en route*. If the Agent were once safe in his house at Mandalay, or in some building there not readily inflammable, I feel satisfied he would be perfectly safe, except from the attacks of plunderers, which there would probably be no difficulty in resisting. We may be certain that none of those who are contending for mastery, either the King's party or the rebels, would wish to injure any foreigner. But the appearance of a British steamer, which it might be supposed had come to take one or other side, would probably excite resentment. Under these circumstances, therefore, I think it better not to attempt to go up until we hear either that the King has regained his power, or that affairs have so far settled down that the danger of any misunderstanding is reduced to a minimum. I propose to go up to Thayetmyo to wait there for any favourable opportunity of proceeding up in order to renew communication with the Burmese Government. But if his Excellency, the Viceroy and Governor General in Council, considers that I should proceed at once, or that Captain Sladen should go alone, I solicit the favour of being so instructed by telegram.

6. I have received more than one application as to compensation for losses of property, either actual or anticipated. These are grounded, first, on loss of property by abandonment consequent on the British Agent leaving Mandalay; and second, on destruction of property in the city by rebels, for which it is claimed that the Burmese government is responsible. There will also be a claim for compensation on account of the services of the "Nerbudda" steamer for detention and bringing away people at the requisition of the agent.

7. I will not now enter upon this subject, but request instructions as to whether I shall receive such applications, and make full inquiry as to the circumstances and amount of loss in each case. I also request instructions as to whether, in the event of the King regaining his authority, or a new King succeeding, I should bring this question before his Government.

EXTRACTS from LETTER from Captain *E. B. Sladen*, Agent to the Chief Commissioner, British Burmah, and Agent to the Governor General, to Captain *C. P. Hildebrand*, Secretary to the Chief Commissioner, British Burmah; No. 30, dated Rangoon, 22nd August 1866.

I HAVE the honour to report generally upon the late political revolution at Mandalay.

2. I propose to lay before the Chief Commissioner a detailed statement of the principal circumstances connected with the revolution, and to point out, with reference to the circumstances themselves and the various incidents or contingencies arising therefrom, the several causes which influenced my determination to leave the capital, and by undertaking a heavy personal responsibility myself, afford the only means of protection then at hand to many whose lives at the time were felt to be more or less in very imminent danger.

3. At about noon, on 2nd instant, the Myeengoon Mentha and his brother, the Myeengoon-daing Mentha (both sons of the King), entered the summer palace with about 30 well-armed followers. Immediately on coming within the palace enclosures swords were drawn and a rush made into the Hlot (High Court), in which the Woongyees, and other high officials, with the Crown Prince as President, were holding council; the Myadoung and Loung Shoay Mengyees were immediately attacked and cut down; the Pakhan Mengyee escaped by climbing over a partition which led into the inner inclosure of the palace; the Crown Prince escaped out of the Hlot, and was making his way to the outer gate of the palace when he was met by a party of the revolutionists, cut down, and instantly killed. The orders given by the rebel Mentha at this time were, that all Burmans who wore white turbans, and were dressed in the long official white jacket, were to be promiscuously attacked and murdered.

The slaughter in and about the Hlot was the work of a moment. So great was the panic and consternation occasioned by the bold and sudden ferocity of the attack, that before any resistance could be made, or even the interior gates of the palace closed, the rebel princes and their party, joined by this time by those inside the palace who were in the plot, rushed into the inner enclosure of the palace by the grand eastern entrance, and in a few moments penetrated the palace itself.

I happened to be on duty myself at the palace, and was talking to the King at the very time the rush was made into the palace building. I was roused to a sense of some impending danger by hearing a sound as if of many men running in haste over the boarded floor of the palace; at the same time one of the principal Queens (the Myouk Namadan) ran towards the King from an inner apartment in violent haste, and cried out, in evident distress and excitement, to the King, to get up and follow her, as rebel princes had entered the palace.

The King got up at once and disappeared inside: he is reported to have remained in the summer palace only a very few minutes, when he left on foot with two or three of the principal Queens and only a few followers, and proceeded direct to the large palace within the city walls.

The rebel princes had by this time obtained full possession of the palace, which was more or less given up to plunder; but learning that the King had escaped, they withdrew their men and went in pursuit to the city palace, which they reached only a few minutes after the King had arrived there himself.

Some of the King's troops had now rallied about him; the gates of the large palace were closed, and an attack upon the palace itself was commenced by the rebel party, which lasted till after midnight.

4. I will now relate, as briefly as I can, some of my own experiences on this eventful day.

When the King got up and left the apartment in which I had been conversing with him, I remained with only a few Burmese officials who had been present at the conference. Dr. Williams was also present, and had been taken by me before the King to arrange matters of business, which will be reported in a separate communication. Our position was a very critical one; parties of rebels were penetrating different portions of the palace, and after the lapse of a few

minutes, a rush was made by rebels carrying drawn swords up a staircase and over a portion of the wall adjoining the apartment in which we were stationed. The King's officials fled, and climbed over a high wall or partition on the opposite side to that over which the rebels were effecting an entrance. I followed them, accompanied by Dr. Williams, and after climbing the partition, and dropping down on the other side of it, we found ourselves in the Myanan, or large entrance hall and vestibule of the palace, running north and south along the whole front of the palace, and facing the large eastern gates of the palace. This place was filled with armed rebels, who ran towards us sword in hand, crying out, "Cut them down!" Most of the men carried a naked sword in each hand. Many of them were stupified and frenzied by drink and excitement: one of them, who came up and held his sword over us in the act and attitude of delivering his stroke, carried in his left hand the gory head of the Crown Prince, who had just been murdered; still we remained unharmed. An unaccountable power stayed the hands of those who, having already tasted deeply of blood, may fairly be said in their mad excitement to have been far beyond the control of either reason or thought. The men near us danced about with threats, those at a distance brandished their swords in defiance, and altogether the escape from immediate death seemed indefinitely remote; we remained perfectly quiet, and the cry of "Cut them down!" was now changed to "Be quiet or die."

The man who carried the gory head was the chief of the party, and was styled "Bo Men." At one time an order was given to fire upon a Burman outside who had made an attempt to cross the open area in front of the Myanan in which we were: muskets were levelled. At some personal risk to myself I got up from where I was, and called to the chief by his title, "Bo Men;" he was evidently pleased at hearing me recognise his assumed honours, and answered me civilly. I said, "Do not fire; it will alarm those inside." "Very well," he replied, "but who are you?" "I am an Englishman; give me a sword or musket, or something to fight and defend myself with." "Are you," he asked, "on the side of Kodan Myat Pyah (the excellent lord)?" "Certainly I am." "That's right; I am glad of it."

It is needless to remark that during this conversation I was fully under the impression that the "Bo Men" and his party were fighting on the side of the King. We remained in this situation as close prisoners for nearly half-an-hour, and could only move at the risk of our lives. At the end of this time a number of troops (said to be Crown Prince's men) effected an entrance into the palace by the eastern gate and approached the Myanan, in which we were prisoners under the rebel party. But my surprise was great when I saw that the Prince's troops who had just entered and the rebel troops who were already in the Myanan, instead of opposing each other, seemed to coalesce and arrive at an understanding to be mutually forbearing.

One of the Prince's officers recognised me, and said we might leave the palace as soon as we could. On descending from the Myanan we were joined by a Mr. Calogreedy and Mr. Marcar Abraham, who had been prisoners in another portion of the palace, and were now making their escape.

Mr. Calogreedy, at the first rush of the rebel party into the palace, was standing near the inner gateway; he was rescued whilst in the act of being cut down by the rebel Myeengoon Mentha himself, who gave orders at the time that foreign residents were not to be injured.

On reaching the Hlot we discovered the dead body of the Crown Prince lying on the road entirely uncared for, and much mutilated by sword-cuts; the head had been cut off and carried away: just outside the outer palace gate were the bodies of three of the King's sons, including that of the Melloon Mentha, the King's eldest son, a prince of much promise.

The scene of slaughter on all sides was a reality hardly to be realised at the time from the sudden and almost mysterious manner in which all had occurred.

We left the palace in the midst of armed troops, whom it was difficult to recognise as being either friends or foes; in fact, the troops themselves at the time, in the confusion and uncertainty they were in as to the nature or results of the morning's operations, hardly knew what they were to do, or whose cause was to be espoused.

Our ponies, which had been left outside the palace gates on our arrival, had been forcibly seized and ridden off with by some of the rebel party; so we were obliged to proceed on foot, mixed up with the rabble party of troops above described.

scribed. We were unmolested in any way, and reached our respective homes in safety.

5. The King was besieged in his city palace by the rebel Prince's party from mid-day on 2nd instant until about 3 a.m. on the morning of the 3rd, when a strong detachment of the late Crown Prince's troops succeeded in driving the rebels out of the palace altogether. The rebel princes, with about 200 followers, proceeded to the river and took forcible possession of the King's steamer, "Yaynan Sekia," which was at the time moored to the bank.

6. Captain Reilly, in command of the steamer, had been previously warned by a messenger sent by the Myeengoon Mentha that the steamer was required, and that he was to be in readiness, under pain of immediate death, to receive the Prince and his followers, and steam away with them from Mandalay. Captain Reilly came to my house at about 2 a.m. to consult me as to what course he should pursue. I told him that his duty appeared to me to be to remain in command of his steamer, and to take no part with the Prince, either in the shape of negotiation or co-operation, unless under a state of compulsion which immediately threatened his life. Captain Reilly returned to his steamer, which was soon afterwards taken possession of, as above described.

7. Early in the morning of 3rd instant a letter was brought to me by Captain Bacon, commanding the steamer "Nerbudda," which he said had been given to him for delivery by Captain Reilly; the letter bore my address in English, but its contents were in Burmese, and conveyed a written order to me from the rebel Myeengoon Prince to unload the "Nerbudda" and send her down to him as soon as possible.

8. The Myeengoon Prince had proclaimed on board the steamer "Yaynan Sekia," previous to leaving Mandalay, that he was proceeding to Rangoon with the express purpose of handing over Upper Burmah to Colonel Phayre as representing the British Government.

9. The steamer "Nerbudda," which I have just referred to, had only arrived at Mandalay early on the morning of 3rd instant, a little before the rebel Myeengoon Prince left in the "Yaynan Sekia." She had started from Mandalay the day previous (2nd instant) with the intention of proceeding to Rangoon; but immediately after the occurrence of 2nd instant, I had arranged, in concert with Dr. Williams, who was the agent for the steamer at Mandalay, that she should be recalled and detained at my risk and responsibility as a means of protection in case of actual need (*vide* letter attached, No. 28, of 3rd August 1866). I may here remark, that this detention of the steamer caused very general satisfaction and comfort to the European community at large, and even to numerous Burmese traders, who flocked to me for advice, and eagerly demanded to be admitted inside my enclosure in order to ensure for themselves, as they said, protection.

10. It appeared to me a rather peculiar feature in a Burmese insurrection or revolution that Burmese subjects should so generally have applied to me for help and protection, and that they should have felt themselves so comparatively secure when once they had removed themselves and families within the limits of my house or into my compound.

It tended to show very unmistakeably that the English name and prestige had gained for itself a wonderful moral influence over the minds of even poor (and on ordinary occasions) apathetic Burmese subjects, and that occasion alone was required to call forth a ready and cordial manifestation of this influence; for, after all, I was without the means of help or assistance myself, and the support and protection which it was in my power to afford was merely nominal, and, when the crisis arrived, might in all probability have been found valueless or altogether ineffectual. Still, from 2nd instant, the date of the outbreak, until the 8th, when I felt myself bound to abandon my post at Mandalay, my house and compound were the common refuge and abiding place for all Europeans, Armenians, and Burmese alike, who had any claim to admission. The house was given up almost entirely to the families of Europeans who required it, and property valued at several lakhs of rupees, besides large quantities of specie, were deposited in and around, wherever an available corner could be found.

11. On 3rd and 4th instant all remained quiet both within and without the city, with the exception of small bands of lawless adventurers, who prowled about here and there with plundering intent. The city gates were shut, and exit and entrance alike forbidden to all who were not officially deputed on duty from inside. The whole of the suburbs appeared almost deserted, the greatest portion of the population having removed themselves, according to custom, to hiding places, or places of shelter beyond the reach of lawless troops or marauding bands of robbers.

12. On the morning of 4th I made an attempt to get into the city and palace, in order to hand over the Pyee Mentha (a nephew of the King), who had narrowly escaped being put to death at the time of the outbreak, and had fled to me and asked for protection until affairs had settled down a little. I was refused admission into the city, but managed to send a verbal message to the Pakhan Mengyee by my Burmese clerk, who was well known, and who contrived with great difficulty and after considerable delay to get into the palace. The Pakhan Mengyee sent me two of his own men to escort me into the palace. On the following morning, the 5th, I accompanied these men, and on reaching the palace, was informed that the King would see me; I found him sitting with some of his Queens, and, as might be expected, in a somewhat dejected state of mind. He addressed me by name as soon as I entered, and spoke very feelingly about the folly of his rebel sons, and the possibility of insurrections like the present taking place in other countries besides Burmah. I left after a short visit, but it was evident from what I saw, that a great feeling of uncertainty prevailed both inside and outside the palace.

13. The means for defence were being steadily but stupidly advanced; for instance, in front of the east face of the palace building were ranged three rows of guns, one behind the other, and all on the same level, with about six feet space between each gun. This space again was occupied by jingals, or smaller guns. The ammunition for each gun lay underneath the gun itself, and the manifest intention appeared to be that each gun was to be used in the position it then occupied. The city and palace gates were closed, but very imperfectly guarded; the city itself was deserted, and beyond the guards at the several approaches to the city the houses and streets had lost all signs of habitation.

14. I am speaking now of the condition of affairs on the 5th August, but a state of anxiety amounting to almost panic ensued on the 6th, when a large fire occurred in the city. The fire was evidently the work of an incendiary, whose object was to burn down the late Crown Prince's palace. The object succeeded completely, and the fact was the more important on account of the political move or motive attached to it.

15. This leads me to mention the "Pudyne Mentha," the eldest son of the late Crown Prince; he is said to have been in the palace at the time of the outbreak on the 2nd, and to have made his escape by at once taking to flight. As soon as it became generally known that the Crown Prince was dead, most of his troops and adherents joined the Pudyne Mentha, who had proceeded northward to the city of Shoay Bo, the general rendezvous of any revolted or runaway prince who professes a design against the ruling powers, or feels in a position to assert his claims to real sovereignty.

16. When it was known to the King that the Pudyne Mentha had gone to Shoay Bo, a deputation of high officials was sent to offer him the heir apparentship in the place of his deceased father, and to use every endeavour to cause his return to Mandalay. The Mentha was known to possess a kind, quiet, and intelligent disposition, and if left to his own pursuits and inclination, it might well have been believed that he would return submissively to Mandalay as soon as his personal safety was fully ensured. But the fact that he would not return unless to claim the crown was well known to those who understood the various interests involved, as well as the character and expectations of the Mentha's advisers, who certainly looked upon the Mentha as a puppet set up for the mere purpose of advancing their own immediate prospects of power.

17. The consequence was that the several deputations sent failed to accomplish their purpose, and some of the individuals composing them, it was said, were even ill-treated and sent back in ignominy. Other fires besides that which burnt

burnt down the Prince's palace occurred in the city on the 6th, and it became very evident that a state of disorganisation was succeeding in natural order, and with the usual precision attending Burmese insurrections to the insecurity and uncertainty of a Government which was itself in danger; for by this time it was known beyond doubt that the Pudyne Mentha had aspired to fight, that his emissaries were preparing the way by fire and pillage, and that his advanced troops were already within a few miles of the city.

18. On the afternoon of the 6th, a Mr. Elias Gallisteen, an Armenian merchant, called upon me, and said he had been sent by the King to ask me whether I would make over the steamer "Nerbudda" to him; he informed me at the same time, that Moolah Ibrahim and Mr. Paul Camaratta had been despatched with a similar request to Dr. Williams. I replied that the matter was a very important one; that any negotiation regarding the steamer must be carried on direct with the King; and that I did not recognise Mr. Gallisteen's powers to treat, as he had never before been made an official medium of communication between myself and the Government. Early the next morning Mr. Gallisteen again appeared at my house with the Lamine Won, an officer of high rank, and I was informed that the King wished to see me as soon as possible. I prepared to accompany the Lamine Won, and under his escort reached the palace. On my road there I received a note from Dr. Williams written at the palace, in which he informed me that he had been asked to give the steamer; that he had expressed every willingness to do so; and begged that my consent might be given to enable him to complete his arrangements with the King. On reaching the palace I met Dr. Williams, and we went together to the King. As I entered, the King was sitting down with his principal Queen, and I heard him tell her in a joking kind of manner, "Sladen had a narrow escape the other day; he was obliged to run and get over a high partition, when he found himself in the Myanan, which was crowded with men, and where by good luck alone he escaped being killed."

19. Immediately after this the King turned to me and said, "What about the steamer?" I replied, "The steamer was detained by me for the sole purpose of saving the lives and property of European residents and their families in case the present disturbances continued and any dire necessity arose such as to cause our flight. If we are saved, it will be good for ourselves and for your Majesty's Government; but if your Majesty will explain to me why you want the steamer, and guarantee at the same time the protection to obtain which the steamer has been detained here at the expense of the British Government, I will at once replace the steamer at the disposal of Dr. Williams, from whom I received it.

20. The King evinced displeasure, and, turning away a little, said—

"I knew there would be some difficulty. As to guaranteeing lives, I will do the best I can, not only for Europeans, but for all alike. The occasion is a very emergent one; it is to the advantage of my whole kingdom that I should have the steamer; I merely want her to cruise up and down the river, a little off the town, and probably I may have to cross troops over to Sagyne, or bring them back again."

21. I saw at once that the King's wishes were intended to be commands. To have opposed them openly at such a time, when his necessities had probably rendered him unscrupulous about consequences, was an act which might have made my own position, and the condition of foreign residents at the capital, a more uncomfortable one than it then was, threatening, as it certainly would, immediate withdrawal of royal countenance and protection, and the probability of indignities, if not imprisonment; so I replied—

"In a case of such emergency I cannot oppose your Majesty's wishes. I give over the steamer to Dr. Williams."

The King then said, "Go to the Mengyees, and make the necessary arrangements."

22. We went at once to the Hlot in company with Mr. Camaratta, and there met the Pakhan Mengyee, and a document in Burmese was drawn out and read. Dr. Williams objected to the Burmese document, and said it was necessary to execute an instrument in English as well as in Burmese. Dr. Williams was dissatisfied, moreover,

moreover, with the pecuniary conditions relating to contingent damages, and it became pretty evident that an agreement was still far from being concluded. The Mengyee remarked more than once during the conference that the times were exceptional; that if he chose, he could do what he liked with us or with the steamer, and said, "If we took the steamer, what could you do?" I said that we should in that case be helpless; but that if a seizure was contemplated, the Burmese Government (in accordance with the practice followed in all countries where State emergencies or the necessities of the times seemed to justify an extraordinary course) would be responsible for all consequences, and that there would be no necessity for entering into written agreements of any kind.

"No," said the Mengyee, "we cannot enter into any written agreement, from the mere fact that the Government cannot comply with the conditions imposed by the Chief Commissioner's Agent, and under which alone he (the Agent) agreed to deliver over the steamer: we do not know what may take place in the present existing state of affairs, and cannot guarantee the lives and safety of Europeans or their families, but come again to-morrow morning early, and we will see what can be done."

23. We left the Mengyee after a fruitless conference, which had lasted more than two hours. I felt sure that the delivery of the steamer was inevitable, and was inwardly sorry that amicable arrangements had not been entered into, and the steamer made over with as good a grace as possible. The delay until the morrow had been merely intended by the Mengyee, I believe, to give him time to consult the King regarding the expediency of immediately seizing the steamer. It was further clear, judging by the state of the times, that a crisis had arrived in which, if the steamer was to be taken at all, immediate possession was a point of essential importance to the Burmese Government.

24. I reached my house at between 3 and 4 p. m. that day (7th), and in about half an hour afterwards Mr. Camaratta, with Mr. Gallisteen and a Sayay-dan-gyee, or Secretary of the Hlot, came and informed me that the King, on hearing that the steamer had not been delivered up to him, had become very angry, and had ordered that immediate and forcible possession should be at once taken of her by his officers. I was further informed that an officer (the Shoay Lam-Bo), with about 30 armed men, with four small guns, and a suitable supply of ammunition, was on his way to the steamer, under orders to proceed on board and take charge.

25. Dr. Williams at this time as agent for the steamer protested against the seizure, and said that before he agreed to give her up he required me to enter into a written guarantee, in which it was to be stipulated that the British Government was held liable for all the consequences of the seizure. This, of course, I would not, and could not, concede. Opposition to the seizure would have been futile; the only recourse, namely, to have despatched the steamer at once to Rangoon, would have involved a wanton breach of faith with the Burmese Government, for we had formally agreed to a further negotiation on the morrow, and conclude final arrangements for the actual delivery of the steamer.

26. Besides, the immediate despatch of the steamer under such circumstances, whilst it would have endangered our position at Mandalay, would at the same time, I believe, only have delayed the forcible seizure a short time until she had been obliged to anchor for the night. Without a sufficiency of arms or suitable means of defence, the steamer must have become an easy capture to the war boats, which it is only consistent and reasonable to conclude would have been despatched to bring her back.

27. My counsel, therefore, was to make no opposition, but to passively submit, under protest, to an act which the Burmese Government had wilfully and deliberately determined on, and for the result and responsibilities attending which the Government and country might justly be held liable.

28. I considered it necessary, however, to hold out or be particular on one point, and that was to obtain, if possible, a royal order in writing as a proof of the King's determination to make a positive and forcible seizure of a steamer belonging to an English Company, and then under British protection. I did not doubt that Mr. Camaratta had been deputed by the King on the duty upon which

which he had then come, for he had on several former occasions been officially made use of and recognized as an authorised medium of communicating the King's orders and wishes in reference to foreign residents and foreign affairs generally; but I thought of future complications, and was anxious, for the sake of future reference, to possess some tangible record of an order directing the forcible seizure of an English merchant steamer by a foreign power.

29. After much hesitation and opposition the Sayay-dan-gyee was despatched to the palace, and returned with the written order in due form, a copy of which is attached for information. The same evening the King's troops under the Shoay Lam-Bo were allowed to take quiet possession of the steamer, the Captain and crew electing to remain on her, and submit to the directions of the Burmese Commanding Officer on all points connected with the duties of the ship and its proper navigation.

30. Regarding the forcible seizure of the steamer, and the views entertained at the time by Dr. Williams, the agent for the Irrawaddy Flotilla Company at Mandalay, I beg to attach copy of letter to my address, dated steamer "Nerbudda," 7th August 1866.

31. I am compelled to remark, with reference to this letter, that the circumstances as related at paragraph 12 are somewhat distorted. Shortly after the fact had become known that the King had determined upon seizing the steamer, Dr. Williams took the Commander of the steamer (Captain Bacon) aside and spoke privately to him. Captain Bacon left Dr. Williams very hastily, and, as he went down the stairs to leave my house, said rather angrily, and with evident determination of purpose, "I won't give up the steamer; I'll be off to Rangoon." I concluded that the Commander had received his instructions from Dr. Williams, as I knew he could not act on his own responsibility. I then called upon Dr. Williams to be careful as to the order he had given, and to remember and realise the difficulties of our situation; that due regard must be had to events, which, however unsatisfactory or unpleasant they may be as regarded the interests of the steamer or her owners, were now beyond our control as regarded the course which I felt bound as a public servant, in the interests of all concerned, to counsel and advise. It was at this juncture that Dr. Williams directed the commander to wait and not return to the steamer, and I have not considered it out of place to refer to this particular circumstance in its connection with paragraph 12 of Dr. Williams's letter of the 7th instant, because, although I have no desire to advance any very material reasons for correcting the paragraph itself, it is due to myself, I think, to point out that the paragraph is not altogether correct as it at present stands.

32. It was a matter of no little anxiety to me to find that the King had ordered guns and troops to be put on board the steamer, for his doing so was an act which hardly accorded with the promises that the steamer should merely be used as a transport to convey troops backwards and forwards between Mandalay and Sagyne, a town a little to the south of Mandalay, on the opposite bank of the river. I was still more concerned to learn that it was the intention of the officer in command of the King's troops to proceed at once with the steamer a few miles up the river, north of Mandalay, to a point where it was known that the Pudyne Mentha was then crossing his troops with the intention of attacking Mandalay. But evening had set in before the King's troops had got on board, and it was understood that the steamer would not leave her anchorage until daylight the next morning.

33. The same night I contrived to despatch a private letter to the commander of the steamer, in which I asked him to do all in his power, and even to use his ingenuity, if necessary, to either altogether prevent the steamer's proceeding up the river any great distance from the capital, and at all risks and under all circumstances to delay her departure, or retard her progress by every direct or indirect means of which he could safely avail himself.

This letter never reached Captain Bacon; the steamer had left her anchorage at 11 p.m. on the night of the 7th, and steamed up the river with hostile intent.

34. On the same night, a little after midnight, or rather early in the morning of the 8th instant, the Myo-Woon, or Chief Magistrate, an official of high rank and position, came to my house for the express purpose of warning me to move

out of it, as, he said, it was impossible to defend myself there, or to make any stand against the irregular bands of mixed soldiers and dacoits who were now close to Mandalay, and would soon be let loose to commence the work of pillage and plunder. The crisis, he said, had arrived, and the attack might commence at any moment. My official position, he added, would not be recognised, because it would not be known amongst the savage hordes which would accompany the Mentha from Shoay Bo. He advised me to abandon my house at once, and seek protection either in his house or that of Dr. Williams situated in the heart of the town, either house being more defensible than my own. The Myo-Woon's warning was significant on account of his official position; he no doubt considered it his duty to give me timely intimation of impending danger, and to warn me (as one more experienced than myself in a Burman crisis) what course I ought to pursue in order to be as far removed as possible from the scene of indiscriminate confusion and riot, which it was believed was then soon to be enacted.

35. Early on the same morning (8th instant) Tseyab Oazan, the official appointed by the King as the medium of communication between his Majesty and myself (I had not seen him since the outbreak of the insurrection on the 2nd instant), came and informed me in a confidential sort of way that I ought to remove myself for a time from Mandalay. I told him to inform the King that he had deprived me of the means of getting away by seizing the steamer "Nerbudda," which steamer I now learned was going to be used offensively against the enemy. I said this was a breach of faith on the part of the King, which compromised as well as jeopardised my position here as British agent, and begged that the steamer might be returned, or suitable protection afforded. The royal messenger informed me that the King was not in a position to give protection.

36. As another instance tending to show the state of insecurity at this time, even inside the palace, I may mention that a message was sent to me on the morning of 8th instant (though not delivered at the time) from the chief wife of the late Crown Prince, then a resident of the King's palace, asking me to give her and her son, a lad about 12 years of age, protection and conveyance to British territory.

37. Matters had thus arrived at a crisis. From 2nd until the 8th affairs grew worse. Distrust and alarm pervaded all; my house and compound were besieged and literally filled with those who sought shelter; European residents, who had lived the greater portion of their lives at a Burman capital, now believed their lives in danger, and feared to inhabit their own houses. I was without the ordinary means of making any suitable defence, and was opposed from the first to many warlike propositions made to me from time to time by some of our community who thought we must fight.

Until the events of the 8th, I was never apprehensive of actual danger to life; my advice was, "Do not barricade; nothing that we can do will save our property from loot and fire, but our lives, I feel sure, will be respected and are safe."

For my own part I was prepared up to that date (8th instant) to remain at my post, and give up my property when called upon to do so to the several marauding bands who would assuredly bring up the rear, if not accompany the van of the attacking forces.

38. However, on the morning of the 8th, when it was known that the steamer had left with the King's troops on board, and with hostile intent, and when I felt the time had arrived for some decisive course of action by which to provide the best means of mutual support and co-operation, I called upon the Europeans who were with me to join in council and deliberate upon the new state or phase of events occasioned by the seizure of the steamer, her despatch northwards to engage the Prince's troops, and the advice given by the Myo-Woon and King's messenger the same morning, urging the necessity for immediately abandoning the Agency.

39. Various propositions were made, but no resolutions arrived at; all were assured that, had the steamer been available, the time had come for repairing on board and removing ourselves from the scene of insurrection, at all events for a few

few days, until matters had begun to settle down. The majority favoured the idea of fortifying ourselves in any building which could be most easily and readily rendered defensible. My own proposition was to remove the families and property deposited in my house on board the flat "Mahanuddy," which had been brought up by the steamer "Nerbudda," and was now anchored in the river in mid-stream, to occupy the flat ourselves if necessary, and for that purpose to place it in as good a state of defence as possible.

40. Our deliberations at this point were interrupted by a note which I received from Mr. Berry, the commander of the flat, in which he reported that the steamer "Nerbudda" had just been sighted coming down the river. We agreed to adjourn our meeting or consultation until four o'clock the same evening, or until we could ascertain the movements of the steamer, and what her operations had been since she left the previous night: we had no sooner got up and adjourned the meeting than the steamer's boat was seen pulling up the creek and making for my house. The officer in charge of the King's troops, with the Armenian gentleman, Mr. Elias Gallisteen, landed from the boat and came towards us; they soon gave us to understand that the steamer had not proceeded up the river many miles before she was challenged by some of the Prince's troops on shore and ordered to stop; that when she did not stop, two war boats filled with armed men left the shore and pulled alongside the steamer, one on either side, with the evident intention of boarding her: but the steamer, by order of the officer commanding the troops, was made to turn round and ran down the boats; that the Burmese troops had fired into the boats; and that altogether between 40 and 50 of the boat's crew (Prince's troops) had been killed by the operations of the steamer: that the officer in charge was now going to the King to report his victory, and to get more troops and a further supply of ammunition for another cruise. The Armenian gentleman's story was soon confirmed by Captain Bacon, the commander of the steamer, who shortly joined us from the steamer. Another consultation was held on the spot; it was unanimously resolved that the only course now left to us, either as regarded our own safety, as well as to prevent the steamer being further offensively used against the Prince's troops under the colour of British support, was to regain possession of the steamer at all risks and by use of force if necessary, and, taking all on board who sought British protection, repair to Rangoon with as little delay as possible.

41. To retake the steamer so as to avoid actual collision with the King's troops was a measure which required both tact and caution, in design as well as accomplishment: above all things, loss of time would have been fatal to success. Notice was sent to all to repair at once to the steamer, and Captain Bacon was sent there also to make preparation for our reception, and especially guard against giving any cause to the troops on board to suspect or distrust his actions. It was now two p.m. I sent Mr. Calogreedy, a Greek merchant, with a box of my clothes and a message to the Sayay-dan-gyee, who was on board the steamer, to inform that official that it was my intention to come and remain with the steamer. Suspicion had been aroused amongst the King's troops when they saw so many Europeans join the flat and steamer armed and with a portion of their effects; still they did not, I think, anticipate any hostile movement, such as a determination on our part to recapture the steamer. Mr. Calogreedy managed the task I had assigned him with great tact and skill; he quite allayed all suspicion, though many general questions were asked.

42. I left my house at about four p.m. with the greater portion of the Europeans who had not already gone to the steamer. As soon as we got on board our intentions were very quietly but palpably disclosed by the attitude we assumed, and by the fact that every man carried arms. When all was in readiness a message was sent to the King's troops (only 17 of them had remained on board) to say that I wished to speak to them; they left their arms in the fore-part of the vessel, and came to where I was standing: their arms were at once secured by Captain Bacon and a party of his men.

43. On the men coming aft they sat down in a row, and I at once told them that we had retaken the steamer and intended to keep her: the men were entirely passive, and their only fear seemed to be that we were about to resent the seizure of the steamer by the infliction of summary punishment on themselves.

selves. They were much relieved when I told them that it was my intention to land them at once with their arms; some of them even expressed a willingness to be taken on to Rangoon, but, of course, this idea could not for a moment have been entertained. The men were all placed in the steamer's cutter, when their arms were handed to them and they were sent on shore.

44. There were at this time four small two-pounder brass guns on board belonging to the King, which I found it impracticable, on account of their weight and the delay which would have ensued in shipment, to put into the boat with the men. It was my intention to have landed the guns at Menhla on the occasion of the steamer's remaining for the due payment of customs duties; but as Menhla was in possession of rebel troops, it was found expedient to pass it by without stopping, and, consequently, the guns have been brought on to Rangoon. It is my intention to hand them over to the agent of the King's steamer, now at Rangoon, and obtain from him, as well as from the officers in charge of each of the King's steamers, their receipts for the same.

45. The steamer was now entirely at our disposal; we proceeded forthwith to the flat, and taking her in tow, allowed both steamer and flat to drop quietly down the river. There was no undue haste or confusion in any portion of the proceeding by which we regained possession of the steamer, nor happily was force requisite. The several arrangements connected therewith, all of which required no little tact and firmness in detail, were carried out with precision and without a mishap of any kind. Full two hours' notice was given to those who elected to leave Mandalay to join the steamer before her departure for Rangoon; and when the time for leaving arrived, all who claimed protection or wished to join us were either on board or on their way to the steamer. We therefore merely dropped down the stream until clear of Mandalay, when the paddles were used, and the steamer shortly afterwards anchored for the night a little south of Sagyne.

46. It now became necessary to be on the alert. The force of circumstances had obliged us to adopt an extreme course in order to get back our steamer, and as that course had involved a display of force and determination, and inasmuch as we had at a time of great emergency so far compromised ourselves by open antagonism to the King's authority, I felt assured, and so did every one else with me at the time, that our own safety and the safety of those who had made themselves dependent on me rested entirely on the means and ability we possessed to further combat and defy that authority.

47. It was expected that armed boats would have been despatched to retake the steamer, and that we should have been compelled to act defensively. The orders on board were that no boat was to be allowed to approach the steamer. The whole of the male portion of our community, not excepting the Catholic and Armenian priests, were told off as guards and watches; our arms were all loaded, and although there was, perhaps, still cause for anxiety, there was nevertheless a greater feeling of security than had been experienced by some since the occurrences of 2nd instant.

48. During the night (a very dark one) Mr. Peter Camaratta arrived in a boat and wished to come on board the steamer; his boat was challenged, and the order being that no boat was to be allowed alongside during the night, he shot past down the stream before it could be clearly ascertained who he was, and without the possibility or opportunity of his reaching us that night. He appeared next morning, and brought five boxes with him, containing the jewellery and valuables belonging to the Camaratta family.

49. During the night of the 8th, as we lay anchored off Sagyne, large fires were seen to be burning in the direction of Mandalay, and on the morning of the 9th, as we proceeded down the stream, heavy clouds of smoke appeared to hang over the devoted city or its suburbs.

The signs of war or insurrection were very manifest as we proceeded on our course. At each of the towns we passed parties of armed men were seen, and war boats filled with men passed continually up and down the stream, apparently ready to join the standard of revolt and help in the general disrupture of the country. In some instances they were pronounced to be King's troops returning after an unsuccessful attempt to entrap the rebel Myeengoon Mentha; in others they

they were declared to belong to the Pudyne Mentha: we asked no questions, and continued on our way with apparent unconcern.

50. As we reached the town of Magway on 10th instant, a small boat came up to us, and I was informed by one of its occupants that the Myeengoon Mentha was at Magway in great force, and that he held possession of the country as far as the frontier station of Menhla. He had attacked Menhla, it was said, and removed from thence the treasure collected in the Custom-house, as well as a few guns which he had placed in position on board his steamer.

51. It seemed somewhat doubtful whether the Mentha might not attempt to obstruct our passage, with a view to obtain possession of the steamer "Nerbudda." The steamer which he already possessed, the "Yaynan Sekia," was known to be a much faster and more powerful boat than the "Nerbudda," and, being well armed and unencumbered with a flat filled with European families, might easily have run down upon, or into, us with certain ruinous effect.

52. As we approached Magway we descried the Prince's steamer, apparently with steam up: my determination was to pass her by without any notice, but if challenged and pursued, to stop and go on board myself for the purpose of holding a personal conference with the Mentha. When nearly abreast of the steamer a boat pushed off to us from the "Yaynan Sekia" with merely a Lascar crew on board; the boat was allowed to come alongside, and the Serang in charge informed me that the Mentha was friendly disposed, and had sent overtures to the English Government at Rangoon for assistance or co-operation: Captain Reilly was reported to be well. He was kindly treated on board, but not allowed to leave the steamer. We sent him some supplies which he asked for, and continued our course. The same evening we reached Menhla, the Burmese frontier customs station, which had been partly destroyed, and was now in the possession of the rebel government, and arrived early the next morning at Thayetmyo.

53. It was no little relief and satisfaction to find that those, many of them with experience gained by long years of residence at the Burmese capital, who believed their lives in danger, and who had sought my protection as refugees from a scene of insurrection and civil war, were at last in safety and within British territory.

54. I have thus attempted to relate the several incidents connected with the insurrectionary movement at Mandalay, and the causes which induced me to leave my post at the capital. I will now, for the sake of further elucidation, briefly recapitulate a few of the circumstances which immediately influenced my conduct, and led me, of necessity as it were, to adopt a course of action which, as an essential condition to success, it was necessary to carry out with decision, and not without disregarding in some respects, perhaps, mere personal interests and responsibilities:

1st. The state of the country did not improve, but rather grew worse since the date of the insurrection on 2nd instant.

2nd. Though the King was still in his palace when I left Mandalay on 8th instant, the city might almost be said to be in a state of siege. The Pudyne Mentha (eldest son of the murdered Crown Prince) had been joined by a large force of his father's troops, who had a special interest in placing the Mentha on the throne, and who, therefore, refused every offer of mediation.

3rd. Several other Menthas, or aspirants to chief power, were in the field collecting troops and aiding in the work of general insecurity and disorganisation, so that, whether the present king remained on his throne, or the kingdom passed over to the victorious Pudyne Mentha, a state of comparative anarchy would naturally ensue, terminable, perhaps, only after the lapse of several months.

4th. The Chief Minister, the Pakhan Mengyee, had distinctly informed me that he could not guarantee the safety of either the lives or property of European residents.

5th. Lawless bands of dacoits and marauders had already begun to infest

and plunder the suburbs; the city had been fired in different places by incendiaries, and even the Crown Prince's palace burnt.

6th. The chief city authority, as well as the King's own private messenger, had both officially and advisedly warned me that I ought not to remain.

7th. The English steamer had been seized by the King's government and used against the enemy in a way which was sure to be resented, because no means existed of entering into explanation with the Pudyne Mentha, and of assuring the minds of his people that the English had not taken part in destroying his troops.

55. But, leaving aside all the above considerations, the responsibility remained with me of deciding, not only a matter in which my own safety was concerned, but of determining at a moment's notice, and at a time of general anxiety and confusion, whether a step (which, though it may have involved doubt as regarded mere personal responsibility, or the commission of even an error in judgment) was not justified by the chances, or rather certainty it held out, of safety and protection to defenceless families, who believed, not without good reason, that their lives were in danger.

56. And with reference more personally to my own departure from Mandalay, I conceive that it is necessary, in determining upon the propriety, or otherwise, of such a move as apart from the necessities by which it was brought about, to bear in mind, or rather to ask, the question, whether, by remaining where I was, any object or purpose was being effected which could have in any way contributed to the public good, or to the end for which my appointment at Mandalay was created?

57. My own opinion is, that when my life was positively endangered (as I think I have shown it was), it was prudent to seize upon the means of removal, and avoid the complication which must have ensued upon the self-sacrifice of a Political Officer for the good, or, perhaps, possible evil, of his country.

* * * * *

64. I have merely to remark, in conclusion, on the course which I consider it advisable to adopt at the present crisis of events in Upper Burmah.

65. I propose that a steamer be placed at my disposal for immediate return to Mandalay. With this steamer it would be my object to keep open the communication between the capital and the frontier, and being on the spot, I should be able to watch and report events exactly as they occurred.

66. It would be an object at the same time to rescue Captain Reilly from his somewhat precarious position on board the Myeengoon Mentha's steamer, and afford protection further to any parties of European extraction left at Mandalay who, owing to the spread of the insurrection and the probable destruction of the city and suburbs, might be either in distress, or without the means of support or subsistence.

67. My return to the capital would, I think, give confidence to whichever party was in power, and might tend in some degree to the pacification of the country.

(B.)

LIST of PRINCES who had collected Troops and were in arms in various parts of the country when I left the capital on 8th August 1866.

1. Pudyne Mentha - Eldest son of late Crown Prince at Shoay Bo.
2. Thonzay Mentha - Eldest surviving son of King (since death of Melloon Mentha) at Aloun Myoo.
3. Myeengoon Mentha } Brothers; commenced the insurrection; sons of the King at Magway.
4. Myeengoon-daing Mentha }
5. Nyoung-Yan Mentha - Half-brother of Myeengoon Mentha; supposed to be raising troops in Shan States.
6. Kyeppidoung Mentha - Adopted son of King with Myeengoon Mentha.
7. Bo-moo-Mentha-Tha - Related to the Royal Family; supposed to be raising troops in the Shan States.

Rangoon,
22nd August 1866.

(signed) *E. B. Sladen*, Captain,
Agent to Chief Commissioner, B. B.

(C.)

From Captain *E. B. Sladen*, Agent to Chief Commissioner, British Burmah, to Dr. *Clement Williams*, Agent to Irrawaddy Flotilla Company; No. 28, dated Mandalay, 3rd August 1866.

WITH reference to the verbal arrangement entered into with you yesterday for the recall of the steamer "Nerbudda" from Sagyne, and the fact of your having so obligingly placed the vessel at my disposal for Government service, I have the honour to inform you that I consider it advisable during the present crisis to detain her here until matters become somewhat settled.

2. The steamer is, I am aware, moored at present in mid-stream, and has been put into as defensible a position as the means at our disposal will admit. It will be necessary, I think, to lay in a good supply of rice (say 50 baskets) and provisions generally, as procurable, to meet possible contingencies. I shall be obliged by your making arrangements to this effect.

3. Very many applications are being made for freight and passage to Rangoon. I am of opinion that they should not be granted for the present, or until, with reference to the capabilities of the steamer, the number of applications, and the necessities of each case, we can ascertain the circumstances of those who may have a prior claim to protection.

P.S.—I shall be glad to learn as early as possible from yourself the number of passengers on both the steamer and flat to whom you have already granted passage-tickets, as well as what available space there may be for cargo in excess of that already taken in on board.

(D.)

From Dr. *Clement Williams*, Agent to Irrawaddy Flotilla Company, to the Agent to Chief Commissioner Mandalay; dated on board the Steamer "Nerbudda," 7th August 1866.

In reference to the seizure of this steamer by His Majesty the King of Burmah with your sanction, I have the honour to state that, on behalf of the Irrawaddy Flotilla and Burmah Steam Navigation Company, I hereby protest against this seizure without the Burmese Government giving any guarantee of reimbursement for damages sustained. The damage suffered by such a seizure must include various accounts.

2. The moment you inform me that it is no longer necessary to keep the vessel here on public grounds, I am bound to despatch her to Rangoon with the cargo entrusted to her.

3. The seizure prevents my doing so.

4. The result is that the cargo is here in jeopardy, when it might be on the way to Rangoon in time to escape danger. The delay itself is money value to the shippers.

5. A large quantity of valuable freight I must now refuse.

6. Even if no accident happens to the steamer or flat, the damage to the Company's interest will be very great. The disappointment and failure of promise will injure the Company's influence or connection here in a trading point of view.

7. The Woongyee declined to enter into an engagement to reimburse me for all damages incurred.

8. I must state that the owners of the vessels will hold the seizing authorities responsible for all damages and penalties, and for due compensation for the loss of the services of the vessels at such an important period.

9. Should the steamer be lost or irreparably injured, a lakh of rupees will be expected as indemnity and 40,000 rupees for the flat.

10. As you have sanctioned this seizure, the owners will naturally regard the British Government as guarantee for the Burmese Government in reference to all just compensation.

11. The captain and crew refuse to leave the vessel. Under these circumstances, I think it advisable that some one understanding the Burmese people should be on board.

12. You will kindly note that at once on the King's agent coming to take possession I stated to you that, were it not for the sake of the safety of yourself and the Europeans here, I should at once remove the steamer from the King's troops' reach and steam away to Rangoon. The consequences of such a step would be insurance of the owner and shippers' property and of those on board; but the resentment of the Burmese Government would be visited on you and others. I was therefore compelled to yield to the forcible seizure.

13. I have duly warned the captain and crew that, if he remains on board, it must be at his own risk and on his own responsibility, and have mentioned to him the law forbidding British subjects to perform military duties on behalf of alien governments without special permission.

14. The fact of all my documents and cash being on board, as well as a large quantity of specie belonging to other people, renders the safety of the vessel a question of extreme moment.

(E.)

From Captain *E. B. Sladen*, Agent to Chief Commissioner, British Burmah, to Dr. *Clement Williams*, Agent to Irrawaddy Flotilla Company; No. 29, dated on board the Steamer "Nerbudda," 10th August, 1866.

I have the honour to inform you that, as soon as we reach British territory, I shall consider the steamer "Nerbudda" at your disposal, with the proviso that all those who have sought protection to life and property in her be allowed to continue their passages to Rangoon, if so inclined.

2. I am

2. I am of opinion that all passengers are liable for the amount of their own passage fares. Should, however, there be any who, either from distressed circumstances or losses incurred in leaving Mandalay, may be unable to pay what is due, I beg you will hold me liable for the same in the name of the British Government.

3. All bills and vouchers on account of expenses or damage incurred by reason of the steamer's detention at Mandalay under the circumstances mentioned in my letter, No. 28, of 3rd instant, should be prepared and sent to me as soon as possible I will submit them to Government for immediate payment.

(F.)

COPY of original written Order directing Seizure of Steamer by the King.

(In Burmese.)

(G.)

TRANSLATION of Royal Order—Document marked (F.)

"THE King wanted (the steamer Nerbudda); he consulted the agent to the Chief Commissioner, but could not come to terms. He therefore feels compelled, on account of pressing State emergencies, to seize and retain temporary possession (of the steamer)."

THE above Royal Order was recorded and proclaimed by Nukhan Dan-nay-myoo-nanda-meik-see-thoo on 12th decrease of the moon Dootiyah Wahzo in the year 1228, Burman era.

LET the steamer be seized and occupied in accordance with above Royal Order.

ORDER of Magway Woongyee and Pakhan Woongyee, given on 12th decrease of the moon Dootiyah Wahzo in the Burman year 1228, and recorded by Wondouk Dan Akhon-won-men.

From Colonel *A. P. Phayre*, C.B., Chief Commissioner of British Burmah, to the Secretary to the Government of India, Foreign Department, with the Governor General,—No. 150-37, dated Rangoon, the 27th August 1866.

UP to the present time I have not received any additional news of importance from Mandalay. It is still uncertain who in the struggle now going on will be victorious.

2. The Myeengoon Prince, who first raised the rebellion, is understood to be gradually moving up towards the capital. The Pudyne Prince, the son of the murdered Crown Prince, is supposed to be urging his followers to the same point.

3. The King, still in the city palace, it is reported, has been joined by one of his sons, who at first had fled. This son, the Thouzay Prince, has influence in the Shan States, and might bring a considerable force to support the King. It is this last circumstance which now makes me doubt if the troubles will be decided so quickly as I at first expected. The appearance of the Thouzay Prince may prolong the civil war for some time.

From the Secretary to the Government of India, Foreign Department, with the Governor General, to the Chief Commissioner of British Burmah,—No. 934, dated Simla, the 14th September 1866.

I HAVE had the honour to submit to the Governor General in Council your letter dated 25th ultimo, No. 143-31, forwarding a further report by Captain Sladen of the principal events connected with the insurrection at Mandalay,

and in reply am directed to inform you, that his Excellency in Council, though he will not actually prohibit your going to Mandalay, should you think it expedient to do so, is nevertheless of opinion that it will be better for you to wait at Thayetmyo and watch the progress of events. His Excellency in Council is also of opinion, that Captain Sladen should not return to his post at present, as there is nothing to be gained by this step.

2. With reference to the question of compensation mooted in the 6th paragraph of your letter, I am desired to state that the Government will not entertain any claims for compensation on account of private property abandoned or destroyed at Mandalay, but that the hire of the steamer "Nerbudda" may legitimately be defrayed from the public funds, because she was recalled to the capital at the desire of Captain Sladen, the British representative.

3. Instructions to the above effect were telegraphed to you on the 8th instant.

4. Your letter, No. 150-37, dated 27th ultimo, has also been received by me and laid before the Governor General in Council.

Foreign Department.—Political.—No. 181.

The Governor General of India in Council to the Secretary of State for India, dated the 23rd October 1866.

From Chief Commissioner, British Burmah, dated 18 September 1866, No. 159.
From Chief Commissioner, British Burmah, dated 24 September 1866, No. 166.
Telegram from Chief Commissioner, British Burmah, dated 15 October 1866.
Telegram to Chief Commissioner, British Burmah, dated 16 October 1866.

In continuation of our Despatch, No. 161, dated 21st ultimo, we have the honour to forward, for the information of Her Majesty's Government, copies of the further papers noted on the margin regarding the state of affairs in the Burmese territory.

2. Your Lordship will perceive, that we have consented to Colonel Phayre's proceeding to Mandalay, should he think it safe and desirable to do so, and that we have directed that officer, in the event of his adopting such a course, to take a sufficient escort with him.

From Colonel *A. P. Phayre*, C.B., Chief Commissioner of British Burmah, to the Secretary to the Government of India, Foreign Department, with the Governor General,—No. 159-52, dated Thayetmyo, the 18th September 1866.

I HAVE the honour to report, for the information of his Excellency the Viceroy and Governor General in Council, that affairs in the Burmese territory appear to remain in the same state as already reported. The King is still shut up in his palace in the city of Mandalay; his nephew, the son of the murdered Crown Prince, is still at the town of Shwé-bo, to the north-west of Mandalay. It does not appear that his strength has increased. The Myengoon Prince, who commenced the disturbance, has the King's steamer, which he originally took possession of, and is now somewhere about Ye-nan-gyoung, about 100 miles beyond the British frontier. By means of this steamer the rebel Prince holds possession of the river, and communication with the capital is difficult. It does not appear, however, that the rebel Prince has any possession ashore, or any influence beyond the mere terror which the steamer creates.

2. There are at this place two steamers belonging to the King of Burmah but the commanders do not like to venture up the river, as they are not armed, and have, in fact, no men on board who would encounter the desperate characters whom the rebel Prince has under his command.

3. With reference to your telegram of the 10th instant, I will wait at this place and watch the progress of events. Captain Sladen will also await further orders.

From Colonel *A. P. Phayre*, C.B, Chief Commissioner of British Burmah, to the Secretary to the Government of India, Foreign Department, with the Governor General,—No. 166-53, dated Thayetmyo, the 24th September 1866.

I HAVE the honour to report, for the information of his Excellency the Viceroy and Governor General in Council, that two steamers belonging to the King of Burmah, which remained at this place, proceeded up the River Irrawaddy yesterday.

2. It appears that the Burmese Governor on the frontier did not wish them to pass beyond British territory until he had collected armed men to man them. They have, therefore, now proceeded into the Burmese territory, and it is presumed will endeavour to take possession of the steamer held by the rebel Prince, called the "Myengoon Prince."

3. The several parties opposed to each other remain much as before, but the King is stronger than he was a month ago.

SERVICE MESSAGE.

From Prome, dated the 15th October 1866.
From Colonel Phayre.
To Simla.
To Foreign Secretary.

"THERE is now a good opening for me to go to Mandalay; the Myengoon Prince has come in the country; south of the capital quiet; there will be no difficulty on the way up. By going now, I shall more readily obtain the objects on view than if I delayed: trade, which has been all but stopped, will at once revive. I propose to take a small escort. Full news report will go by mail."

SERVICE MESSAGE.

From Simla, dated the 16th October 1866.
From Foreign Secretary.
To Prome
To Colonel Phayre.

"YOUR message of 15th October received. If you think that a visit to Mandalay is safe and desirable, the Viceroy sanctions your going. His Excellency leaves the matter to your own discretion; but desires that you take a sufficient escort."

Political Department.—(No. 98.)

EXTRACT Despatch from Secretary of State for India to the Governor General of India in Council, dated 24 December 1866.

Insurrection at Mandalay.

Para. 2. THE most important letters are those (Nos. 161 and 181) which report the measures of your Government in consequence of the recent revolution at Mandalay. You have sanctioned the visit of Colonel Phayre to the disturbed district; but wisely instructed him not to proceed thither without a suitable escort. I await with much interest further advices on the subject.

Foreign Department.—Political.—(No. 194.)

The Governor General of India in Council to the Secretary of State for India, dated 8 December 1866.

IN continuation of our Despatch, No. 181, dated 23rd October last, we have the honour to forward, for the information of Her Majesty's Government, copy

of a further report from the Chief Commissioner of British Burmah on the state of affairs in Burmah Proper.

2. We have approved of Colonel Phayre's views and proposals regarding his visit to Mandalay; but with reference to the arrangements for the Myeengoon Prince and his brother, who, it will be observed, have taken refuge in British territory, we prefer to await the recommendations which Colonel Phayre may be in a position to make after his arrival at the capital and his interview with the King of Burmah. At present, considering the conduct of these princes, we feel indisposed to allow them more than a mere maintenance.

EXTRACTS from LETTER from Colonel *A. P. Phayre*, C.B., Chief Commissioner, British Burmah, to the Secretary to the Government of India, Foreign Department, with the Governor General, Simla,—No. 63-192, dated Prome, the 15th October 1866.

I HAVE the honour to report, for the information of his Excellency the Viceroy and Governor General in Council, the state of affairs in the Burmese territory since the date of my last Despatch up to the present time.

2. On the 6th instant the steamer belonging to the King of Burmah, which had been seized by the rebel Prince, Myeengoon Mentha, arrived at Thayetmyo. The Prince was on board, with his younger brother and a relation, Kyoukpadoung-tsa, not belonging to the royal family, but called an adopted son of the King; he is, I believe, maternal uncle to the two young princes. It appeared that the steamer, called in English the "Honesty," had been attacked by the two King's steamers which had proceeded up from Rangoon, and were under the command of the governor of the frontier districts.

3. The Myeengoon Prince, according to his own account, did not wish to fight against his father's forces; he, therefore, when attacked, ordered that the steamer was to be so manœuvred as to escape. This was done, and the "Honesty" came down the river, pursued by the other steamers until within a few miles of the British frontier.

4. As soon as she reached Thayetmyo I sent Major Ripley, the Deputy Commissioner of Prome, and Captain H. Duncan, the Inspector General of Police, on board. I had given orders that the prince was to be informed that all arms must be given up, and that he must proceed to Rangoon, where he would be housed as comfortably as could be until orders regarding him could be received from his Excellency the Viceroy; that in the meantime the steamer must be given up at Rangoon, as being the King's property.

* * * * * *

6. The steamer, with the two princes, left Thayetmyo on the 7th instant. I have heard by telegraph of their arrival at Rangoon. They have not yet had a house got ready for them, but that will be done in a day or two more.

7. Since the 6th instant the intelligence which I have received from beyond the frontier shows that the country of the Irrawaddy Valley, between the British territory and the capital, is entirely under the King's officers. It is true that the Padyne Prince, the son of the murdered Crown Prince, is in arms to the north of the capital; but his power is now much weakened, and he cannot be considered as being likely to hold his ground. His chief desire, he has always stated, was to see his father's murderers punished; their exile will, at least, be a strong argument to advance to him that he has no longer any ostensible reason for continuing in arms.

8. On the other hand, it appears very desirable that, in order to secure favourable commercial terms without any undue pressure, I should appear at Mandalay as soon as possible: I shall be able to take up the King's steamer and restore it to him as a friendly act. My going up will entirely restore trade, which has much slackened, and, indeed, for some 50 miles south of the capital has actually ceased. My presence at the capital will, I feel convinced, prevent any destruction of the property of British merchants, a good deal of which was left there. It is true the King has done his best to protect it, and I trust that much less damage has been done than was at first anticipated. By being at Mandalay I feel sure of being able to save what remains. There is no probability at all of my being drawn into any hostility with the Padyne Prince's party,

party, and I shall abstain from all direct support of the King's party. I also feel assured that I shall be welcomed as a friend by all parties, and not as an intruder.

9. My mission originally was to have been undertaken by myself, with one assistant, Mr. R. S. Edwards. I have become so well known to, and have established such friendly personal relations with, the Burmese Court, that I felt I could proceed to Mandalay in this simple fashion without in the least impairing the dignity of his Excellency the Viceroy, whom I have the honour to represent. But the outbreak of the 2nd of August last has altered the position of affairs; it is now necessary to appear with more form and ceremony. I have therefore deemed it to be advisable to go up the Irrawaddy in a steamer, and to take with me an escort of British infantry. The escort will not exceed 60 men in all; they will be on board a troop-boat, which will be towed by the steamer. I at the same time take up with me the King's steamer, which was brought away by the Myeengoon Prince. Captain Sladen will accompany me. I propose that he should remain when I leave, if all events shall render that step advisable.

10. I am unable at present to make any distinct recommendation regarding the Myeengoon Prince and his brother. I trust that his Excellency the Viceroy and Governor General in Council will allow me to support both in a way becoming their rank, but at the same time without showing any sympathy with their acts. I shall see that their followers are reduced down to a number sufficient for the comfort of household requirements. I will endeavour to bring down the elder Prince's wife and children, as being the best way of having a hold on himself, and inducing him, should he not return to the King, his father, to abandon his ambitious projects, at all events for the present. I hope I am right in already having informed him that he cannot be allowed to go towards the Burmese frontier, as that would at once cause great disturbance. He may possibly ask to be allowed to go to Calcutta. I beg that I may be favoured with orders as to what I am to do in that case.

From *J. W. S. Wyllie*, Esq., Under Secretary to the Government of India, Foreign Department, with the Governor General, to the Chief Commissioner of British Burmah,—No. 1168, dated Camp Agra, the 24th November 1866.

I HAVE the honour to acknowledge the receipt of your letter, dated 15th ultimo., No. 63, giving further intelligence as to the state of affairs in Burmah Proper.

2. In reply, I am directed to inform you that the Governor General in Council approves of your views and proposals regarding your visit to Mandalay; but with reference to the arrangements for the Myeengoon Prince and his brother, his Excellency in Council will await your recommendations after you may have arrived at the capital and seen the King of Burmah. At present his Excellency in Council is of opinion that, considering the conduct of these princes, nothing more than a mere maintenance should be given them.

(Political Department, No. 33.)

The Secretary of State for India to the Governor General of India in Council, dated 28 February 1867.

I HAVE considered in Council the letter of your Excellency's Government, dated 8 December (No. 194) 1866, with enclosures, in which Colonel Phayre reports the arrival of the fugitive Burmese princes within British territory, the arrangements for their temporary location at Rangoon, and his own approaching departure to Mandalay. In reply, I have to intimate to you the approval of Her Majesty's Government of the orders passed by you in your Under Secretary's letter of the 24th November last, No. 1168, and to express a hope that Colonel Phayre's visit may be conducive to the maintenance of the present friendly relations between the Government of your Excellency and that of Burmah.

(signed) *Cranborne.*

(Foreign Department.—Political.—No. 14.)

The Governor General of India in Council to the Secretary of State for India, dated the 23rd January 1867.

No. 181, dated 23 October. No. 194, dated 8 December.

In continuation of our Despatches, noted in the margin, regarding the commercial mission to the Court of Mandalay undertaken by the Chief Commissioner of British Burmah, we have the honour to forward, for the information of Her Majesty's Government, copies of two letters from Lieutenant Colonel Phayre, giving an account of his negotiations with the Burmese Government, and submitting recommendations as to the course which should be followed in consequence of his having failed to obtain the object for which he was despatched.

2. We also forward a copy of our orders in reply.

3. Your Lordship will perceive that we have empowered the Chief Commissioner to inform the King of the dissatisfaction with which we view the attitude taken by his Majesty in disallowing the very moderate and reasonable requisition of the British Envoy. Further, we are of opinion that, as a measure of retaliation, the export duties formerly levied by our Customs officers on the Burmese frontier should, as suggested by Colonel Phayre, be reimposed with effect from June next; and, subject to the sanction of Her Majesty's Government, which we now solicit, instructions to that effect have already been issued by us.

4. Our attention has been drawn to the valuable service rendered to the mission by the Right Rev. the Bishop Bigandet. We have already desired Colonel Phayre to convey the thanks of the Government of India to the bishop, but we would further beg to recommend that our high appreciation of the prelate's good offices may, if your Lordship think proper, be communicated through Her Majesty's Secretary of State for Foreign Affairs to the Government of His Majesty the Emperor of the French.

Extracts from Letter from Colonel *A. P. Phayre*, c.b., Chief Commissioner, British Burmah, to the Secretary to the Government of India, Foreign Department,—No. 218-5000, dated Thayetmyo, the 10th December 1866.

2. During the period of my stay at Mandalay, which extended over one month, I have had constant interviews and prolonged discussions with the principal Woongyee, styled Pakhan Mengyee, regarding the necessity for an improved arrangement to regulate the trade between the two countries. I have also been received four times by the King of Burmah. I regret to report that my efforts to obtain a satisfactory settlement for future commercial intercourse have been unavailing. It would be useless for me to relate in detail the discussions of each day; I will, therefore, state briefly the terms which I insisted upon, the terms to which the Burmese minister acceded, and those which he finally refused to admit. The better to elucidate the final position of the negotiation, I have the honour to enclose the draft Treaty which we had agreed to; and I have added thereto the two articles on which I insisted, but which the Burmese minister stated he had no orders to consent to.

* * * * *

4. I will now proceed to narrate briefly the terms proposed, those acceded to, and those rejected. It will be recollected that Article 8 of the Treaty of the 10th November 1862 provided that, "should the British Ruler within one year abolish the duties taken at Thayetmyo and Toungoo, the Burmese Ruler would, if so inclined, after one, two, three, or four years, abolish the duties taken at Maloon." The main portion of the negotiation as to commercial affairs was based upon this article. The Treaty, of which it forms a part, settled satisfactorily the question of Customs duties at the Chinese frontier of the Burmese territory and on the sea-board of the British territory, so that goods coming from sea for China, or from China to go to seaward, pay only the nominal duty of one per cent. on entering either country. What remained was to effect a fair settlement regarding frontier duties, payable where the Burmese and British territories joined, on goods coming from the latter to be consumed in Burmah; to secure, if not free trade, a moderate rate of duty; and to have an effectual guarantee against dishonest practices,

practices at the frontier custom-houses, which, if not guarded against, neutralise the benefits which might be derived from the provisions of any treaty. In addition to these terms, I consider it essential to insist upon the necessity of all articles of commerce, excepting precious stones and petroleum, being free to be sold by the owners thereof to any purchaser; for the King has monopolised some of the most important products of the country, as cotton, raw sugar, and, to some extent, timber, so that the sale and export of them can be stopped at any moment; and the supply of them is materially diminished by means of the arbitrary interference, which deprives the people of profit and checks enterprise. Further, it was necessary to secure to foreign traders at Mandalay a safer and surer settlement of suits and disputes in mercantile business than is possible under the Burmese Civil Courts. This I proposed to provide for, by giving the agent to the Chief Commissioner at Mandalay exclusive jurisdiction in such cases. The above terms I considered absolutely necessary for a satisfactory arrangement of future commercial intercourse with Burmah.

5. Considering the financial difficulties of the Burmese Government, I admitted that they could not altogether give up their frontier duties. I, therefore, in Articles 1, 2, and 3 of the draft Treaty, a copy of which is enclosed, consented that they should be allowed to levy a five per cent. *ad valorem* duty on imports and exports, to have effect from April 1868, and to last for 10 years. I allowed until April 1868 in order to give the King time to restore his finances somewhat after the late disturbances. At the expiration of 10 years the rate was by consent to be either lowered or raised. As long as the rate did not exceed five per cent., the British Government was not to levy frontier duties. Practically, after 10 years, it would scarcely have been possible for the Burmese Government to raise the *ad valorem* duty higher than five per cent. Article 4 provided for a list of articles of import and export, and their tariff prices, for the levy of duty being delivered annually by the Burmese Government. Articles 5 and 6 provided for officers being placed by either Government at places in the territory of the other, where customs duty may be, or is, levied, to hear and report upon complaints by merchants as to any payments demanded by officials not warranted by the Treaty. Article 7 provided for the free export and import of gold and silver, hitherto prohibited by the Burmese, and for the import of arms from British territory.

6. The above articles refer to trade and customs duties. The next four provided for the material surrender of persons charged with the crimes of murder, robbery, dacoity, or theft, and who shall fly and take refuge in the territory of the other Government. Due care is taken to test the evidence in each case. Provision is also made for the trial of a subject of either Government who may commit any such crime in the territory of the other and fly back to the territory of his own Government.

7. The articles above described were agreed to by both sides. It will only be necessary for me to explain the arrangement regarding arms. I agreed to this solely on the condition that the whole of my propositions to be mentioned below were acceded to. I was induced to do this from the following considerations:— It is of paramount importance to British Burmah to have unfettered trade with Upper Burmah. It is essential to ensure security for our merchants against official oppression and obstruction in their dealings, and in the disputes which may arise with Burmese subjects. The question was whether, in consideration of all I required on these points being conceded, it was worth while to give up the frontier duties on the British side of the border and to allow the Burmese Government to import arms. Those were the two concessions I proposed to make, and in return I required that British subjects and trade generally should be effectually protected against oppression, annoyance, and interference. Regarding the propriety of the first concession, I believe there can be no doubt. As regards the second, I was authorized in 1862 to grant the point if found to be necessary; I did not find it necessary then, and therefore left it unnoticed. * * * * Considering the state of affairs, I am of opinion that the danger, political or military, of allowing arms to be purchased by the Burmese is reduced to a mimimum, and that, if the concessions I required had been granted, the privilege of purchasing arms and powder, though, as concerns the Burmese Government, great, would, as regards British interests and risks, be small indeed. It must also be considered that the Burmese Government really require arms to maintain

order both in Burmah Proper and in the Shan States. If, therefore, it is for the interest of the British Government to have the neighbouring country quiet and orderly, positive advantage is likely to be derived from the concession. On these grounds, therefore, I agreed to include in the Treaty an Article allowing the purchase of arms in British territory by the Burmese Government.

8. The Articles numbered 8, 9, 10, and 11, which refer to the extradition of criminals and trial of persons charged with offences, do not require detailed remark. I considered it advisable to restrict the arrangement to the four crimes which are most frequent on the border; for, as the Burmese Government required strict reciprocity, it was necessary to adopt precautions for testing evidence in each case before any accused person should be delivered up. To have extended the arrangement to criminal offences generally would have led to much inconvenience.

9. There are two remaining Articles, numbered 12 and 13, in the draft, regarding which the discussions were very prolonged. They proposed to provide for suits between British subjects, or those in which they were defendants, being decided by the British agent at Mandalay, and for all monopolies being done away with, except those in a few articles, the sale of which it may be admitted the Sovereign may legitimately control. From these exceptions it is considered that no general inconvenience would be felt by the people of either country.

10. With respect to Article No. 12, the Burmese Woongyee contended earnestly for two points: 1st, that in suits decided by the British agent, an appeal should lie to the Burmese High Court; and, 2nd, that a similar right should be secured for Burmese subjects at Rangoon; that is, that if a Burmese agent were appointed at Rangoon, that he should have jurisdiction in cases where Burmese subjects were concerned. The appeal at Mandalay I would not consent to; such an arrangement would have made the process of collecting debts and settling accounts by merchants as tedious and as uncertain as it is now. With regard to the Burmese agent at Rangoon, the Woongyee said it was only asked for as a point of honour, so that it might not be said by those who read the Treaty the British by their superiority of force had made the Burmese succumb. I have no doubt this was the only objection, and probably they never would have put an agent at Rangoon; indeed, the Woongyee candidly admitted they could not trust an agent of their own with any authority at Rangoon. However, I at once told him I would not admit the reciprocal Article on this point which he required. Finally, the King himself intimated that, if I would consent to give up Article 12, he pledged himself to issue a decree giving the whole authority asked for to the British agent within his kingdom, but declining to give it under treaty unless corresponding authority was given to a Burmese agent. I consented to this arrangement provided Article 13 was agreed to.

11. The whole question of Treaty or no Treaty then turned upon Article 13, that is, no monopolies. I have no hesitation in saying that as long as the King of Burmah allows certain persons to have the right of purchasing produce at fixed rates from the producers, as cotton, raw sugar, cutch, and so on, that no satisfactory trade can exist between the two countries. Any agreement as to rates of duty is, as far as monopolized articles are concerned, of comparatively little importance. What is required is entire freedom for the seller and buyer. This point was one on which the Woongyee plainly gave me to understand he had no orders; in other words, he was not allowed to discuss it. The King himself intimated through other channels that he could not dispense with the monopolies; that the state of his finances required them; that his wish was gradually to drop them, but that at present he could not promise to do so. Under these circumstances, I finally informed the Woongyee that I could not sign any treaty. I observed that with two countries so close together as ours, trade should be as unfettered as possible, and that the restrictions imposed and maintained did not bear out the appearance of the friendly professions which had been made. The demeanour of the Woongyee and the personal bearing of the King were certainly friendly, but nothing would move the latter regarding the monopolies.

12. I considered it better to sign no additional treaty than to agree to one which,

which, allowing monopolies to continue, indeed, thereby guaranteeing them, must inevitably produce more poverty in one country and more dissatisfaction in the other. I trust, therefore, it will appear to his Excellency the Viceroy and Governor General in Council that in refusing to sign a treaty unless monopolies were abandoned, I have acted for the true interests of British Burmah.

13. On my departure from Mandalay I deemed it necessary to address the Woongyee regarding the construction of Article 7 of the Treaty of 1862; that Article provides that "traders from the British territory * * * * who may travel in the Burmese territory * * * * shall be allowed to purchase whatever they may require." I pointed out that there is here no restriction whatever admitted. If, therefore, a trader from the British territory finds a person the lawful owner of produce which he is willing to sell, the former may purchase it. There is after that nothing to prevent him from exporting such produce under the existing tariff. This point, which has never been distinctly admitted by the Burmese Government, but also has not been denied, will, to some extent, mitigate the evil of monopolies. But it is still in the power of a despotic Government, like that of Burmah, so to intimidate owners of produce that they would not dare to sell it, except to purchasers approved by the Government. It may possibly be necessary seriously to warn the Burmese Government against any such infringement of the whole spirit of the Treaty of 1862.

14. Finally, before leaving I wrote to the Woongyee, announcing that, as no arrangement had been made by the Burmese Government regarding the frontier duties in the spirit of Article 8 of the Treaty of 1862, the British Government would consider the propriety of reimposing the frontier duties as they existed at the time when that Treaty was concluded. I shall have the honour to address you upon that subject in a separate Despatch.

DRAFT of TREATY negotiated with the Burmese Chief Woongyee at Mandalay in November and December 1866.

Article 1.—GOODS imported into the Burmese territory from British territory, or other western countries, as likewise goods imported from the Burmese territory to British territory, or other western countries, shall be liable, with the exception of goods reserved by the Burmese Government, to the payment of five per cent. duty *ad valorem* from the 1st day of the Burmese year 1230* during the term of 10 years. Import or export duty shall be levied once only at the frontier, and no other charges shall be made on accouut of the conveyance of goods from one place to another, or on any other account.

* April 1868.

Article 2.—After the expiration of the term of 10 years, as provided in Article 1, when taking into consideration the capabilities of the merchants and people, if it should be deemed necessary either to decrease the rate of the five per cent. duty to three per cent., or to increase it to seven and a half per cent., or to 10 per cent., and no more, *ad valorem*, to be levied once only, it may be done, and no other charges shall be made for the conveyance of goods from one place to another, or on any other account. Three months' previous notice shall be given of the change in the rate of duty, namely, in what year, and on what goods it is to have effect.

Article 3.—During the term that the Burmese Government, under Article 1, shall levy the five per cent. duty, or a lesser rate of duty, the English Government shall, in accordance with Article 8 of the Treaty of 1224 (1862), exempt all goods from the payment of any duty. If the rate of duty levied by the Burmese Government at the expiration of 10 years should exceed five per cent. and up to 10 per cent. *ad valorem*, the English Government may likewise levy duty not exceeding 10 per cent. *ad valorem*.

Article 4.—A list of all goods under Articles 1 and 2, with the market prices thereof, shall be furnished to the agent of the Chief Commissioner within two months after the conclusion of this Treaty for the year 1228 (1867-68), and the market value of goods may hereafter be altered with the consent of the British agent and a new list be given for each year.

Article 5.—A British officer may be appointed at any place within Burmese territory where customs duty is levied, to hear complaints regarding trade or customs duty; he shall be allowed to purchase ground to build a suitable brick house for his residence.

Article 6.—A Burmese officer may be appointed at any place within British territory where customs duty is levied, to hear complaints regarding trade or customs duty, who shall be allowed to purchase ground to build a suitable brick house for his residence.

Article 7.—In accordance with the existing great friendship between the two countries, Burmese or British subjects shall not be prohibited from importing or exporting gold and silver from one country to the other, but shall be at liberty to do so. The Burmese Government shall not be prohibited from obtaining guns, swivels, muskets, lead, powder, flints, and warlike ammunition, but shall be allowed to purchase whatever they may require.

Article 8.—A person, being a Burmese subject, who may be accused of having committed murder, dacoity, robbery, or theft within Burmese territory, and who may be found taking refuge in British territory, shall be delivered up to the Burmese Government, provided an investigation is first made by the Burmese authorities in conjunction with the British agent, and provided the said agent, being satisfied, affixes his signature to a written requisition for delivery, which shall be made by the Burmese Government to the British Government.

Article 9.—Any person, being a British subject, who may be accused of having committed murder, dacoity, robbery, or theft, within British territory, and who may be found taking refuge in Burmese territory, shall be delivered up to the British Government on a requisition being made to that effect by the British authorities, provided that, in case the Burmese Government thinks proper to appoint an agent (at Rangoon), the requisition shall be made according to the form laid down in the previous Article.

Article 10.—Any person, being a Burmese subject, who may be accused of having committed murder, robbery, dacoity, or theft within British territory, and who may be found taking refuge in Burmese territory, shall be apprehended and brought to trial according to the laws and procedure of Burmah. It shall be optional with the British Government in any such case to appoint a British official to be present at the trial of any person or persons so accused.

Article 11.—Any person, being a British subject, who may be accused of having committed murder, robbery, dacoity, or theft within Burmese territory, and who may be found taking refuge in British territory, shall be apprehended and brought to trial according to British law. It shall be optional with the Burmese Government to appoint a Burmese official to be present at the trial of any person or persons so accused.

Article 12.—British subjects coming into Burmese territory, and whose names have been registered by the British agent as British subjects permanently residing in Upper Burmah, shall be subject in all suits arising between them, or in which they are defendants, to the jurisdiction of the British agent. The Burmese Government will give effect to all orders and decrees on the application of the British agent.

Article 13.—The goods reserved by the Burmese Government under Article 1 are precious stones, jade stone, and petroleum; all other produce may be sold according to the will and pleasure of the owner, and the Burmese ruler will put no restriction on the sale and purchase of such produce.

EXTRACTS from LETTER from Colonel *A. P. Phayre*, C. B., Chief Commissioner, British Burmah, to the Secretary to the Government of India, Foreign Department, No. 219-5001, dated Thayetmyo, the 10th December 1866.

IN my letter, No. 218-5000, of this date, I have detailed the provisions of the Treaty which, in accordance with the orders of his Excellency the Governor General in Council, I proposed to the Burmese Government, and have explained the

the circumstances under which I refused to conclude any agreement at all. I beg now to add a separate despatch showing how the negotiations were conducted, and to state what I beg respectfully to recommend consequent on the failure to effect any satisfactory arrangement.

2. It was the 7th December 1866 before I could land at Mandalay. Arrangements could not be made for me to have an audience with the King until the 12th idem. I was accompanied to the palace on this and on all other occasions by Captain Sladen, the agent at Mandalay, and by Mr. R. S. Edwards, collector of Customs at Rangoon. The reception was a formal one, which precluded the mention of business.

3. I had been accompanied from Rangoon by the French Bishop, the Right Reverend Dr. Bigandet, who has been for many years in Burmah, and is well known to the King. Two days after our arrival the bishop informed me that he had been received at a private audience by the King, who spoke on the subject of my mission. He was already aware of the general nature of what I had come to demand, but intimated that in the present state of his country, recently so deeply disturbed and still unsettled, he could not give sufficient attention to the negotiation of a treaty. It was evident that the King wished to postpone coming to any distinct understanding. At his request I sent to the palace a draft of what I proposed.

4. After visiting the Woongyees, or ministers of state, and a return visit having been paid by them to me on the 15th, the chief Woongyee, in reply to my inquiries, said he had no orders from the King as to any negotiation. I again, therefore, had an audience with the King on the 16th; his observations were vague, the tenor of them being that it would be better if I would not press matters now, but return after one year. He, however, referred me to the chief Woongyee to settle everything. I considered it better not to discuss any details with the King himself, as it might be necessary to say before a number of persons what might not be agreeable to him.

5. On the 17th I went to the Woongyee; according to his wish, we first discussed the extradition clauses, which, in fact, he brought forward. He again said he had no orders regarding the articles I had proposed relative to trade. On the 19th the Right Reverend the Bishop informed me that, from a private conversation he had had with the King, it was evident his Majesty wanted to put off what he considered the evil day of coming to any settlement at all. He constantly spoke of the necessity of reserving in his own hands the monopoly of certain articles of produce, as without that resource, he said, his revenue was not sufficient. He again also spoke of the disturbed state of the country, and of the present time being unsuited to the settlement of affairs regarding trade.

6. On the 20th we had another interview with the Woongyee. I laid before him the several propositions to facilitate trade between the two countries, and of which a copy had been furnished 12 days before. He said he had as yet no specific orders from the King: he thought the proposed decision of suits by the British agent would produce confusion. On the 22nd we again went to the Woongyee, but could not induce him to discuss each point separately. On the 24th the Woongyee came to me; after several hours' conversation on the propositions as a whole, no conclusion was arrived at.

7. On the 26th we were again received at the palace. The King said nothing distinct regarding the proposed treaty, but told me to discuss everything with the Woongyee; to look to the good of both countries, and hold an even balance; and to let the French bishop be present, as he was impartial, and would be of use. We at once had a meeting with the Woongyee; a discussion of some length ensued as to what the duties and powers of the British agent at Mandalay would be, connected with the investigation of merchants' suits. He seemed to fear that this power would extend to all cases in which British subjects might be concerned, as payment of taxes, and so on, and that Burmese jurisdiction would be altogether set aside. The Woongyee was informed that it was only proposed to give the British agent jurisdiction in mercantile cases, such as claims on trading transactions and settlement of accounts.

8. The next day the Woongyee placed before me a draft of articles embodying what he proposed in reference to those which I had already delivered to him. This draft is substanially contained in Articles 1 to 11 of that attached to my letter, No. 218-5000, of this date; it also contained a provision similar to that in

Article 12 for a Burmese agent to be stationed at Rangoon. The subject of monopolies was altogether omitted. I at once informed the Woongyee that I could not admit of a Burmese agent at Rangoon with judicial powers, which he affected to be utterly astonished at, but that I would carefully consider his other propositions.

9. On the 29th I simply informed the Mengyee that unless he allowed the investigation of suits by the British agent, and unless the monopolies were resigned, I would not agree to the other articles. I also added, gravely, that unless these terms were agreed to, the cordial understanding which now existed could hardly be maintained. This appeared to have considerable effect, and I left somewhat abruptly. For three days after this there was a lull. On the 3rd December, after a discussion of several hours, the Mengyee finally said the points in question (contained in Articles 12 and 13 of the draft) could not be yielded.

10. I then at once required an audience of leave-taking with the King, which was granted on the 5th December. No mention was made on either side of the proposed treaty. The King was friendly in his manner, and announced his intention of writing a letter to the Governor General, and also of giving to Bishop Bigandet and to me a copy of the whole original Boodhist Scriptures, termed the Beedagat. I expressed my thanks for this. The King also said he wished to send a copy to Ceylon to be preserved there in a suitable building secure from fire. I stated that I would represent this to his Excellency the Viceroy for his orders. The next day I embarked in the steamer to return to Rangoon.

11. I cannot conclude this sketch of the negotiation without bringing to the notice of his Excellency the Viceroy and Governor General in Council the cordial assistance which I have received throughout from the Right Reverend Bishop Bigandet, Catholic Bishop and Vicar Apostolic in Ava and Pegu. The bishop, who was frequently received by the King in a more private manner than the etiquette of the court allowed of in my case, steadily and earnestly supported my propositions regarding the abolition of monopolies. He also frequently accompanied me to the Woongyees, and earnestly advocated the measures I proposed. I beg respectfully to recommend that an expression of the value of the bishop's services, rendered heartily for the good of the people of both Governments, may be conveyed to the French Government in such manner as to his Excellency the Viceroy and Governor General in Council may appear appropriate.

* * * * *

13. As the selfish policy of the King of Burmah leaves the trade of the two countries restricted and fettered, it remains now to be considered what will be the best course to pursue regarding it. The frontier duties on the British side were provided for by Section 6 of Act XXX. of 1854; under the Treaty of 1862 and Section 3 of Act IV. of 1863 they have been discontinued. With reference to the interests of British subjects, I would venture to recommend that no import duty be imposed at the frontier. The collection of import duty requires minute inspection and registration of a great number of small articles—fresh fruits and vegetables, for instance—the amount derived from which is scarcely worth the time required to collect it. The people in British territory also find it more remunerative to grow rice, and to look beyond the frontier for their supply of many articles of agricultural produce. Besides, under Article 4 of Act XXX. of 1854, goods which have paid import duty at the frontier, if exported by sea, pay no sea export duty. This, therefore, exempts goods going to foreign countries by sea, and leaves the burden upon the people of British Burmah in using those articles they require from Upper Burmah. On the whole, therefore, I would, at all events, for the present, not reimpose any duty on imports at the Frontier Custom Houses.

14. The case is different as regards exports. The duty on these has been limited under Section 9 of Act XXX. of 1854 to certain articles which are produced largely in Pegu, and are much required in Upper Burmah. Salt, though made in Upper Burmah, is imported there in considerable quantity, and will always be required. The people of Upper Burmah may be said to be absolutely dependent on Pegu for Ngapee, or fish paste, and for salted or preserved fish of every description. Rice is required more or less every year from Pegu. I think, then, it will be advisable to reimpose the frontier duty on the articles enumerated in the Schedule attached to the above-mentioned Act.

15. Article 8 of the Treaty of 1862 impliedly gives the Burmese four years to arrange for the abolition of duty on their side. As the duties on the British side

side were not abolished until June 1863, it might be considered proper in the spirit of the above-mentioned Article to consider the four years as commencing from that date. If this be approved, the export duties would again take effect from June 1867.

From *J. W. S. Wyllie*, Esq., Officiating Secretary to the Government of India, Foreign Department, to the Chief Commissioner of British Burmah,—No. 40, dated Fort William, the 10th January 1867.

I AM directed to acknowledge the receipt of your two letters, No. 218-5000, and No. 219-5001, dated 10th ultimo, giving an account of the mode in which your negotiations with the Burmese Government during your recent visit to Mandalay were conducted, and stating the measures which you recommend the Government to adopt in consequence of the failure of the mission.

2. The Right Honourable the Viceroy and Governor General in Council entirely approves of all your proceedings at Mandalay, and, however much your failure is to be regretted, his Excellency in Council is quite satisfied that you did all in your power to bring the negotiations to a successful issue.

3. You were quite right in promptly rejecting the unreasonable proposal of the Burmese Court that there should be an agent of that Government stationed at Rangoon with judicial powers.

4. The Government of India sanctions your acceptance of the copy of the Boodhist Scriptures presented to you by the King, as also the intention which you are understood to entertain of transferring the work to the British Museum. With regard to the copy which his Majesty wishes to send to Ceylon, a communication has been addressed to the Government of that Colony inquiring whether the King's wish may be gratified.

5. The valuable service rendered to the mission by the Right Reverend the Bishop Bigandet is cordially acknowledged by the Viceroy and Governor General in Council. A recommendation will be made to Her Majesty's Secretary of State for India that the high appreciation which this Government has of the prelate's good offices may be communicated through the English Foreign Office to the Government of his Majesty the Emperor of the French. In the meantime you are requested to convey the Viceroy's thanks to the bishop.

6. It is disappointing that the King of Burmah should have disallowed your very moderate and reasonable requisitions. You are empowered to inform his Majesty of the dissatisfaction with which the Government of India has received your account of the attitude taken by him in this matter. The King should be made to understand that the spirit of the Treaty of 1862 gave the Government just grounds for anticipating a very different result.

7. The question whether, as a measure of retaliation for the selfish policy of the Burmese Court, export duties should be reimposed at the British frontier, will be taken into consideration in the Financial Department, and orders communicated to you hereafter.

8. In respect of the two Burmese princes who are now under your surveillance at Rangoon, the Governor General in Council has reason to believe that you would wish to deport the elder prince to Port Blair. His Excellency in Council can well understand that his continuance in British Burmah is unadvisable. I am, however, to suggest, for your consideration, whether it might not sufficiently answer the purpose, besides saving the prince from disgrace, if Mergui were preferably selected as his place of future residence. Should you, however, still be of opinion that at Mergui he would not be adequately isolated from the scene of his recent revolutionary outbreak, the Governor General in Council authorises you to despatch him to Port Blair.

(No. 41.)

COPY of the above letter, together with extract, paragraphs 13 to end of Chief Commissioner's letter, No. 219-5001, forwarded to the Financial Department for early consideration of the question regarding the export duties.

EXTRACT from the PROCEEDINGS of the Government of India, in the Financial Department,—No. 249, under date Fort William, the 14th January 1867.

READ a communication from the Foreign Department, dated the 10th January, No. 41, forwarding a copy of papers relating to the result of the recent negotiations of the Chief Commissioner, British Burmah, with the Burmese Government for early consideration of the question of the proposed re-imposition of Customs duty on certain articles exported to Burmese territory.

Resolution.—Under the present circumstances of the case, the Governor General in Council fully approves of the recommendation of the Chief Commissioner, British Burmah, for the re-imposition of the frontier export duty in question.

Ordered, That the Foreign Department be informed accordingly.

(A true Extract.)

(signed) *E. H. Lushington,*
Secretary to Government of India.

From *H. Le Poer Wynne,* Esq., Officiating Under-Secretary to the Government of India, Foreign Department, to the Chief Commissioner of British Burmah, —No. 61, dated Fort William, the 15th January 1867.

No. 249, dated 14th January.

WITH reference to paragraphs 14 to 16 of your letter, No. 219-5001, dated 10th December last, I am desired, in continuation of the reply, No. 40, from this office, dated 10th instant, to forward to you the accompanying copy of a resolution of the Government of India, in the Financial Department, conveying the formal sanction of the Right Honourable the Governor General in Council to your recommendation for the re-imposition of the frontier export duties on the articles mentioned by you.

2. I have to request that you will communicate this resolution to the Court of Mandalay.

(Political Department.—No. 46.)

The Secretary of State for India to the Governor General of India in Council, dated 23rd March 1867.

Para. 1. I LEARN with much regret, from the Despatch of your Excellency's Government, dated 23rd January, No. 14, 1867, that Colonel Phayre's recent mission to Mandalay has, so far as the regulation of your commercial policy with the Burmese State is concerned, not been crowned with success.

2. It is not improbable, however, that at a more propitious time, when the minds of the King and of his minister are not distracted by internal seditions and dissensions, they may be better disposed to listen to any reasonable representations that may be made by your officers, and that a more favourable result may then be attained.

3. But I am of opinion that the retaliatory proceedings sanctioned in your Financial Department are not those best calculated to conduce to the desired end.

I have, &c.

COPY of CORRESPONDENCE between the Secretary of State for *India* and the Governor General in Council, relating to the Appointment of a COMMERCIAL AGENT in *Ladakh*, and to his Proceedings there.

(No. 40.—Foreign Department—Political.)

The Governor General of India in Council to Viscount *Cranborne*, Secretary of State for India; dated Fort William, 23rd February 1867.

IN continuation of our Despatch, No. 164, dated 8th October last, regarding the exactions of Cashmere officials on British traders in Ladakh, we have the honour to transmit, for the information of Her Majesty's Government, copy of a further correspondence with the Punjab Government, from which it will be seen that we have sanctioned the deputation, as an experimental measure, of an English officer to Ladakh. The first duty of this officer will be to secure the observance of the Customs Tariff fixed by the Maharajah of Cashmere in 1864; but he will also be instructed to obtain as much information regarding the trade and politics of Central Asia as may be available.

2. Further, upon the representations of the Punjab Government as to the inadequacy of the emoluments enjoyed by the Native Official who superintends the neighbouring British District of Lâhoul, we have taken this opportunity to raise the allowance of the Negee of Lâhoul to 550 rupees per annum.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to *J. W. S. Wyllie*, Esq., Officiating Secretary to the Government of India, Foreign Department, Calcutta (No. 534–2514); dated Lahore, 13th December 1866.

I HAVE the honour to acknowledge the receipt of your Despatch, No. 930, dated 10th September 1866, conveying an expression of the views of the Right Honourable the Governor General in Council regarding the obstacles placed on the development of trade with Central Asia by the exactions of the Ladakh officials, and regarding the levy by them of a money contribution from the people of the British district of Lahoul.

2. In reply, I am desired by the Honourable the Lieutenant Governor to intimate, for the information of the Right Honourable the Governor General in Council, that the Maharajah of Jummoo and Cashmere has been addressed upon the subject, and has promised to make a searching investigation into the complaints made against the conduct of the Ladakh officials, the result of which will be reported hereafter.

3. With regard to the measures to be taken by this Government to secure the due enforcement of the tariff of duties agreed to by his Highness in 1864, I am desired to state that, during the latter part of the past hot season, a news-writer was deputed by this Government to Ladakh, partly for the purpose of collecting information regarding events in Eastern Turkistan, and partly with a view of reporting whether the terms of the agreement abovementioned were properly carried out, and with that view he was furnished with vernacular copies of the schedule of duties agreed upon.

4. It may be desirable to depute a news-writer to Ladakh next season also, and in that case his Honor proposes to place that official in communication with the Assistant Commissioner in charge of the subdivision of Kulu, who will for that period be located in Lahoul; and his Honor would further recommend that he be empowered, should he think fit, and notwithstanding the distastefulness of such an arrangement to the Maharajah, to depute an Assistant Commissioner, specially selected for his fitness for the post, to remain at Ladakh during the next hot season and rains to protect the interest of traders, and report upon the measures which may be best calculated to develop trade between the regions beyond Leh and British India. The arrangement will cause no extra expense to the State beyond the usual deputation allowance of five rupees per diem.

5. With regard to the levy by the Maharajah of a contribution of 164 rupees per annum from the people of Lahoul, I have the honour to report that the levy of that contribution has now ceased; and with reference to the position and emoluments of Tara Chund, Negee of Lahoul, adverted to in paragraphs 7 and 8 of your Despatch, I am desired to submit the accompanying extracts of correspondence,* and to remark thereon as follows:—

6. Tara Chund having been strictly prohibited for the future from receiving any allowance from the Maharajah, there can, in his Honor's opinion, be no doubt whatever that the income which will then remain to him is wholly insufficient to enable him to maintain the position which he ought to hold; and notwithstanding the comparatively insignificant character of the tract, the responsibilities devolving on the head of the Lahoul pergunnah, owing to its secluded position, are really very considerable; and all concurrent testimony shows that he fulfills them in a very commendable manner, so that he is deserving of much consideration personally, while his office stands in need of substantial support.

7. Elsewhere in the Punjab it has been a common practice with former rulers, and their practice has been in some instances followed by ourselves, to allow to influential chiefs, as a reward for their services and to secure their loyalty, one-fourth of the revenue of the tract over which they preside; and it would, in his Honor's opinion, be in every way more appropriate to extend this principle to Tara Chund and his successors, should they prove themselves worthy of the grant.

8. The revenue of Lahoul is at present but 2,200 rupees per annum; the Lieutenant Governor would accordingly recommend that, without interfering with the small jaghire which Tara Chund holds, one-fourth of this, or 550 rupees per annum, be granted him in lieu of his present allowances. The sum is a small one for the Government to surrender, but it would suffice to satisfy the Negee's aspirations and place him above the necessity of looking elsewhere for a provision. It would evince to the people of Lahoul the consideration in which Tara Chund is held by the Government, and would ensure for the post he holds that respect which he at present secures by his own personal qualities, while a percentage of this kind would give him a direct interest in increasing the productiveness of the tract.

EXTRACT, Paragraphs 39, 40, and 41, of a LETTER from *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Jullundhur Division, to *T. H. Thornton*, Esq., Secretary to Government of the Punjab (No. 187); dated 23rd July 1866.

Tara Chund's Jaghire.—Tara Chund enjoys a jaghire of 134 rupees as Negee of Lahoul, and 100 rupees per annum as honorary magistrate. He is a man universally respected, and possesses letters from numerous European officers, all of whom speak of him in the highest terms. From the missionaries I hear that he rules with consideration for the people, is very hospitable and generous; but unfortunately his means are small, and quite inadequate to meet the demands of his position. He occupies an important place, looking at it in a political view. His countrymen are the great traders between British territory and Ladakh and Yarkand, and it makes a material difference to them whether their own chief is on friendly terms or the contrary with the rulers of the foreign countries into which they penetrate. Thus, Tara Chund is ever ready to give a friendly reception to any of the Ladakh officials or influential natives of the Thibetan countries who visit Lahoul, and in various ways he has incurred heavy expenses, which he can ill afford, in order to keep up the trade between his country and Thibet. On this subject of trade I shall treat hereafter; at present I merely record the fact of Tara Chund's liberality at the expense of his pocket.

40. He was supposed by Mr. Jones to have considerable perquisites, but the result of further inquiry, confirmed by the opinion of Mr. Heyde, shows that Tara Chund derives very little income from the cesses on ponies, sheep, &c., which the Government have been pleased to continue to him for his life.

41. The revenue of his province is insignificant, only 2,200 rupees per annum, and if it be taken into consideration, I fear the Government would not be disposed to increase his allowance; but if we look at the case in a political light, and consider the advantage to be gained by advancing our influence and our trade beyond Himalaya into Central Asia, I think our object would be furthered by improving the position of our representative in the frontier province of Lahoul. If, therefore, Tara Chund's allowance cannot be increased, I trust that he may be granted a khillut in cash and kind from time to time as the Lieutenant Governor may be pleased to order.

---

* Extract, paragraphs 39 to 41, of Mr. Forsyth's Memorandum, dated 23rd July 1866.

Extract, paragraphs 14 to 16, of his letter, No. 235, dated 14th September 1866.

Extract, paragraph 6, of Secretary to Financial Commissioner's letter, No. 456, dated 11th September 1866.

Extract of diary of Captain Smyly, Assistant Commissioner, Kulu, dated 16th August 1864.

EXTRACT, paragraphs 14, 15, and 16, of a LETTER from *T. D. Forsyth*, Esq., C. B., Commissioner and Superintendent, Jullundhur Division, to *T. H. Thornton*, Esq., Secretary to Government of the Punjab (No. 235); dated 14th September 1866.

14. THE last point which requires immediate attention is the question of allowances to the Negee of Lahoul.

15. In a former communication I remarked that I had reason to believe that Tara Chund had been offered certain pecuniary help from Cashmere, though I could not get at the truth of this.

16. Since then, and when the abolition of tribute was being agitated before the Viceroy, I found that Hurree Chund was suddenly rather lukewarm on the subject, and at last he told me that his father received in presents and perquisites about 250 rupees or 300 rupees per annum from Cashmere. I mentioned this to the Viceroy, who was pleased to remark that in any arrangements now made the Negee of Lahoul ought not to be a loser; and with this expression of His Excellency's opinion, I now would ask that some formal assurance may be given to Tara Chund, so as to remove all fears from his mind. I think that Tara Chund ought to have an increase of 400 rupees to his present allowance, so as to remove him from all temptation. For the Nono of Spiti I have proposed a grant of 300 rupees.

EXTRACT, paragraph 6, of a LETTER from *J. A. E. Miller*, Esq., Secretary to Financial Commissioner, Punjab, to *T. H. Thornton*, Esq., Secretary to Government of the Punjab (No. 456); dated 11th September 1866.

THE Financial Commissioner considers that it would be good policy to treat with liberality and consideration an influential man on our frontier like Tara Chund.

EXTRACT of DIARY of Captain *Smyly*, Assistant Commissioner, Kulu; dated 16th August 1864.

I HAVE been pleased with what I have seen and heard of Tara Chund's conduct of affairs in Lahoul, and I believe him to be, as far as his light goes, a trustworthy person to exercise authority in such an isolated position, where so many opportunities for extortion and injustice offer. He has a kind and gentle disposition, and in all his dealings with the people there is a tendency to the *suaviter in modo* rather than towards the *fortiter in re*, which is a favourable trait, seeing that the Lahoulees are generally so truthful, obedient, and honest. I have been informed by the Moravian Missionaries, who see a great deal of the country people and have frequent opportunities of conversing freely with them, that Tara Chund is above taking *douceurs*. There is no doubt about his popularity with the Lahoulees, who invariably acquiesce to his dictum, which of itself is a healthy sign. As for Tara Chund's attention to the wants of European travellers, the testimonials he has earned, some of them most flattering and gratifying, prove that the trouble he has taken in this respect is fully appreciated. Like so many of those hill chiefs, Tara Chund has exceeded his income, and is indebted to Kulu Mahajuns, Wuzeer Gooshaon of Mundee amongst the rest.

Might be granted a khilut on such a good report.
(signed)
A. Brandreth.

From *J. W. S. Wyllie*, Esq., Officiating Secretary to the Government of India, Foreign Department, to the Secretary to Government of the Punjab (No. 79); dated Fort William, 22nd January 1867.

I HAVE laid before the Governor General in Council your letter, No. 534-2514, dated 13th ultimo, with its enclosures.

2. The points requiring consideration are, first, the allowance to be given to the Negee of Lahoul; and secondly, the deputation of a European officer to Ladakh.

3. On the first point His Excellency in Council desires me to state that the proposals of the Lieutenant Governor, as detailed in the last paragraph of your letter under acknowledgement, are sanctioned; but it must be distinctly understood that these allowances are personal and in lieu of service, and therefore will not be heritable, unless the Government should, on Tara Chund's death, think proper again to entrust the charge of Lahoul to the male representative of his family.

4. On the second point I am to state that the Governor General in Council agrees to the deputation of an officer to Ladakh as an experimental measure for one season. At the close of the season sufficient data will have been obtained for considering whether the arrangement is to be further continued. Should it be made permanent, the cost, I am to

remark, will amount to the whole allowances of one officer, seeing that his place in the general administration must be filled up by a substitute.

5. It will be necessary to exercise great care in the selection of the officer now to be deputed, and he must, of course, be cautioned against any interference in the internal administration of the country. The primary object he will have to keep in view will be the maintenance of the tariff fixed by the Maharajah in 1864. Any infraction of this tariff, which his remonstrances on the spot may be unable to prevent, should be promptly reported to the Punjab Government. Another and very important branch of his duties will be to enquire closely into the nature and extent of the traffic, as it at present stands, between India and Central Asia, and to report the measures which he would recommend to secure a further development of this trade. Lastly, he will pick up and sift all the political information that may come in his way, especially as regards the progress of events in Chinese Toorkistan.

6. It is obvious that an officer possessed of sufficient intelligence and discretion for such a position cannot readily be found. The main qualification to be sought for will be aptitude for commercial and political inquiries. But if the Lieutenant Governor should know of any Medical Officer who may unite, with the capacity chiefly required a willingness to exercise his profession gratuitously among the people of Ladakh, the Governor General in Council thinks that a medical officer would, on the whole, be the happiest selection that could be made.

7. The deputation of an English officer to Ladakh will supersede the necessity for a native news-writer at that place. Any information which the news-writer of last season may have collected should now be submitted for the information of the Government of India.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to *J. W. S. Wyllie*, Esq., Officiating Secretary to the Government of India, Foreign Department, Fort William (No. 16-105); dated Lahore, 10th January 1867.

In continuation of my No. 534, dated 13th December 1866, I am directed to forward a khureeta (with translation annexed) from the Maharajah of Jummoo, stating that he has remitted the tribute hitherto levied by his Highness from the people of Lâhoul.

Translation of a Letter from the Maharajah of Jummoo, to his Excellency the Viceroy of India; dated 21st December 1866.

Reports that, in obedience to the orders of his Excellency, given to Dewan Nihal Chund, at Simla, the Maharajah has remitted the tribute in money and iron levied from the Zemindars of Lâhoul since the time of the former rajahs of that territory.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to *J. W. S. Wyllie*, Esq., Officiating Secretary to the Government of India, Foreign Department (No. 34–164); dated Lahore, 21st January 1867.

In continuation of my letter, No. 534-2514, dated 13th December 1866, I am directed by the Honourable the Lieutenant Governor to transmit, for the information of the Right Honourable the Governor General, copies of a further communication from the Commissioner, Jullundhur Division, and its enclosure, No. 6, dated 5th instant, relative to the exactions by officials of the Cashmere State on British traders at Ladakh.

2. These papers appear to his Honor to afford additional grounds for the measure recommended of deputing an European officer to Ladakh during the ensuing season.

From *T. D. Forsyth*, Esq., C.B., Commissioner and Superintendent, Jullundhur Division, to *T. H. Thornton*, Esq., D.C.L., Secretary to Government, Punjab (No. 6); dated 5th January 1867.

With reference to your letter, No. 1912, dated 15th September 1866, forwarding translation of the letter from the Mahrajah of Cashmere asking for information as to the particular exactions of which individual traders complain, I have obtained a reply from Tara Chund and Wuzeer Goshaon, which I now forward with a translation.

2. At the same time Tara Chund has forwarded me a copy of the new tariff printed and promulgated in 1864.

3. I have

3. I have now to remark—

1st. That the vernacular tariff does not agree with the English counterpart.
2nd. That the reductions announced in it have not been carried out.
3rd. That in addition to these duties, other heavy exactions are levied.

4th. That further inquiry leads me to think that Mr. Davies laboured under a misapprehension when he remarked, in the 10th paragraph of his letter, No. 223, dated 29th April 1864, to Supreme Government, that the rates on goods proceeding to Leh by the Kooloo route were always pretty reasonable, and are still generally below the revised rates.

4. In the English copy of Statement IIB., table of rates on goods passing from Ladakh to Kooloo and Rampoor, the column of present duty on goods exported to Kooloo is left blank, and so is that showing the difference.

Similarly, the columns showing former rates on goods by Rampoor and the difference are blank, thus leading to the conclusion that there has been no change in either case.

5. But in the Vernacular Statement there is some difference between the former and present rates as regards both routes; and, again, there is a reduction in some cases made in favour of Rampoor which is not accorded to Kooloo.

	Rs.	*a.*	*p.*	
For instance, Cherrus - - -	1	–	–	By Kooloo route. The same
Silk - - - -	1	4	–	are charged only 10 annas
Gillur Puttur - -	1	4	–	by Rampoor route.

Yamboo - - - -
Silung - - - - - } Are charged double by Kooloo what is taken by Rampoor.
Gooli darcheenee - - -

Tuwar is entered in the English Statement as paying nothing by Kooloo and 4 annas by Rampoor, but in the Vernacular Statement it is charged *Rs.* 1. 4. by Kooloo and 2 annas by Rampoor.

6. Again, in Statement IIA. there is a striking difference between the duties levied on Kooloo and the Rampoor route, opium, kiriana, otter skins, copper vessels being taxed only one-half by Rampoor, and English piecegoods are subjected to *Rs.* 2. 3. per maund by Kooloo, and only 10 annas 6 pie by Rampoor.

7. Tara Chund's Statement shows that the professed reductions are not attended to, and Hurree Chund gave in to the Viceroy, as I see is alluded to in Mr. Secretary's letter, a statement from which, for convenience sake, I give the subjoined extract.

Some of the most important articles are taxed as follows:—

OPIUM.

	Rs.	*a.*	*p.*	
Customs dues - - - - - -	2	8	–	per maund, kutcha.
Choongees, Leh - - - - -	–	13	2	„ „
Nuzzur Bhuttee taken by Thanadar at Leh $1\frac{1}{2}$ annas per rupee, or about - -	12	7	6	„ „
Brokerage, 2 per cent. - - - -	2	8	–	„ „
TOTAL - - - *Rs.*	18	4	8	per maund, kutcha.

Average value of maund, *Rs.* 133 – –

SUGAR.

	Rs.	*a.*	*p.*	
Customs dues - - - - - -	1	4	–	per maund.
Choongee - - - - - -	–	1	7	„
Nuzzar Bhuttee - - - - -	1	8	–	„
Brokerage - - - - - -	–	5	2	„
TOTAL - - - *Rs.*	3	2	9	

SPICES.	BROADCLOTH.
The Same.	The same.

IRON.

Customs duty, 2 rupees. Choongee, &c., as above.

8. In addition to all these rates, there is the export tax as enumerated in the penultimate column of Statement IIA.

9. All these exactions were probably not made known to Mr. Davies when he made his report, but I wish to point them out, for they will remove the impression which a perusal of that report gives, that the Kooloo route was the most favoured, whereas, in reality, it is the least so of all the lines.

10. But leaving the past, my object is to secure a proper reduction of rates for the future.

11. According to paragraph 13 of Mr. Davies's letter, No. 223, dated 29th April 1864, a uniform transit duty of 5 per cent. has now been fixed for goods going to Leh, and it is added that thus the trader to Yarkand by Srinuggur is placed in a position, fiscally, not less advantageous than that of one trading with Bokhara by Peshawur.

12. We have here, then, a clearly-enunciated standard to work by, and during the approaching season I should wish to see this carried out under the supervision of the English officer who may be sent to Leh. All goods, of whatever kind, which do not break bulk in the Ladakh territories, but which pass through the town of Leh, ought not to pay to the Government or any official one fraction more than 5 per cent. If opened in Leh, and any portion is sold there, then the higher rate of 8 per cent. on piece-goods and 12½ per cent. on other articles would be levied.

13. I consider this rate much higher than ought to be levied, but we must work by degrees. Elsewhere transit duties are either abolished or reduced to 1 per cent., and if the Maharajah takes 5 per cent., he ought to repair the road for his merchant travellers.

14. I have hitherto written regarding goods passing through Leh. But you are aware that it is my desire to send traders and merchandise to Khotan and Yarkand by the Chang Chemoo route, as thus by far the easiest passage over the Karakorum range can be effected, and by this route I hope the Maharajah may be induced to allow goods to pass free.

15. I sincerely trust an European official may be sent to Ladakh. It is quite hopeless otherwise attempting to free our trade, for, however much the Maharajah may desire to help us, experience teaches us that native underlings placed at so great a distance from control cannot resist the temptation to commit petty oppression. An European traveller, who was at Leh for some time last year, told me a day or two ago that some Guddees from Kangra came to him to intercede with the thannadar to allow them to buy food, which had been forbidden unless they presented a nuzzur of several rupees; and in a hundred ways our traders can be, and are, subjected to annoyances and exactions.

16. And from what Tara Chund, writing from Lahoul, and my European informant tells me, I doubt whether any reliance can be placed on the information supplied by the news-writer stationed at Leh by the orders of Government.

TRANSLATION of PETITION.

IN accordance with your orders I enquired from the traders of Ladakh regarding duty, and find that the list of duty which my son, Hurree Chund, at Simla, submitted before yourself is the one according to which duty is realised in the Ladakh territory, and that the tariff of customs duty prescribed by Government for the Jummoo territory is not in force there.

On inquiry I have also learnt from Noora and other traders that the "Ladakhwallas" have increased the duty on some articles, on that entered in the tariff of customs duty. For instance—

First.—Formerly *Rs.* 1. 4. was realised as duty on a maund of "Shukkur," or "Goor," but by the tariff of customs duty it was reduced to 2 annas and 3 pie, and the Ladakhwallas, contrary to the tariff of customs duty, realised, as formerly, *Rs.* 1. 4.

Second.—*Rs.* 1. 4. was the duty on a maund of Misree, reduced by the tariff of customs duty to 9 annas 6 pie, realized by the Ladakhwallas, as formerly, *Rs.* 1. 4.

*Per pony load.

Thirdly.—When a bale of churrus is imported from Yarkand to Ladakh, *Rs.* 18. 6.* are realised, and when exported from Ladakh to Kooloo seven rupees more are realised from the traders, although no mention of the realisation of any duty on goods exported from Ladakh to Koloo is made in the tariff of customs duty, except a duty of one rupee per load.

All

All the traders now pray that Government may fix duty on our goods at the rates fixed for the routes by Rampoor and Cashmere, for it is a wrong custom to take double rates from the subjects of the Government, and only single rates from those travelling by Cashmere and Rampoor. We therefore beg that Government may make some permanent arrangement for taking the single rates, or somewhat less.

Herewith is submitted, separately, a list of exactions levied during the present year. A copy of the tariff fixed for the levy of customs duties accompanies this petition.

(No. 113.—Foreign Department.—Political.)

The Governor General of India in Council to Sir *Stafford Northcote*, Bart., Secretary of State for India, dated Simla, 22nd June 1867.

In continuation of our Despatch No. 40, dated the 23rd February last, reporting the experimental deputation of an officer to Ladakh, we have the honour to forward the accompanying copy of papers showing that, subject to the approval of Her Majesty's Government, we have fixed 1,000 rupees as the remuneration to the officer in question.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab and its Dependencies, to *J. W. S. Wyllie*, Esq., Officiating Secretary to the Government of India, Foreign Department (No. 81-451); dated Lahore, 21st February 1867.

I am directed to acknowledge the receipt of your letter, No. 79, dated 22nd ultimo. With reference to your sixth paragraph, I am directed to state that the Lieutenant-Governor fully concurs in regarding the deputation of a Medical Officer to Ladakh as highly desirable, if a suitable one can be procured. But as in this case his substantive duties will have to be performed by another medical officer on full allowances, it is presumed that the Supreme Government is prepared to regard as a special extra outlay the full pay and allowances drawn by the officer who may be deputed for the six months to which his deputation to Ladakh must probably be limited. And before endeavouring to select an officer for the post, it is necessary that his honour be informed what deputation allowance will be granted to such officer. Medical officers attached to a native regiment and performing the civil duties ordinarily receive at present in this province 780 rupees per mensem; and it appears to the Lieutenant Governor that the consolidated allowance to be granted to the officer deputed to Ladakh should be somewhat in excess of this, to cover the extra expenses which he must necessarily incur, and to enable his Honor to secure the services of the best officer available.

Ladakh Report for 1866.

Extract from the Proceedings of the Government of India, in the Foreign Department (No. 282); under date Fort William, 25th March 1867.

Read a letter from the Secretary to the Government of the Punjab, No. 81–451, dated 21st February last, submitting an abstract of the Ladakh news-writer's report during the last season, and requesting the decision of the Government of India as to the pay to be allowed to the medical officer who is to be deputed to Ladakh in the coming season.

Observations.

As regards the pay of the medical officer whom it has been determined to depute to Ladakh, the Governor General in Council is of opinion that 1,000 rupees per mensem, to include travelling allowance, might be given for one season to cover all expenses.

(No. 283.)

Ordered, that in continuation of No. 80, dated 22nd January last, a copy of the foregoing observations be sent to the Financial Department for early consideration regarding the pay of the medical officer.

Extract from the Proceedings of the Government of India, in the Financial Department—(No. 1771); under date Fort William, 30th March 1867.

Read order of the Foreign Department, No. 283, dated 25th instant, forwarding, in continuation of No. 80, dated 22nd January last, observations relative to the pay of the medical officer to be deputed to Ladakh during the ensuing season.

Resolution.

The Governor General in Council is pleased to sanction a monthly salary of 1,000 rupees, to include travelling expenses to the medical officer who may be deputed to Ladakh during the ensuing season.

Ordered, that the foregoing resolution be communicated to the Foreign Department and to the Accountant General, Punjab.

(No. 182.—Political.)

EXTRACT of LETTER from Sir *Stafford Northcote*, Bart., to the Governor General of India in Council, dated India Office, 15th November 1867.

I have received and considered in Council your Excellency's letters, Nos. 40, 113, and 114, in the Foreign Department, of the 23rd February and 22nd June last, the two former reporting the appointment of a British Commercial Agent, in the person of Dr. Cayley, at Ladakh, to observe the operation of the Cashmere Customs Tariff of 1864, and the fixing of his salary at 1,000 rupees per mensem.

I approve your having fixed Dr. Cayley's monthly salary at 1,000 rupees, and observe that he is to be stationed at Ladakh for six months in the year, and in the first instance, experimentally, for one season only.

I approve the small increase to the allowances of the Negee of Lahoul.

(No. 176.—Foreign Department.—Political.)

The Governor General of India in Council to Sir *Stafford Northcote*, Bart., Secretary of State for India; dated Fort William, 7th December 1867.

IN continuation of our Despatch, No. 113, dated the 22nd June last, we have the honour to transmit, for the information of her Majesty's Government, the accompanying copy of a correspondence with the Punjab Government regarding the deputation of an officer annually to Ladakh.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General, Simla, Confidential (No. 352-755); dated Murree, 26th September 1867.

I AM desired to submit an extract from a demi-official letter from Dr. Cayley, on special duty at Ladakh, and to solicit an expression of the wishes of the Government as to that officer's future proceedings.

2. The Lieutenant Governor is of opinion that Dr. Cayley should certainly stay until the arrival of the last kafila from Yarkand in November; but he thinks it unadvisable that an English officer should remain alone at Ladakh during the winter.

3. But with reference to Dr. Cayley's remark that, "unless it is known that the appointment will be continued or renewed, little or no permanent good will result," his Honor would suggest that, in the event of the Supreme Government being willing that the deputation of an agent to Ladakh should be repeated each season during the pleasure of Government, he be authorised to intimate accordingly to his Highness the Maharajah.

4. The presence of Dr. Cayley at Ladakh has already led to a reduction of duty on goods imported *viâ* Kulu, and his Honor hears from the Commissioner of Jullundhur that it has greatly increased the confidence of the traders of Lahoul.

EXTRACT from a demi-official LETTER from Dr. *Cayley*, on special duty at Ladakh, to *T. H. Thornton*, Esq., Secretary to Government of the Punjab; dated 15th July 1867.

WITH regard to the effect of my residence here, I think, from what I hear, that the Rajah wishes to act justly both to the traders and people of the country; but I am quite sure that, as regards the officials here, directly my back is turned the corruptions of previous years will be resumed; and unless it is known that the appointment is to be continued or renewed, little or no permanent good will result. Under these circumstances, should it be the wish of Government, I am quite ready to remain up the winter, although it would involve no small personal discomfort, and, I may say, hardship; but as all communication would then for some months be quite cut off, it would, I think, be equally advantageous for me to remain here as late as possible, and return as soon as the road is open next year, if it is intended to renew the appointment. I am not asking this on personal grounds, but in the interests of my work, and of the traders and people of the country (for though with the latter I have nothing to do officially, I cannot shut my eyes to the system of

of oppression by which they are ground down to the dust), who, unless they are assured of protection next year, will never venture to open their lips as to any wrong they may suffer; such is their terror of the local officials. I cannot directly make use of any information I pick up, lest I subject the informer to future cruelty, and even the servants I have engaged here, not supplied by the Thannadar, are in terror, lest, on my leaving, they should suffer ill-treatment on my account.

(True extract.)

(signed) *W. Kirke,*
Assistant Secretary to Government, Punjab.

From *J. W. S. Wyllie,* Esq., Under Secretary to the Government of India, Foreign Department, with the Governor General, to the Secretary to Government of the Punjab (No. 1034); dated Simla, 14th October 1867.

In reply to your letter, No. 352–755, dated 26th ultimo, I am directed to state that the communication which the Lieutenant Governor proposes to make to the Maharajah of Cashmere, announcing the present intention of the British Government to depute an agent every season to Ladakh, is approved by the Governor General in Council.

(No. 22.—Political).

Sir *Stafford Northcote,* Bart., to the Governor General of India in Council.

India Office, 15 February 1868.

1. I gather from the letter of your Excellency's Government, in the Foreign Department, No. 176, of the 7th of December 1867, that you have sanctioned the deputation of a British Officer every season to Ladakh, for the purposes brought to my notice in your letter, No. 113, of the 22nd of June, the arrangement having been originally proposed to and acquiesced in by me, as an experimental measure for one season only.

2. The extension of this policy, as now suggested, is sanctioned by Her Majesty's Government with the full understanding that Dr. Cayley, as commercial agent in Ladakh, is ever to bear in mind that he is in foreign territory, and, whilst exerting his influence for objects which you may consider it to be expedient and just to secure by friendly representation and advice, to abstain from any peremptory acts and dictatorial language calculated to give offence to the rulers of these countries.

(No. 177.—Foreign Department.—Political).

The Governor General of India in Council, to Sir *Stafford Northcote,* Bart., Secretary of State for India; dated Fort William, 7th December 1867.

In continuation of our Despatch, No. 153, dated 9th October last, we have the honour to forward, for the information of Her Majesty's Government, the accompanying copy of a letter from the Secretary to the Government of the Punjab, and of its enclosures, regarding the restrictions imposed by the Cashmere authorities at Ladakh upon the trade between Eastern Toorkistan and British India.

2. From further papers herewith submitted, it will be seen that his Highness the Maharajah has, at the instance of the Punjab Government, applied the rate of 5 per cent. to all imports from Central Asia.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General, Simla (No. 371-786); dated Murree, 9th October 1867.

I AM desired to transmit, for the information of his Excellency the Right Honourable the Governor General in Council, copies of the papers marginally noted on the subject of the interference exercised at Ladakh with trade from Yarkand and Turkistan with British India, which trade promises considerably to increase if the duties levied are not exorbitant, and the merchants fairly treated.

Extract, paragraphs 1 and 2, from the diary of Dr. Cayley, on special duty at Leh, dated 27 September 1867.
Reply, No. 787, of this date.
Translations of khureetas addressed to the Maharajah.

2. In the letters addressed by this Government to his Highness the Maharajah, it has been assumed that the acts of which Dr. Cayley complains are the acts of the Ladakh officials only, but there is reason to believe that they are really done with the cognizance and approval of the Cashmere authorities; indeed, as regards the importation of wool, my predecessor, in his Despatch, No. 343, dated 29th April 1864, remarked that "it seems that the Maharajah is quite determined that none of the fine turfani wool shall go out of his territory, as the rates on this article are nowhere detailed."

3. It is not improbable, therefore, that his Highness the Maharajah will object to comply with one or both of the requests of this Government contained in the above letters.

4. Should such be the case, I am desired to inquire what action in the matter his Excellency the Viceroy in Council would wish to be taken by this Government.

EXTRACT, paragraphs 1 and 2, from the Diary of Dr. *Cayley*, on Special Duty at Leh; dated 27th September 1867.

IN continuation of my last report, I have to bring to your notice a few points connected with the trade through Ladakh, and which, owing to the arrival of the Yarkand kafila, are of the greatest importance, and I request the favour of your furnishing me with instructions on the subject as soon as possible. In the "tariff of transit duties," 1867, page 59, para. 4, it is laid down (when referring to the transit duties in Ladakh on goods coming from Lahoul) that the transit duty on goods intended for Turkistan, Yarkand, &c., should be limited to 5 per cent. *ad valorem* (this has not, however, yet been really carried into effect), but nothing is anywhere mentioned that I can discover, in any letter or in any tariff, of the amount of transit duty to be levied on goods passing unopened through Ladakh and coming from Yarkand, &c. It appears that in former years few or no merchants ever passed through, but always bartered their goods in, Leh, the through trade being almost confined to the trading agents of the Cashmere officials; but this year independent merchants are flocking in from Yarkand, and many wish to carry their goods through unopened to Palimpar and the Punjab. These men had heard from a party of return pilgrims from Mecca (who left Leh soon after my arrival, and who had all been under my medical treatment for severe illness, the result of cold and exposure on the Zooji La pass, where two of their number were frozen to death), that there was a British officer at Leh to protect the traders, and that the duties were much reduced; and, in consequence, nearly all the Yarkand merchants who formerly went to Badakshan, or travelled by Chatial and Swat to the Punjab, are now coming this route, which is so much safer and easier. Those who open or sell their goods in Ladakh must of course pay the duties laid down in the tariff, amounting, import and export, to about 25 per cent., or more than 100 per cent. on the cost price; and the officials here want to charge the same duties on goods passing through unopened; but as there is no authority for this, and nothing laid down in the tariff, I have insisted that, until instructions are received from Government, only a 5 per cent. *ad valorem* duty should be charged, corresponding to the transit duty sanctioned for goods passing the other way. The Dewan will not consent to this, but is willing to take a receipt from each merchant of the amount and value of his goods, and not to levy the duty until he has received the Maharajah's orders; the merchants, however, are not to be detained, as they would in that case suffer great loss. This is a matter of very great and immediate importance; in fact, the future extension of trade with Turkistan greatly depends on the decision now given. Nearly all the merchants now arrived, and those on their way have never come this route before, and are now come in the full belief that the duties are reduced, and that they will meet with fair treatment. There is no doubt that the trade from all the chief cities of Turkistan will flow this way another year. If, however, a transit duty of 100 per cent. (on the cost price) is imposed, it will prove simply prohibitive, and will at once kill the trade, which has been languishing for years, but seems now ready to spring up into vigour if fairly treated. As the point has now for the first time to be settled, I cannot too strongly represent how injurious it will prove if the Cashmere Government is allowed to impose a transit duty of anything like the amount above mentioned; a transit duty of 5 per. cent. for passing through a few miles of Ladakh territory should be the limit.

2. I have another point to urge; the authorities here have never allowed the shawl-wool (pushm), which comes from Yarkand, to pass by any other route than into Cashmere; in fact,

fact, a few years ago they forcibly seized and confiscated a large amount that was being taken by British traders into Lahoul. As, however, there is no mention of such a restriction in any of the tables of duties, I cannot discern that any such right has ever been demanded by Cashmere, or admitted and sanctioned by the Punjab Government. I have insisted that merchants are to be allowed to carry "pushm" or any other article they wish into British territory on paying the recognised duties, and that no such restrictions are admissible. This has met with the strongest opposition on the part of the Ladakh officials, but I feel sure that I am only acting in accordance with the spirit of my instructions in enforcing this point, which is one of the great subjects of complaint on the part of the traders, and has hitherto thrown most serious obstacles in the way of trade.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to *H. Cayley*, Esq., on Special Duty, Ladakh (No. 787); dated 9th October 1867.

I HAVE the honour to acknowledge the receipt of your diary on the 27th September, bringing to notice that the officials at Ladakh were desirous of charging on goods in transit from Yarkand to British territory the import and export duties prescribed for goods intended for sale or consumption in Cashmere, instead of a 5 per cent. *ad valorem* duty charged for goods in transit from the Punjab to Yarkand; and that you had objected to their demand.

2. In reply, I am desired to intimate to you that his Honor approves of the action you have taken in this matter, and I beg to annex for your information translation of a letter this day addressed to the Maharajah on the subject.

3. His Honor further approves the course you have taken in regard to the shawl-wool merchants, whose case has been made the subject of a separate communication to his Highness, copy of which is annexed.

TRANSLATION of a KHUREETA to His Highness the Maharajah of Cashmere.

I REGRET to have to bring to your Highness's notice another instance of the obstruction caused by your officials at Ladakh to the development of trade with British India.

It appears that traders bringing shawl-wool from Yarkand are not permitted to carry their wool into British territory like other merchants, but are compelled to proceed with their goods to Cashmere.

As there is nothing in the prescribed tariff to justify this arbitrary conduct on the part of your Highness's officials, Dr. Cayley has insisted upon the shawl-wool merchants being permitted to proceed by whatever route they please, like any other merchants, on payment of the recognised duties.

The Lieutenant Governor approves of Dr. Cayley's conduct in this matter, and he trusts that your Highness will at once issue the necessary orders to prevent further interference on the part of the Ladakh officials.

A copy of this communication will be sent to Dr. Cayley for his information and guidance.

TRANSLATION of a KHUREETA to his Highness the Maharajah of Cashmere.

IN the note appended to Statement I. A. of the revised tariff of duties chargeable on goods entering Cashmere territory, it is stated that goods from the Punjab passing through Leh *en route* for Yarkand and Turkistan, without being opened or sold, should be liable to a five per cent. *ad valorem* duty only, but no express allusion is made to the case of goods passing under similar circumstances from Yarkand and Turkistan through Leh to the Punjab.

Your Highness's officials, taking advantage of this omission, desire to charge on such goods the exorbitant export and import duties prescribed for goods brought into Cashmere for sale or consumption in Cashmere, and thus greatly to interfere with the trade between Turkistan, and Tibet, and British India.

To this proceeding on the part of your Ahilkars, Dr. Cayley, the officer on special duty at Ladakh, has objected, and his Honor the Lieutenant Governor considers he is quite justified in so doing, for though the note I have above quoted only provides for the case of goods passing through Leh from the Punjab, and makes no special mention of the case of goods passing through Leh from Yarkand, &c., yet the same principle is applicable to both cases, and any other interpretation would be opposed to the spirit of the rules.

The charge of a transit duty at all on goods passing through an angle of your Highness's territory unopened is, as I have remarked in a previous communication, greatly to be regretted, as it is a practice which has been abandoned by the more civilized States of India and elsewhere; but to charge on such goods the high export and import duties levied on goods intended for your Highness's dominions would be calculated to act most injuriously on the trade with British India, and can never have been contemplated by any enlightened ruler.

Accordingly, I am desired to request that your Highness will, without delay, issue orders to your officials at Leh to apply the tariff prescribed for goods passing from the Punjab to Yarkand, &c., to goods passing from Yarkand, &c., to the Punjab; and to inform his Honor of your having done so.

A copy of this communication will be sent to Dr. Cayley for his information.

From the Foreign Secretary to the Government of India to the Secretary to Government of the Punjab (No. 1083); dated Simla, 22nd October 1867.

I HAVE laid before the Governor General in Council your letter, No. 371, dated 9th instant, with its enclosures, regarding the restrictions imposed by the Cashmere authorities at Ladakh upon the trade from Eastern Turkistan with British India.

2. In reply, I am directed to state that his Excellency in Council approves of the communications which the Lieutenant Governor has addressed to the Maharajah of Cashmere on the subject, and authorises his Honor to press the demands made in those communications on the Maharajah's attention with equal courtesy and firmness.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to Foreign Secretary to Government of India, with the Governor General, Simla, Confidential (No. 381-807); dated Mureee, 17th October 1867.

I AM directed to forward, for the information of his Excellency the Viceroy in Council, extracts, paragraphs 6 and 7, from Dr. Cayley's Diary, dated 1st instant, regarding emissaries of the Cashmere Government in Central Asia, and obstacles thrown by that Government in the way of Dr. Cayley to prevent traders freely communicating with him.

EXTRACT, paragraphs 6 and 7, from Dr. *Cayley's* Diary, dated 1st October 1867.

Para. 6. The Cashmere Government has agents and news-writers in Yarkand and Khotan and other cities of Turkistan, and there is no doubt that this year it has sent an envoy by Gilgit, and probably Badakshan, either to the Russians, at Khojend, or else to Kokan. It is kept a close secret, but all the traders, &c., know of one having gone.

7. Obstacles are still secretly thrown in my way to prevent the traders freely communicating with me. The Yarkand merchants are on their arrival privately told that they had better not give information or make any complaints to me, as their doing so will be displeasing to the Wazir and to the Maharajah; but that the Maharajah is going to reduce the duties and show them favour in every way. All this is done by some of the trading agents of the Wazir's, and under the directions of the Dewan here, and of course causes shyness and reserve on the part of the merchants, who are not sure whether they may not offend the Maharajah, and so injure their own interests in future years. This is a return to the obstructive system that I before brought to your notice.

(True Extract.)

(signed) *T. H. Thornton*,
Secretary to Government, Punjab.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General (No. 836-394); dated Murree, 24th October 1867.

IN continuation of my letter, No. 371-786, dated 9th instant, and its enclosure, regarding levy of duty on through-trade from Yarkand to British territory, I am directed to forward, for the information of his Excellency in Council, translation of a letter from the Maharajah of Cashmere, and of my reply of this date thereto.

TRANSLATION of a LETTER from the Maharajah of Cashmere to *T. H. Thornton*, Esq., Secretary to Government of the Punjab; dated 17th October 1867.

REPLY to letter of Punjab Government regarding an *ad valorem* duty at the rate of 5 per cent. being levied on unopened merchandise imported from Yarkand, as in the case of similar goods exported from the Punjab.

References have been received from you repeatedly desiring that the tariff of 1864 should be acted upon. In the letter dated 13th April 1867, intimating the appointment of Dr. Cayley, it is expressly stated that the appointment has been made merely with the object of making inquiries regarding the rates of duties laid down in the tariff of 1864.

In

In Schedule 2 B. of that tariff the rate of duty to be levied on goods imported from Yarkand into Ladakh is laid down as follows:—

	Rs.	*a.*	*p.*
Garda Bhung and Shawl-wool - - - - - - -	18	6	–
Ditto - - ditto - imported from Rampore Bussaher	–	10	–
Ditto - - ditto - - ditto - Kulu - - -	1	–	–

But as my kingdom thrives by the kindness of the British Government, I have made various reductions in the rates of duty.

In the letter of Sir R. Montgomery, dated 14th January 1863 (a copy of which is annexed hereto), the rate of duty on grocery is entered at 15 rupees per cent.; the same rate of duty, viz., 15 rupees per cent., is laid down therein as leviable on all merchandise imported into my dominions, whether intended for Jummoo or Cashmere, or for exportation to Turkistan, and without reference to its being opened or otherwise. But with the view of promoting commerce and pleasing the British Government, notwithstanding that the fulfilment of the conditions mentioned in the above roobacari was deferred by the British Government, I reduced the rate of duty on goods arriving in the Jummoo territory by more than one-half, and on goods arriving at Ladakh or Srinuggur to 12-8 rupees: the rate on unopened goods I fixed altogether at 5 rupees on the prices entered in the invoice, which, considering the price fetched for the goods at Ladakh, will not amount to more than 2 per cent. In the beginning of the present year, four months before the arrival of Dr. Cayley, I made further large reductions in the rates of duty on goods coming from Kulu, and entirely remitted the brokerage duty.

Now, if Dr. Cayley had considered that further revision of the duties was desirable, it was proper that he should have referred the matter to your office, and consulted me, but he took action on his own authority.

I have (before and since the receipt of your letter) written to my officials to carry out Dr. Cayley's orders, pending orders which the Government may issue hereafter.

My agent, whom I intend to depute to wait on his Honor the Lieutenant Governor at Lahore, will make proper representations in this matter.

I seek your satisfaction, and surely you will do nothing to subject me to loss.

Translation of a Letter from *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Maharajah of Cashmere; dated Murree, 23rd October 1867.

I AM desired to acknowledge the receipt of your communication dated 17th instant, and to express his Honor's regret that your Highness has failed to give a direct reply to the request conveyed in my khureeta of the to the effect that orders should be at once issued that goods arriving from Yarkand and the other countries beyond Cashmere in transit to British territory without being opened should not be charged with a duty of more than 5 per cent. *ad valorem*, the same as that leviable on goods passing from British territory unopened to Yarkand.

But your Highness, instead of giving a direct reply, or promptly complying with the request of his Honor the Lieutenant Governor, proposes to send a confidential agent to Lahore, and thus to waste another year in useless representation.

But his Honour, I am desired to state, can admit of no further delay; the matter is urgent, and it is most important that the merchants now assembled at Ladakh be at once informed that the exorbitant export and import duties shall no longer be charged on the through-trade from Turkistan to British India, or they will return disappointed to their homes,—a circumstance which cannot fail seriously to retard the progress of British commerce.

I am, therefore, again to request that your Highness will at once issue the requisite orders; and further, to warn you of the responsibility you incur by further delay.

I am to add that Dr. Cayley will be instructed to remain at Ladakh until the orders are duly promulgated.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General—(No. 407-848); dated Murree, 28th October 1867.

I AM directed to forward, for the information of his Excellency the Viceroy in Council, extracts, paragraphs 1 to 3, from Dr. Cayley's diary, dated the 15th instant.

EXTRACT, paragraphs 1 to 3, from Dr. *H. Cayley*'s Diary, dated 15th October 1867.

Paragraph 1.—A MAN named Shere Sing, an agent of the Maharajah, arrived here two nights ago from Yarkand, and went on the next morning to Jummoo. This man was formerly Kotwal of Srinuggur, and in the guise of a Mussulman was sent two years ago *viâ* Cabul and Badakshan to Bokhara, and then on to Samarkand and Khojend, as agent

of the Maharajah, and returned by Kokan and Yarkand. His arrival here was kept a close secret; he came in the night and went off the next morning. There is little doubt that he went as envoy from Cashmere to the Russian governor at Khojend. I hear that two men, named Ahmad Khan and Mahomed Khan, were brought to you from Jummoo in February and March last by Dewan Jowala Sahai to give you such information as they picked up on a visit to Bokhara, from whence they had returned two months before. I am told by men coming from Yarkand that these two men were sent as agents of the Maharajah to Khojend, and had a friendly interview with the Russian governor there. Two agents of the Maharajah have returned this year, one from Khotan and one from Yarkand, and there are now two agents and news-writers in Yarkand who are constantly trying to get the traders from Hindoostan into trouble by representing them as spies, and one or two have been imprisoned in consequence. These two men seem to be even spreading ill reports about the intentions of the British Government with regard to Eastern Toorkistan.

2. The latest accounts of the Russians say that they have not taken, or advanced on, Samarkand, but after defeating the Bokhara army at Yangkurgan, 12 koss in front of Samarkand, they have not made any further advance, but that the people of Sheri Sebz (to the south of Samarkand) have submitted to Russia, and are prepared to join against Bokhara. The Khan of Kokan, too, has come to an understanding with Russia that, if Bokhara is taken, they will submit without resistance, but till then they are to be left alone.

3. Yarkandi traders are still arriving, and many have gone on *viâ* Lahoul to the Punjab.

From the Foreign Secretary, with the Governor General, to the Secretary to Government of the Punjab (No. 1128); dated Camp Lucknow, 16th November 1867.

I HAVE laid before the Governor General in Council the extract from Dr. Cayley's diary forwarded with your letter, No. 407, dated 28th ultimo, and with reference to the passages cited in the margin, I am directed to request that Dr. Cayley may be called upon to furnish the evidence on which these statements are based.

"There are now two agents and news-writers in Yarkand, who are constantly trying to get the traders from Hindoostan into trouble by representing them as spies." * * * * *

"These two men seem to be ever spreading ill reports about the intentions of the British Government with regard to Eastern Toorkistan."

2. His Excellency in Council observes that such statements should not be made lightly, and unless their correctness can be placed beyond doubt by a careful scrutiny of the evidence on which they are founded.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General (No. 872–419); dated Camp Dina, 8th November 1867.

I AM directed to forward, for the information of the Supreme Government, extract paragraph 2, of the weekly narrative of the officer on special duty in Ladakh, dated 24th September last.

EXTRACT, paragraph 2, from DIARY of Dr. *H. Cayley*, on Special Duty, Ladakh; dated 24th September 1867.

Paragraph 2. THE road from Turkistan has at last been opened, and Yakhoo Kush Begi has given permission to all traders to pass, and a large number have already reached Ladakh; and yesterday evening two of them arrived in Lé; they say that more than 1,000 ponies with merchandise are now on their way. This morning I had a long conversation with one of the merchants named Gul Mahomed, who was in Khotan at the time of its capture, and afterwards went to Yarkand, from whence he has now come. He confirms all that I have before related about the war between Yarkand and Khotan, and says that when Kush Begi had seized the Khotan ruler and his sons and all the head men and entered Ilchi, the capital of the country, the people of that city, and of Kharraskash and other towns, and of all the country, joined together to resist him, and were completely defeated, and all the towns and villages were given up to plunder, and about 14,000 were slain, but no women were injured, and the traders were all protected and treated with great consideration, and some who had been robbed during the disturbance were compensated for their losses. Only the agent of the Cashmere Government was fined 50 "Kurns" (nearly 10,000 rupees) for having interfered in politics. Kush Begi sent Hababoolah Khan of Kholan, and his two sons and grandchildren, and about 80 of the chief men of the place, to Yarkand, and there had them all beheaded; he then went and took Aksu and Kucha, and all the surrounding places. The Tunganis of these two cities joined him, and by their help he easily overthrew the rulers, who, with their followers, were all either killed or

or fled away, but the people were not plundered or otherwise injured. Kush Begi is now on his way back to Yarkand, and sent the order beforehand to open all the roads to traders. He seems to be greatly respected for his energy and determination, and for the justice and order that he maintains in his army and in the country generally. The army, which musters about 15,000 men, is said to be regularly and well paid, and kept under most strict discipline, and any man guilty of any violence or oppression is most seriously punished, and thieves and robbers are most seriously dealt with. He is most anxious to promote trade with and through his dominions, and the duties he imposes, viz., 2½ per cent. import and no export duties, are very light.

It is said in Yarkand that both Kokan and Bokhara have submitted to Russia, but have not been occupied; this agrees with the news received by other channels.

Nothing is known of any advance of the Chinese to retake Turkistan, but it is said that the Tunganis and Imperialists are still fighting in North-Western China.

There is every reason to believe that Kush Begi will do his best to keep on friendly terms with the Indian Government, and to advance trade between the two countries, and that great advantages will result from his having made himself master of Khotan and the other countries.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General (No. 382-808); dated Murree, 17th October 1867.

I AM directed to forward, for the information of his Excellency the Viceroy in Council, extracts, paragraphs 4 and 5, from Dr. Cayley's diary, dated 1st instant, together with copy of a postscript attached to the diary, regarding the state of affairs in Eastern Turkistan.

EXTRACTS, paragraphs 4 and 5, from *Dr. Cayley's* Diary, dated the 1st October 1867.

Paragraph 4.—The state of affairs in Eastern Turkistan seems to be as follows:—Yakub Kush Begi is now master of Yarkand, Khotan, Kashgar, Aksu, Ush Turfan, and Kucha, but is nominally a Lieutenant of Khoda Yar Khan, the King of Kokand, to whom all these States own allegiance and pay tribute; but Kush Begi seems inclined to throw off the Kokand yoke and become independent; and, apparently, he has power and resources enough to enable him to do so, as he has completely destroyed or driven out all his enemies in the countries now under him. It is said that he has this year refused to pay the usual annual tribute of 2,000 "Kurus," about 300,000 rupees. He has now with him in his camp, and is treating with great attention and honour, Mahomed Ali Khan, whose father, the former King of Kokand, was killed in battle by the King of Bokhara some 20 years ago, and who himself escaped from captivity in Bokhara a year or two ago, and it is thought that Kush Begi will support this Prince against the present King of Kokand, and try and drive the latter out. If any such dispute were to take place, it is probable that the Russians would step in and assist one side. There seems to be a general feeling of distrust and dislike towards Russia all through Eastern Turkistan, and a determination to resist any further Russian encroachments in that direction; but of course internal disputes would quite prevent any effectual resistance being made. The authority of Kush Begi seems to be submitted to without opposition, and he seems to be both feared and respected for his bravery, justice, and liberality.

5.—A vakeel has just arrived from Yarkand with presents of ponies, silks, silver, &c., from Yakub Kush Begi for the Maharajah of Cashmere. The envoy is an officer of rank in the Yarkand army, named Mahomed Nazar Meer Akhoor; Suddiq Koolie, one of the Maharajah's vakeels at Yarkand, is accompanying him. The envoy, accompanied by the Dewan, paid me a visit this morning. He said that Kush Begi wished to be on friendly relations with the English Government, and was desirous of promoting trade between Yarkand and Hindustan. I explained to him that I was sent here by the British Government to protect the traders from ill-usage, and to see that they were not made to pay excessive duties or undue exactions; and I hoped that the Yarkand ruler would assist in furthering trade, and in rendering the roads safe and free from robbers, and so on.

P. S.—The following intelligence is, I believe, authentic:—Kush Begi has (for a time) made friendly terms with Kokand, and has sent envoys to that place, and to the Tunganis of Ili (Kuldja), and to the King of Bokhara, calling upon them all to join him against the Russians, and telling the Bokhara king that if he will only hold out bodly, they will relieve him in a very short time. Kush Begi is collecting a large army, and soldiers join him from all sides, and has a good supply of guns, ammunition, &c. The cannons have been manufactured under the directions of a number of Sikhs, who, two years ago, returned with the Khotan envoy from the Punjab.

(True Extracts.)

(signed) *T. H. Thornton*,
Secretary to Government, Punjab.

From the Secretary to the Government of the Punjab, to the Secretary to the Government of India, Foreign Department (No. 428-890); dated Camp Baganwala, 14th November 1867.

In forwarding, for the information of his Excellency the Governor General in Council, extract, paragraph 2, from Dr. Cayley's Narrative from Ladakh, for the week ending 29th ultimo, I am directed to state that the Maharajah of Cashmere has consented to the reduction of transit duties to five per cent. *ad valorem*, and has issued orders to this effect to his officials in Ladakh.

2. I am further to mention that traders from Yarkand bring a report that Yakoob Kush Begi has been assassinated, but this is a mere rumour requiring confirmation.

Extract, paragraph 2, from Narrative of *Dr. Cayley*, on Special Duty, Ladakh, dated 29th October 1867.

Paragraph 2.—Your letter, No. 787, of October 9th, with copies of two letters addressed to the Maharajah, reached me on the 25th. I at once put in force the rule of a five per cent. *ad valorem* duty on all goods passing unopened through Leh, and to those traders still here who had paid the full import duties; pending the result of my reference to you on the subject, I ordered a refund to be made of the amount they had paid in excess of five per cent. Although it is not quite definitely so stated, the meaning of your letter clearly is, that all goods passing through unopened, and which are not for use or consumption in Cashmere territory, should pay the five per cent. transit duty only. The duty is on the goods and not on the owners, and is not affected by the goods changing hands in transit. As a general rule the Yarkandees exchange their merchandise in Leh with the Hindustani merchants, and each party returns with its respective purchases to its own country. All such goods pass unopened through Ladakh (except so far as is necessary to examine samples), and are not for sale or consumption in Cashmere, but remain as it were in bond, and of course such goods come under this rule, and in this spirit I have applied it. The merchants, of whom there are many now in Leh, came forward to me in a body to hear the transit duty explained, and nothing can exceed their gratitude at this boon being granted them. One man had to pay only 50 rupees, instead of 800 rupees duty; and, as a rule, they had only to pay one-sixth of the previous amounts. It is fortunate that so many of the Yarkandees are still here, as they now see what has been done for them, and all say that there will be no limit to the trade in future years.

(True Extract.)
(signed) *E. W. Trotter*,
Officiating Assistant Secretary to Government,
Punjab.

From the Foreign Secretary to the Government India, to the Secretary to Government of the Punjab (No. 1160); dated Fort William, 29th November 1867.

In reply to your letter, No. 428–890, dated 14th instant, submitting an extract from Dr. Cayley's Narrative from Ladakh, for the week ending 29th ultimo, I am directed to state that the liberal action of the Maharajah of Cashmere in reducing the transit duties to five per cent. *ad valorem*, is duly appreciated by the Governor General in Council.

From *T. H. Thornton*, Esq., Secretary to Government of the Punjab, to the Secretary to the Government of India, Foreign Department, with the Governor General (No. 837–395); dated Murree, 24th October 1867.

In continuation of my letter No. 371–786, dated 9th instant, and its enclosure, on the subject of interference exercised at Ladakh with trade from Yarkand and Turkistan with British territory, I am directed to forward, for the information of his Excellency the Viceroy in Council, extracts, paragraphs 1, 2, and 3 from Dr. Cayley's diary, dated 8th instant, regarding the state of trade in Ladakh and the presence of a Russian envoy at Kashgar.

Extracts, paragraphs 1, 2, and 3, from Diary of *Dr. Cayley*, on Special Duty, Ladakh, dated 8th October 1867.

Paragraph 1.—The accompanying tables show the extent of the trade through Ladakh during the past month. The imports at the Punjab rates have amounted to nearly 36,000 rupees in value, and on the spot are worth nearly double that sum; and goods to the value of 23,000 rupees have been exported. Merchants are still arriving both from Yarkand and the Punjab.

2. The

2. The Yarkandi merchants, who are coming in large numbers, chiefly, as I have before mentioned, in consequence of having heard that a British officer was stationed here, and that the duties were lowered, are now thoroughly disgusted at finding the old extravagant duties still in force, and they will never return here unless some reduction is made this year. The exorbitant import and export duties on goods from Yarkand, amounting to over 30 per cent., must destroy all trade by private individuals, and will again throw it all into the hands of a favoured few.

I am convinced from all I hear that English goods would entirely beat Russian goods out of the field in Eastern Turkistan, and would probably soon find their way to Western China. All the merchants say they could supply English goods from Bombay and Calcutta cheaper and of better quality than any that came from Russia if only the Ladakh transit duties were lowered; and there is no doubt that reducing these duties would vastly increase the revenue that the Maharajah derives from customs after a very short time, even so soon as next year. I am most anxious for an early reply on the subject of the transit duty to be imposed on goods from Yarkand passing unopened through Ladakh, for the future of the trade almost depends on this point being at once settled in favour of the traders.

3. I have no further news to give of Central Asian events, but a Russian envoy has been sent to Kashgar, and is there awaiting the return of Kush Begi.

(True Extract.)
(signed) *T. H. Thornton,*
Secretary to Government, Punjab.

(No. 21.—Political.)

Sir Stafford Northcote, Bart., to the Governor General of India in Council.

India Office, 15 February 1868.

1. The enclosures to your Excellency's letter in the Foreign Department, No. 177, of the 7th December 1867, contain much interesting information relating to the commerce and politics of Central Asia; but the only subject which calls for any notice from Her Majesty's Government is that to which you have especially invited my attention, namely, the "restrictions imposed by the Cashmere authorities at Ladakh upon the trade between Eastern Toorkistan and British India."

2. The general sentiments of Her Majesty's Government, with respect to the conduct of native chiefs in maintaining illiberal systems of commercial policy, have been communicated to you in my Despatch of the 30th of March 1867, and I regret to observe that the instructions therein contained, with reference to the course to be pursued towards them in the event of their imposing duties on transit through their dominions unfavourable to British trade, have not been sufficiently regarded by the authorities of the Punjab. The peremptory tone of the letter addressed by the Secretary of the Punjab Government (not, as is usual, by the Lieutenant Governor himself) to the Maharajah on the 23rd of October, is neither in conformity with the views which I have communicated to your Excellency's Government, nor consistent with the courtesy and respect which should be shown to an independent Prince in the position of the ruler of Cashmere.

3. I observe that the Maharajah has finally agreed to an *ad valorem* duty of 5 per cent. on all goods passing unopened through Leh; and I trust that, having consented to this liberal measure, his Highness will adhere to it, and that he will eventually find that the increased development of trade is advantageous to the interests of his own country. I hope, however, that there will be no undue interference on the part of any of your officers (such as is apparently indicated in Dr. Cayley's letter of the 29th of October) in enforcing these regulations.

Extract from Despatch of the 30th March 1867.—No. 50.

2. Her Majesty's Government have learnt, from official and other quarters, that complaints of the commercial policy of the Native Princes of India are of frequent occurrence; that there is a general tendency on their part to maintain high transit duties, which are necessarily disadvantageous to our own subjects and to our own Government. The sentiments of Her Majesty's Government have

recently been communicated to you with respect to the proceedings of the King of Burmah and the Maharajah of Cashmere. In the present instance, the complaint suggests special considerations in connection with the passage of our railways through the territories of Native Princes, undertakings which, I fear, are still regarded by them with much suspicion and distrust. But in addition to these feelings, which time will probably assuage, there can be little doubt that it is the material loss of revenue, unaccompanied with benefits very directly affecting their own subjects, that Native Princes most regard. Every care, in such a case, should be taken to render these enterprises as little obnoxious as possible to the native durbars, and if concessions are required injurious to the finances of the State, some corresponding advantage should be granted to the native chief to reconcile him to the loss which he sustains.

(No. 23.—Foreign Department.—Political.)

The Governor General of India in Council to the Secretary of State for India, dated Fort William, 6 February 1868.

We have the honour to forward, for the information of Her Majesty's Government, copy of a correspondence with the Punjab Government, showing the satisfactory result of Dr. Cayley's medical operations in Ladakh during the past year.

(No. 28–18, dated 9th January 1868.)

From the Secretary to the Government of the Punjab, to the Secretary to the Government of India.

I am directed by the Honourable the Lieutenant Governor to forward, for submission to his Excellency the Viceroy, copy of a letter dated 23rd ultimo, from Dr. Cayley, reporting the results of his medical operations in Ladakh during the past year.

2. In the Lieutenant Governor's opinion the Report appears a very appropriate and satisfactory one, and the results of the season's operations are on the whole gratifying and creditable to Dr. Cayley.

3. On the receipt of your reply, the Lieutenant Governor proposes to publish the Report in the "Punjab Gazette" for general information.

(Dated 23rd December 1867.)

From *Henry Cayley*, Esq., on Special Duty, to Officiating Secretary to the Government of the Punjab.

In compliance with your letter No. 960, dated 3rd December, I have the honour to submit the following Report, showing the result of my medical operations in Ladakh:—

2. I reached Le on the 24th June, and at once opened a dispensary; that is to say, I let people know that all applicants would receive medical treatment. I was accompanied by a hospital compounder as a native doctor, and had brought up with me a small supply of what I supposed would be the most useful medicines and instruments.

3. During the first few days patients began to come freely, and then the attendance suddenly ceased, or was confined to the sepoys and other servants of the Government. This was owing, as I represented in my Reports at the time, to the orders of the Dewan and local officials, who endeavoured to prevent any one from coming near me; but on my vigorously protesting against such opposition, the obstructions were removed, and the sick again attended freely.

4. Early in July, when the small bungalow was ready for my reception, I gave up a room for the native doctor and for seeing out-patients; and after another month I commenced to make use of some of my tents for the accommodation of in-door patients; chiefly operation cases.

5. The

5. The following Tables show the attendance of sick during each month, the principal diseases that came under treatment, and the number of admissions under each disease:—

	June 25th to 30th.	July.	August.	September.	October to Nov. 6.	Total.
Admissions - - -	22	239	149	120	129	659
Daily average of sick -	6	30	29	26	22	27·5

Diseases.

Fevers - - - - 92	Skin diseases - - - 10	Dyspepsia - - - 99
Ophthalmia - - - 64	Paralysis - - - 8	Hepatitis - - - 1
Diarrhœa - - - 3	Epilepsy - - - 5	Caries of teeth - - 39
Dysentery - - - 7	Cephulœa - - - 3	Abscess - - - 7
Throat diseases - - 8	Deafness - - - 11	Ulcer - - - - 20
Rheumatism - - - 57	Cataract - - - 14	Accidents - - - 19
Neuralgia - - - 23	Amaurosis - - - 2	Erysipelas - - - 1
Venereal diseases - - 69	Staphyloma - - - 3	Piles - - - - 2
Scurvy - - - - 9	Entispion - - - 6	Ascarides - - - 1
Scabies - - - - 3	Bronchitis - - - 28	Frost Bite - - - 2
Tumours - - - 11	Colic - - - - 16	Other diseases - - 17

As shown in the foregoing list, fever cases were numerous, but were nearly all of the form of simple continued fever, depending usually upon cold, fatigue, exposure to the sun, and similar causes. Amongst the pilgrims, merchants, and others coming from the plains, there were, however, many cases of severe remittent and intermittent fever. In Ladakh itself, and among the people of the country, malarious fever seems almost, if not quite, unknown.

Chronic ophthalmia is very prevalent, and is the cause of loss of sight in many cases, this result being chiefly due to want of treatment and care.

Amongst the people of the country diarrhœa and dysentery are almost unknown; the cases that came for treatment were nearly all amongst pilgrims and traders from other countries.

Chronic rheumatism is very prevalent among the Ladakis, and gives rise to great and protracted suffering; the causes seem to be insufficient food and clothing, exposure to cold, constantly working in the wet whilst irrigating the fields; and the disease is frequently accompanied by a tendency to scurvy. Neuralgic affections, which are also very common, seem to depend on the same causes.

Venereal affections are everywhere prevalent, and the sepoys of the Le garrison suffer to a great degree; but the diseases of this class are not generally of a very malignant type; less so than in the plains of India.

Skin diseases generally are very rare, and scabies, in spite of the dirty habits of the people, is almost unknown.

Scurvy, or rather a scorbutic tendency, is very general, and accompanies many of the other diseases. This is owing to the poor diet on which the people generally live, and the absence of fruit and fresh vegetable in their food during the greater part of the year.

Cancerous diseases are not uncommon, and several cases attended at the dispensary for treatment. Cataract prevails to a great degree, and 14 patients with this disease applied for relief, in most of which I performed the operation of extraction.

Other diseases of the eyes, leading to ultimate blindness, are frequently met with.

Bronchitis and lung diseases are very rare among the Ladakis. There were a good many cases of bronchitis among merchants and other strangers, but they were seldom severe, notwithstanding the severity of the climate, the extreme dryness of which seems to counteract the effects of the cold. I did not see or hear of a single case of pulmonary consumption.

Amongst the people of the country dyspepsia is one of the most prevalent and troublesome complaints, and gives rise to great and long-continued suffering. It is most undoubtedly due to the unvarying and indigestible diet of the people, who in a great measure live on masses of uncooked dough made out of "suttoo," or flour of parched grain.

Sufferers from toothache and decayed teeth were very numerous, and always came forward with the greatest readiness to have the painful tooth extracted, bearing the pain of the operation with the most stoical indifference.

Accidents presented nothing unusual; severe contusions from kicks by horses were very frequent among the Yarkandis. Many of the Yarkand horses refuse to be shod unless they are first thrown down and their legs firmly tied, and in this process many severe blows are received.

The diseases, stone in the bladder, leprosy, goitre, a nd scrofula, which are so common in the lower ranges of the hills, and which one would expect to find in Ladakh, are almost, if not quite, unknown.

6. *Operations.*—The principal operations performed were the following:

I. *Cataract.*—The operation of extraction was performed in 12 cases, generally by the method of linear section, so strongly advocated by Dr. Macnamara in Calcutta. Of the 12 cases, in seven fair sight was restored, three were doubtful, and in two the eyes were quite lost by inflammation. The performance of this operation, by which sight was restored to the blind, made a great impression on the people, and on my return journey the blind were brought from all sides to meet me on the road, though, of course, I could not then perform such an operation. Another year all these cases would be ready to go into Le for treatment.

II. Entispion, or growing inwards of the eyelids and eyelashes, which is generally the result of neglected ophthalmia, I found a very common affection. It is one that causes constant and acute pain and irritation, and frequently in time leads to blindness and destruction of the eye. I operated in 11 cases by the usual method of removing a fold of skin and muscular fibre from the affected eyelid, and the cure was in every case complete.

Operations for the removal of tumours were performed in five cases; some of the tumours were cancerous.

Besides the above, many minor operations were performed.

7. The climate of Ladakh, at the altitude of Le, about 11,500 feet above the sea, is, during the summer months, most delightful and remarkably healthy.

The air is always dry and bracing, never hot in the shade, though pleasantly warm. The weather is almost uninterruptedly fine; the rain-fall during the four or five months is not above three inches, and there are very few cloudy days.

During the months of July and August the readings of the thermometer in the shade were as follows:

Maximum - - -	80°	Minimum - - -	42°
Average maximum - -	72°	Average minimum - -	49°

In the sun's rays an ordinary thermometer rose to 136°.

During September.

Maximum - - -	65°	Minimum - - -	36°
Average maximum -	60°	Average minimum - -	38°

In the sun - - - 127°

During October and first week of November.

Maximum - - -	58°	Minimum - - -	18°
Average maximum - -	40°	Average minimum - -	22°

In the sun - - - 102°

During winter the climate is very severe and extremely cold. Even in October there were slight falls of snow in the valley of Le, and in the beginning of November the whole valley of the Indus was covered with snow two or three inches deep.

8. Of the patients, 532 were male and 126 female; there were only 10 children under 12 years of age. There were patients from almost every race and people, either dwelling in or passing through Ladakh, as shown in the following list:—

Ladakis - - - - - - - - - -	260
Bultistanis - - - - - - - - - -	84
Yarkandis or Turkis - - - - - - - -	71
Cashmiris - - - - - - - - - -	45
Argoons, or half-breed between Cashmiris and Ladakis - -	49
Sepoys of Le Garrison - - - - - - - -	97
Men from Lhassa - - - - - - - -	5
Men from Kulu and Lahoul - - - - - - -	14
Cabulis - - - - - - - - - -	3
Hindustanis - - - - - - - - -	35
Others - - - - - - - - - -	5

Of the total number, 138 were traders and 37 pilgrims from Central Asia.

This varied list proves that the dispensary was appreciated, and there was no prejudice felt against European treatment. One man came all the way from Yarkand for the sole purpose of receiving medical treatment for a chronic disease.

9. Considering the circumstances under which the dispensary was established, that it was newly introduced amongst an ignorant people unused to our customs, and who had to discover for themselves that they derived any benefit by attending, that the Ladakis are extremely poor and with difficulty able to leave their work, however ill they may be, and many of those who did attend were carried off to perform enforced labour, and that for a long time there was the general impression abroad among the people that the Cashmere official would be offended at their attending the dispensary—considering all these circumstances, I think that the results of the medical operations in Ladakh have been on the whole successful, and have certainly been the means of relieving much suffering. I may add,

add, too, that the opportunity the dispensaries afforded me of communicating with the traders and others, and of conversing freely with them, were very great, and this I found of the greatest advantage in enabling me to pick up information; and there is no doubt that the merchants have many of them returned to Central Asia, feeling a very lively gratitude for the benefits they have received; and such a feeling is calculated to spread abroad a spirit of friendship towards India among the races beyond the Himalayas, and thus indirectly promote future trade.

10. The hospital compounder, Khuda Buksh, who acted in the capacity of native doctor, has done his duty with zeal and activity, and to my entire satisfaction. He has by hard work picked up a very fair knowledge of the Boti language, and thus greatly increased his usefulness.

(No. 116, dated 31st January 1868.)

From the Secretary to the Government of India, to the Secretary to Government of the Punjab.

I AM directed by his Excellency the Governor General in Council to acknowledge your No. 28-18, of the 9th current, submitting copy of Dr. Cayley's Report on dispensary operations at Le in Ladakh.

2. The results set forth appear to be highly creditable to Dr. Cayley's professional zeal and humanity. The good hereby effected in those remote regions will extend even beyond the physical benefits conferred.

3. These interesting papers will be published in the Supplement to the "Gazette of India."

CLASS

COPY of PAPERS relating to the Route of Captain *W. C. M^cLeod* from *Moulmein* to the Frontiers of *China*, and to the Route of Dr. *Richardson* on his Fourth Mission to the *Shan* Provinces of *Burmah*, or Extracts from the same.

To the Honourable the Court of Directors of the East India Company.

Revenue Department, 3 August (No. 16) 1838.

I HAVE the honour to submit, for the information of your Honourable Court, a condensed Report of the missions on which Captain M^cLeod and Dr. Richardson were deputed by the Commissioner of the Tenasserim Provinces, together with copies of the original documents forwarded by the Commissioner to this Government, and of the orders passed thereon.

2. On the 17th December 1836, Mr. Commissioner Blundell reported that, under the permission granted by Government on the 22nd September 1835, he had deputed his assistant, Captain M^cLeod, on a mission to the Shan States tributary to the Siamese, instructing him to penetrate to the frontier towns of China, with the view of opening a commercial intercourse with the traders of that nation. Dr. Richardson was in like manner deputed to the Shan States in connection with Ava, and charged with the conduct of a caravan of traders from Moulmein; instructions had been given him to penetrate through the country of the Red Karens as far as "Moné," thence to endeavour to make his way to "Ava," and join the Resident at that court.

3. Although the latter mission had not been authorised, still as it was likely to prove of great utility, and the distance of Moulmein from the Presidency was too great to admit of an answer to any application being received before the season had become too far advanced, the Commissioner hoped that his Lordship would not withhold his sanction from the proceeding, the more particularly as the expense would be comparatively trifling. The aggregate outlay on account of these two missions had been 1,300 rupees for presents to the chiefs, and 1,696 rupees for the purchase of elephants, both of which sums the Commissioner stated would probably be recovered by the sale of return presents, and of the animals after the termination of the missions; 250 rupees would cover the monthly expenditure on account of coolies, interpreters, provisions, &c.

4. Mr. Blundell submitted copies of the instructions and letters of credence with which he had furnished Captain M^cLeod and Dr. Richardson, and remarked that, from the mild and conciliatory manners of these two officers, and from their scientific acquirements, he had every reason to expect a most favourable result. He observed also, that it would be very desirable if he were invested with a discretionary power to depute officers to the bordering countries with the view of conciliating the chiefs, or of opening any new channel of trade on the spur of the moment, which if delayed for the special authority of Government, might not afterwards be so favourably prosecuted.
